"The same. It has been arranged that he will be present this evening with his officers at a ball to be given by the usurper John. Mornay has been requested to prepare a military dance, and in the midst of this performance, he and his friends, armed to the teeth, will precipitate themselves on the self-styled king, kill him without mercy, and cry 'Long live Eric the Fourteenth!' The army will rally to the signal, for the usurper is detested by all."

"The people then are tired of my brother," observed Eric, with tearful eyes. "Should Heaven again place me on the throne, I will be a good king and father to them. Karine, thou shalt be ever present with me, and I will mould all my thoughts and actions to thine own sweet will. Just and merciful shall be my conduct, and I will secure the happiness and prosperity of Sweden."

"And Peterson will be no longer at court," added the Queen, in the same low tone.

"Who has then happened to him?"

"He has been executed by order of John."

A sigh broke from the royal captive. "The stars, however," he remarked, "have not deceived the astrologer. Peterson predicted I should be dethroned. If I had kept my brother, whom he so plainly designated, in prison——"

The noise of approaching footsteps disturbed the dethroned monarch. An officer of the court appeared.

"An infamous conspiracy has been discovered," he said, addressing the Prince. "Mornay, your insolent agent, has been arrested, together with his accomplices, and the scaffold awaits them."‡

Karine uttered a cry of distress.

"Drive hence this woman," continued the officer, turning to his attendants, "she came here to reveal the murderous plans to her husband. They will, however, meet in prison."

"Back to him!" exclaimed the Queen.

"And you," he added, addressing Eric, "must now change quarters. It

On the borders of Lake Venad, upon a gloomy and deserted coast, stood an old tower, proudly dilapidated, which was appropriated as a prison for the dethroned sovereign. Orlyhus was the name given to this spot; and in a damp and loathsome cell, hidden from the light of day, the royal captive passed nine dreary years.

Eric never again beheld Karine. His lyre was the only consolation left to him; and he would compose and sing hymns of great solemnity and beauty, in praise of God and immortality. Pleasure and love, the former themes of his muse, were now abandoned, and he gave up his whole soul to religion and piety.

A psalm composed by him in this frightful abode has been preserved. The long imprisonment of the dethroned monarch at length softened the feelings of those even who had been his most bitter enemies, and a report was spread that a popular demonstration was about to be made in his favour.

John the Third became alarmed, and resolved to slay his brother.

One morning, the governor of Orlyhus made his appearance before Eric. His features were dark and menacing.

"Your condemnation is pronounced," said the inflexible jailer. "prepare yourself for death, and choose between being stifled or poisoned. The one or the other is to be your portion."

"Bring me poison," replied Eric, calmly.

\* At Skokloster is a charming picture by Sandberg, representing this last interview between Eric and Karine. The king is remarkably handsome, and the Queen's features have a sweet and tender expression.

† He punished the victims of his devotion. The plot was denounced by a priest, of whom one of the conspirators had demanded absolution beforehand for the blood he was about to shed.

\* These words of Eric, and all the details of the homicide, are related in history. Burraeus had always evinced for his headstrong pupil the liveliest affection. This name was pronounced like Burrhus, the preceptor of Nero, who was poisoned by the tyrant's order.

† These are still to be seen in the Cabinet of

He uttered a last prayer, and then with an air of tranquil dignity, quaffed the fatal draught.

"Adieu, Karine," he murmured, as he closed his eyes.

On the same evening Eric the Fourteenth died.\*

The Queen expired shortly afterwards of grief.

The Psalm of Penitence composed by King Eric in his prison is still to be found in the book of Swedish Canticles. It has also been rendered into the Danish and German languages. The following translation of three verses may serve to give the English reader a faint idea of the original poem.

"Take pity, Saviour, on a captive lone,  
Whose crimes just Heav'n hath punished with distress;  
Shipwreck'd, proscribed,—all worldly hopes now flown,—  
Thee, he implores, to comfort and to bless.  
Take pity, Saviour, on a captive lone!

Sweet are my sorrows if they cleanse from sin:  
Could I have felt them in my days of pride,  
What cares and sorrows I had spared within!  
Grant me the mercy, Heaven, I then denied.  
Sweet are my sorrows if they cleanse from sin

Give me, Great Judge, the heritage of Heaven,  
And earthly crowns may crumble into dust.  
Comfort a heart to Thee now wholly given,  
Crush'd by dark guilt, Thou only art my trust!  
Give me, Great Judge, the heritage of Heaven."

## A PEEP AT AN OLD MAN'S HEART;

OR, WHY UNCLE HARRY WAS A BACHELOR.

### SCENE THE FIRST.

"WHEW! what a storm!" ejaculated old Uncle Harry Bell, as he stamped his feet and brushed the snow from his overcoat in the hall, and then flung wide open the door of a snug, cozy little parlour in his comfortable farm-house.

Within, a cheerful wood fire was burning; and the flickering light cast a bright lustre on the quaintly carved old-fashioned mahogany chairs and tables—danced upon the lofty ceiling, and scattered a shower of golden beams on the sunny ringlets of fair Lilly Bell, who had fallen fast asleep in Uncle Harry's arm-chair.

"Whew! what a storm, I say. Lilly! Lilly! Lilly! where are you? Asleep? hey! A fine welcome, this, for a hungry old man; for as I live, tea is not ready. Come, Lilly, wake up," and Uncle Harry rubbed his chilled fingers across Lilly's face, which caused her to jump from her chair, and open her blue eyes with astonishment.

"Why, have I been asleep, and can it be six o'clock!" she exclaimed, as the old clock in the hall chimed forth the hour; "and I declare it is snowing fast, too! Why, how could I be so careless as to fall asleep when I am in such a hurry to finish my tabouret? and where in the world can Nancy be?" and away Lilly flew to the kitchen to summon the good old housekeeper, whose movements were somewhat dilatory.

Uncle Harry sat slowly sipping his tea—closely eyeing Lilly the while—a mischievous smile playing about the corners of his mouth, while her glance was fixed upon her plate; but it was evident by her movements that her thoughts were neither upon the plate nor its contents, for Uncle Harry presently burst into a hearty laugh, exclaiming, "There, Lilly, that will do. Pouring cream and sugar on one's bread is not so bad, but when I see large lumps of butter floating about like islands in your tea, I think it is time to recal your wandering thoughts. Ah! Lilly, how I pity poor Ned Allston. A sorry little wife you will make him. I declare you'll surfeit him one week, and starve him the next," and again Uncle Harry burst into a hearty laugh, which sent the blood flying into fair Lilly's face, but then "Uncle Harry was such a 'dear old quiz,'" as all the girls said, that Lilly found it impossible to get angry with him, although a very perceptible pout was on her cherry lips as he again reiterated, "Poor Ned, I pity him!"

Lilly could stand it no longer. "I don't believe Ned wants your pity," she exclaimed. "You are too provoking!"

"Ah!" persisted her tormentor, "but that is the very reason why he ought to have it—because, running into the fire with his eyes wide open, does not show that he will not get burned."

"Come, now, Lilly, dear," he continued, "acknowledge, like a candid, sensible girl, that no condition in life can be preferable to that of a jolly old bachelor."

But Lilly only persisted in shaking her pretty little head with an incredulous air, to the infinite amusement of her uncle, who sipped his tea with a smile of good humour on his lips.

"Ah, well!" said he, at length, "it always has been so, and it always will be, that the young will never take the advice of the old. Now, if I were in Ned's place——" here he paused, for Lilly's eyes were bent upon him with an earnest, appealing look, as she asked, "What would you do, Uncle Harry?"

"Well," he continued, "were I very much bewitched, perhaps I might—I might—commit matrimony. But then I rather think that I should not resign myself to such a fate, without I had struggled pretty hard to free myself from my fetters."

"Ah, then," said Lilly, laughing, "I aim to conclude that you never were bewitched by any pretty girl, else you had yielded to her charms. Uncle Harry, why were you an old bachelor?"

Ah, Lilly, you touched a tender chord; for Uncle Harry's hand trembled strangely as he lifted a spoonful of tea to his mouth, and an unwonted moisture sprang to his eye; but he only dropped the spoon, exclaiming, "Why, Lilly, how hot this tea is. I declare it has scalded me!"

Yes, Lilly had touched a tender chord; and the meal ended in silence, for Uncle Harry's heart was now filled with memories of the past.

### SCENE THE SECOND.

An hour later, Lilly sat at the table, busy with her worsted work. Her fingers flew rapidly, and the flowers rose quickly upon the canvass beneath her needle; but it was evident that her thoughts were not there. A sunny, loving, hoping smile played upon her lips, like a bright-winged bird among the flowers, and a tender light gleamed from the dilated eye, for her heart was away with her absent lover—Ned Allston.

In one month from that eve was Lilly to plight her faith where she had long since given her love.

The poet hath said, "the course of true love never did run smooth," but for once he erred; for Lilly was beloved by one well worthy of her, and her's had ever been a sunny sky, where storms never came, nor wild winds blew.

Uncle Harry sat leaning back in his arm-chair, looking very comfortable, with his slippered feet resting on the fender, and the ruddy fire-light gleaming on his hale cheeks and silver hair.

Lilly had placed beside him upon the table his spectacles and the newspapers; but contrary to his usual custom, the glasses were unused, the papers unread.

Even his old favourite, the pipe—and Uncle Harry still clung to that old pipe with a wonderful tenacity—lay quite unregarded between his thumb and finger.

No graceful wreath of smoke, curling upward, wreathed his head like a silvery veil—no sudden nodding of the head betokened that ever and anon the old man was wandering in Dreamland; he was wide awake now, and his eye was fondly bent on the young girl who sat beside him; and thus he gazed until a tear started from its depths, and coursed down his cheek. Brushing it away, Uncle Harry spoke—

"Lilly,"—and she slightly started, as his voice broke alike the silence and her reveries—"Lilly, you asked me a little while ago why I was an old bachelor. Shall I tell you a story of my early years?"

Lilly threw aside her work, and seating herself on a low stool at her uncle's feet, leaned her head upon his knee, letting her hair fall like a rippling shower of gold over her shoulders, while he gazed tenderly on her, and slowly passed his hand across his brow, as if to dispel some disagreeable memory that lingered there. It was thus that he spoke:—

### UNCLE HARRY'S STORY.

"I was twenty-two years of age when I finished my studies at college.

"With a mind and body alike enfeebled by intense mental application and long confinement, I gladly accepted the invitation of my friend and classmate, Frank Waters, to spend the long vacation succeeding the summer term at his house. It was a lonely village whither we went, embosomed in lovely mountains, and very picturesque.

"And here, away from books, and the ceaseless round of college duties, how swiftly sped the hours in quiet communion with the beauties of nature. We passed whole days shooting in the thick woods, or fishing in the blue river; and by these pursuits, varied by the healthy exercise on a large farm, my health was completely established. So the days sped swiftly onward, until one-half of our allotted vacation had vanished as a dream.

"An excursion and pic-nic in the mountain woods had long been talked of among the young people of the village, and needed only the enterprising spirit of Frank to forward it. He, as chief manager, enlisted me in his service, and so we immediately busied ourselves with all necessary preparations.

"It was on a beautiful morning in the early autumn time, that a merry party of gay young men and rosy-cheeked maidens assembled at the 'Mansion House,' from which we were to start for the grove, about five miles distant.

"What merry shouts rang out on the pure morning air, as one after another stowed themselves away in the huge hay-racks, trimmed with wreaths of evergreen and fresh oak-leaves, woven for the occasion; and how merry was the cry, 'Here's room for just one more!' when the carriage was already filled to overflowing. At length all were ready, and on we went, past orchards bending beneath golden fruit, and fields waving with nodding grain, by fragrant hedges and warm uplands, where the white mist hung overhead like fleecy clouds, until we entered the dim and solemn woods."

Uncle Harry's voice grew yet more distinct as he proceeded, while Lilly's eyes were turned to his with eager interest speaking from every glance.

"But why do I linger," continued he. "It is of her, of sweet Annie Gray that I would speak. Lilly, how can I describe to you the light of her violet eye, the dimpled cheek, and the waves of sunny hair? I have often thought that they were strangely like yours, Lilly.

"It was then that I first met sweet Annie Gray. Frank and myself were both, at first sight, struck by her exceeding loveliness and quiet lady-like deportment; and we eagerly sought an introduction.

"Her manner was calm and subdued—quite different from the noisy group around her; and I half suspected that she had thus early known sorrow, else had the spirits not been checked in their joyous outpourings; and what I learned of her history confirmed me in the opinion I had formed.

"What I had heard of Miss Gray only rendered me more anxious to seek her acquaintance, and I had but just engaged her as my partner for the day, when Frank came where we were standing, and repeating the question I had

\* Besow, a celebrated Swedish writer, has written an admirable tragedy on the eventful history of King Eric the Fourteenth.

just asked her, was informed that she was already engaged to Mr. Bell. He cast upon me a look, which then I could not fathom, but which rose before my memory in after days like an evil vision, bit his lip with vexation, and walked away.

"Lilly, that was to me a happy, happy day.

"We rambled apart from the others, down by the river banks; and sat upon mossy knolls beneath the magnificent old trees, and I wove her garlands of flowers, while she sang to me snatches of sweet ballads, in a voice more musical than the birds.

"And there in those old woods, alone with the birds and flowers, we became far better acquainted with each other than those who meet in the crowded drawing-room.

"In sweet Annie Gray I recognised the embodiment of my boyish dreams—dreams, too, which the opening years of manhood had not dispelled. The ideal gave place to the real.

"I saw no more of Frank Waters that day, until at evening, when I sought him after I left the cottage of Annie. He sat alone in his room. I addressed a few words to him regarding the events of the day, but he seemed disinclined to converse, only answering my questions abruptly; and not knowing the reason, I left him for my own apartment.

"A word here with regard to Frank. During our first two years at college we had been room-mates as we were class-mates; and a similarity of tastes and pursuits created a sort of student sympathy between us; but for the past year we had not shared the same room, although we were frequently together.

We were both orphans, having control over our own time, and at that time over our own fortunes, which were not inconsiderable. Frank was a younger child—I an only one."

"But, Uncle Harry, you could not have been an only child. I thought my father was your brother," said Lilly, hastily interrupting him.

"You shall know all soon, Lilly," was Uncle Harry's reply, as he continued. "Frank and I at school were reckoned intimate friends, but it was not so in reality, although we were much together.

"His was one of those natures so common among men; generous to an inferior where they could well afford to be generous—courteous to their equals where it was their policy to be courteous; but woe unto him who dared to rival him, as I afterwards learned to my bitter sorrow. He was affable and gentlemanly outwardly, but at heart a villain.

"My stay in C— drew to a close, but I had taken every opportunity to see Annie. Oh, what long, long walks we had in those deep woods, and what happy hours I spent at the cottage; and when we parted, it was as plighted lovers. Even Annie's father smiled as I sought his consent, and said, 'Yes, yes, Annie is a good girl. She deserves to be happy.'

"Ah, Lilly, how sweet is 'Love's Young Dream!' but Lilly needed no to be reminded of it thus by Uncle Harry, for her eyes were bent on his with a dreamy expression, soft as a hazy sky. She was revelling then in its sweet light.

"I returned to college with new incentives for application to books; yet eagerly did I turn from abstruse study and classic theme to pore over long letters from my Annie—letters which, to my wearied soul, were as refreshing as the desert spring to the fainting traveller.

"Even Frank, for a while, seemed to be as much as ever my friend; but it was only seemingly, as I afterwards found. We were both acknowledged by our classmates as candidates for the highest college honours, and each was striving to win them.

"Frank had set his heart upon delivering the college address, and so had I. Had he owned it to me like a man, I should have honoured him for it, but he ever denied it, saying that he cared not for paltry college honours; while to the next person he met he said, 'Bell thinks to distance me in this race, but he'll have to try pretty hard, I'm thinking. He's a conceited fellow, but I'll teach him how to cope with me.'

"I despised such meanness; and, shortly afterwards, I met him, and told him that I considered such language as what hardly could be expected from one who professed to be a friend. For a moment he equivocated; but I passionately exclaimed that I scorned his threats as I did him who uttered them, and turning away, left him, little thinking that I had aroused all his evil passions.

"Shortly afterwards, I received a letter from Annie—a cool, carefully worded letter, so different from the previous effusions of her warm, loving heart, that I knew not what to think.

"I hastened to reply, requesting an explanation, and again was my heart racked with undefinable fears, lest I had by some means lost her love; yet strange to say, I never once suspected treachery—never once suspected but that Annie was the author of the letter. Again I wrote to her, reiterating my vows of love, and conjuring her to deal faithfully and candidly with me; and in a few days, I broke the seal of a letter, which should either remove all doubt and anxiety, or blight my hopes for ever. Ah, it was a cruel, cruel blow! and the sunlight of happiness was shut out from my soul, for ever, as I then thought.

"Now Annie informed me that circumstances rendered it necessary for her to say that she considered our engagement as having been too hastily formed upon too slight an acquaintance—that she had been interested in me it was true, and this feeling had been mistaken for love, but that recent events had revealed to her the true nature of her feelings, &c.

"Lilly, all hopes died within me then!

"Henceforward, I mocked at the words—*true love*. I scorned those who treasured woman's affection as a holy thing; my laugh rang the loudest when among my gay companions, and my steps were the most buoyant, though my heart was aching with intense agony all the while.

"Alas, that I was thus hasty in believing! Would that I had sought Annie

then; but pride, stern pride, said, 'Go not to her; humble not thyself again to woman, who trifles with the best feelings of the heart.'

Here Lilly's face flushed with indignation at this imputation, Harry smiled such a sad, mournful smile, that she again leaned her head confidently upon his knee, as he continued:—

"I graduated with the highest honours, amid the plaudits of friends, even the admiration of envious rivals; but what cared I for triumph or—for fame? To me success was but as a bitter mockery, since the boon of love was denied me.

"Friends crowded around, congratulating me upon one of my 'happiest efforts' as they termed it. Even Frank Waters gave me a cordial grasp of the hand, while words of courtesy fell from his lips. I treasured no ill-will against him, and readily accepted his good wishes and congratulations, glad that we were friends again.

"The villain! A smile was upon his lips, but I knew not that it was a mocking smile at the misery he knew I was suffering! And so we parted.

"A brilliant future lay before me, at least my friends said so.

"I was young, wealthy, and they said I was talented. They wished me to my attention to the law, prophesying for me a bright career, but all to my arpose.

"Hope was dead; ambition's voice was hushed; the future had no charms for me. I grew morose and taciturn; withdrew from society, refusing all invitations to mingle with the young and gay, saying, 'Why should I go with them? They are happy, but joy is not for me!'

"Nearly two years had passed, when one day in glancing over a newspaper I read the marriage of Anne with James Morton, brother of Carrie Morton, her intimate friend.

"But what cared I? Did I not know her to be false? It was nothing more than that another had won her! It was thus that I reasoned; yet I a confused ringing in my ears, and a sudden shock as though I had been stunned by a heavy blow, when I was conscious what I had read.

"But I rallied my strength again; and then I thought that I would do with the oft-repeated advice of my friends, who, wishing to draw me from seclusion, urged me to turn my attention to professional pursuits; but it was but for a moment that I wavered.

"Injured pride said, 'Go win yourself a name among men, she will repent that she refused one honoured and esteemed by while reason said, 'Remain here;' and to her voice I listened, for the secluded life which I led here in my ancestral home, where my strains dwelt, accorded far better with my wounded feelings, than would the and cares, and toil, while pursuing fame.

It was about three years after Annie's marriage, that business led me to the village where I first met her. How every scene and every object served to remind me of the past! I rode by the 'Mansion House,' where we had met on the morning of that brief and happy day. I inquired for Frank, and learned that he was in a western city, eminently successful as a physician. I drove through the woods where I had been before with a light and happy heart; alas! how changed now! I wandered down by the green river and lingered long beneath the shade of those magnificent trees, for thoughts swept across my soul. Here I had listened to words dearer to than life—words that were but idly pledged, and had been broken, ah, how lightly! and bitter feelings rose within me as I mentally reviewed the

At the village inn, I inquired for all my old acquaintances, excepting Annie. Of her I spoke not. I could not speak of her, when they would tell me that she was happy as the wife of another. I called upon Miss Morton, the friend of Annie, and found she had been married some time to a farmer in the village.

She received me cordially; spoke of our pleasant acquaintance during brief sojourn in C—; but, although I thought it very strange, never once reverted to Annie.

I was dying to hear but one word regarding her; yet she never once referred to her. What puzzled me still more was the strange expression of countenance more when, in reply to questions, I informed her that I was unmarried, adding that 'I should live and die an old bachelor.' She hastily waived the subject, as if unpleasant to her.

"Just at this moment my attention was arrested by two little children apparently of the same age, who burst into the room, frolicking in all the glee of innocent childhood. 'Your children, I presume,' said I, addressing Carrie; taking a fair-haired girl upon my knee, and caressing her as I spoke.

"This is mine, patting the curly head of a fine little boy; 'the other is my niece. You knew Annie Gray, her mother,' said she, after a slight pause. Had a serpent stung me, I could not have started quicker than I did.

I had been caressing the child of the very woman who had proved so false to me, yet I found strength to speak, and faintly gasped—'And Annie, is she happy?' 'I trust so,' was the reply, in a sad voice. 'Poor thing, he suffered here keenly enough, but has at length gone where sorrow never comes. Oh, it was unkind, it was cruel of you to treat poor Annie so!' and he tears ran down her cheeks.

It flashed upon me in a moment with overwhelming force. Annie was dead!

"How! what mean you?" cried I. 'I unkind? I cruel? You wrong me, indeed. Did not Annie prove false to me?' I almost shrieked, dreading yet wildly anxious to hear her say that Annie had been innocent; for such words seemed to imply.

Can it be possible that you have been deceived?" said she. "Annie loved you as she did her own soul."

"But she scorned me! she wed another!" and I pointed to the little child in a manner that terrified it.

"There has been a sad wrong done you both here. Listen a moment, and I will tell you all;" and she spoke thus:—

"Annie and I had no secrets from each other; and she told me with a smile, while the light of happiness danced in her eyes, that she had surrendered her happiness to your keeping. Aye, if ever man was beloved, you were beloved by Annie.

"One day she came to me, and I saw that she had been weeping. I inquired the cause, when she laid before me a letter so different from the one preceding it, that she knew not how to regard it. There was nothing written which in itself was calculated to wound the feelings, but there was lacking the depth of tenderness which had characterized your previous com-

"I advised her to take no notice of it, but to write as she had done before. She did so; but when she came to me afterwards, with another epistle still more formal than the first, I knew not what to advise her.

"About this time, Frank Waters wrote to a friend, and casually remarked that he hoped Miss Gray was not interested in Bell, for it was evident to him that he had nothing for her, as report said he was engaged to a very beautiful and wealthy lady."

"This soon came to Annie's ears. She bent her head in anguish, for her dream of love was crushed. What bitter tears she shed as she told me of the visions of happiness she had formed, that were wrecked for ever."

"Lilly, I could hardly restrain myself sufficiently to listen with any degree of composure to the narration of Carrie. How I longed to search out the monster who had secured all my happiness, for it was evident now that Waters had been the author of those letters purporting to come from Annie."

"She continued: 'Annie wrote to you once again, saying that she gave you up; and since it was evident you cared not for her, no love of hers could ever fetter you, although it cost her many a bitter tear.

"Her attention and time was now wholly engrossed by her father; who had a failing for some time; and although many would gladly have won her, she repelled all advances, saying that her duty was to remain beside her

My brother James had sincerely loved Annie, yet always concealed a passion, thinking she loved another."

"He was extremely sensitive, never enjoying good health; and not daring to appear other than as a friend to Annie; until after months had elapsed, he told his long-concealed love, and besought her to become his wife. Then I do not think Annie would have consented, had she not yielded to wishes of her father; and so she gave James her hand, saying, 'You know I have suffered, and if you can be content with such love as I have to offer you, it is yours.'

"They were married. One child was given them, and my brother had but not begun to taste happiness, when the destroyer came and summoned him away. He died, blessing his Annie, who had ever been to him a true wife—smoothing his pillow, and ministering to him to the last. She was now alone with her child, her father having died shortly after her marriage. A few months went by, and her steps grew feeble, and her eyes dim; and one summer's eve she also passed away like the breeze. Her last words were, 'all may love in Heaven!'"

"I knew all now: I was undeceived, and I thanked God that Annie had been true. I kissed her child, and vowed that henceforward she should be to me as my own. I have never seen Waters, and I pray God I never

"Lilly, eighteen years have passed away since then; and though my years number no more than do many who are in the prime of life, yet I am an old man—old before my time.

"Sorrow has silvered my hair and furrowed my brow, yet I am young again when I gaze upon you. Then do I again live over the past; for in your eyes I see again the love-light of other days. Need I tell you that Annie was your mother? And do you wonder now, Lilly, that I am an old bachelor?"

Uncle Harry's voice was husky, as choked for utterance; while Lilly answered not, but arose, wound her arms about his neck, and kissed his ear-bedecked cheek, and then left the room.

Half an hour afterwards she sat in her own room, with the tears falling upon a small miniature painted on ivory, which she held in her hand, as she murmured, "Sweet mother, why wert thou so unfortunate, while thy life is only too happy?" And below, in the parlour, gazing sadly, yet tenderly, upon a tress of golden hair, entwined with one of a deep, rich red—pledges of early affection, more prized than costly orient gems—sat in silence and deep thought, Uncle Harry, the old bachelor.

**GUARD AGAINST VULGAR LANGUAGE.**—There is as much connexion between the words and the thoughts, as there is between the thoughts and the words; the latter are not only the expressions of the former, but they have power to react upon the soul, and leave the stains of their corruption there. A young man who allows himself to use one profane or vulgar word, has not only shown that there is a foul spot on his mind, but, by the utterance of that word, he extends that spot and inflames it, till, by indulgence, it will pollute and ruin the whole soul. Be careful of your words, as well as of your thoughts. If you can control the tongue, that no improper words are pronounced by it, you will soon be able also to control the mind, and save it from corruption. You extinguish the fire by smothering it, or by preventing bad thoughts bursting out in language. Never utter a word where, which you would be ashamed to speak in presence of the most refined male or the most religious man. Try this practice a little while, and you will soon have command of your tongue.

## BEARDS AND SHAVING.

CONNECTED with the subject of beards, there is much that is curious and interesting. The difference which the beard exhibits in different countries is a curious matter for inquiry. It is the cherished appendage of the despised oxeroseous of others: some have it in profusion, others are almost without it. In hot countries, the beard is dark, dry, hard, and thin; in cold, thick, curling, and light in colour. Poor, dry, and indigestible food renders the beard hard and bristly; while wholesome and digestible nutriment makes it soft.

Civilised life appears to be most favourable for producing luxuriant beards. Savages are seldom furnished with large ones; though there is, perhaps, no people, however savage, upon whose chins a few stunted and stray hairs do not appear. At one time it was believed that the Indians were naturally destitute of beards; but stricter inquiry has since shown that they pull out, root and branch, the scanty supply of hair with which their chins are furnished. In this they are not alone; and it may be generally stated, that those on whose faces no culture can raise a decent beard, consider the little they possess a deformity of which they would be well rid.

Excepting the Greeks and Romans, all the nations of antiquity appear to have prized and cultivated the beard. Even in Greece, it was worn until Alexander's time, and in Rome, until 300 B. C. In both nations beards were retained by the philosophers and priests long after they were given up by the mass of the people. Among the Egyptians, on the other hand, it was the priests that shaved, and that not only in the face, but the head and the whole body. In times of mourning, however, they let their beards grow; and so did the Romans, after they became a shaven people; while the Greeks, in the time of the abolition of slavery, were accustomed to shave. After the abolition of slavery, among the Romans a long beard became a token of its owner's pride. On the other hand, the Franks, who were a bearded people, had all bondsmen to shave the chin.

In the middle ages beards were generally in high esteem. Among the early French monarchs, it was the custom to attach three hairs of the sovereign's beard to the seal of all important official documents, which probably became so numerous as to threaten the royal beard with extinction, and the custom was abolished.

The natives of Europe, generally speaking, are now a shaven people, while the Asiatics are as generally bearded. Among Asiatics, the Persians have the finest and best cultivated beards; we shall, therefore, bestow a few remarks upon Persian beards. The Persians, in early times, paid extreme attention to their beards. According to Chrysostom, their kings had them interwoven with gold thread. During one dynasty, however, only moustaches were allowed. But at the present time, the ancient zeal for them has revived, and the king has a magnificent specimen—one reaching to the waist, and claiming the admiration and adoration of his numerous subjects. Naturally the beards of the Persians grow to a larger size than those of any other people. Mostly, they are black by nature; but the practice of dyeing, either to strengthen the intensity of the black, or to give that colour where it does not exist, is universal. The operation of dyeing is both tedious and painful, and must be undergone every fortnight. It is always performed in the hot bath, as the hair is then saturated, and takes the colour better. At first, the beard is plastered over with a thick paste of henna, which, after remaining for about an hour, is washed away, leaving the beard of a deep orange colour, bordering on that of brick-dust. Many of the common people are so enraptured by the meteoric appearance of the beards produced by this first application, that they decline having it changed to black. In the second operation, another paste, made from the leaf of the indigo, is applied in the same manner, and allowed to remain for two hours, after which the patient leaves the bath with a dark bottle-green beard, which, in the course of a few days, becomes a jet black. Throughout all this, the patient is obliged to lie on his back; while the dye, in the application of the second preparation, causes the lower part of his face to smart and burn, and contracts the features in a most painful manner. The whole operation is one of great delicacy, and often results in a purple or parti-coloured beard.

The comparative advantages and propriety of shaving, and of permitting the beard to grow, it is not easy to determine. Much has been said that is good for both sides; yet, after all, it seems more a matter of taste than anything else.

The practice of shaving probably originated at first from its being found that the beard afforded too good a hold to an enemy in battle; and for this cause shaving was originally practised among the Greeks, who continued in it until Justinian's time, when long beards came again into fashion, and so remained until Constantinople was taken by the Turks. The Romans appear to have derived the custom of shaving from the Sicilians, who were of Greek origin; and the refinement of daily shaving was first introduced by no less a personage than Scipio Africanus. At the close of the Republic beards were rare; and some of the Emperors lived in great fear of having their throats cut by their barbers. For the sake of hiding the scars on his face, the emperor Hadrian wore a beard, and this, of course, brought that appendage again into use; but the custom did not long survive him.

Among the Romans, shaving did not commence with the appearance of the hair; the youth was permitted to raise a small beard which was shorn for the first time with great ceremony. Persons of rank had the operation performed for their sons by men of rank higher than themselves; and by this act such person became the youth's adopted father. The day was kept as a festival, visits were paid to the young man, and he received presents from his friends. The first crop of beard was solemnly consecrated, rally, to the household gods.

The ancient Germans wore only the moustache. They allowed no young man to shave, or cut his hair, until he had killed his enemy in battle. The ancient Goths, Franks, Gauls, and Britons, also wore only moustaches, which they permitted to attain to an enormous size. The Saxons wore long beards until the introduction of Christianity; after which they dispensed with all but the moustache. The Normans shaved their beards entirely, and looked upon beards as indications of want and misery. Accordingly, being great apostles of shaving, they succeeded in compelling, by persuasion, the English to clean their upper lips. In the fourteenth century, beards became again fashionable; but commenced to decline since more about the beginning of the seventeenth, since which time they have experienced many fluctuations—now being favored, now slighted. Beards, though useful in the battle-field, yields to French caprice; for it is of the later changes which have taken place in beards, France has led the way. The Spaniards were more tardily influenced by French caprice. A French prince, however, with a shaven chin, having introduced the Spanish throne, the courtiers, with heavy hearts, lightened their heads of those hairy burdens, and the Spaniards, according to a popular proverb, "with their beards, lost their souls."

It is a singular fact, that in most countries where the beard is allowed to grow, the hair of the head is shaved. This is particularly the case in Mohammedan countries, in which, in general, only a small tuft of hair is left on the crown of the head, for the purpose of adorning their Prophet a hold in raising him to Paradise.

## SIMILES.

As wet as a fish—as dry as a bone;	As blind as a bat—as deaf as a post;
As live as a bird—as dead as a stone;	As cool as a cucumber—as warm as a
As plump as a partridge—as poor as	toast; [ball;
a rat;	As fast as a flounder—as round as a
As strong as a horse—as weak as a cat;	As blunt as a hammer—as sharp as an
As hard as a flint—as soft as a mole;	awl;
As white as a lily—as black as a coal;	As red as a ferret—as safe as the stocks;
As plain as a pike-staff—as rough as	As bold as a thief—as sly as a fox;
a bear;	As straight as an arrow—as crook'd
As light as a drum—as free as the air;	as a bow;
As heavy as lead—as light as a feather;	As yellow as saffron—as black as a
As steady as time—uncertain as weat-	shoe;
her;	As brittle as glass—as tough as gristle;
As hot as an oven—as cold as a frog;	As neat as my nail—as clean as a
As gay as a lark—as sick as a dog;	whistle;
As slow as the tortoise—as swift as	As good as a feast—as bad as a witch;
the wind; [unkind;	As light as is day—as dark as is pitch;
As true as the Gospel—as false as	As brisk as a bee—as dull as an ass;
As thin as a herring—as fat as a pig;	As full as a tick—as solid as brass;
As proud as a peacock—as blithe as	As lean as a greyhound—as rich
a grig;	as a Jew, man;
As savage as tigers—as mild as a dove;	And ten thousand similes equally new
As still as a poker—as limp as a glove;	—for the "Home Companion."

## BEAUTY IN MEN.

"I CAN tell when a woman's face is beautiful," said a friend to us the other day. "but I don't know what you call a handsome man."

We might have referred him to the popular romances of the present day, for the description of manly beauty; but having little sympathy for those perfect beings with expansive brows of snowy whiteness, oblong, drooping, deep, piercing blue, black, or grey eyes, finely chiselled features, rich, wavy curls, and all the minutiae of fancied perfection, we simply said we believed there was no particular standard of beauty recognised among the ladies with reference to his sex, and we think that in so saying we were correct.

"I do not like a pretty man,  
With pretty lip and pretty walk,  
With hands that prettily sport a fan,  
And delicate lips that prettily talk."

says a lady at our elbow, an interesting and sensible one, too.

We believe, as a general thing, ladies do not like what are called pretty men; their style of face is too softly feminine; there is generally no break-up in the monotony of expression, no sudden gleam of joy, no flitting ray of thought; they are like a cloudless sky, which needs here a massive array of dark clouds, there a broken line of fleecy vapour, here a bright spot of brilliant hue, there a pale azure, a soft, almost imperceptible blending into the white pure light that sometimes silvers our northern heavens as with a dazzling wreath, to make its beauty impressive and lingering. A pretty man is too apt to be mincing and affected; his smile is always sweetly interesting; his whiskers—he would not have them encroached upon a tenth of an inch for a dozen little worlds like ours; his reputation is at stake should an unsightly pimple obtrude its hideous outline upon the fairness of his complexion.

Strong outlines of face, well-defined brows, marked and prominent forehead, any sort of eyes, so that they are capable of being lighted up with the soul—these, with us, constitute a handsome man, for the reason that rough, heavy features, if they are not in any way deformed, are capable of the greatest play of expression; and expression, after all, is the truest test of

beauty, for it captivates while it pleases, and stamps itself upon the heart, not upon the imagination. Do we not weary of the most perfect picture? Even in contemplating the cherished semblance of a friend, the heart aches for a change; a frown would be preferable to that immovable placidity or unbending sternness.

The frank, open countenance, cheered with the light of a sunny disposition; the thoughtful, placid brow; the firm when in thought, yet flexible and smiling in conversation; the possession of a refined nature illuminating every lineament: give us these in preference to all your set, fine faces. And even the irregular features of a man are valued decidedly plain men, we have seen glow with an expression so beautifully beautiful, as some all-pervading theme of interest lighted up the face, so that the coarse mouth, the crooked nose, even the heavy, shapeless forehead, and the dull eyes, have caught a reflection of the inner loveliness—the beauty of the soul.

Now, gentlemen, remember it does not need the aid and face of an Adonis to please and interest us ladies. Only let us rest upon the countenance the stamp of a cultivated mind, or the quick lighting up of the eye as some generous impulse prompts to an act of kindness; let us behold you at once dignified and courteous, gentle and refined in all things, even in the slightest delect in your attentions (especially to us ladies), unobtrusive in your will only when in the absolute right, gentlemanly in your address, and that in person, and we will all—those whose opinion is of any value, of course—pronounce you handsome, without a dissenting voice.

Remember that the qualities of the heart and the actions of the life stamp the features with an ineffaceable mark, either with goodness or villainy; and cultivate those affections and habits which will write upon the tablets of your countenance that which no one reading can but love and admire.

## THE PIONEER'S DAUGHTER:

## A TALE OF INDIAN CAPTIVITY.

(Continued from Page 162.)

## CHAPTER IV.—THE CAPTURE.

ON purring for new adventures at the Rendezvous Mount, as one of the scouts appropriately termed the place, Colonel Danforth and Edward embraced each other, and separated, as friends who are about to encounter perils, with a great uncertainty of ever meeting each other again on earth. Tears dimmed the eyes of both for the time, and the farewell prayers for each other's safety were said in tones tremulous with deep emotion. Each party had been assigned their post for reconnoitring, and each cautioned the other against unnecessary exposure. Canale was to accompany Edward, Miller the Colonel, Wade the Lieutenant, Hale (another of the scouts) the Sergeant, and the two remaining scouts were to go by themselves. By this arrangement, each party had an experienced woodsman to act as leader, who perfectly understood the habits of the Indian, and knew the caution necessary to succeed in their enterprises. Thus, two by two, they led off, in different directions, for different points of observation, and, in five minutes from the time of starting, were effectually separated.

The night had set in dark and gloomy. Clouds driven from the east overspread the heavens, and not a star was visible. The wind still blew strong and cold, but seemed to be more damp than during the day, an almost certain prognostic that a storm of rain would follow soon. From Rendezvous Mount to the Piqua village, the distance was about half a mile; and for a quarter of a mile, the direction taken by Canale and our hero led them down a declivity, from which the lights of the town were plainly visible. They then came to a level, but heavily timbered bottom, which extended to the Miami, on the opposite side whereof they could dimly perceive the wigwams of the Indians, by the light of their fires, scattered along a high bank, that rose almost abruptly above the water, which was here too deep to be forded.

"We'll hew to swim, or go below," said Canale; "and I think we'd best go below, for its powerful cold work swimming, and it might not be the wisest thing to come out of the water right under the noses of the Indians."

"You are right," rejoined Edward; "but how will our friends get across, unless they come below also?"

"That's their look out, and not ours. May be they'll go above, and may be swim. If we've got to look after them, it'd be best to had 'em with us; but since they aint with us, it's best to look arter ourselves. Yes, we must go below;" and, as the old woodsman uttered this, he glided away down the bank of the river, and Edward, with gloomy feelings, followed in his steps.

A quarter of a mile brought them to a point where the current ran swift; and, cautioning Edward to be careful of his steps, and not let the stream prove too much for him, the old scout entered the water and waded across, apparently without difficulty. Not so Edward. Unused to fording streams, and the river in some places being breast high, he found it exceedingly troublesome and laborious to maintain an upright position himself, and keep his rifle, pistols, and ammunition above water.

He succeeded, however, in gaining the opposite shore in safety; but was so fatigued by his exertions and benumbed with cold, that for several minutes he was unable to proceed. But intense excitement, caused by the reflection that he might now be near her he loved, soon aroused all his faculties, and served him to new exertions; and, starting abruptly to his feet, he declared his readiness to go on without more delay.

*Edward, who had just gained the outside of the wigwam, with Lucy in his arms, was laid senseless upon the earth by a blow from a war-club. At the same instant, some three or four savages, one of them bearing a lighted torch, sprang over his body, burst into the wigwam, and secured Carnele a prisoner."*

When he came to the trial, however, he found that he had overated his power of locomotion; for a strange, cold numbness seemed to chain his nether limbs to the earth, so that it was almost impossible for him to get one foot before the other. At length, after going a few rods, he sunk down upon the ground, and in as loud a tone as he dared to use, called to his companion, who was several paces in advance, to come to his assistance.

"What's the matter?" inquired the old hunter, anxiously, as he retraced his steps to where Edward was lying.

"I fear the water has so chilled me that I shall be unfit for further service to-night," replied Edward, with a deep sigh that amounted almost to a groan.

"That comes o' being raised in the settlements," rejoined the other, with something like contempt. "I al'ays arg'd they was the places for spilin' all young chaps like you. They're only fit for sich good-for nothin', soft-handed, inealy mouthed things as doctors, lawyers, women, and them; and ef I'd got a boy—which thank fortin', I haint—I'd stripe his back ef ever he staid over night in one on 'em till he was a man grown. Oh, it's woful to think what people now-a-days is comin' to! It's my opine the men is all turnin' women, and that the world will disgenerate till thar wont be a man of as much account as a two-year old Injen baby. Now I've bin in the water when it war so cold it friz right afore my eyes; and I've staid in't for more'n a hour to time, and never felt the wuss for't when I got out. But, howsoever, I reckon you think as how this here kind o' talk don't help your case now—which is a fact—and so I'll set to work and make up a fire to warm you by."

"But surely, Mr. Carnele——"

"Don't Mister me!" interrupted the other. "I don't want none o' them settlement fixins hitched to my name. I'm jest plain John Carnele, and John's the shortest, and saves talk. Jest call me John when I'm alone; and of thar's another John along, why jest put on the tother for a distinguisher."

"Well, John, surely it would be imprudent to start a fire here, so near an Indian village. Why, we should have the whole town upon us in less than an hour."

"Tush! you're a boy, Ned—a settlement boy at that—and haint follered by a few as many trails as I hev, nor laid out in the woods quite so many nights, with howlin' imps all round ye. I said, I'd have to start a fire to warm ye by—but I didn't say I war going to raise a light for Injens to look at."

"But where there is a fire, there must of course be a light," persisted the other.

"And that's whar you show your ignorance," rejoined the scout, "and your settlement raisin'. But wait a bit, and you shall see what you never seed afore."

Saying this, the old hunter leaned his rifle against a tree, and drawing his

hatchet from his belt, began to dig a hole in the hard earth at his feet, scooping up the dirt, and throwing it out with his hands. When he had made an excavation large enough for his purpose, he collected a few dry sticks and placed them in the hole, in the form of a coal-pit or cove, with a handful or two of leaves at the bottom. These he next ignited by means of flint and steel, and then covered the whole over with the loose earth thrown out, taking care to leave one or two small air-holes on either side.

"Thar," he said, as soon as he had done—"thar, young man, thar's a fire without a light; and ef you'll jest plant yourself on top on't, you'll find the frost 'll leave your legs right sudden."

Edward immediately followed his directions, and in a very short time the steam began to rise from his wet garments, while the warmth restored an animated circulation of blood to his chilled and almost frozen limbs. As he revived, he was profuse in his thanks to the old hunter, for having, as he expressed it, given him renewed life. In the course of fifteen minutes, he declared he was again ready to pursue his adventures, and accordingly both set off toward the town, Carnele leading the way, and charging the other repeatedly to exercise great caution, and not to make the least noise.

Less than a quarter of a mile brought them to the outskirts of the Indian village; and, by the aid of a few fires kindled outside, they could plainly perceive the lodges of the savages scattered over a large area of ground, and occasionally a dusky figure stalking about in the uncertain light, which, together with the growling and barking of a few restless mastiffs, warned them they were already treading on dangerous ground, where a single wrong movement might prove fatal to their hopes, if not their lives.

The night, however, disagreeable as it appeared, was favourable to their adventure by keeping most of the Indians closely housed; while the sighing and moaning of the wind prevented any ordinary sound from being heard—or, if heard, proved a ready means of accounting for it without creating suspicion or alarm. The main thing to be feared was the watchful dogs, whose keen sense of hearing was less easy to be deceived than that of their masters, while their power of smelling, or scenting, would be almost certain to detect the presence of strangers.

"It won't do to go into the village here," said Carnele, in a whisper. "No; we'll hev to go up a piece, and wait a spell."

Our two friends accordingly moved away, and taking a circuitous route through the forest, approached the town in the rear, or rather on the side farthest from the river. Ascending a little hillock, which was well covered with bushes, they found themselves in a very comfortable position for overlooking the lodges of the Indians, and noting everything of consequence taking place within their limits. Fearing the effects of the cold upon his companion, whose garments were by no means dry, and thinking he might as well enjoy the luxury of now warming himself, Carnele immediately set to work, and prepared another underground fire. This done, both he

and Edward seated themselves over it, with the design of waiting till nearly midnight, or until the savages should have retired to their slumbers, before making any further explorations.

But they had not so long to wait as they at first anticipated, for in less than half an hour, the storm, which had been so long brewing, came on with fury, and the rain poured down in torrents, completely drenching our spies, and extinguishing the fires about the village. It was so cold that the drops often froze as they fell, forming a kind of snow which the wind drove with such fury against the faces, hands, and necks of our friends, as would have rendered their situation almost too uncomfortable to be borne, had not their spirits been cheered by the reflection, that the same pallings would drive their enemies under cover, and consequently lessen the danger of detection.

"Everything so far favours our enterprise," whispered Edward; "shall we not venture now to enter the village?"

"Directly," replied Carnele, "just as soon as I can git my dog-feed ready;" and he unstrapped his knapsack from his back, and began to fumble inside of it.

"What do you mean by dog-feed?" inquired Edward.

"Why, I've got a fixter here, that'll quiet dogs better nor all the potheecases you could buy from the fast settlement to sunrise. It's made from yarbs, and I made it myself—though I'll allow it war an old Indian as fast showed me how to do it. It's made in little balls like, about the size o' bullets; and all we has to do in goin' into the village, is to scatter 'em around; and the fast dogs as comes about will nose on 'em and eat it, and it'll be the last fodder he'll ever cram. It'll make him arful dry; and he'll break for the drink; and the fast swallow he takes 'll do his business, and ten to one but the stream takes his body down it; and that'll be the end o' him. Ah! here it is, all right—so now we'll be for a tramp. Cover your w'pons as much as you can, and mind your powder don't git wet."

Saying this, the old hunter replaced his knapsack on his back, and rising to his feet, led the way into the village; treading very cautiously, and scattering his unknown compound for the destruction of the canine race in every direction. Either this latter worked to a charm, or else the dogs, like their masters, did not care to encounter such uncongenial weather, for not one of them approached our friends as, slowly and cautiously, they now moved about among the huts, gradually nearing the centre of the village, where three or four lodges larger than the rest, proclaimed them the abodes of the chiefs of the nation. Most of the huts were dark inside; but, occasionally, a ray of light gleamed out through the crevices made by the swaying to and fro of the skins, which were hung at the doors to protect the inmates against the inclemency of the weather. Wherever a light of this kind could be seen, Edward or his companion would approach the hut, and cautiously raise the skin a little, and peer inside; and they would generally perceive a few Indians, or one Indian and his family, either lounging about in careless attitudes, stretched at full length on their rude pallets, or sitting near the light, engaged in making wampum belts, mending or making moccasins, and other similar employments.

The interior of some eight or ten huts had been examined in this manner without the occurrence of any incident worthy of note, when, just as Carnele approached another, a large Indian suddenly pushed aside the skin and came out. The old scout suddenly drew back, and stood still, and the savage passed close to his person without perceiving him. Carnele then softly advanced to the rear of the hut, where he remained in deep shadow till the Indian had re-entered when he heard him comment, in his own peculiar way, upon the rough state of the weather. Then he drew a long breath of relief, for he had been in great fear lest Edward should be discovered, but, fortunately, the latter had seen the Indian also, and had exercised sufficient presence of mind to remain motionless till the danger was past.

Some three or four more lodges were now examined in the same manner as those described, which brought our party almost to the centre of the village, and still no traces of the pioneers had been found, and they were already beginning to think themselves deceived by the information obtained from Posetha, and were debating whether it were best for them to look farther or retrace their steps, as they had even now exceeded the limits assigned to them at Rendezvous Mount, when a long deep moan, followed by a sharp reproof in broken English, proceeding from a darkened hut close by, reached their ears, and turned their thoughts into an entirely different channel, arousing both curiosity and sympathy, and, in the breast of Edward at least, exciting emotions strange and indescribable.

Without speaking a word, and scarcely venturing a natural respiration, our two spies, acting in concert, slowly and silently drew near the hut whence the sounds proceeded, and listened. For some moments all was still; and then several low moans succeeded, and another sharp and angry reproof was given, which evidently came from the lips of an old squaw, and, from the tenor of the language, left no doubt in the minds of our friends that it was addressed to a white female prisoner.

Oh! how wildly beat the heart of Edward; and what strange, almost uncontrollable, feelings were excited in his breast, as these few broken sentences reached his ear.

"Lie down! why you make noise? Me strike you, beat you, take you scalp, you no be still and go sleep."

What would he not have given then to know to whom they were addressed? Could it be that he was so near his dear Lucy, and that it was her groans, wrung from an agonized soul, that had sounded in his ears, and caused those harsh threatenings in return? And oh! if such were the case, how glad would he now take her place, and endure all the horrors of imprisonment, if by this means she could be restored to liberty and happiness. Edward loved, and loved truly, and there was no sacrifice too great for him to make for the object of his affections.

All within had once more become still; but without, the storm was raging

as fiercely as ever; and the wind moaned and whistled among the lodges and flapped the skins, and drove the rain and sleet against them with a loud pattering sound. Taking advantage of the noise, Edward now drew Carnele aside, and in low hurried tones informed him that he had resolved upon the bold expedient of entering the hut, and endeavoring to ascertain whether it contained any one of the party of whom they were in search.

"Why, boy, it's a foolish risk, and no good can come on't," was the hunter's reply.

"At least, I can ascertain whether my hopes have any foundation."

"And if they hev, what'll you do?"

"Endeavour, by some means, to get the captive away."

"Yes, and hev the whole village at your heels. No, it'll never do for you to go, lad, for you've not had experience enough; and, besides, you'd be too nervous in such a case to do things right. Ef anybody goes, it'd best be me; and ef thar's only one old squaw thar, I'll try and still her."

"Surely, you would not murder her!" exclaimed Edward, his mind revolving at the thought of such extreme measures.

"Not ef I could get along without, sartingly; but ef thar's a white captive in thar—and thar must be, else why did she speak English to her?—I'd fetch her out, at all risks, or die trying."

"Well, then, go; but, for Heaven's sake, do no violence if it can possibly be avoided!"

"Don't fear for me," rejoined the old woodsman. "I'll be very keeful—I al'ys is keeful. Here, take my rifle, and wait for me at the door; but don't move nor speak till you hev orders from me; and mind you keep the lock down, and don't let the powder git too damp-like."

"May heaven prosper this undertaking!" was the silent prayer of Edward, as he retraced his steps to the lodge, preceded by Carnele.

The latter now turned to his companion, put his mouth to his ear, and said, in a whisper—

"Stand right still, and don't move. I'll jest slip round this old shanty, and see ef thar's any other opening," and the next moment his dusky figure was lost in the darkness. Something like a minute elapsed, when he again made his appearance, on the opposite side of the hut, and added, "It's all right; be keeful, Ned, I'm jest a-goin' to enter now—keep a good look-out;" and with these words he dropped quietly to the earth, extended himself at full length on the wet ground, and cautiously raising the lower part of the skin, which hung at the door, put his head under, and slowly and silently drew his body after him.

The moment of Carnele's final disappearance was one of the most mentally and physically painful to Edward he had ever experienced. It seemed to him as if his blood had all rushed to his heart, and his heart to his throat, producing a strange species of suffocation and strangulation. For some moments, as he stood and listened, he could not breathe; and then, with a degree of pain that almost forced him to cry aloud, his heart seemed to leap back to its proper place, and began a series of palpitations, that to him really appeared audible; and which, to his excited fancy, threatened to force a passage through his breast. Gradually he grew calmer; and then he approached the hut, so as to place his ear against the skin at the entrance, and listened, with every faculty of hearing exerted to the last degree his will could give it. For a time, however, all remained still within; and no sound, save that caused by the driving storm without, could be heard. Suddenly, a quick, sharp, Indian ejaculation, followed by a stifled scream, smote upon his ear; and then he could distinguish sounds indicating a struggle where one is endeavouring to strangle another. Next he heard a voice, that sent a thrill of joy and fear through every fibre of his frame, exclaim—

"Oh! Heaven help us! What is taking place here! Mercy! mercy!—help! help!"

"Hut! hut!" cried the voice of the old hunter, "or you'll spile all!"

"Who are you?" cried another female voice.

"A friend come to save you, and git ye clear of these blood-thirsty varmints. Be quiet, now, or else go out, where you'll find a young chap ready to take you away."

"Quick, then, release us!" cried the first speaker—"for we are bound by cords!"

"Ha! that voice—that voice!" almost shouted Edward, bursting into the lodge. "Lucy! dear, dear Lucy! is it indeed you?"

"Edward! oh, merciful Providence!" was the response; and then the fair speaker burst into tears.

"Quick! quick!" rejoined Edward—"where are you?—let me cut you loose!—we have not a moment to lose!"

"You're mad—mad, boy—mad!" fairly growled Carnele. "You've ruined all by your foolish doin's!"

"What do you mean?" gasped Edward, as he cut the cord that bound Lucy Danforth, and almost convulsively clasped her in his arms.

"You talkin' and yellin' has roused the Indians in the other lodges, and they're hurryin' out in search of the cause."

"But we may escape!" rejoined Edward, tremulously. "Nerve yourself, dear Lucy, for the effort, and lean on me;" and as he spoke, he raised her in his arms, and made for the door.

"And what will become of me?" cried the other female prisoner.

"Hush! hush!" began the old hunter, "I'll—"

The sentence, if finished, was drowned by a loud, shrill whoop; and Edward, who had just gained the outside of the wigwam, with Lucy in his arms, was laid senseless upon the earth by a blow from a war-club. At the same instant, some three or four savages, one of them bearing a lighted torch, sprang over his body, burst into the wigwam, and secured Carnele a prisoner.

**PRIZE ENIGMA COMPETITION.**—The Competition for Prizes offered by the Editor of *THE FAMILY FRIEND*, for the Best Solution of ENIGMAS for LADIES, GENTLEMEN, and YOUTHS, in three separate classes, is now open. The PRIZES amount, collectively, to ONE HUNDRED AND SEVENTY-FIVE GUINEAS.

The Three ENIGMAS are contained in *THE FAMILY FRIEND*, No. 61, for JANUARY 1, 1852.

In the same number is commenced a NEW TALE, of great interest:—*THE WORLD'S OPINION; OR, THE HEART'S TRIALS*.

London: Houlston & Stoneman, and all Booksellers.—Price 2d.

Parts I. & II. of the *HOME COMPANION* are NOW READY.—Part I., price 6d.—Part II., price 5d.

A WEEKLY MAGAZINE.

### PRACTICAL ILLUSTRATIONS OF POPULAR FALLACIES.

#### No. V.—"TAKE CARE OF NUMBER ONE.

THERE is another adage which deserves to be bound up with this—"Charity begins at home;" and the two together would make as complete a packet edition of selfishness as the most ardent admirer of Number One could desire. The evils which sayings of this kind produce, arise from there being two senses in which they can be read: one a good sense, as in this instance, commendatory of economy and frugality; the other a bad sense, as productive of avarice, covetousness, and rapacity. And it needs but little knowledge of human nature to be certain that when such a proverb is fixed in the heart, the good sense will speedily degenerate into the bad one, and economy will be changed into avarice, frugality into rapacity. Some five-and-thirty years ago, the rector of Harrow, Mr. Cunningham, well known as the author of the *Velvet Cushion* and other works of stamp, published a little volume which he called *Sancho the Proverbialist*, with the intention of showing the evil that was occasioned by placing our reliance on, and squaring our actions by these scraps of the "Wisdom of our Ancestors" which have become dignified with the name of proverbs. And the very first of those he selects is, "Take care of Number One." Sancho is a little boy who has an aunt who places the most entire faith in the value of these proverbs; whose whole life was guided and directed by these maxims, and who insisted on making others shape theirs by the same rule. She is about to send poor Sancho to school, and summoned him to her presence, that she might impress upon his mind the words of wisdom before he departed. He arrives, his face "begrimed to the very eyes with half the contents of a pot of black currant jelly which she had, upon pain of her mortal displeasure, prohibited him from touching about half an hour before." Impressed, however, with the importance of the moment when she was about to instil into his youthful mind the proverb that was to carry him with safety, honour, and splendour, through life, she passed over the delinquency of the jam, while she exhorted him ever to remember "Take care of Number One." Poor Sancho, not clearly understanding the meaning of Number One, thought it must refer to some counters she had given him, and in his innocence asked if he must not take care of Number Two also. "Child," said my aunt, "you are little better than an idiot. Number One means your foolish self; and, therefore, if I must put into common English what is so briefly and forcibly expressed by the proverb, 'Take care of number one,' means 'Take care of yourself alone.'" "Oh," said I, "aunt, now I do understand you, and I am sure you will think me a very good boy, for I have just been 'taking care of Number One' in the very way you mean, by eating up all the currant jelly you left upon the table." This was a very hopeful application of the proverb for a young beginner! but his aunt still maintained her faith in it, and sent him off to school with the contents of a pastry-cook's shop in his trunk, and a guinea wrapped up in paper, on which was written, "Take care of Number One." What with the currant jam, and what with the guinea, it was no wonder that this maxim was engraved on his heart, that he was thoroughly determined to act up to it, and show his obedience to his aunt by "taking care of Number One."

He begins by devouring his sweetmeats in the presence of the boys, without giving away a single nut; the boys do not much admire this practical application of the proverb. "Take care of Number One," so by the time he had eaten enough to make himself ill, they made a rush upon him, and deprived him of the remainder, rolling him upon the ground with sundry pommellings, leaving him with a bruised body and sick stomach, and some few glimmerings of a notion that the best way to have taken care of Number One, would have

been to take care of all the other numbers also. But with the sickness of the stomach, the sickness of his faith in his aunt's maxim disappeared. And he resolved to be revenged on some of those who had interfered with his taking care of Number One: for this purpose, he watched his opportunity, and catching one of the most puny boys in the school alone, he most unmercifully thrashed him, and sent him away howling in agony. He soon found that he had brought a hornet's nest about his ears, for the other boys, who had not been educated in the maxim of "Take care of Number One," resolved to punish him for damaging Number Two; they set upon him in a body, beat him black and blue, and strongly impressed upon him the notion, that if he went on taking care of Number One much longer there would not be a sound inch of Number One left to take care of. But the baneful consequences of adhering to his maxim were not yet all accomplished. It had made him greedy and cruel; it was not long before it made him dishonest. Notions of property are very loose in those who see only Number One in the world. Whatever is gratifying to Number One, is appropriated by Number One, provided Number One thinks he can escape detection. Thus, many small articles disappeared, until, at length, a knife which had excited the cupidity of poor Number One, being missed, a search was instituted; it was found in Sancho's trunk, wrapped up in the very paper on which his aunt had written his guiding maxim. He is dismissed with ignominy from the school, bearing this characteristic note from the master to his aunt—"Madam—you have sent your boy to school with a principle that has made him greedy, cruel, and dishonest. It is but just that you who have given the disease, should endeavour to cure it; and therefore I have sent him back to you."

Sometimes it happens that this proverb is instilled into the youthful mind—not, perhaps, by words, but practically, by the habits and practices of the parents by whom the early education of the child is formed. Penurious habits breed covetousness, and covetousness does not always stop short of dishonesty. Some little while ago we witnessed the trial of a wealthy yeoman, for stealing some sheaves of corn from his own tenant; the case was clearly brought home to him; he was convicted and transported. There were some singular circumstances connected with him talked about, which led us to make some inquiries into his early life and habits, and we collected the following facts, showing him to be another victim of the adage, "Take care of Number One." His father had been a penurious man, always taking care of Number One; with, apparently, no object in life but how to save money. Like old Elwes, he would be seen picking sticks from everybody's hedge; gathering up little odds and ends wherever he could lay his hands upon them; trifles which, perhaps, he thought it no great harm to appropriate, although they certainly did not belong to him. Eventually, he saved considerable sums of money, and died, leaving this young son to succeed to a very fair income, arising from lands he had purchased. The son was young at his father's death, but the penurious habits of the father had even then become covetousness in the son. He was sent to school, where, like the boy in Mr. Cunningham's tale, he was remarkable for his greediness and selfishness. After a little time small articles of various kinds began to disappear throughout the school—pencils, knives, cables of all description, money, books, all the little trifles on which boys set a value disappeared, and no trace of the thief could be discovered: soon the depredations extended to the house also; spoons, knives and forks, vanished; the bedroom of the mistress was entered, and rings, brooches, chains, jewellery of all kinds and to considerable value, were missing; set after set of servants were discharged, but still the robbery went on. At length the boys themselves were determined to discover the depredator;

which was established, and this young lad was at last detected abstracting a case of mathematical instruments from the pocket of one of the boy's coats. This led to a discovery of the whole affair; a full confession was made, and most of the articles were recovered, being found hidden away in queer little hiding-places about the premises, in holes in the garden hedge, crevices between the walls and the roofs of the outhouses; most of them damaged and spoiled by damp. It was not for the purpose of converting them into money they had been taken, for he was more largely supplied with pocket-money by his doting mother than most of the boys in the school; but from a morbid desire of taking care of Number One, of becoming the possessor of all that he coveted. He was of course sent away from the school, to the great grief of his mother, who seemed to feel deeply the disgrace, but not so much on account of the crime itself as that it should have been committed by a person of his property, or, as she expressed herself in her own strange dialect and elliptical mode of speech, "My dear boy, how coudee com fur to do it, you know you'm a property;" meaning, that he was possessed of large property. The boy grew into the man; the same propensities still clinging to him—the same desire to take care of Number One at the expense of all the other numbers around him. As he moved about in his world—the villages and market towns around his residence—many trifling things were found to disappear; a watch was gone from the chimney-piece of a public house he visited, and he was suspected of having taken it,—was charged with having done so, and returned it upon the plea of having taken it in a joke—and no one supposed a man of his property and respectability could have intended to have stolen it. He gave up farming, let his farm, and lived in a small house close by, a solitary and friendless life, as those who are always thinking of Number One are sure to live. His tenant perceived that his farm-yard had been robbed of corn, kept watch one night, and saw his landlord drawing the sheaves of corn out of the stack, and carrying them away to feed his own pig. For this offence he was tried and transported. Upon searching his house two large chests were found, filled with all sorts of articles, the produce of his pilferings, hoarded away without ever having been of the slightest use to him: odd chimney ornaments, thimbles, small glasses picked up in public houses, gilt chains and brooches, all kinds of odds and ends that could be easily secreted and carried away. Nothing seems to have come amiss to

him; covetousness had absorbed his whole soul; "take care of Number One" meant with him "fill your pockets;" he lost sight of the consequences of theft in the gratification he derived from indulgence of the propensity to thieve.

Let us now turn to some of the other consequences of adhering too strictly to the maxim, "Take care of Number One." We mean, the heartlessness, the want of sympathy with our fellow-men, which springs from this source. It may not always lead to dishonesty—that is, to dishonest acts, liable to the punishment of the law; but it often leads to moral dishonesty—dishonourable and mean actions, petty trickery, and knavish proceedings. But, above all, it engenders a selfishness which becomes the predominant spring of every thought and action. Wherever the intellectual horizon is bounded by self, all the friendships and affections of life, all its amenities disappear. We remember once congratulating a man of this stamp, whose life was passed in "taking care of Number One," on the pleasure he would derive from a very old—we were going to say friend, but, alas! those who live for "Number One" alone, have no friends—acquaintance having purchased a nice villa close to the town in which he resided. "I do not know," was the reply, "I think I would rather a stranger had taken it. I do his business already, and if a stranger had come there I might have had his also." Here, "Take care of Number One" ignores all the ties of friendship and acquaintance, all the sweet bonds of social life, and substitutes for them a hard, pounds, shillings, and pence life, which wears out all the better feelings of humanity. Once, talking with a lawyer who had taken care of "Number One," on the death of a gentleman of the neighbourhood, of most estimable character and useful life, with whom he had lived on terms of intimacy, he expressed himself strongly on the loss the neighbourhood had sustained, but, at the same time, he could not account for feeling so much on the occasion. "I do feel it very much," he said, "and I am quite surprised at myself for doing so. There is no reason why I should; he was no client of mine." This death had deprived him of no business—did not interfere with "Number One"—and he was surprised that all the common feelings of humanity had not been completely eradicated from his heart.

We are all of us naturally endowed with a full sufficiency of the selfish principle, and do not require to have it continually forced upon us by means of an old adage. It should not be forgotten, too, that most of these old sayings are answered by other sayings of far higher authority. "Do unto others as ye would they should do unto you," is far more likely to promote happiness in this life, to say nothing of the life to come, than that miserable cloak which the selfish man wraps round him as he exclaims, "Take care of Number One!" The lesson taught by the proverb produces no effect on the wasteful and extravagant. It does not lead them to economy and frugality; but it is ever in the mouths of the mean and the miserly, who, in its language, find an excuse for their avarice, a stimulus to their covetousness; and this passion, once taken root, never quits a man but with life. It fills every thought, it guides every action. "Every man," says Johnson, "is born cupidus—desirous of getting; but not avarus—desirous of keeping." This adage, and the feelings it engenders, enlarges the desire of getting, and encourages the desire of keeping; while its selfish doctrine renders him insensible to what is due to other persons. He sees in the whole world nothing but men and things that are to be used for his own purposes, to be made to minister to his craving desires for possessing and keeping. He has no scruples about the means he applies, if only they "put money in his purse." Hence all the trickery and cheating that disgraces the course of trade, lowers the morality of the tradesman, and gives rise to the notion that it is right to take every advantage of a customer. When Sam Slick, by the aid of "soft sawder" and "human nature," sold a clock for forty dollars that had cost him six dollars and fifty cents, he was acting upon the principle instilled by "Take care of Number One." The grocer who can mix the most sand with his sugar, is but fulfilling the doctrines of "Take care of Number One." As long as such traders can go on without being found out, they rejoice in the notion that they are "taking care of Number One." If discovered, and a stop put to their practices, they "take care of Number One" by going into the Gazette, cheating their creditors, and commencing the world afresh upon capital of which they have defrauded others. The spirit of honesty dies out before this false maxim, and nothing but the spirit of selfishness—and its companions, knavery and trickery—remains.

As with individuals, so is it with classes of men; the principle of "Take care of Number One" operates upon them also, and through it general interests are sacrificed to those of a class. If the wants and necessities of the times require that reforms should be made in the law—that justice between man and man should be rendered cheap and accessible—that the high road to our courts should not be encumbered with too many toll-gates—that vexatious delays and grievous uncertainties should be swept away, up rises at once the whole body of lawyers with the cry of "Take care of Number One," and every obstacle is placed in the way of the contemplated changes. In our graveyards in great cities spread pestilence among the living—if they are so crowded that the means of decent interment are wanting—that no room is to be found for the ever multiplying victims who perish in larger numbers as the nuisance increases, and at length means are adopted to remedy the evil, then parsons, clerks, sextons, and undertakers, unite under the influence of "Take care of Number One," a shout is raised for their fees, their perquisites, their profits; and if ever the necessary reform is completed, succeeding generations will be saddled with the payment of large sums to them in the shape of fees for services that have never been performed, and profits for work that has not been done. If it is intended to increase the supply of water to the metropolis, to give the inhabitants an increased and purer supply of this prime necessary of life, "Take care of Number One" is the rallying cry of the old Companies, as their selfish instincts rouse them in opposition to the

proposed improvement. In every case the same feeling is manifested, the detriment to the public is in proportion to the power of the class, and the loudness of the outcry they can make.

In illustrating our adage, our main object is to condemn the selfishness which arises from it—the desire to gain by any means, honest or dishonest, and the restless and insatiable thirst for riches, merely from the desire of hoarding, as the foolish magpie steals jewels and money, merely that he may hide it away. Too often in this world do we see men make a stalking-horse of honesty to gain their selfish ends, and "Take care of Number One" is the salve that he applies to his conscience. It has been said, a miser has a pleasure in hoarding, is happy in his avarice, in spite of the sneers of the public—

"Populus me alibit; at mihi plaudo,  
Ipse domi, simul ac nummis contemplor in archa;"

which Francis, in his translation of *Horace*, is

"I'm in public; but in secret blest,  
I count my money, and enjoy my hoard."

But a pleasant poverty is better than discontented riches; and the wealth ever accumulated by the selfish man, never brought with it anything but discontent. Frugality and economy are consistent with the active exercise of the most wide-spread benevolence and charity; but "Take care of Number One" draws tight the purse-strings, and buttons up the pockets against the most deserving objects. It deadens every good spirit within us, until at last, like old Grippewell on his death-bed, we see nothing in the cofee from which his last sacrament is to be partaken but an object brought to be pawned, on which he cannot afford to lend more than twenty shillings.

## LOVE.

BY MARY BENNETT.

God hath given me store of love;  
All the things that breathe and move,  
I love, I love.  
I love the earth, I love the sky;  
The sweets that bloom, the sweets that die,  
I love, I love.

I love the trees, songs, birds, and flowers;  
The summer and the winter hours,  
I love, I love.  
I love the fairies and the moon;  
The balmy eve, the sunny noon,  
I love, I love.

I love the sun; the brave, free blast;  
Repose, and thoughts of trouble past,  
I love, I love.  
I love the rich, I love the poor;  
The tatter'd beggar at my door,  
I love, I love.

I love the friends of love and truth;  
Childhood, old age, and merry youth,  
I love, I love.  
I love the good, the great, the free;  
In all things I some charm can see,  
But, most of all, whom I love me,  
I love, I love.

## INDIAN CEREMONY OF BORING CHILDREN'S E

THE editor of the *St. Louis Republican*, writing from the late Indian treaty ground at Fort Laramie, thus describes the ceremony of ear-boring:—

"We were witnesses of another novel, but painful exhibition. The boring of the ears of infants is quite as important and religiously observed a ceremony with the Indians, as a christening with the whites. When a child is of proper age to have its ears slit—that is, several slits or long incisions made in the rim of the ear to hold ornaments—it is done in public by some other man than its father; and on this occasion a sacrifice is made to the Great Spirit, by giving away to some person a horse, and whatever else the head of the family can afford. If these things cannot be given away—and sometimes they cannot, for the receiver stands as a godfather—the horse is turned out to run wild on the prairie, and the other presents are thrown away or destroyed.

"In the present instance, a young squaw came in carrying several mats and blankets. These she arranged as a bed. She then brought in her child and laid it down. After surveying the young men for some time, she selected one, and drawing from her belt an old knife, which had been worn to a tolerable sharp point, she took the Indian she had selected by the hand, gave him the knife, and he became the operator. Two or three others were selected as assistants. They always cut two, and sometimes five slits in each ear. The operation was evidently very painful to the little sufferer to 'fashion,' for the knife was dull, the ear tough, and the child screamed with all its power. The father always assists in the operation. I was curious to watch the features of the mother whilst the child was in its agony, and although she stood out in full view of most of the crowd, and was evidently struggling to appear indifferent, yet the mother's feelings manifested themselves even more strongly through her efforts at concealment. The tears rolled down her cheeks—her breast heaved—and ever and anon a deep, partially suppressed sigh would escape her. When the slits were made, threads from dried sinews were inserted to keep the parts from growing together. All this over, the squaw presented the operator with a horse, and other presents to the assistants, and then she bore off her child. The little sufferer ceased to cry much sooner than I expected, and I think sooner than a white child would after such an operation; but it may be important to know that I could perceive no difference between the crying of an Indian and a white baby. However our dialect may differ, infants cry in the same language. This would indicate that nature had but one way to give expression to its agony. The same process was gone through with in the case of a number of other children."

## ONWARD!

**PENNY NEWS ROOMS.**—Among the signs of our ever-increasing provision for cheap reading, we notice the recent opening of several penny news-rooms. Our attention has been particularly drawn to two of these useful little institutions—one in High Holborn, another in Cheapside. Both are conveniently fitted up with reading desks, chairs and sofas—and the tables are covered with reviews, newspapers and magazines.—*Athenaeum*.

**STEAM STONE-CUTTING.**—Not long ago, Mr. Charles Wilson, an American, invented a machine for dressing and rubbing stone, which has proved, in practical application, to be astonishingly effective. The dressing of stone by hand will soon in a great measure be done away with. The slow plodding of the mallet and chisel contrasts strongly with the rapid evolution of the steam cutter. The works of the Empire Stone Dressing Company are carried on in New York. The establishment is conducted on a most extensive scale, occupying about five acres of ground, and employing a steam-engine of 100 horse-power. Huge blocks of stone are lifted by steam from the vessel at the dock, and placed upon a railroad track extending to the main building, and conveyed by means of a truck to the remarkable machine. The adjustment of the cutters is but the work of an instant, and then, by the push of a lever, the stone chips begin to fly like shavings from a board. One of these machines can do more work in ten minutes than a man can do in a whole day by hand.

**SANITARY IMPROVEMENT IN THE METROPOLIS.**—A Company having for its object the draining of London, and other excellent sanitary measures, has been projected. The plan of their operations is thus set forth:—to consist of "a tunnel sewer on each side of the Thames, crossing under the present sewers without disturbing them, and receiving the contents of each through a shaft. These two tunnel-sewers will be constructed by tunnelling or boring, and will be laid with such an additional fall, or inclination, as will secure a rapid subterranean current towards the marshes east of the metropolis, where the refuse matter will be raised by mechanical means, for agricultural purposes. The Company's works will afford means for effectually draining the lowest parts of the metropolis. An important sanitary improvement will be conferred, by the proposed removal of the refuse which now vitiates the atmosphere: the Thames water, which is used by a million of the inhabitants, will be preserved from pollution; and a guano field, of vast extent, will be collected for the use of our agriculturists."

**THE SPANISH FLYING-MACHINE.**—The inventor of this contrivance, Don Diego de Salamanca, and his daughter, are about to arrive in Paris to show the effects of this marvellous invention. The machine is very simple: it consists of a case two feet long and one foot wide, adapted to a band of leather round the waist, buckled behind. Two iron rods, fastened to the case, support a small piece of wood on which the feet repose. The case contains a simple and ingenious mechanism, similar to that which is employed to set an automaton in motion. The mechanism is worked by means of a handle. It sets to work two large wings ten feet long, made of very thin caoutchouc covered with feathers, and the wings may be so worked as to produce vertical, perpendicular, or horizontal flying. The number of turns given to the handle, determines the height to which it is desired to go. The handle has also to be turned every quarter of a league to regulate the distance. The operation of turning lasts a minute. Horizontal flying is the most difficult, the wings beat the air like the oars of a boat, or rather as the feet of the swan when it swims. By means of this curious machine a man can go almost as rapidly as a carrier-pigeon from the Hotel de Ville to the Arc de Triomphe or l'Etoile in eight minutes, and in half an hour to Versailles.

**LODGING-HOUSES AND READING ROOMS FOR THE WORKING CLASSES AT SALISBURY.**—Mr. Sidney Herbert is causing to be fitted up a large and commodious lodging-house for as many of the unmarried labourers of the parish of Wilton as may be disposed to take the benefit of it. The house will be furnished with every convenience, and a housekeeper will be provided. The meals will be at stated hours, and the dietary will be ample but plain, and each inmate will have a separate bed. A library will be attached, and as one of the curates of the parish church will reside in a part of the house, he will occasionally deliver a lecture to the labourers. For all these advantages, which it is impossible to estimate too highly, each labourer is to pay 4s. 1d. a week only.—The same excellent idea is in operation at Halifax: Mr. John Crossly, ex-mayor of this borough, has fitted up Mulcure Hall, the oldest mansion in the town, as a model lodging-house. The parlours and drawing-rooms have been converted into large store rooms, reading rooms, and dormitories. Spacious kitchens, and cooking apparatus, have been fitted up, and a large wash-house appropriated to the use of the inmates. The lodging rooms are arranged with every convenience, and the whole fitted up with gas, and ventilated. The number of inmates will be restricted to fifty, and no females will be admitted. The charge will be 3d. per night's lodging.—It is pleasing to observe the same benevolent intention carried out at Carlisle, where the Working Men's Reading Room has been opened; it was recently built by the John-street working men, is in the Elizabethan style, and contains a reading room, school room, committee room, and a library; and the opening was celebrated by a public *soirée* at which the Mayor took the chair, and, about 500 persons were present. The Dean of Carlisle, Mr. W. N. Hodgson, M.P., the Mayor, and various other gentlemen addressed the meeting.—*Builder*.

## THE BIRMINGHAM ENIGMA.

As a beginning, we have tried a simple ANAGRAM, And found that BIRMINGHAM will yield the sentence—BRING-MI-HAM. May peace and plenty long prevail, and their great blessings shed, And to the sons of "Brummagem" bring HAM as well as BREAD! And now we'll run the townsmen through, and with a ready eye Find out the NAMES that will for all a cheerful hour supply.

1. There's one, a god of wine, the king of jollity;
  2. And one in whom the opposite of this false god we see.
  3. There's one that for the ham here sought a substitute may be;
  4. And two the ham we often on the table see.
  5. There's one that, if he were the ham, would surely be rejected
  6. By others, who, at breakfast time, are frequently expected.
  7. There are others, in whose absence no ham could be supplied;
  8. And some by whom the quality of ham is often tried.
  9. There are some who oft are pickled, and savour many a dish;
  10. And some who often eat their kind, though in the shape of fish;
  11. And other fish in Brummagem, fine golden backs have they;
  12. And others, near whose spreading banks the sportive fishes play.
  13. There are some that on the table come at evening hour with tea;
  14. And some that show what ladies do, when they o'er their cups agree.
  15. Some show by what the tea is "made," when undisturbed it stands;
  16. And some proclaim, if the tea you spill, the nature of your hands.
  17. Some tell you what the tea-pot's of, if made of earthenware;
  18. And others tell you of the place wherein your teas you share.
  19. Some tell you what the marriage state to many hearts secure;
  20. And others of a single state the ladies can't endure.
  21. Some tell you of the worldly gain that cold wife-hunters seek;
  22. Others of those that only love the lady-like and meek.
  23. Some tell you of the false address which worthless lovers use;
  24. And others, of the sense of those that all such love refuse.
  25. Some are in holy orders, though differing in belief;
  26. Some point to acts, which truly done, will spread around relief;
  27. Some show to whom the wondrous world and all therein belong;
  28. Some show the place where all will meet, who shun the ways of wrong.
  29. Some show the love which every one should to his neighbour bear;
  30. And others show what we should do, all times and everywhere.
- And now of wonders strange and droll, we will reveal a few:—
31. There's one who'd form two animals, if his name were split in two,
  32. There's one who was a jovial man the moment he was born;
  33. And one who's ne'er without a mist at night, or noon, or morn;
  34. There's one who can't walk less than miles, though short his errand be;
  35. And one who's joined unto a pipe—a careless man is he!
  36. There's one whom luck will ne'er desert, be he soever poor;
  37. And one who never will be weaned, though he be three-cote or more;
  38. There's one, who, if he runs away, will lead a funny chase;
  39. And one who from his birth till now, has been a long embrace;
  40. There's one who wore the new costume full many years ago,
  41. And a teacher who unto his boys always the birch doth show.
  42. There's one with whom 'tis always cold, and always cold will be;
  43. And one who in the last one's time we're almost sure to see.
  44. There's one, who, wheresoe'er he walks, can never go before;
  45. And one, who, like an insect vexed, would sting you very sore.
  46. There's one who always walks about, just like a living doll;
  47. And one who'll always a diver have, though he has no coach at all;
  48. There are minor towns that often walk about your busy streets;
  49. There's one who gives a powerful blow to every one he meets;
  50. There's one who might be ground up to yield a good manure;
  51. And one, once met, it is a chance if you ever meet him more;
  52. There's one you all would like to have, in every hour of need,
  53. And one you'd like to follow, if he went off with speed;
  54. There's one who often is relieved by soaking in hot water;
  55. And one who had a male child that proved to be a daughter;
  56. There are some that ought to keep, from fear, out of some other's way;
  57. And one with whom 'tis never dark, though long beyond the day;
  58. There's one whose every part is used in every act of speech;
  59. And one who is an instrument by which instructors teach;
  60. There's one that tells how we may all to height of knowledge climb;
  61. And one that shows what man should be when he is in his prime;
  62. There's one who throughout all his days has been a perfect bore,
  63. And one who dyed the battle-field, and made it red with gore!

Such wonders, men of "Brummagem," may well excite surprise, And make you o'en and your smoke ope wide your staring eyes. Your smoke? Not no! for o'en amid your chimnies dark and tall, Full often may we hear the Nightingale's melodious call; And have Greenwoods, and have Fields, Green-hills, and Rocks, and Vales, And the Linnet and the Finch—let tell their loving tales. You have Lillies and have Roses, and Garlands of sweet Flowers, And Peacocks walk their stately way among your Breezy Bowers! Swans with their graceful shapes appear, where, too, your Waters move, And Geese of brightest Dew descend upon your walks of Love. Thus fancy weaves with names of men a picture for the mind; May He who reads their hearts than this a fairer picture find!

## ANSWER TO THE GLASGOW ENIGMA.

THE "DO."

My first was a shocking coquette!  
I shall never forget.  
So tight were her stays, so arch were  
her ways,  
And her bright eyes sent forth such a  
luminous blaze.  
Oh! she was my pet.

She told me she lov'd me—as truth I  
receiv'd it,  
And believed it.  
And did I love her? To prove it I did  
Affix to my second my name as she  
bid;  
And she receiv'd it. •

You're a "jolly good chap," said she,  
cunningly winking.  
This set me thinking!  
For she took up my second and wish'd  
me good day,  
And with her "solicitor" trotted away,  
Saying—"Dear Mr. Jenkins, you jolly  
old soul,  
You will very soon find we have both  
done my whole!"

ENIGMAS, &c.

1. Sometimes I fly—though very low;  
2. Sometimes I make another go,  
I give him such a heavy blow.  
3. In short, when I approach too near,  
You're very apt to disappear;  
I make you fly away with fear.

2. Sometimes I'm form'd of beaux and belles;  
2. Sometimes of lead, of wood, of leather;  
3. Sometimes I'm pack'd in lonely cells,  
Now by myself—now whole groups  
together.  
Sometimes in haste I fly away;  
Sometimes I roll and tarry on the earth;  
Sometimes I burst upon the way;  
4. Now a great grievance cause—and now  
much mirth.

8. In northern clime I often roam,  
Sometimes I make the gouth my home.  
From place to place I quickly run,  
My labour still is never done:  
For though at early dawn I rise,  
2. Soon as Aurora sweeps the skies,  
Onward I press, without repose,  
Nor stop to rest at evening's close:  
But journey on, deor'd by fate,  
One single moment ne'er to wait.  
Compell'd my duty to fulfil,  
Which lets me set, but never still:  
5. Unless by some great miracle.

4. Although I'm dumb, I often speak,  
No matter whether French or Greek:  
The feelings of my heart I tell,  
And do explain them vastly well.  
I'm always understood, and more,  
Your thoughts and sentiments explore.  
So now be cautious, lest I find,  
All that is passing in your mind,  
And to the which you'd have me blind.  
Now, if you're quick of penetration,  
You'll want no further explanation.

5. My history's so blended with fable and  
truth, [my youth]  
That few will believe the great feats of  
Such miraculous tales have been told of  
my birth,  
That it seems rather doubtful how I came  
on earth:  
But on earth I have certainly been, you  
will find, [your mind]  
By truths, that may reconcile more to  
The poor knights of Windsor will surely  
attest, [at rest]  
That when round my table, they all sit  
No further proof of my having existed,  
Need be brought forward, if that be re-  
sisted.

6. 1. Place a French article between you and I,  
2. Then set it before us, and you will desecry  
3. That after some centuries it will pro-  
claim  
4. A king and a hero of very great fame.  
He was valiant and brave as Mars, we  
are told,  
And was blest with a son as courageous  
and bold,  
He conquered a hero, a chief, and a sage,  
United in one, and the pride of that age.  
Each party erected a trophy, to show  
That their chief had vanquish'd the  
powerful foe;  
But our hero certainly proved that he  
gain'd  
The battle at last, and the glory obtain'd.

7. 1. In company I'm often drawn,  
2. And sometimes stay from night till morn.  
For when I fly both friends and foes,  
3. Perchance are taken by the nose.  
My presence seldom fails to cheer,  
Yet fast bound down I must appear.  
4. The welcome, then, I meet from you,  
Pleases my soul and body through.  
5. By bribery my freedom's gain'd,  
But not till I'm completely maim'd.

SIR RONALD.

SIR RONALD was a spendthrift,  
A gay gallant was he;  
The boldest of the daring, the fleetest of  
the free.

Sir Ronald's purse was limited,  
His lands they were but small:  
Poorest of the poor knights, yet gayest  
of them all.

Sir Ronald in his poverty,  
Of my first sought the aid:  
The gambler of gamblers, what princely  
stakes he laid!

Sir Ronald lost his thousands,  
And he was not my second:  
The worst of all defaulters, Sir Ronald  
he was reckon'd.

Sir Ronald had a challenge,  
Defying him to fight;  
And fiercest of the furious, resolved to  
try his might.

Sir Ronald was defeated,  
And in a goal was cast;  
The boldest of the daring became my  
whole at last.

8. 1. Though I am gentle and slender,  
Believe me not, if I am tender;  
Nor let your youthful heart be warm'd,  
Although I'm so gently form'd,  
And trust me not, although I swear,  
2. That I am really in despair.  
For ne'er was I in love—'tis true,  
So don't believe me, should I woo,  
For should I change my shape and feature,  
And prove an awkward, crooked creature  
3. Then in a disappointed strain,  
You'd find me out, and tell my name.  
9. 1. I'm like a tree that's ever green,  
And in most countries may be seen.  
2. Oft in Morocco I sojourn.  
Sometimes in Russia take a turn:

[The whole answered in No. 12.]

3. Though more than monarchs I possess,  
My fame depends I must confess,  
4. Less on caprice of taste, than fashion;  
And though with care I try to dash on,  
Sometimes I meet with no compassion,  
THAT—proclaims me faultless, vor'ries  
agree;  
THAT—is more candid, and my frailties  
see.  
THAT—prone to censure, if the critics  
wound:  
THAT—is more just, and more to mercy  
tuned.  
So between both, I'm often bound to  
stray,  
With wits, with prelates, with the sad,  
and gay!

ANSWERS TO THE PASTIME OF LAST EVENING.

PICTORIAL CHARADES, P. 141—DON-KEY;—P. 157—KNIGHT-HOOD;—COR-DEW.

1. I from IX remain X.  
2. Add nothing to it, O.  
OX.

The foe pursuing close behind,  
A bridge demolish'd often find.  
1. Unties two shores.  
2. Stone bridges usually filled up with  
rubbish.

3.—A BELL  
1. Spreads good news from ev'ry steeples,  
On happy events, t'enliven the people;  
It gives a good peal when a Princess is  
wed.  
And it likewise issues to toll for the dead.  
2. The temper or quality of the metal is  
usually tried.  
3. Dinner bell!  
4. Rings for the domestics.

1. A ring, it is surely, that binds man and  
wife,  
When they promise to live with each other  
for life.  
2. It used to be customary to present rings  
on the death of a person, to the sur-  
viving friends.  
3. A wedding-ring joins all classes, of course.  
4. See the circles on the globe.

5. Backwards or forwards  
Divide me in two I'm crazy . . . Madam.  
Put me together, divide me again . . . Madam.  
I'm a mother bereaved . . . M.A. DOW.  
Join me again, cut off my head . . . M.  
I'm a man, &c. . . Adam.  
Return me my head . . . M.  
I once more am. . . Madam.

## OUR CORNER CUPBOARD!

If life be miserable, to live is painful; if happy, to die is terrible. They both come to the same thing.

He who shows hatred against the sinner, instead of exercising it only against the sin, condemns himself.

The name tulip is derived from the Turkish, and the flower is so called from its fancied resemblance to a turban.

The happiest of pillows is not that which love first presses; it is that which death has frowned on, and passed over.

Why ought the best lead-pencils to use be made in Philadelphia?—Because Philadelphia is capital, in *Pencil*-vania.

"Thou rich," said a Turkish physician, "should eat when they are hungry; and the poor when they can get anything to eat."

It is a curious fact, recently demonstrated, that if a tree be inoculated with the poison of a rattlesnake, the leaves will wither.

At what time of life may a man be said to belong to the vegetable kingdom?—When long experience has made him *sage*.

There is a plant in South America the leaves of which are natural skeletons, the places between the vascular tissues never being filled up.

If you wish to have a shoe made of durable materials, you should make the upper-leather of the mouth of a hard drinker, for that never lets in any water.

The Mahometans suppose that shooting stars are the firebrands with which the good angels drive away the bad, when they approach too near the walls of Heaven.

To be happy, the passions must be cheerful and gay, not gloomy and melancholy. A propensity to hope and joy is real riches; one to fear and sorrow, real poverty.

An Eastern writer, speaking of a man of weak understanding and deformed person, but magnificently attired, compares him to a wretched hand-writing, traced in characters of gold.

A gentleman burying his wife, a friend asked why he expended so much on her funeral. "Ah, sir," replied he, "she would have done as much, or more, for me, with pleasure."

A wag observes, that the reason ladies make the best theatrical managers is, probably, because a woman is obliged to be so much more careful than a man in choosing the company she keeps.

"Wall, how uneasy I am seated between two tailors," said a self-important fellow. "They suffer the greatest inconvenience," replied a gentleman, "having but one *gown* between them."

"I am always heavy and stupid when I have a cold," said a gentleman; to which John Wilkes replied—"You have been afflicted, too, in the same way these twenty years, to my certain knowledge."

A LOVE-SONG.—I've seen her out a-walking, in her habit *de la rue*, and it ain't no use a-talking, she's pumpkins and a few. She glides along in beauty, like a duck upon a lake,—Oh! I'd be all love and duty, if I only was her drake.

In ceremonial politeness and conventual courtesy, better do too little than too much. Never talk when you do not feel inclined. Express yourself frankly and candidly when you visit. People will become accustomed to your manner.

"Has that cookery-book any pictures?" said Miss M. C. to a bookseller. "No, madam, none," was the answer. "Why!" exclaimed the witty and beautiful lady, "what is the use of telling us how to make a good dinner, if they give us no plates?"

"Will you keep an eye on my horse, my son, while I step in and get a drink?" "Yes, sir." Stranger goes in, gets his drink, comes out, and finds his horse missing. "Where is my horse, boy?" "He's runn' a way, sir." "Didn't I tell you to take care of him, you young scamp?" "No, sir; you told me to keep my eye on him, and I did, till he got clear out of sight."

"My friend," said an American hotel-keeper to an over-avaricious boarder, "you eat so much, I shall have to charge you an extra half-dollar." "An extra half-dollar!" replied his boarder, with his countenance the very picture of pain. "For goodness' sake, don't do that! I'm most dead now, eating three dollars' worth, and if you put on an extra half-dollar, I shall certainly bust—I shall."

"My wife tells the truth three times a day," remarked a jocosely old fellow, at the same time casting a very mischievous glance at her. "Before rising in the morning, she says, 'Oh, dear, I must get up, but I don't want to.' After breakfast, she adds, 'Well, I suppose I must go to work, but I don't want to,' and she goes to bed, saying, 'There, I have been passing all day, and haven't done anything.'"

A NEWLY-IMPORTED Irish girl was engaged in service in New York, recently, and on the third day of her servitude she came to her mistress before breakfast, and inquired, "How the meals pleased the lady?" "Why do you ask, Biddy?" "Because, ma'am, the brizist will be better to-day." "How so?" "I thought the coffee and tay was too wake, myself, for your ladyship, so I jist mixed 'em together, to make 'em stronger, my lady." Her mistress went into hysterics.

## OUR MEMORANDUM BOOK.

If thou art rich, then show the greatness of thy fortune—or, what is better, the greatness of thy soul, in the meekness of thy conversation; condescend to men of low estate, support the distressed, and patronise the neglected. Be great; but let it be in considering riches as they are, as talents committed to an earthen vessel. That thou art but the receiver, and that to be obliged and to be vain, too, is but the old solacism of pride and beggary, which, though they often meet, yet ever make but an absurd society.—*SKRINE*.

Let none look back on darker years,

Where Hope's lone star had set;

But let us e'er pursue the right,

And all the wrongs forget.

Let none despair, for brighter hours

Will surely come at last;

And thousands yet will hail the day,

When sorrowing scenes are past.

CONVERSATION.—There must be, in the first place, knowledge—there must be materials; in the second place, there must be a command of words; in the third place, there must be imagination to place things in such views as they are not commonly seen in; and, in the fourth place, there must be a presence of mind, and a resolution that is not to be overcome by failures. This last is an essential requisite; for want of it many people do not excel in conversation.

THINGS TO BE FOUND OUT.—Nature is not exhausted. Within her fertile bosom there may be thousands of substances yet unknown as precious as the only recently found gutta serena. To doubt this, would be to repudiate the most logical inference afforded by the whole history of the earth. Corn and the grape excepted, nearly all our staples in vegetable food are of modern discovery. Society had a long existence without tea, coffee, cotton, coco, sugar, and potatoes. Who shall say there is not a more nutritious plant than the sugar cane?—a finer root than the potatoe?—a more useful tree than the cotton? Buried wealth lies everywhere in the bowels of the earth, which needs but the divining-rod of organized action for its discovery.

OUR OWN CONSEQUENCE.—We think of our own consequence, our talents, our attainments. We think what a breach will be made when we die. We think of the mourners who will gather around us with broken hearts. We think of the solemn, sad procession that will go with us to the tomb—forgetting how seldom it is that the hearts of any considerable portion in a funeral procession are serious and solemn at all, or care anything about the dead. We look at our own affairs, and press them forward, as if everything else should give way to them, and as if the world had no interests so great that they may not be required to yield to our convenience. Now, how contrary all this is to truth and reality, it is hardly necessary to attempt to show. Few will care about it at all when we die; and the world at large will care nothing about it. A very little circle of friends will be afflicted.

There is a joy, innate, divine,

The fruit of conscience, free from crime;

Nor wealth, nor fame, can e'er bestow

The joys which never fail to flow

From consciousness of doing good.

Sweet are the joys of rectitude!

A BROTHER'S PORTION.—Sharoch, the son of Tamerlane, was a prince naturally avaricious, and of extreme parsimony in the management of his household. A potter, who was aware of his disposition, once presented himself before him, and asked him if he believed in the truth of that doctrine of the Mahometan religion which teaches that Mussulmen are all brethren. Sharoch replied, "Undoubtedly." "Then," resumed the potter, "since we are all brothers, is it not a great injustice that you should possess such an immense treasure, while I have only one poor chest of tools. Give me at least the portion I ought to have in quality of brother." The Sultan accordingly presented him with a piece of money of the value of three half-pence. "What!" said the potter, "is this all that is coming to me out of so great a treasure?" "Retire," said Sharoch, "and be careful to toll no one of the sum I have given you: your portion would not be so considerable if all our other brothers knew it."

IGNORANCE OF GREAT PHYSICAL TRUTHS.—How few men really believe that they sojourn on a whirling globe, and that each day and year of life is measured by its revolutions, the labour and the repose of every race of beings. How few believe that the great luminary of the firmament, whose restless activity they daily witness, is an immovable star, controlling, by its solid mass, the primary planets which compose our system, and forming the gnomon of the great dial which measures the thread of life, the tenure of empires, and the great cycles of the world's change. How few believe that each of the millions of stars—those atoms of light which the telescope can scarcely deary—and the centre of planetary systems that may equal, if not surpass, our own. And how very few believe that the solid pavement of the globe upon which they nightly slumber is an elastic crust, imprisoning fires that have often burst forth in tremendous energy, and are at this very instant struggling to escape—now finding their way in volcanic fires—now heaving and shaking the earth—now upraising islands and continents, and gathering strength for that final outburst which is to usher in the new heavens and the new earth, "wherein dwelleth righteousness." Were these great physical truths objects of faith as well as deductions of reason, we should lead a better life than we do, and make a quicker preparation for its close.

THE FIFTH VOLUME OF  
**THE FAMILY FRIEND** is now  
ready, Price 2s. 6d., elegantly bound.  
Covers for Binding the Volumes, uniformly with the  
above, Price 6d. each.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

Subscription Meeting, 23rd January, 1852.  
The Actuary of the Indisputable Life Policy Company  
says:—"The scheme is completely approve. The principles  
and plan of operation are just and equitable to all parties,  
and the advantages offered to Borrowers are superior to  
any yet brought under my notice." Obtain the Prospectus  
Enclose Stamp for Postage, to Mr. Southwell, Manager,  
4, Terrace, Stepney Green.

A BIBLE DICTIONARY FOR THE PEOPLE.  
By JOHN KITTO, D.D., F.S.A., &c., Editor of the *Pic-  
torial Bible*.—In a beautifully printed volume, 8vo.,  
price 10s. 6d., illustrated by 336 Engravings on Wood.  
**A CYCLOPEDIA OF BIBLICAL  
LITERATURE FOR THE PEOPLE.** By JOHN  
KITTO, D.D., F.S.A., &c., &c.  
This Work is studiously accommodated to the wants of  
the great body of the religious public. To Parents, to  
Sunday School Teachers, to Missionaries, and to all engaged  
either steadily or occasionally, in the important business of  
Biblical Education, the volume is confidently recom-  
mended as at once the most valuable and the cheapest com-  
pendium of Bible Knowledge for the People which has ever  
appeared in this country.  
A. & C. BLACK, Edinburgh; and sold by all Booksellers

## THE HOME COMPANION PORTFOLIO.

We strongly recommend to our Subscribers the adop-  
tion of the "HOME COMPANION PORTFOLIO," for the  
preservation of the Weekly Numbers of the Monthly  
Parts. These Portfolios are made with elastic cords at  
the back, so hold Fifty-two Numbers, or Twelve Monthly  
Parts, which comprise one Volume. At the end of each  
year they may be taken out and bound, and the Portfolio  
may be employed to preserve the Numbers or Parts of the  
succeeding Volume. The Price is Two Shillings. The  
usage will be saved by the preservation of the Numbers,  
which, hereafter, may be difficult to obtain. The Port-  
folio is beautifully embossed, and illuminated with silver,  
by a new invention introduced by LEIGHTON, Son, &  
Hobbs. It is an ornament for the drawing-room table.—  
Order of any Bookseller.

**THE QUADRUPLE INDEX.**—The  
Fourth Volume of the *Family Friend* contains a  
Quadruple Index, embodying upwards of Three Thousand  
Five Hundred References to the Contents of the Work.  
Persons wishing to judge of *The Friend*, may receive  
copies of this Index gratis, by applying, post-paid, to  
Mr. J. BENNETT, 69, Fleet Street, London.

**EXQUISITE OIL PICTURES.**—Six-  
pence each. KNIGHT & FOSTER, agents for the sale  
of Baxter's Oil Pictures. They are perfect gems of art:  
no lady's scrap-book can be perfect without them. A few  
of the subjects are named below, but an enlarged list will  
be sent on application:—Windsor Castle—Princes of Wales  
—Lover's Seat, Hastings—Dripping Well, Ditto—Bouquet  
of Flowers—Ben Nevis—Tarantella Dance—Tintern Abbey  
—Welsh Drovers—Netley Abbey—Bala Lake—Brougham  
Castle—Water-mill on the Wye—Llangollen—Lake Como  
—Warwick Castle—View on the Rhine. Two sent free  
by Post for 14 Stamps.  
When the value of Five Shillings is taken, they will be  
sent post free.—The above are each neatly mounted on  
Drawing Paper, 7½ by 5½. KNIGHT & FOSTER, Stationers,  
&c., 5, Eastcheap, London.

**PRIZE MEDAL FOR STEEL PENS.**  
This was given to KNIGHT & FOSTER, the celebrated  
Pen Manufacturers, of Eastcheap. Their Pens have been  
for several years extensively used in the Bank of England,  
Post Office, and Custom House, London, and in addition  
to the already brilliant success that has rewarded the Pro-  
prietors, for the care bestowed on the Manufacture of these  
Pens, they have the gratification to announce that to them  
was awarded the  
**PRIZE MEDAL AT THE GREAT EXHIBITION,**  
for their great Excellence, Superior Merit, Utility and  
Cheapness.—See Class 22—689, and 691: also Lord Can-  
ning's Report.  
Sold by most stationers and booksellers. 1s. per box of  
3 dozen and holder, or direct for 15 stamps from the Pro-  
prietors, KNIGHT & FOSTER, Stationers, 5, Eastcheap,  
London.

The only memento of the Great Exhibition produced  
within its walls.

Just published, complete in Two Volumes, price 5s. each,  
elegantly bound in cloth and gold, with a View of the  
Crystal Palace gilt upon the cover.

**THE PARLOUR MAGAZINE**  
OF THE LITERATURE OF ALL NATIONS. Printed in  
the Crystal Palace, Hyde Park, at Machines No. 138, and  
162, Class 6.

We have no doubt that the two volumes of the PARLOUR  
MAGAZINE will be treasured by many future generations.  
People flocked to the Crystal Palace after its close, and  
eagerly bought up, at enormous prices, articles that had  
been exhibited there, that they might possess some me-  
mento of the Exhibition. We supply not only a work ex-  
hibited therein, but one actually produced by machinery  
within its crystal halls, and in the view of millions of spec-  
tators. The value of our book will therefore increase with  
the advance of years, until it will be regarded as a curiosity  
and a treasure.

These volumes contain translations of Literary Treasures  
from the

CHINESE.	HUNGARIAN.	POLISH.
DANISH.	HINDOSTANI.	RUSSIAN.
DUTCH.	IRISH.	SPANISH.
FRENCH.	ITALIAN.	SWEDISH.
GERMAN.	MEXICAN.	TARTARIAN.
GREEK.	MORLACHIAN.	WELSH, &c.
	PERSIAN.	

With original ENGLISH Contributions by celebrated  
authors, and choice adaptations from the American. Each  
Volume is embellished by a superior Steel Engraving and  
by numerous Woodcuts.

**RE-ISSUE OF THE PARLOUR MAGAZINE.**  
In order to meet the wishes of numerous persons of the  
middle and working classes, who, during the excitement  
of the Exhibition, were unable to obtain this memento of  
that great event, the work will be RE-ISSUED in Weekly  
Numbers, price 2d., and Monthly Parts, price 6d. or 10d.  
Order of any Bookseller.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

Now publishing,  
**GRANDFATHER WHITEHEAD'S  
CATECHISMS**, designed to make the Acquisition of  
Useful Knowledge by the Young, and by Beginners of  
all Ages, easy and pleasing. The Catechisms are pub-  
lished Monthly, each containing 32 pages, crown 8vo.,  
illustrated by numerous Diagrams. The price of each  
Catechism will be 3d., and it is in a neat wrapper. The  
whole Series, bound in cloth, 2s. 6d.

**THE FAMILY TUTOR, AND SCHOOL  
COMPANION.**—Was published on the 1st of January,  
1851, and subsequently on the 1st and 15th of each Month,  
in Parts price 2d. each.

THE FAMILY TUTOR, as its name implies, is a Work of  
a highly instructive character, and realises, as far as can  
be accomplished in print, the advantages of a *Family  
Tutor* to every reader—a Tutor whose teachings are freely  
kind, and comprehensible, making the acquisition of  
knowledge a PLEASURE, not a TASK.

The First Volume contains—A COMPLETE ENGLISH  
GRAMMAR, improved and Simplified; FAMILIAR EX-  
PLANATIONS OF CHEMISTRY, TALKS OF HISTORY AND OF TRAV-  
EL; ZOOLOGY; THE PHYSICAL HISTORY OF MAN; THE  
PHYSIOLOGY OF HEALTH AND DISEASE; CHEMISTRY AND  
THERMISTICAL PHENOMENA OF THE MOUNTAINS; MATHE-  
MATICAL, COSMOGRAPHICAL, ASTRONOMICAL, AND OTHER  
PROBLEMS; ECCECURIOSITY EXERCISES; THE YOUNG  
AND HIS PUPILS, being Answers to Educational Ques-  
tions; and A VARIED MISCELLANY.

THE SECOND VOLUME contains a Complete System of  
NATURAL GEOGRAPHY, with Pictorial Illustrations, dis-  
playing the Costume and the Architectural and Natural  
Features of the various Peoples and Countries of the world.

THE FAMILY TUTOR may be had complete up to the end  
of 1851, in Two Volumes, price 2s. 6d. each.

London: HOULSTON & STONEMAN, 65, Paternoster Row.

**THE FAMILY FRIEND**, an established  
Magazine, published upon the First and Fifteenth of  
every Month, price Two-pence. Thirty-two pages, beau-  
tifully printed, and neatly covered. The following is a type  
of the OPINION formed of THE FAMILY FRIEND, and ex-  
pressed by upwards of THREE HUNDRED NEWSPAPERS:—

"The Boys and Girls will like it, for it contains good  
Stories; the Young Ladies will like it, for the sake of its  
pretty Poetry, and its Receipts for various kinds of Fancy-  
Work; Young Men will like it, for it smacks of Science;  
the Women will like it, for it abounds in useful Household  
Receipts; the Men will like it, for it treats of Gardening  
and Natural History, and advises wives to be kind to their  
husbands; those who love amusement will like it, for it  
swarms with Conundrums; everybody will like it, for it  
has a corner for everybody; and nobody need be afraid of  
finding any harm in it."—*Gateshead Observer*.

The Work may be had up to the end of December, 1851,  
in FIVE VOLUMES, price 5s. 6d. each.

The Fourth Volume contains a **QUADRUPLE INDEX**  
to the First Four Volumes, embodying about THREE THOU-  
SAND FIVE HUNDRED REFERENCES to matters of every  
day usefulness. The Work forms a most perfect Encyclo-  
pædia of Domestic Economy.

London: HOULSTON & STONEMAN, 65, Paternoster Row.

**LONDON, SUBURBAN, AND  
HOME COUNTIES BENEFIT BUILDING SO-  
CIETY.** Established 9th April, 1851.—Enrolled under 6  
and 7 Wm. IV. c. 32.

Bankers: Messrs. Spooner, Attwood & Co., Grace-  
church Street, London.  
Shares £30 each, payable at 10s. monthly per share.  
Fixed entrance fee, 2s. 6d. per share.

The funds, as fast as they accrue, are lent to members,  
in rotation of their applying for loans, at five per cent., to  
enable them to purchase a house, or repay by equal  
monthly or quarterly instalments, distributed over a period  
of fifteen years from the time of borrowing. No charge or  
deduction of any kind is made by this Society, beyond the  
interest. Surveys fee, 10s. per cent. on the loan. So-  
litor's fee for mortgage, 24s.

This Society offers better security to those who now in-  
vest their money in Savings Banks, as the directors lend  
money only upon real or leasehold property, which is  
carefully examined and valued before any advance is made.  
The Society's plan of lending its funds as fast as they  
accrue, swells the interest of depositing members to six per  
cent., and they can draw out their money at any meeting  
on seven days' notice.

**SUBSCRIPTION MEETINGS** on the Second Wed-  
nesday of every month, at the George and Vintery City  
Hotel, George Yard, Lombard Street, London, from Six  
to Eight o'clock, P.M.  
Every information may be obtained, and shares taken  
daily, of G. W. CHURCH, Esq., 2, Robert Street, Adelphi.  
Mr. BURNHAM, 20, Fenchurch Street, London; Mr.  
CLARK, Rose Cottage, Vauxhall Road, Battersea, Surrey; and  
of Mr. W. L. HARTY, the Secretary, 3, Goddard Street,  
Doctors' Commons.

### Editor's Note-Book.

**COUNSELS FOR THE YOUNG.**—Never be cast down by trifles. If a spider break his thread twenty times, twenty times will he mend it again. Make up your minds to do a thing and you will do it. Fear not if a trouble comes upon you; keep up your spirits, though the day be a dark one. If the sun is going down, look up to the stars: if the earth is dark, keep your eye on Heaven!

With God's promises, a man or a child may be cheerful. Mind what you run after! Never be content with a bubble that will burst, firewood that will end in smoke and darkness. Get that which you can keep, and which is worth keeping. Fight hard against a hasty temper. Anger will come, but resist it strongly. A fit of passion may give you cause to mourn all the days of your life. Never revenge an injury. If you have an enemy, act kindly to him and make him your friend. You may not win him over at once, but try again. Let one kindness be followed by another, till you have compassed your end. By little and little great things are completed; and repeated kindness will soften the heart of stone. Whatever you do, do it willingly. A boy that is whipped to school never learns his lessons well. A man who is compelled to work, cares not how badly it is performed. He that pulls off his coat cheerfully, strips up his sleeves in earnest, and slugs while he works, is the man of action.

**SIR WALTER RALEIGH.** Denny.—This great man was undoubtedly the victim of an infamous conspiracy, but his ruin was, in a great measure, owing to his ambition. His *History of the World*, a most remarkable work, was written during his imprisonment in the Tower of London.

**TO LEARN FRENCH WITHOUT A MASTER.** J. J.—Our correspondent may certainly acquire, by self-tuition, much valuable grammatical knowledge of the French language; but in regard to pronunciation, a teacher is indispensably requisite.

**TO FRY EGGS.** T. S.—To fry eggs nicely requires some little attention, as they are apt to become hard, black, and unpalatable. There should be plenty of butter or oil, and care taken not to let them be overdone. If ham or bacon is fried with them, it must be done first, and the eggs afterwards.

**CHILTERN HUNDREDS.** T. R. C.—The Chiltern Hundreds were not always a fiction; they were a veritable locality, in which the knight of the shire who was averse to entering Parliament took refuge, and might be secure from the pursuit of the sheriff; but when once the member had taken his seat in the house, this sanctuary was no longer open to him.

**BLEACHING IVORY.** T. H.—An excellent method, to bleach bones is to boil them in a dilute solution of caustic potash for about half an hour, which method would be equally successful with ivory. The ordinary bleach, lag agents, namely, chloride of lime, chlorine, and sulphuric acid, are inapplicable to the bleaching of bone, ivory, &c., for they dissolve the lime which forms the principal part of their substance.

**ORIGIN OF SMALL FEET IN CHINA.** T. C.—According to Chinese history the custom of small feet among the females of that people, originated several centuries back, when a large body of women rose against the government and endeavoured to overthrow it. To prevent the recurrence of such an event, the use of wooden shoes was enforced on all female infants, so small as to disable them, without great pain, from making any use of their feet.

**LYONS.** F. S. S.—"Mr. Editor—Can you inform me by whom the following lines have been written?"

Who thinks that fortune cannot change her mind,  
Prepares a dreadful jest for all mankind.  
And who stands safest? Tell me, is it he  
That spreads, and swells, in puffed prosperity;  
On blest with little, whose preventing care  
In peace provides fit arms against a war!"

—[We think they are by Pope.]

**EPPING AND HAINAULT FORESTS.**—"Mr. Editor.—Sir,—Can it be true that we are to be deprived of the privilege of relaxing for a time from the toils of business and taking a mouthful of fresh air in the beautiful forests of Epping and Hainault. I implore you, in the name of the working men of England, to lift up your powerful voice in condemnation of such a measure. The pleasures of the poor are surely not so numerous, and certainly no overabundance is necessary. And why is the proposed inclosure to be effected? For whose benefit,

and at whose suggestion? By the evidence given before the house, in 1846, it appears that these spots constitute healthful pastime grounds for thousands of the overworked operatives of this vast metropolis. Let not our rulers take from us then a source of so much good, merely for the gratification of a few selfish members of the community. I am a plain man, and one not given to speaking out; but I call on you to aid me in this work. Remember that you will confer a blessing, too great to be expressed, on us and on our children; and it is impossible to say how much good may be done, and what amount of evil may be prevented, by your advocacy. Trusting you may be prevailed on to air in this matter, I remain, your obedient servant, A WORKING M/AN."

**"ENOUGH IS AS GOOD AS A FEAST."**—Among the many excellent old maxims that occasionally stir our thoughts into prudence and good humour, as we journey through life, there is not one that could more worthily engage the memory than this, which is, unfortunately, like most other sage adages, "more honoured in the breach than the observance," or if we do sometimes adjust them to the cases of others, we too often overlook their application to ourselves, which renders them of no practical value. The man toiling to increase his gains, and disappointed with his lot, is but an older (we cannot say wiser) than the boy, who, with a large piece of cake in one hand, makes a floodgate to his eyes with the other, crying because he cannot have more. This is a homely simile, but it is of universal adaptation. Happy, indeed, would it be for the whole human race, if each one was satisfied with his own portion, nor envied the lot of his neighbour. The "good time" so long expected, would, no doubt, then pass the world a visit, and man would be favoured with those greatest of all blessings

PEACE (PIE!) AND PLERITY.

**DR. FRANKLIN AND ELECTRICITY.** B.—"Mr. Editor, You have devoted considerable space in your columns to the wonderful progress of science in the present day, not forgetting the submarine telegraph, as you justly term it 'the greatest marvel of the age.' Some of your readers, however, may not be acquainted with the fact that, so far back as 1748, Dr. Franklin conceived the idea of an electric communication through a river, and actually performed the experiment. This circumstance is thus pleasantly alluded to in one of his letters.—'Chagrined a little that we have hitherto been able to produce nothing in this way of use to mankind, and the hot weather coming on, when electrical experiments are not so agreeable, it is proposed to put an end to them for this season somewhat humorously in a party of pleasure on the banks of Skunkkill. Spirits at the same time are to be fired by a spark sent from side to side through the river, without any other conductor than the water; an experiment which we have some time since performed to the amazement of many. A turkey is to be killed for dinner by the electric shock, and roasted by the electrical jack, before a fire kindled by the electrical bottle; when the healths of all the famous electricians in England, Holland, France, and Germany, are to be drunk in electrified bumpers, under the discharge of guns from the electrified battery.'—BETA."

**EMBLEMATIC STONES.** S. W.—**THE JEWELS OF THE MONTHS.**—In Poland, according to a superstitious belief, each month of the year is under the influence of some precious stone, which influence is attached to the destiny of persons born during the course of the month. It is, in consequence, customary amongst friends, and more particularly between lovers, to make, on birthdays, reciprocal presents, consisting of some jewel ornamented with the tutelar stone. It is generally believed that this prediction of happiness, or rather, of the future destiny, will be realised according to the wishes expressed on the occasion.

**January.**—The stone of January is the Jacinth, or Garnet, which denotes constancy and fidelity in any sort of engagement.

**February.**—The Amethyst, a preservative against violent passions, and an assurance of peace of mind and serenity.

**March.**—The Bloodstone is the stone of courage and wisdom in perilous undertakings, and firmness in affection.

**April.**—The Sapphire, or Diamond, is the stone of repentance, innocence, and kindness of disposition.

**May.**—The Emerald. This stone signifies happiness in love, and domestic felicity.

**June.**—The Agate is the stone of long life, health, and prosperity.

**July.**—The Ruby, or Cornelian, denotes forgetfulness of, and exemption from, the vexations caused by friendship and love.

**August.**—The Sardonyx. This stone denotes conjugal felicity.

**September.**—The Chrysolite is the stone which preserves and cures madness and despair.

**October.**—The Aqua-Marina, or Opal, signifies distress and hope.

**November.**—The Topaz signifies fidelity and friendship.

**December.**—The Turquoise is the stone which expresses great sureness and prosperity in love, and in all the circumstances of life.

**COMMUNICATIONS RECEIVED.**—S. J. C. (we have no present intention of publishing music in the *Home Companion*).—C. E. P. (we do not know of any work on the subject. Consult your own taste).—**SUFFERER** (seek a dentist; inexperience cannot advise you).—J. PRIN (the question is an important one, and open to much discussion. We should perhaps take the negative side).—E. L. B. (apply to some hairdresser).—**LORENZO** (our correspondent is right in his pronunciation of the word.—These problems are inserted in each number of the *Family Friend*, a fortnightly publication).—G. W. I. (many thanks for his communication. We shall avoid inserting the notices mentioned).—J. CHAIR (thanks).—G. NORMAN (cannot be sent free through the post, being unstamped).—J. AVERIN (should state whence the family is derived).—F. B. J. REAR (Jesus hominum Saviour—Jesus the Saviour of Men)—J. HAZARD (the first Christian church erected in England was at Canterbury, in the suburbs of St. Martin. Chapels were formerly places set apart in baronial residences for private worship, but in course of time the term became of general adaptation to both Roman Catholics and Protestants).—G. C. C. (dislike, according to Pliny, were invented by Anaximander, 550 years B.C.).—W. J. CLARK (thanks).—T. H. (the Carthaginians are said to have been the first who paved their towns with stones. London was first paved about the year 1535. Wood pavement commenced in 1839).—T. G. (we quite agree that the eating is better than the experiment).—W. T. T. (great moderation in living and attention to health, constant exercise of the voice).—G. C. G. (we think not).—T. R. S. (the origin of money is very remote. It is mentioned as a medium of commerce in the 22nd chapter of Genesis).—W. ARMSTRONG (Cordwainer is derived from the French *cordonnier*, and it is the title under which the shoemakers are incorporated).—Sir Walter Raleigh was charged with conspiring to place Arabella Stuart on the throne, and a base jury returned a verdict of guilty).—**THOMAS** (the Will-o'-the-Wisp arises from the gas of putrefying animal and vegetable substances, especially decayed fish).—W. W. (thanks).—M. THATCHER (the article would be too incomprehensible for most of our readers).—B. S. I. D. (our correspondent should mention which family he alludes to).—R. R. O. (a good ear is indispensable; tune is a great addition).—**LORENZO** (it should be "hanged." We shall consider the suggestions offered).—J. MORRISON (the three most requisite articles are brevity, good sense, and logic).—T. A. (this must depend upon constitutional causes).—A cheerful and contented disposition greatly contributes).—**TWO PUCK** (Puck is the proper spelling).—W. W. (not suitable).—J. H. SLOANE (the arms borne by Sir Hans Sloane are Gules, a sword in pale, point downwards; blade ar, hilt or, between two bears' heads couped at the neck of the third, on a chief arm. A lion pass of the first, between two maces. Crest: a Lion's head erased, or collared with maces interlaced).—**EXPIRIMENTALIST** (we are unwilling to recommend any untested remedy for removing superfluous hair from the face and hands. The roots of the hair lie so deep that no external wash will destroy them without shrivelling and disfiguring the skin; even when pulled out, others will immediately succeed them).

**THE JEWELS OF THE MONTHS.**—In Poland, according to a superstitious belief, each month of the year is under the influence of some precious stone, which influence is attached to the destiny of persons born during the course of the month. It is, in consequence, customary amongst friends, and more particularly between lovers, to make, on birthdays, reciprocal presents, consisting of some jewel ornamented with the tutelar stone. It is generally believed that this prediction of happiness, or rather, of the future destiny, will be realised according to the wishes expressed on the occasion.

# THE HOME COMPANION.

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 12.—VOL. I.]

SATURDAY, MARCH 20, 1852.

[PRICE ONE PENNY.]

## THE HUMBLE COTTAGE

BY EDWARD ASHTON

ALONE the humble cottage stood,  
Far from the city and its din  
Hard by a wide extent of wood  
Which almost seemed to hem it in  
As if with kind protecting hand  
To guard from all that household ban  
Yet 'twas a sweet romantic spot  
Where grew the pink and gladioli  
Where grew the gillyflowers and the pansies  
The blushing rose and trailing vine  
And all that nature's hand has made  
In glorious beauty arrayed  
The little streamlet wandered by  
Breathing a sweet music on the air  
The distant mountain to the high  
Up through the sky so bright and fair  
And Nature's everlasting smile  
Was there the care worn to be galle  
But humble was indeed that cot,  
As if artist's skill was so need  
So very rudely was it wrought  
Not with one ornament and red  
But like an uncouth ruin'd pile  
It stood in loneliness the while  
And all without and all within  
While the curious eye could see  
Taught plainly wealth had never been  
To stay the hand of poverty  
And lesson long and wary tell  
With plenty a rich and bonny set

Yet happy was the household band  
Which in the humble cottage dwelt,  
Hope joyed to a better land  
And off the toiling pilgrims knelt  
In holy fear and reverence there  
To offer up their heartfelt prayer  
What matter, then, though rich and great  
Their humble threshold never passed?  
Though proud ones scorned their low estate  
And on their name oppressor's sin cast  
Though they no longer saw one friendly smile  
So cheer their orphan hearts the while?  
Perchance it were a joy to know  
If at some time there were to sympathise,  
But what is all of earth below  
To him who reigns beyond the skies?  
He was their all in all—a light  
To cheer them through time's stormy night  
And thus they lived—and bless their life  
Though thus secluded from the world  
They knew that over them their strife  
A Saviour's banner was unfurled  
To slay the serpent's snares of sin,  
And add a fabled crown of win  
And when the day of life was o'er  
And they must leave all earthly things  
To tread an unknown silent shore  
Death plumed for them his angel wings  
And lo! a sweet release was given—  
That cottage proved the gate of heaven

## ISABEL LESLIE.

THE good people of Westbrook had just concluded it could not be possible that Marion Warren was to be married to that gentleman from W—, for, if he was fine looking rich and intelligent, he was a widower with one child, and a pretty step mother that young thing would make!—when one bright morning, the church doors were observed to be open and presently an elegant carriage drove up before the porch and the bride party alighted—Marion looking very lovely in her rich but plain travelling dress. They entered the church, and when after a short time they reappeared Mr Leslie lifted his bride into the carriage sprang in after her himself the noble steeds bounded forward, and in a moment, a sudden turn in the road had hidden them from the eyes of the curious lookers on. No party or parade of any kind. What a disappointment!

Three weeks after the event narrated in the preceding paragraph a travelling carriage, drawn by a pair of spirited bays was slowly ascending a hill in one of the most beautiful and romantic portions of England. Its occupants were a lady and gentleman, who were so absorbed in earnest conversation, that the many beauties of the surrounding scenery were entirely unheeded. As they reached the summit of the hill, however, the driver reined in his steeds, in obedience to a signal from his master, and Mr Leslie exclaimed—

"There, Marion we are almost at home now have I been too poetical, or too prosaic, in my descriptions of Glenwood?"

The young bride looked hastily from the window, and an exclamation of mingled surprise and admiration escaped her.

"Your descriptions certainly fell very far short of the reality," she replied, with a smile. "I had no idea of anything half so lovely."

And the scene that greeted the eyes of Marion Leslie was indeed exquisite. The spacious old mansion, surrounded as it was by forest trees that had grown old with it the extensive grounds, the arrangement of which art had never been allowed to supplant nature, the dark ravine in the background, through which a streamlet wound like a thread of silver, and, at a short distance from the house, fell over a ledge of rocks, forming a small but beautiful cascade, which, at that moment, with the last red light of day falling upon it, flashed and sparkled as if the Diamond Fay had converted each tiny drop into a gem, lustrous enough to deck the brow of his queen herself, the undulating outline of the hills that nearly surrounded the glen, bathed in a purple, golden, and rose-coloured haze, all combined to form a view most attractive even to the eye of a stranger—how much more so, then, to that of her who looked upon it as the spot where her household gods were henceforth to abide—as the home of a lifetime.

For some moments they sat in silence. There was a blending of new and strange emotions in Marion's breast and she could not give vent to them in words. At length as her eye wandered around in search of new beauties, it fell upon a simple but tasteful monument of white marble, gleaming out in strange contrast with the green turf, and from among the overshadowing trees.

An indefinable thrill passed through the frame of the young wife, and her cheek perhaps grew a shade paler, for her husband, marking the direction of her glance, bade the driver go on, and drawing her closer to his side, kissed her fondly as he said—

"The mother of my child sleeps there. Nay—do not tremble, dearest; I know that if her gentle spirit looks down upon us now, she rejoices that my heart is no longer desolate—that her little one is no longer motherless. And look, Marion," he continued, laying aside the solemnity of his tone and manner, "there is Isabel in the piazza ready to welcome us!"

A moment more, and the carriage drew up at the door. The household had all assembled in the hall to greet their new mistress; but the little Isabel had escaped from her nurse, and stood upon the piazza, clinging to a vine-wreathed column that supported the roof. Her face was flushed, her eyes sparkled with excitement, as, shaking back her dark curls, she leaned forward to obtain a better view of the new-comers, and when Mr Leslie lifted his wife from the carriage, she sprang forward, and, without awaiting her father, extended her little arms beseechingly, exclaiming, "Mama!"

Tears started to Marion's eyes, and she would have clasped the little creature to her heart with whispered words of tenderness; but the child, after gazing in her face long and earnestly, while surprise, doubt, and finally bitter disappointment were depicted on her own expressive features, broke from her embrace, and bursting into tears, ran to her nurse, crying, "Take me away, Nanny—take me away!"

Marion stood motionless with astonishment, and Mr Leslie, turning with a half frown to the housekeeper, who at that moment approached, asked—

"Mrs Morris, what is the reason of Miss Isabel's extraordinary behaviour?"

"Indeed, indeed, sir, I am as much surprised as you can be. Nannie told her this morning that her mama would be here before night, and she has been half wild all day, running all about the house, and asking so many questions. She thought it was Mrs Leslie—my former mistress, I mean," she added hesitatingly, "who was coming, and, indeed, sir, I had not the heart to tell her the contrary. Still, I did not think she would know the difference."

The old housekeeper's voice trembled, and with a few words of respectful yet kindly greeting to Mrs Leslie, she led the way to the suite of rooms that had been furnished for Marion's special use, and then retired.

You will think this but a sorry welcome my sweet wife," said Mr Leslie, as the door closed, and he led her to a luxurious chair that stood invitingly by the open window. "and I must own I am puzzled by Isabel's conduct."

"Can it be possible she remembers her mother?" asked Marion. "She is five years old now, you tell me, and I think she was but two when her mother died."

"I do not think she can remember her," was the reply, "but she has heard so much of her, that she probably thinks she does. Still, I am at a loss to know why, when she saw you, she seemed to realise so quickly that you were not the one she was expecting."

Is there no portrait of her mother in the house?"

"Yes, one that is remarkably lifelike, but it is in a room that she seldom enters, and she has not seen it many times. Nannie!" he called, as the nurse passed through the yard at a little distance from the window where they were sitting—"when was Miss Isabel in the library last?"

"She was there this morning, sir. Sampson was airing the room, and putting the books in order. She would not stay in the nursery, and when I left her in the hall just for a minute, she crept in there, and hid behind the curtains. When Sampson had finished his work, he came out, and shut the door. I could not find her for a long time, for I did not remember that the library had been open, but at last I happened to think of looking there. When I opened the door, she was sitting on the floor, in front of my mistress's portrait, and she said she was 'looking at mama.'"

"That explains the mystery in some degree," said Mr Leslie; "yet I can hardly account for such a sudden burst of emotion."

"Do you remember that you have not yet spoken to her, Ernest?" She ran away so quickly that you had no opportunity to do so, and had you not better go and find her? Poor child! her disappointment must have been bitter indeed!"

"I will go at once," replied Mr Leslie, "will you come, too?"

"Not to-night. My presence might occasion another flood of tears, and I can easily amuse myself here until you return."

"She has forgotten all her troubles," said Mr. Leslie, gaily, as he re-entered the room a few moments after, "and is sleeping as soundly as possible. A tear-drop glittered on her little rosy cheek, but I kissed it off without waking her, and I must defer my words of greeting until the morrow. But you look sad, my Marion; surely this little affair is not going to make you unhappy?"

"No, Ernest, neither sad nor unhappy, but a little thoughtful, perhaps, and that will certainly do me no harm. Ever since I promised to be your wife, I have thought often of your child, and trusted that I might be to her a mother in heart, as well as in name; but while the depth of feeling she has manifested to-night has awakened an interest in my breast which months of ordinary intercourse might have failed to do, it has also given rise to the fear that I may find it a difficult task to win her love and confidence."

"Never fear that, darling. I expect to be jealous ere long—jealous of both of you. But come, this will never do. It is time 'our new mistress' saw something more of her new domain,—so call back your smiles, love, and we'll start on a short exploring expedition, if you are not too much fatigued."

Sweet little Isabel Leslie! "That is not my mama! Nannie—oh, Nannie! you told me my mama was coming; but that is a strange lady," she exclaimed, as Nannie bore her to the nursery, although her words were scarcely audible, she sobbed so bitterly. "Mama's eyes were black, and she had long dark curls like mine; but this lady's eyes are blue, and her hair is brown, like Cousin Mary's, and her cheeks are red, and poor mama's were so pale. Oh, no—she is not my mama—she is not my mama!"

"But she is your papa's wife, Miss Isabel," replied Nannie, as she tenderly clasped her to her faithful breast, "she is your papa's wife; and, indeed, she is very pretty, and I think you will love her dearly, but if you cry so you will be sick to-morrow; and your papa will think Nannie did not take good care of you while he was gone. Hush, hush, little birdie!" and many a tender caress did Nannie try to soothe the little one she had from her infancy, until, at last, she fairly sobbed herself to sleep.

So first Mrs. Leslie had been loved with a love nearly akin to adoration, all of those with whom she had mingled in the social circle. After she taken from their midst, and the little Isabel grew old enough to plead for a story, it was always "a story of mama," and she had so often been told of her mother's deep love for her—of the caresses she was wont to lavish upon her—of her long illnesses, when she grew paler and weaker day by day, and of her prayers for the babe she would leave motherless—her mother's form and features had been so often and so minutely described to her, that she really fancied that she remembered her; and the strongest feeling in that young child's heart was love and reverence for her dead mother. No one imagined—not even her father—how that childish heart had yearned for that mother; and when told that her mama was coming back, she was, indeed, as Mrs. Morris had said, "half wild." And who can tell the anguish and disappointment that swept over her spirit, when, instead of meeting the tender eyes of which she had so often dreamed—instead of seeing the face that her own imagination had painted with all the vividness of reality, bending over her—she gazed upon one, beautiful, it is true, yet that of a stranger!

One pleasant evening in August—it was in May that our young bride first saw her new home.—Mr. and Mrs. Leslie were seated in the piazza of which we have before spoken, and Isabel was playing on the grass at a little distance. Her father's eyes rested fondly on her, as he watched her graceful movements, and noted her rare beauty with pardonable pride.

"She is very lovely," he said, at last. "Is she not, Marion?"

"She is, indeed," was the reply, and a shade of sadness rested on the sweet face of the young step-mother. "Oh, if she would only love me!"

"Do not say so, my Marion; how can she help loving one so kind and gentle as yourself?" said Mr. Leslie, earnestly, as he tenderly clasped the little hand that his wife had placed upon his arm while speaking.

"No, Ernest, Isabel does not love me. I have no disrespect nor rudeness to complain of; her temper is too sweet for that; but with all my endeavours I have not advanced one step in winning her love. She has no personal dislike to me; it is but her fidelity to the memory of her mother that keeps us apart. Of her she no longer speaks, unless it be to Nannie; but it is not because she has ceased to think of her. Every morning she takes her little basket, fills it with flowers which she has been told her mother best loved, and goes to her grave and scatters them over it. Child as she is in all other respects, upon this one subject her heart has far outgrown her years."

"I know all this, my Marion; and I will not conceal from you that I love her the better for so cherishing the affection with which she has been taught to regard her mother. I have watched her closely, and have only refrained from noticing her reserve and distance towards you, because I was very sure that she would soon lay it aside of her own accord,—sooner, perhaps, than if there was any interference on my part. Have you ever spoken to her of her mother?"

"Never. I have felt almost afraid to do so?"

"Try the experiment, then;—induce her to talk to you of her mama,—win her confidence upon that subject, which she now seems to regard as one forbidden,—make her love you as a friend, my darling, and, take my word for it, she will soon, of her own free will, love you as a mother."

Just then, Nannie came for her little charge, and a flood of light from the drawing-room windows falling upon the floor of the piazza, told them that Samson was already lighting the lamps, and they withdrew into the house.

At the usual hour, immediately after breakfast the next morning, Marion saw Isabel take her little basket, and go to the garden in search of flowers. Throwing on her bonnet, she slowly followed the child, and reached her just as she had filled her basket.

"You have some beautiful flowers here, my little Isabel," she said, adding, at the same time, a superb moss rose-bud to her fragrant treasures. "Shall we go and sit under the large oak tree near your mother's grave? Then, I

will show you how to make some pretty wreaths, and we can hang them in the shade over the grave, so they will keep fresh all the day." "Will you come?" she continued, extending her hand with a smile. Isabel lifted her large, dark eyes wonderingly to the kind face that was bending over her, and, finally placing her hand quietly in that of Marion, she walked silently by her side to the oak tree, which was one of her favourite resting-places.

There was a singular expression, half pleasure and half doubt, upon her young face, as she watched the busy fingers that were so rapidly twining her flowers into a wreath of rare elegance and beauty; but when it was completed, her delight and admiration knew no bounds.

"Now, Isabel, we will hang the wreath on that willow tree that bends just over your dear mama's head. There, does that please you, and shall we make one every morning?"

Isabel made no reply; but her red lips quivered, and her hands trembled so violently, that her little basket fell from her grasp. At last, she flung herself upon the grave, and sobbed convulsively; Marion knelt by her side, and putting her arm around her, asked—

"What troubles you, dear Isabel? are you weeping for your mama, my poor child?"

The little creature struggled with her tears for a moment, and then lifting her tiny arms, she clasped them around Marion's neck, and kissed her over and over again.

"Oh, no, no!" she exclaimed. "I was not weeping for my mama; but I have been so very, very naughty! They told me you was my new mama, and that papa would be angry with me if I did not love you; and then I thought that if I loved you, and called you my mama, I could not love my own poor mama any more: and oh, she always loved me so much! and I was afraid you would not like me to come here, and bring flowers, and would not wish me to talk of my mama any more, and so I would not love you at all."

Inexpressibly affected, Marion raised the weeping child in her arms, and bore her back to their seat under the tree.

"You must love your own dear mama, Isabel. You must love her, and think of her very often. I could not love you, neither could your papa, if you did not. But can you not find love enough in your heart for her, and for me, too? Your poor mama had been sick for a long, long time. She was glad to go to rest in this quiet grave, just as you are glad, when you are very tired, to go to sleep at night. But she did not like to leave her little girl behind her, without any mother: and do you not think she would be glad to know that Isabel had found another mama, who would teach her to be good, and try to make her happy?"

"Oh, yes!" replied the child; and her face was radiant with smiles. "And now, I do love you so much! You will love me dearly, too, won't you, mama?"

It was the first time she had addressed Marion by that title; and the young stepmother, as she clasped her to her heart, felt that the victory was won. An hour after, Mr. Leslie found them in the same spot, still talking earnestly. Isabel sprang with a glad cry into his outstretched arms; and laying her head on his shoulder, murmured, "God has been very good to me, dear papa. I have two mamas to love me now—one in heaven, and one on earth."

From that hour there was confidence—perfect, entire confidence, between Marion Leslie and the child of her adoption. As time passed on, and the young wife knew that ere long she would be indeed a mother, she could not help feeling a slight degree of anxiety as to the effect the arrival of the little stranger might produce upon Isabel; but her uneasiness was wholly uncalculated for. All hearts, rejoiced when, after a day and night of torturing suspense, Mrs. Leslie was pronounced out of danger, and the joyful tidings of the birth of a son passed from mouth to mouth; but none were more overjoyed than she who had been before regarded as the heiress of Glenwood.

Ten years! how long in anticipation—how short in the retrospect! Ten years had passed away; and to our friends at Glenwood, they had brought many changes. Marion Leslie had, for three long years, worn the garb of widowhood; and the same fell disease that tore her noble husband from her side, laid its hand heavily upon her first-born. When at length, after many months of suffering, they bore him from the chamber where he had lain so long, out into the garden, that the pure fresh air might play amid his golden locks, it was with saddened hearts and tears that would not be kept back; for they knew that their pride, their darling, their precious little Willie might not look upon the roses that were just opening their white and crimson buds—upon the soft, green turf—nor on the large old trees, beneath whose swaying branches he had so loved to play. The boy was blind!

His sisters Marion and Isabel—for another daughter had been added to the household band—a laughing, hazel-eyed little fairy, who was then four years old—escaped the contagion. The latter had changed from a lovely child into a still lovelier maiden. She was, indeed, beautiful; but hers was not the dazzling beauty that at once challenges admiration. She would, very possibly, have passed unnoticed amid a crowd. Her dark, lustrous eyes were generally so veiled by the heavy lashes that shaded them, that few knew how they could flash and sparkle; and she was, perhaps, too pale, save when some high thought of spirit-stirring impulse made her heart beat quickly, and sent the rich blood to her cheek. Yet beautiful or not, all loved her for her thoughtfulness, her purity, and for the warm, confiding heart, that found some good in all God's creatures.

Trouble, it is said, never comes singly, and at the time when we take up again the broken thread of our narrative, a shadow was resting upon the spirits of the inmates of Glenwood, although the sunlight fell, as cheerfully as of yore, upon hill, ravine, and waterfall. Death was again hovering over the dwelling; and this time his destined victim was she who, twelve years

had crossed its threshold a trusting, happy bride. Marion Leslie knew that her days—nay, her very hours were numbered; and can we wonder if, when she thought of her orphan children, one of whom was so helpless—so dependent, her heart sank chill within her, and she wildly prayed that the cup might pass from her! God alone may know the agony of such an hour! He alone may know how fearful must be the struggle ere a dying mother can teach her heart to say, "Thy will be done!"

She was reclining one evening on a low couch, near an open window, around which hung, in rich luxuriance, flowering vines, that her own hand had trained there, and Isabel sat near her, reading, in a low tone, the concluding lines of Bryant's *Thanatopsis*. As she paused, her mother's eye kindled, and a faint flush rose to her cheek.

"Beautiful! beautiful!" she murmured. "I have known that noble poem by heart, ever since I was much younger than you are, Isabel; but it always seems new to me. But lay aside your book, love, and sit here close by my side. I want to talk with you awhile. It is just twelve years this evening, since I first saw you. Do you remember it, my Isabel?"

"Do I remember it? Indeed, indeed, I do, my mother!" was the fair girl's answer, as she bowed her head, and her tears fell fast upon the wasted hand that clasped her own. "I can never forget the day, that I long ago learned to regard as the brightest of my life—the day that brought you here, to be to me at once a guide, a companion, and a friend. Oh, my mother—my more than mother, how can I ever repay you for all your kindness and affection—for your persevering efforts to win my love and confidence, when I was but a wayward child—for the unvarying tenderness, that has never allowed you to evince by look, or word, or deed, that I was less dear to you than your own children—for the watchful care that has kept my yearning heart from ever realizing for twelve long years that I was motherless!"

"Blessings on you, my sweet Isabel! I was more than repaid long since, in the delight of loving and being loved by you. Never was daughter more to a mother than you have been to me; and let that thought console you, when I am lying yonder among the willow trees, by your own dear mother's side. I feel that I shall lie there very soon; and were it not for my children, I should welcome the hour of my release. But, oh! Isabel, when I think of them—of my poor blind Willie, and of my clinging, sensitive, affectionate little Marion, it is hard—hard to be reconciled to the approach of death!"

Mrs. Leslie had half raised herself from her couch, in the excitement of the moment; but, as she ceased speaking, she sank back exhausted, and large tears forced their way through her closed eyelids. Isabel had fallen upon her knees, and buried her face in the pillow; and for some moments the silence was unbroken. At length, she raised her head, and looking steadily in her mother's face, she said, in a voice that, though low and solemn, was yet calm and firm—

"Mother, I am young, very young, and the words I am about to speak might be deemed presumptuous by a stranger, but you will not so understand them. What you have been to me, that—God helping me—will I be to Willie and Marion. Their happiness shall be dearer to me than my own, and I will watch over and care for them even as you would have done. Do you trust me, mother? Will you accept this vow?"

"Will I accept it? will I trust you? Oh! my Isabel, you little dream what a burden you have removed from my heart. You are young, it is true, but I have such confidence in the principles that have guided you through your whole life—in your fidelity to the right, and in the gentle firmness of your character, that I can leave my darlings in your charge, without a fear or a doubt. God in heaven bless you, my child—your words have removed the last cloud that came between my heart and heaven, and now the pathway to the grave has no terrors!"

She ceased; and Isabel's watchful eye marked the increasing pallor of her cheek. "You have exerted yourself too much, dear mother," she said; "lay your head upon my breast, and try if you cannot sleep."

Mrs. Leslie complied; and, for several hours, Isabel supported her in one position, refusing to listen to the entreaties of the nurse, that she might be allowed to take her place. "She will surely waken, if we attempt to move her, Nannie; and she was so very tired—oh! do let her sleep." Just then, the physician came in; and, in reply to Isabel's remark, that her mother had slept sweetly for three hours, he approached the window, and drew the curtains farther back. It was as he had anticipated—they looked upon the face of the dead!

Sacred as the promise that Isabel Leslie had made to her dying mother would have been regarded by her under any circumstances, the fact that the words in which it was couched were almost the last that had fallen upon that mother's ear—that, in a few moments after they were breathed, she had exchanged the discordant sounds of earth for the deep harmonies of Heaven—rendering it still more so. It seemed, to her excited fancy, that her mother's spirit had caught the vow from her lips, and borne it up into the presence of Him who sitteth upon the great White Throne. That promise had not been made lightly or ignorantly. Isabel had been for the last three or four years so much the companion and confidant of her mother, that she knew, better than most young girls would have done, what responsibilities she was taking upon herself. But she did not shrink from the task, and it was indeed wonderful how gracefully she bore herself under her arduous duties. She might truly have been said to be "eyes to the blind;" for she was almost constantly by Willie's side, reading to him, instructing him, leading him out under the shade of the old majestic trees, and describing, in glowing language, the beautiful and picturesque scenery around, singing to him the wild plaintive ballads he so loved to hear, or guiding his small fingers over the keys of the piano; thus giving him a source of amusement of which he never wearied. Indeed, the poor boy sometimes said he was "almost glad he was blind; for, if he could run and play like other

boys, his dear sister Isabel would not grant him so much of her time and attention.

The little Marion, who was seven years old when her mother died, clung to her with a fondness scarcely less than that she would have given to a parent; and so well did she combine firmness with gentleness, that both children revered as much as they loved her.

Riverside, the estate of Walter Hamilton, lay about five miles to the north of Glenwood. Mr. Hamilton and Mr. Leslie had been friends in boyhood, and that friendship had grown stronger, when, each having arrived at man's estate, they found themselves agreeing upon nearly all questions, whether of national or domestic policy. Their families had ever been upon terms of the closest intimacy; and it was a rare thing if a week passed without finding Clarence, the only son of Mr. Hamilton, quietly seated in the pleasant parlours at Glenwood, reading to, or chatting with, Mrs. Leslie and Isabel; or, as was more frequently the case, pleading with the former for a walk, or a ride with the latter.

For the last year, there had been more reserve in their manner towards each other; and, meanwhile, Clarence Hamilton had been looking into his own heart, and had learned—but we will not anticipate.

At the close of a dark, gloomy day, about six months after her mother's death, Isabel sat alone in the library. The large parlours had looked so lonely and dreary, after the children had retired, that she had ordered lights in her father's favourite apartment, thinking that change of place might, perhaps, drive away the sadness that weighed upon her spirits. There had been an unusual display of wilfulness on the part of Marion that day, and she had been obliged to exert her authority more decidedly than ever before. She had been fancying, too, that Willie was growing sicker, and more feeble; and these causes, together with some trifling household difficulties, made her feel more oppressively than was her wont, the burden of care that rested upon her. She had tried to read, in vain; and was sitting by the table, with her head resting upon her folded arms, when the door opened, and Clarence Hamilton entered.

She looked up, and welcomed him with a faint smile, as he seated himself by her side; but, after a few fruitless attempts to maintain a conversation on ordinary topics, he said, "You look sad, to-night, Isabel; I wish I dared ask why you are so, as I used to do when we were children together."

"I know no reason why you may not, Clarence," replied Isabel, without raising her eyes; for there was something in his tone and manner that embarrassed her—she knew not why. Then, trying to speak more gaily, she continued: "There is nothing the matter, except that I sometimes find being the 'Lady of the Manor' rather a troublesome dignity. Have you been to L— lately?"

"I have not," was the answer;—and the long pause that ensued was broken, at last, by Clarence, who exclaimed, "I cannot talk to-night upon indifferent subjects! I came here to speak to you of ourselves—of our own intercourse. Isabel—Isabel, why do you shun me as you have done of late? For the last few months I have found it difficult to obtain even a glimpse of you; and never, until this evening, have I met you alone. May I not ask why is this?"

"I have not the leisure I once had, to devote to my friends," was the evasive reply; "and my spirits have not been such as to allow me to mingle in society with any pleasure, either to myself or others."

"And this to me, Isabel?" asked the young man, sadly. "I had hoped that you regarded me as more than an ordinary acquaintance; that friends, as we have been, from our very childhood, I might have claimed the privilege of friendship, and striven to soothe, and comfort in your affliction. But that you have not permitted; and now, I hardly dare ask, that you will give me the right to do so for the future. Yet you must know that I love you, Isabel,—that I have loved you for years,—that the hope of one day calling you mine, is the dearest that my heart has ever cherished. May I not believe that hope is not a vain one?"

Isabel had turned her face away,—it was pale as marble, and almost as rigid, such was the effort she made to retain her composure; and so successful was she, that her voice scarcely trembled as she replied, "It may not be, Clarence; we can never be more to each other than we now are—friends!"

Young Hamilton rose hastily, and, gazing upon her face for a moment, said—"Then I may linger here no longer. I thought I had reason to believe that my love was not unreturned; but it seems I was mistaken,—farewell!" and, without another word, he left the room.

Isabel's forced composure gave way the moment he passed from her sight. "Oh, my mother—this is terrible!" she murmured, and her slender frame swayed to and fro, in the violence of her emotion. The door had not quite closed behind Clarence Hamilton, and turning involuntary, for a last look, he was startled by beholding the sudden change in the countenance and attitude of her he loved. Noiselessly entering the room, he stood again by her side.

"Isabel, I was not deceived; you do love me, and this strange agitation convinces me that some cause, of which I am yet ignorant, occasioned the cruel words you have just spoken. I leave you not again, until all is explained."

"Oh, Clarence! I have hoped and prayed that I might be spared the agony of this moment," was the young girl's answer; "I will no longer try to conceal from you that you are dear to me; but there is a bar to our union that can never be removed."

"There can be none that is insuperable. Oh, Isabel! now that I know you love me, I cannot give you up."

"A promise to a dying mother can never be broken, Clarence," and Isabel related to him her last conversation with Mrs. Leslie. Harpently he strove to alter her determination—to persuade her that duty required no such self-sacrifice; and, finally, he said, "You need not be separated if

Willie and Marion, dear Isabel—my home shall be theirs, and you can watch over and care for them as well in one place as another."

"I know, I feel, that Willie's life would be shortened by taking in from Glenwood. Here, he is familiar with everything around him—he can go from room to room, and even to some extent about the grounds, alone. It could not be so elsewhere; and he is so attached to his home, that, if taken from it, he would droop and wither like a transplanted flower. No, Clarence, urge me no longer; our paths lie in opposite directions, and God will give us strength to walk therein. Leave me now, I beg; you are but torturing yourself and me by prolonging this interview. Go—and may Heaven bless you!" She extended her hand—Clarence raised it, for a moment, to his lips, and Isabel Leslie was alone.

Yet again must we pass over the period of ten years in the lives of those to whom our story relates. It was a morning in early spring-time: Glenwood bore much the same appearance that it did when we first looked upon it. The fine old trees raised themselves, if possible, with a more stately mien than at that time, and one or two of the very oldest had begun to show slight symptoms of decay. The vines that twined round the pillars, supporting the piazza, had clambered up and spread themselves upon the roof; but there was no other change. By one of the open windows sat a lady, apparently about twenty-seven or eight, engaged in some light embroidery. She did not look in the least sad or unhappy, yet there was something about her face and mien that spoke of past sorrow. You could scarcely tell what, however; for her smile was sweet and even joyous, as she turned to greet a young girl, who, at that moment, approached the window from without—one tiny hand grasping the folds of her riding-dress, while, with the other, she unfastened the little velvet cap that so well became her.

"Oh, sister Isabel. I have had such a charming ride," she exclaimed, as she laid her cap on the window-seat, and commenced smoothing the long, brown ringlets that shaded her bright, animated face. "Ebony was in fine spirits, and we flew over the hills like two madcaps, as we were. Caesar found it hard work to keep up with us, and I imagine he hopes Miss Marion won't take another ride very soon. And, oh! I have some news for you, Isabel: we passed Riverside, and—what do you think?"

"Pray, don't make me guess, dear Marion. I was never good at riddles."

"Why, then, I learned that Clarence is coming home. Old Susan had every window in the house wide open, I verily believe; and such tearing down and putting to rights again I never saw in my life."

A slight flush had mounted to the brow of the other sister, but the younger one marked it not; and, in a moment, added—

"I wonder if he looks at all as he used to? Susan said he had been gone ten years."

"Do you remember him?"

"Oh, yes; and how handsome I thought he was! Are you not glad he is coming home? I am; for now there will probably be something going on to keep us awake," and the merry girl bounded away to her room, singing as she went.

Clarence Hamilton was coming back; and how would he come—alone or otherwise? Isabel knew not—they had never met since the interview of which we have before spoken. He left for the Continent the next week. Until the death of his parents, she had heard from him occasionally through them; but for the last five years no intelligence concerning him had reached her.

A few weeks afterwards, he stood again in her presence; and no one would have dreamed that the two who there met—not coldly, but so calmly and quietly—could ever have loved each other as they had loved. The interview was not long, and it was tinged with sadness on both sides; for Mr. Hamilton had returned to look on the graves rather than the faces of his nearest relatives. Willie's wonted seat, too, was now vacant; and, as his eye fell on a shorter mound near Mrs. Leslie's resting-place, he needed no explanation.

From that time they met frequently. During the long years that had rolled away since they parted, Isabel had striven to conquer her attachment, and she had succeeded; but thrown again into his society, she soon found that if it had been easy to love the high-spirited, ardent, enthusiastic youth, it would be still easier to love the noble, intellectual man. Did he love her? She sometimes fancied that he did, although he had never even alluded to the past.

"Marion, my own dear sister, why will you no longer confide in me? For weeks you have been sad and restless; your cheek grows pale; your step is slow and languid; and, at times, you startle me by an unnatural gaiety that is more painful to behold than sadness itself. I am convinced that your suffering is more mental than physical, yet you evade all my questions. What have I done, Marion, thus to forfeit your confidence?"

"Oh, nothing, nothing, dearest Isabel! Do not be anxious about me. I have not felt very well for the last few weeks, but it will soon pass over."

"You cannot deceive me, Marion. I have read your heart too long not to be well aware that something distresses you. I cannot now demand your confidence: you are too old for that. I can only beg, by the love I have so long borne you—by the memory of your mother—that you will no longer withhold it from me. May I ask you a question or two, my own sister; and will you answer me truly?" she continued, as she drew the now weeping girl to her breast and twined her arms around her.

"I will, I will, Isabel—ask me whatever you wish."

"Then tell me truly, Marion, do you not love Clarence Hamilton?"

Marion started quickly from her sister's embrace at this unexpected question, and an almost angry flush rose to her very forehead, then with a sudden revulsion of feeling, she buried her face in her sister's lap, and wept more bitterly than before.

"I am answered, darling," said the latter, after she had allowed her to weep awhile in silence. "Now, tell me all about it?"

"Oh, do not blame me, Isabel! Indeed, indeed, I did not mean it. I could not, knowingly, have given my affections to any, unsought. I did not dream that I cared for him, until I was told that—that —"

"That, what, dear Marion?"

"That Mr. Hamilton had been a lover of yours before he went on the Continent, and that you refused him. Then, my eyes were opened, and at the same moment I felt that he who had once loved one so good and noble as you are, even vainly, could never care for one like me."

"You do yourself injustice, my sweet sister. I should feel that I was bestowing a treasure upon any man, in giving him the hand of my Marion; but tell me, have you ever had reason to think Mr. Hamilton loves you?"

"Never, never. His manner is always kind and courteous, but nothing more. But, oh, Isabel! do not, do not betray me. I could never look upon his face again, if I thought he suspected my folly."

"Nay, fear not, dear one. Your secret is as safe with me as if it were hidden in your own breast. Now, go, let Flora smooth these dishevelled curls, and try, if for my sake at least, you cannot call your smiles and roses back again," she added, as she tenderly kissed Marion's now glowing cheek.

"Blind fool that I have been!" murmured Isabel, as she gained the secrecy of her own apartment. "How could I expect that one so young, so confiding, so prone to love as Marion, could associate as freely as she has done, with one like Clarence Hamilton, without loving him? Now, once again my dream is over—their happiness shall be dearer to me than my own!" were the words of my vow. I have kept it thus far—shall I break it now?"

We may not pause here to tell of Isabel's resolves—of her efforts to secure Marion's happiness—of her struggles with her own heart in the night-watches, when there was no eye to witness her suffering save that of Him who seeth in darkness. Suffice it to say, that several months afterwards Clarence Hamilton called at Glenwood, and requested a private interview with Miss Leslie.

"Isabel," he said, as he rose to meet her,—and we cannot deny that there was a slight tinge of embarrassment in his manner. "Isabel, I have a boon to ask of you, and, ere I make it known, will you pardon one allusion to the past? You cannot have forgotten what passed between us in this very room more than ten years ago. While I was abroad, I strove to forget you, or rather to think of you only as the friend of my childhood. I thought I had succeeded; but when I again met you, and saw that there was now no bar to our union, my heart would dwell upon the admission I had once won from you, that you loved me. There was a time when I fancied that the dream of my youth might yet be realized; but your manner soon convinced me that it was a vain hope, and that you would never regard me again as you had done in days gone by. And then, I can scarcely tell how—by slow degrees—I found my affections twining around Marion, and I now love her, Isabel—deeply, sincerely; not, perhaps, with the enthusiastic love of boyhood, but with the calmer attachment of maturer years. Will you give her to me, Isabel?"

Calmly did Isabel Leslie place her hand in that of Clarence Hamilton, as she replied, "Yes, Clarence, I give her to you willingly"—gladly, she would have added, but her tongue refused to syllable the word. "She is just coming up the avenue—go meet her."

Mr. Hamilton rose eagerly, and then Isabel bowed her head, and murmured, "My mother, my more than mother—the sacrifice is complete! From your home in heaven, bless, oh, bless me!"

For more than an hour she remained there, while ever and anon the low murmur of voices from the garden fell upon her ear. Then, well-known footsteps sounded a moment more, and Marion came to her—her sweet face all smiles, and tears, and blushes.

"Well, Marion, what is it? When are you to be mistress of Riverside?" said Isabel, gaily; for she saw that Marion's heart was too full for words.

"Oh, not soon—not very soon. I cannot leave you yet, Isabel."

Tenderly did Isabel part the rich tresses on her young sister's brow, and fondly press her lips upon it, as she said, "God bless you, my sweet sister, now and evermore!"

Not many months afterwards, there was a small bridal-party assembled in the elegant drawing-room at Glenwood. Exquisitely lovely was the child-like bride in her robe of pure white, and her luxuriant ringlets unconfined save by a simple wreath of the lily of the valley; but scarcely less so was the pale, spiritual Isabel, with her deep, dark eyes, and raven tresses, bound with severe simplicity around her beautifully-shaped head. Once only, during the evening, did Clarence Hamilton, on looking suddenly up, meet those eyes bent upon him with such a strange expression that his heart thrilled, and the unbidden thought arose, "Has she quite forgotten that she ever loved me?" But the next moment, she was receiving her guests with a graceful dignity that completely deceived him. Two hours later, and Isabel Leslie was alone in the home of her father.

**IMPORTANCE OF CORRECT PUNCTUATION.**—The contract made for lighting the town of Liverpool, during the year 1819, was thrown void by the misplacing of a comma in the advertisements—thus:—"The lamps at present are about 4050, and have in general two spouts each, composed of not less than twenty threads of cotton." The contractor would have proceeded to furnish each lamp with the said twenty threads; but this being but half the usual quantity, the commissioners discovered that the difference arose from the comma following instead of preceding the word each. The parties agreed to annul the contract, and a new one was ordered.

## THE AGE OF IMPROVEMENT.

We live in an age of improvement. The characteristic battle-cry of our times is, *Onward!* Not shouted by armed columns in the headlong onset that secures or overthrows empires, but in the scarcely less impetuous advance of all classes, of all nations, in the eventful struggle for preëdence in the arts of peace.

In looking back within the period of our own remembrance, there seems so much of progress crowded into that brief space, that we are surprised so little should have been done before we lived. We wonder what the world has been about since the creation, and suspect that the past ages must have had rather a sleepy time in leaving so much to our day and generation. In the vast range of science, and its applicability to every-day use, in the means of abridging distance by increased locomotion, in all that relates to human culture and human comfort, the nineteenth century has done more than the combined results of all its predecessors. Its distinctive mark is utility. All professions and classes must contribute to this great end. The plodding scholar and the practical man must alike lay their work on the public altar. The student is not allowed to follow his tastes and gratify his curiosity for himself alone: he must acquire for others, and surrender his knowledge for the good of all. He may dissect the globe until its component parts are familiar things; resolve matter into its original elements; compel the solid rock to tell the history of its formation; and from the indistinct and mouldering fragments of a bygone time, spread out the map of the infant earth teeming with monster life and unseemly vegetation. He may show how processes, worked out by the wisdom of the Creator, compelled the ungenial soil to unfold the principles of production, and, transforming the primitive world into fertility and usefulness, prepared this beautiful home for the advent and improvement of the human race. But he must do all this with a strict regard to the wants of humanity. Science can no longer dwell in seclusion—a living thing buried from men; but she is summoned from study and laboratory, from closet and cabinet, to aid in the great march of advancement. She abandons her "arcana" to minister to man, and to apply her power to the necessities of active life. She does not, now, bend mysteriously over furnace and crucible, that iron may become gold, and our allotted days be indefinitely extended; but she brings her works into light, that industry may be encouraged by her friendly assistance. She seeks a solvent that shall cover the barren places with abundance, converting stones to bread, and transmuting sterility into waving corn-fields. That the husbandman may know how to apportion his labour, she subjects the soil to a scrutiny, which infallibly betrays where excess exists, or where nutriment is wanted. She classifies and arranges earth, stone, and plant, with unerring skill; tells the history and uses of the forest tree; breaks in on the domestic economy of insect life; discloses the habits of the worm; gives every hue of the beetle's mail; describing so minutely the appearance and intentions of the destroyer of orchard and garden, that his presence may be detected, and his operations frustrated. Indeed, the speculations of science and abstractions of philosophy are made subservient to this utilitarian age, which discards theory without practice, and estimates the value of learned research in proportion to its adaption to the tangible requirements of society.

It is not advisable to go back to the early ages, tracing the progress of agriculture from beyond the flood. It may be taken for granted that the antediluvians entertained a due consideration for dinner, and very well comprehended the small chances of procuring it without paying their addresses to the soil. Neither is it expedient to explore what is generally understood by antiquity. It may be a matter of curiosity what the people of that indefinite period did to the earth, but as for any practical application of the information, we might as well consult a model of one of their war galleys for the purpose of improving a line-of-battle ship. Whether tillage was first practised in India or China, whether the Egyptians pulverized the Delta of the Nile with a wooden hoe, or the Romans scarified the Campagna with a crooked stick, are matters of no great moment except to the antiquary. A thorough investigation into the agriculture of the ancients would give no hint for the management of our farms, adding neither to the corn-bin, hay-mow, or market-cart. They wrote much, and not content with plain prose, gave some, now useless, advice in very excellent verse. Hesiod's poem of *Works and Days* sleeps on the shelf of the library, and the *Georgics* of Virgil serve only to worry schoolboys with rather tough Latin. Homer says, that the master farmer was accustomed to meet his ploughmen at either end of the furrow with the "crowned goblet," to reward and stimulate them with hearty draughts. He does not describe the quality of the beverage, but it is to be supposed that it was such as would meet the approbation of a temperance society, or that the furrows were very long; the employers of those days doubtless being as anxious as at the present for a good day's work, and however partial they may have been to "the serpentine line of beauty" in art, it can be presumed they did not fancy an irregular series of them in their ploughed fields.

We give the past ages credit for very good intentions, and, in some things, must acknowledge their superiority. The huge monuments, whose construction is an unsolved problem, puzzling the science and art of modern times even to raise from the ground the fragments which time or the barbarian has laid low, compel us to confess that they beat us in laying stone walls. But, in positive usefulness, we entertain a belief that we have made an advance in the management of the earth. If the Carthaginian general, who wrote twenty-eight books on Husbandry, every word of which is now as little known as his military exploits, had been present at the Great Exhibition, his astonishment would be equal to that of his soldiers, should they rise up, to find themselves

confronted by a battery of flying artillery. And could Cincinnatus walk through our agricultural warehouses, his wonder would be, not that he left his plough, but that he ever returned to it. In fact, we flatter ourselves that we know something more about farming than did the Egyptians, Greeks, and Romans; and doubt whether the most indefatigable research into their modes of cultivation would increase our knowledge. We respect them for their veneration of the plough, and can excuse them for worshipping the ox that drew it, he being, unquestionably, superior to the average of their deities; but we think we could show them stock that would essentially diminish the divine honours of all the cattle of antiquity, from Apis downward.

The cultivation of the earth commenced whenever, and wherever, she did not, spontaneously, produce enough for human wants. Necessity placed the hand on the plough, for men never yet did hard work for the fun of it. When they can feed and clothe themselves without it, they find other modes of amusement. Labour has been ordained as man's heritage, leaving to his ingenuity to discover the best ways of applying or diminishing it. One of his great objects is to produce the most results with the least work. He has, therefore, pressed the horse and ox into his service, making them do his bidding. He dams the water-course, and only suffers it to run after it has turned his mill-wheels. He invents the steam-engine, and it puffs and blows that his hands may rest and his own breath not be expended. The drowsy hum of the old-fashioned spinning-wheel, which was once seen in every farmhouse, and the monotonous sound of the hand-loom, that lumbered up the largest apartment, have given way to the stunning din and clatter of the factory, which turns out material enough to clothe an army, in the time that an ancient housewife would have been getting ready to weave a shirt.

## TWO SIDES TO A STORY.

"HAVE you seen much of your new neighbours, yet?" asked Mrs. Morris, as she stepped in to have an hour's chat with her old friend Mrs. Freeman. "Very little," was the reply. "Occasionally I have seen the lady walking in her garden, and have sometimes watched the sports of the children on the side walk, but this is all. It is not like the country, you know. One may live here for years and not become acquainted with the next-door neighbours."

"Some may do so," replied Mrs. Morris, "but, for my part, I always like to know something of those around me. It is not always desirable to make the acquaintance of near neighbours, but by a little observation it is very easy to gain an insight into their characters and position in society. The family which has moved into the house next to yours, for instance, lived near to me for about two years, and although I never spoke to one of them, I can tell you of some strange transactions which took place in their house."

"Indeed!" replied Mrs. Freeman, with little manifestation of interest or curiosity; but Mrs. Morris was too eager to communicate her information to notice her manner, and lowering her voice to a confidential tone, continued—"There is an old lady in their family whom they abuse in the most shocking manner. She is very rich; and they, by threats and ill-treatment, extort large sums of money from her."

"A singular way of inducing any one to bestow favours," replied Mrs. Freeman, dryly. "Why does not the old lady leave there?"

"Bless your heart, my dear friend! She cannot get an opportunity. They never suffer her to leave the house unattended. Once or twice, indeed, he succeeded in getting into the street, but they discovered her in a moment, and actually forced her into the house. You smile incredulously, but if you had been an eye-witness of their proceedings as I have, or had heard the screams of the poor creature, and the heavy blows which they inflict, you would be convinced of the truth of what I tell you."

"I do not doubt the truth of your story, in the least, my dear Mrs. Morris. I only think that in this case, as in most others, there must be two sides to his story. It is almost incredible that such barbarous treatment could continue for any great length of time without discovery and exposure."

"Oh, as to that, people are not fond of getting themselves into trouble by meddling with their neighbours' affairs. I am very cautious about it myself; I would not have mentioned this matter to any one but an old friend like yourself. It seemed best to put you on your guard."

"Thank you," was the smiling reply. "It is hardly probable that I shall be called upon to make any acquaintance with my new neighbours, but if I am, I certainly shall not forget your caution."

Satisfied that she had partially succeeded in awakening the suspicions of her friend, Mrs. Morris took her departure, while Mrs. Freeman, quite undisturbed by her communications, continued her round of domestic duties, hinking less of the affairs of her neighbours, than those of her own household. Occasionally she saw the old lady whom Mrs. Morris had mentioned, walking in the adjoining garden, sometimes alone, and sometimes accompanied by the lady of the house or one of the children. There was nothing striking in her appearance. She looked cheerful and contented, and showed no signs of confinement or abuse. Once when Mrs. Freeman was in her garden, she had looked over the fence and praised the beauty of her flowers, and when a bunch was presented to her, had received them with that almost childish delight which aged people often manifest.

Weeks passed on, and the remarks of Mrs. Morris were almost forgotten, when Mrs. Freeman was aroused one night by loud cries, apparently proceeding from the adjoining house; and on listening intently, could plainly distinguish the sound of heavy blows, and also the voice of the old lady in question, as if in earnest expostulation and entreaty.

Mrs. Freeman aroused her husband, and together they listened in anxiety and alarm. For nearly an hour the sounds continued, but at length all was

again quiet. It was long, however, before they could compose themselves to rest. It was certainly strange and unaccountable, and there was something so inhuman in the thought of abusing an aged woman, that their hearts revolted at the idea.

Still Mrs. Freeman maintained, as was her wont, that there must be two sides to the story; and after vainly endeavouring to imagine what the other side could be, she fell asleep, and was undisturbed until morning.

All seemed quiet the next day, and Mrs. Freeman had somewhat recovered from the alarm of the previous night, when she was again visited by her friend Mrs. Morris. As usual, she had confidential communications to make, and particularly wished the advice of Mrs. Freeman in a matter which she declared weighed heavily upon her mind; and being assured that they should be undisturbed, began at once to impart the weighty secret.

"You remember Mrs. Dawson, who went abroad with her husband, a year or two ago?"

"Certainly I do," was the reply. "I was well acquainted with her."

"Do you recollect a girl who had lived with her for several years: I think her name was Mary Berkly?"

"Quite well. Mrs. Dawson placed great confidence in her, and wished to take her abroad, but Mary was engaged to an honest carpenter, in good business, and wisely preferred a comfortable house in her own country."

"She had other reasons, I suspect," replied Mrs. Morris, mysteriously; "but you will hear. This Mary Berkly, or as she is now called, Mary White, lives not far from my present residence. Her husband is comfortably off, and his wife will occasionally, as a favour, do up a few muslins for particular persons. You know she was famous for her skill in those things. The other day, having a few pieces which I was particularly anxious to have looked nice, I called upon her to see if she would wash them for me. She was not at home, but her little niece, who lives with her, a child of four years old, said that Aunt Mary would be in directly, and asked me to walk into the parlour. I did so, and the little thing stood by my side chattering away like a magpie. In reply to my questions as to whether she liked to live with her aunt, what she amused herself with, &c., &c., she entered into a long account of her various playthings, and ended by saying that she would show me a beautiful new doll which her good uncle had given her, if I would please to unlock the door of a closet near where I was sitting, as she could not turn the key."

"To please the child, I unlocked the door. She threw it wide open, and to my astonishment I saw that it was filled with valuable silver plate, china, and other articles of similar kind, some of which I particularly remembered having seen at Mrs. Dawson's."

"Perhaps she gave them to Mary," suggested Mrs. Freeman. "She was quite attached to her."

"Impossible!" exclaimed Mrs. Morris. "Valuable silver plate is not often given to servants. But I have not yet finished. Just as the child had found the doll, Mrs. White entered, and on seeing the closet door open, said sternly to the child—'Rosy, you did very wrong to open that door without my leave. I shall not let you take your doll again for a week;' and looking very red and confused, she hastily closed it and turned the key. Now, to my mind, these are suspicious circumstances, particularly as I recollect that Mr. and Mrs. Dawson were robbed of silver plate shortly before they went abroad, and no trace could be found of the thieves."

"True," replied Mrs. Freeman, thoughtfully; "I recollect the robbery very well. Still I cannot believe that Mary had anything to do with it. I was always pleased with her modest manner, and thought her an honest girl."

"She is very smooth-faced, I know," answered Mrs. Morris, "but appearances are certainly against her. I am confident that the articles I saw belonged to Mrs. Dawson."

"There may be another side to the story, however," remarked her friend, "but why not mention your suspicions to Mrs. Dawson; you know she has returned, and is living in the city. I have her address somewhere."

"I know where she lives, but would you really advise me to meddle with the affair. I shall make enemies of Mr. and Mrs. White, if they hear of it, and I like to have the good will of all, both rich and poor."

"I do not believe that Mary would take anything wrongfully," replied Mrs. Freeman; "but if my suspicions were so fully aroused as yours seem to be, I presume I should mention what I saw to Mrs. Dawson, if it were only for the sake of hearing the other side of the story, and thus removing such unpleasant doubts from my mind. And, indeed, if you really think that the articles which you saw were stolen, it becomes your duty to inform the owners thereof, or you become, in a measure, a partaker of the theft."

"That is true," said Mrs. Morris, rising, "and in that way I might ultimately gain the ill-will of Mrs. Dawson; therefore, I think I will go at once and tell her my suspicions."

"Which, I am convinced, you will find erroneous," replied Mrs. Freeman. "We shall see," was the answer of her friend, accompanied by an ominous shake of the head; and, promising to call upon Mrs. Freeman on her return, she took leave.

During her absence, the alarming cries from the next house were again heard; and presently the old lady appeared on the side-walk, apparently in great agitation and alarm, and gazing wildly about her as if seeking a place of refuge; but she was instantly seized in the forcible manner Mrs. Morris had described, and carried into the house.

"This is dreadful!" exclaimed Mrs. Freeman. "What excuse can there be for such treatment!" and, for a moment, her heart was filled with indignation toward her supposed barbarous neighbours; but a little reflection caused her to suspend her judgment, and try to learn both sides of the story.

As she sat ruminating on this singular occurrence, and considering what was her duty in regard to it, she was aroused by the entrance of Mrs. Morris,

who, with an air of vexation and disappointment, threw herself upon the nearest chair, exclaiming—

"A pretty piece of work I have been about! It is all owing to your advice, Mrs. Freeman. If it had not been for you I should not have made such a fool of myself."

"Why, what has happened to you?" asked Mrs. Freeman, anxiously.

"What advice have I given you which has caused trouble?"

"You recommended my calling upon Mrs. Dawson, did you not?"

"Certainly: I thought it the easiest way to relieve your mind from painful suspicions. What did she say?"

"Say! I wish you could have seen the look she gave me, when I told her what I saw at Mrs. White's. You know her haughty manner. She thanked me for the trouble I had taken on her account, and begged leave to assure me that she had perfect confidence in the honesty of Mrs. White. The articles which had caused me so much unnecessary anxiety, were entrusted to her care when they went abroad, and it had not yet been convenient to reclaim them. I cannot tell you how contemptuously she spoke. I never felt so mortified in my life."

"There is no occasion for feeling so, if your intentions were good," answered Mrs. Freeman, "and certainly it must be a relief to you to hear the other side of the story. Nothing less would have convinced you of Mrs. White's honesty."

Mrs. Morris was prevented from replying by the sudden and violent ringing of the bell, and an instant after, the door was thrown open, and the old lady, whose supposed unhappy condition had called forth their sympathies, rushed into the room. "Oh, save me! Save me!" she exclaimed, frantically. "I am pursued—protect me, for the love of heaven!"

"Poor creature!" said Mrs. Morris. "You see that I was not mistaken in this story, at least. There can be no two sides to this."

"Depend upon it there is," replied Mrs. Freeman; but she invited her visitor to be seated, and begged to know what had caused her so much alarm.

The poor lady told a plausible and piteous tale of ill-treatment, and, indeed, actual abuse. Mrs. Morris listened with a ready ear, and loudly expressed her horror and indignation. Mrs. Freeman was more guarded. There was something in the old lady's appearance and manners that excited an undefinable feeling of fear and aversion. She felt much perplexed as to the course she ought to pursue, and looked anxiously at the clock to see if the time of her husband's return was near.

It still wanted nearly two hours, and after a little more consideration she decided to go herself into the next house, ask for an interview with the lady of the house, frankly state what had taken place, and demand an explanation. This resolution she communicated in a low voice to Mrs. Morris, who opposed it as imprudent and ill-judged.

"Of course they will deny the charge," she argued, "and by letting them know where the poor creature has taken shelter, you will again expose her to their cruelty. Besides, you will get yourself into trouble. My advice to you is to keep quiet until your husband returns, and then to assist the lady secretly to go to her friends in the country, whom she says will gladly receive her."

"But I am anxious to hear both sides of the story before I decide to assist her," replied Mrs. Freeman.

"Nonsense," exclaimed her friend. "Even you must see that there cannot be two sides to this story. There is no possible excuse for cruelty, and to an inoffensive aged woman."

While they were thus consulting together their visitor regarded them with a troubled look and a fierce gleam in her eye, which did not escape Mrs. Freeman's observation; and just as Mrs. Morris finished speaking, the maniac sprang upon her, like a tiger on his prey, and seizing her by the throat demanded what new mischief was plotting against her.

The screams of the terrified woman drew the attention of the son of the old lady, who had just discovered her absence, and was hastening in search of her. At once suspecting the truth, he rushed without ceremony into his neighbour's house, and speedily rescued Mrs. Morris from her unpleasant and somewhat dangerous situation. After conveying his mother to her own room, and consigning her to strict custody, he returned and respectfully apologised to Mrs. Freeman for what had taken place.

"His poor mother," he said, "had for several years been subject to occasional fits of insanity. Generally she had appeared harmless, excepting as regarding herself. Unless prevented by force, she would sometimes beat her own flesh in a shocking manner, uttering at the same time loud cries and complaints of the abuse of those whom she supposed to be tormenting her."

"In her lucid intervals she had so earnestly besought them not to place her in the asylum for the insane, but to continue to bear with her under their own roof, that they had found it impossible to refuse their solemn promise to comply with her wishes. For themselves, their love for her rendered them willing to bear with her infirmities, but it should be their care that their neighbours should not again be disturbed."

Mrs. Freeman kindly expressed her sympathy and forgiveness for the alarm which she had experienced, and the gentleman took leave.

Poor Mrs. Morris had remained perfectly silent since her release, but as the door closed on their visitor, and her friend kindly turned to inquire how she found herself, she recovered her speech, and exclaimed energetically—

"I will never, never say again that there are not two sides to a story. If I am ever tempted to believe one side without waiting to hear the other, I shall surely feel again the hands of that old witch upon my throat."

"Old witch!" repeated Mrs. Freeman. "Surely she demands our sympathy as much as when we thought her suffering under ill-treatment. It is indeed a sad thing to be bereft of reason. But this will be a useful lesson to both of us: for I will readily acknowledge that in this instance I was sometimes tempted to forget that there are always 'two sides to a story.'"

## OLD CHINA.

AMONG the ornaments and decorations of our modern apartments, old porcelain forms a very prominent feature. The activity shown in the pursuit of a rare piece of china, and the extraordinary price which has been frequently paid for it, are striking indications of the prevailing taste; and there is a certain degree of reputation attached to the possessor of a good collection, which is highly stimulating.

Of all the pursuits of fashion, this is one of the most innocent. We have had frequent occasions to admire the female taste and judgment displayed in the selection, and we have listened to many an elegant dissertation from the sweetest lips in the world, on the beauties of a mutilated jar, until we have felt the incipient mania. Then have we pryed into every broker's store in each dirty avenue of the metropolis, in the hope of forming a collection suited to the dimensions of our apartment, and purchased with painful reluctance to the state of our exchequer.

The proficiency of the Chinese in the chief branch of their manufactures, the state of their fine arts, and even the religious opinions of the people, may be collected from their porcelain. In the numerous private cabinets of this metropolis are specimens of the most precious kinds of porcelain, for which the Chinese have been long pre-eminent, and the manufacturers of our own country experience the benefit of these models. With the advantages of more correct principles of design, the knowledge of perspective, and of the harmony of colours, we are only deficient in understanding the mixture of the materials, and the plastic part, to rival the productions of Eastern Asia in this line. The former may be made good to us by our superior chemical science, the latter will no doubt be acquired by patience and care. Every one therefore must applaud the curiosity which leads to forming such collections, and must cease to wonder at the high price at which objects of such beauty and importance have been estimated.

The kind of porcelain chiefly prized is termed Mandarin or Egg-shell. It displays the greatest ingenuity in the fabric; its characteristic is extreme delicacy, and the objects on it are of the most exquisite pencilling and enamel. The marks, however, by which the Mandarin porcelain may be known are not decidedly agreed on. Some persons have ventured to recommend it by the thinness and transparency of the material; others by the contrast of some rich colour on the outside with a green verditer within; others again only, and perhaps with juster reason, on the quadrangular cluster of characters inscribed on the bottoms of the vessels. These groups, it is believed, are the most ancient characters of China, changed from their hieroglyphical to a quadrate form, and are used as a court character. The inscription records the dynasty and emperor under which the specific piece of porcelain was made.

The *Crackle China* is admired for the cracks observable in the varnish, which, it is believed, are occasioned by the vase being suddenly exposed to a cool draught of air while the varnish is yet warm.

The more thick *Enamel China* is less to be admired for its earth and painting, than for the freedom with which aquatic and other plants are designed on it, for the richness of the colours laid on in varnish, and the curious symbols with which it is embellished.

The *Burnt-in China* is considered of inferior quality; but this mode of colouring gives admirable richness and effect when introduced on the genuine specimens of the old Japan, which is of massive manufacture, and admired for its weight.

The *Old Japan*, properly so called, combines almost every quality that is separately admired in the porcelain of China. The broad flowers depicted on it are displayed in blue and red, burnt in, with the addition of a little enamel. But what chiefly gives richness to these specimens, is the bold relief in which some of the flowers are executed, and afterwards gilt and burnished.

The Chinese have discovered a fertile source for the embellishments of these different kinds, in the fables of their religion; and, it is remarkable that, like the Greeks, they have chosen their earthenware to commemorate their most secret doctrines.

A Chinese Emperor is said to have observed that the dragons on his crest were designed for more than merely ornament. They had a moral signification. We may affirm that many subjects depicted on porcelain have a recondite meaning. The operation of the elements on each other, to produce the first created universe, according to the material notions of the Gentiles, seems to be expressed by the combinations of the *fiery dragon* with the *Fung Hoang*, or bird of Paradise, expressive of Air; the *Ky-lin*, or horned dog, perhaps denoting Earth; and the tortoise-fish, or the lotus, which indifferently imply Water.

Fohi, the ancient founder of the Chinese Empire (coeval with Noah) is reported to have seen a tortoise issue from the water, bearing on its back a mystical diagram; and on this account we find a tortoise-shell pattern adopted on china as a border, having open compartments in which flowers are painted and enamelled in natural colours. Hence, the date of this appearance to Fohi being considered, we conclude the combined emblem denotes the vegetable creation arising from water. But the forms, as well as the paintings of porcelain, are of mythological import; and the hexagon seems to have been generally preferred, from its representing the natural vein or mark in the shell of the sacred tortoise. We collect from Bayer that Fohi appointed eight Tchín or spirits—they are probably no more than the eight persons preserved at the general destruction of mankind, with which Fohi must have been coeval, but which he and a few others survived. These persons are on bowls, plates, &c. standing on water, generally supported on an animal, and are thus distinguished

1. How-cing-koe, a female with a landing-net.
2. Hong-chong-lie, a boy with a flute.
3. Lit-bit-quay, a man with a crutch and double gourd.
4. Tong-fong-sok, a man with a fan and the fruit of immortality.
5. Schow-lak-how, a man with rattles or castanets.
6. Lut-hong-ban, a man with a sword and cowtail.
7. Tchung-colso, a man with a bamboo tube and pencils.
8. La-mi-tai-woo, a youth or female with a basket of flowers.

The implements depicted on Enamel China are the symbols of these divinities, and the fruit borne by the fourth person has suggested the form of many vessels in porcelain. Were a Chinese to present liquor in a vessel so shaped, it might be deemed a flattering mode of entertainment.

We find a ninth person, superior to these, who may, perhaps, represent the material heaven; he is almost invariably seated; he rides on the stork, a bird of supposed longevity; he is bald and aged, and he carries a sceptre. He seems to be the ancient one—a title well known in the Egyptian, Scythian and Greek mythologies, as Ptah, and Jupiter Pappus.

OF

(Continued from page

## V.—THE CAPTIVES AND

It is of course impossible for us to convey a thing more than a line of the alarm and confusion which prevail throughout the town.

It imagines more than five hundred men suddenly awakened from a peaceful slumber, under the impression that the town was at the mercy of the whites, and that a horrible massacre was about to ensue. We say, such a number of pell-mell from their dwellings, and jostling one against the other, with whoops, yells, and screams of terror resounding on all sides, mingled with the yelping and barking of dogs, the report of fire-arms, and the howlings of the storm, and you will have as good a general conception of the scene presented, as our humble pen is competent to pourtray. So great and universal was the alarm this midnight arousing occasioned, that it was more than half an hour before all could be made to understand the true cause thereof; and then anger gradually took the place of fear; and the loud invectives poured upon the heads of our friends, proclaimed the general desire of the nation to have the disgrace—which each felt had been brought upon him by his cowardice during a false alarm—washed out in the heart's blood of the poor prisoners. Alas for those who had unintentionally raised this terrible storm of human passion!

But there were more prisoners taken that night than Edward Allen and John Carnele. Of the remainder of their friends, who had set off at the same time with themselves to reconnoitre the town, only three had escaped the clutches of the savages. These three were, Sergeant Bomb, and the two scouts who had gone by themselves. How Bomb escaped, is beyond our power to explain; and he never had any definite idea of the matter himself, it is altogether probable the mystery will never be cleared up; and that, consequently, coming generations will be as much in the dark as we are. All he ever remembered, was, that when the alarm broke out, he was not a great way from the river; and that, soon after, he found himself chilled to the very bone swimming the Miami. The escape of the scouts was more easily accounted for. They chanced to be on the northern side of the village, in the very outskirts thereof, and on the point of entering it—having waited till such an hour as they deemed advisable to insure the success of their design. On the first alarm they fled, and in due time reached Rendezvous Mount, where they were shortly after joined by the Sergeant, who, under the excitement from which he was labouring, immediately embraced the old woodsman, and solemnly declared, that if he ever lived to reach a white settlement again, he would never have anything further to do with Indians. He had escaped a horrible death twice, he said, and in a third risk there might be a fatal charm.

Those of our gallant little band who were captured, had, like those whom we have followed step by step, penetrated to the very heart of the village. Consequently the alarm at once surrounded them with Indians, and rendered it impossible for them to escape. They did their best, however, and all that men could do. They were not captured without a struggle for liberty. It was their fire-arms that were heard, and more than one of their enemies bit the dust, though none, as it chanced, were mortally wounded. Yet they fought alone, and each party without the knowledge of the whereabouts of the other; for no two had met after the separation which we described in a previous chapter. Why they were not killed on the spot, will be readily perceived by those who know the nature and habits of the Indian; and to those who have no such solution to what may seem a mystery, we will merely say, that they were reserved for the greater vengeance of the most diabolical and excruciating tortures.

Death in itself, as viewed by the savage, has no terrors; it is merely the manner of dying that can appal him; consequently, he rarely inflicts a sudden death upon his most bitter enemy, when it can be as well avoided. Thus it was in the case of our friends. Each party being surrounded by numbers, were certain of securing them, their lives were spared, by mutual con-

"Nothing could exceed the majestic bearing, of Black Hoof, as, upon ending his brief speech, he turned away from the captive, amid outbursts of applause from the hearers, of his own nation."

sent, for a vengeance a thousand times more terrible. If there is any doubt existing in the mind of the reader as to how each could be so readily discovered in the pitchy darkness that prevailed, we must remind him that all the village had not retired to rest—that in every third or fourth cabin there was a light, generally a torch—and that in rushing out at the first alarm—whoop, each party exercised sufficient forethought to take one of these with them, which, though it might reveal their own persons to the enemy, would, in return, reveal the persons of the enemy to them; and this, under the circumstances, was necessary, in order to know whether it were the better policy to stand their ground or take to flight.

To such a degree of vindictive fury were the passions of the populace excited, that for a time it seemed probable the prisoners would be torn in pieces, in spite of the efforts of a more calculating few to reserve them for another fate. But at last, by entreaty and menace, they succeeded in restraining the mob from present violence. Gradually the tumult subsided, and the prisoners were severally conducted to the council house, bound hand and foot, and put under a strong guard, to await their hour of trial, which was to take place on the following day. Sentinels were next stationed throughout the town, to prevent the recurrence of a similar scene, and guard the village against surprise; and a party of young warriors, headed by a daring, experienced, and sagacious chief, were selected to set off by daylight, to ascertain if any of the adventurous whites had made their escape, and if so, to follow their trail, and endeavour to take them prisoners, that all might die at the stake together, and create a savage jubilee.

Order at length being restored, the recently alarmed denizens of Piqua quietly withdrew to their homes, all more or less elated at the prospect of shortly being both spectators and actors in the barbarous amusement of human torture.

Silence, as concerning the human storm of passion, again reigned in the village; but the storm of the elements still raged as fiercely as ever; and the wind sighed, and moaned, and whistled among the lodges, and the rain and hail pattered on their bark roofs as before, rendering the night pitchy dark, disagreeable, and gloomy.

And doubly gloomy was it now to our friends, whose last hopes had expired, and who could look forward to nothing better than a horrible death on the morrow. As one by one each was conducted within the council house, and, by the lurid, flickering light of the torch burning within, beheld so many of his friends prisoners also, a keener pang than ever his own captivity occasioned, penetrated his breast.

As for Edward, on coming to himself, and perceiving at a glance what had transpired, and believing it was all occasioned by his own imprudence, his anguish of soul knew no bounds; and he repeatedly groaned aloud, and rolled to and fro in his fetters, as one in mortal agony. On the point of liberating her he loved, he had been struck down, she had been torn from him, and now there was little hope that he would ever behold her sweet face again.

And more than this, he had involved others in his own ruin, and brought

upon them a doom of which he shuddered and grew sick at heart to think. Oh! he thought, if he could but die alone, and thus atone for his incautious acts, how gladly would he do so; but no, this could not be—the father of her he loved would also be a victim—and not only this, but those who had so nobly consented to risk their own lives to rescue those so dear to him, would receive the same horrible doom and fate. And then, alas! what would become of poor Lucy, without a protector? Alas, indeed!

The prisoners, though near each other through the night, were not permitted to speak; and as the day dawned—a cold, disagreeable drizzly morning—and the dull rays of light penetrated the chinks and crannies of the council house, and spread a grey or leaden hue over each object, it revealed the pale, anguished features of the prisoners, with their bloodshot eyes, and clearly showed that the night had been one of intense, restless, mental agony, devoid of hope.

The positions of Edward and the Colonel were such, that though tightly bound and extended at full length on the damp, cold ground, they could look into each other's faces; and as they did so, tears involuntarily started to the eyes of both; but they knit their brows, compressed their lips, and strove to be stoics—yet strove in vain; for the tears would occasionally gush out afresh, in spite of their efforts to the contrary. The Colonel was unhurt, as were all the rest, with the exception of Edward, whose head was somewhat bloody from the wound he had received at the time of his capture. But the contusion was not a dangerous one, and he experienced very little inconvenience from it; though the Colonel, in looking on him, could not forbear a groan, for he knew not the extent of the injury, and he already loved him as his own son.

About sunrise, the guard over the captives was changed; but nothing else worthy of note took place for a couple of hours, when Posetha, the brother of Miller, made his appearance. As he entered the council house—which was a large, circular building, with a row of rude benches around the walls—he glanced his dark eye, coldly, almost savagely, over the prisoners, without the least sign of recognition, even when it fell on his own brother. He was still costumed as we before described him; but his face and breast had been repainted, and he now presented an appearance which our friends considered revolting in the extreme—the more so, perhaps, that they knew him to be a white man, and looked upon him as a being sunk to the lowest degree of human depravity and degradation. It was bad enough, they thought, to behold so disgusting a spectacle in an Indian; but for a white man, it was monstrous, and his presence became hateful to their sight. Previous to his appearance, there had been a faint hope in the mind of his brother, that he might, in some unknown, unexpected way, assist them in their difficulties; but the moment he looked upon Posetha, that hope fled, and he closed his eyes and shuddered.

All this the white savage noted, as his keen, black eye glanced from one to the other; and when he had finished his survey, a grin, which seemed one of fiendish delight, rested on his now ugly countenance. He had read their

thoughts, and knew himself despised by all, and this seemed to give him inward satisfaction.

"Dog of the pale face!" he said, addressing his brother in Shawnee, "your time, and that of your companions, has come; and Posetha laughs—tell them so. As sure as the sun rises and sets, you will all be doomed; and still Posetha laughs—tell them so. Your cries at the stake will be music to Posetha's ears."

"Begone!" exclaimed Miller, vehemently, his indignation raised to a pitch he could not controul. "Begone, base ingrate and fratricide! and may your brother's blood be on your head."

"Ha! ha! I laugh—I laugh!" was the taunting rejoinder; and Posetha drew closer to his brother, who was so bound as to be unable to move a limb. "I laugh at you—I spit upon you—I defy you!" he continued still drawing closer and closer, by a slow movement, till his feet fairly touched the prostrate man. "Oh, yes, I laugh, and I will laugh at the stake, as I invent tortures wherewith to make you groan anew. Let me tell you one of the tortures now, that you may laugh, too—let me whisper it in your ear;" and he bent down his head, apparently for the purpose; but instead of the language Harry was expecting to hear, these words almost made him doubt his senses:—

"Posetha is true—but know him not—for he must deceive the Indians to suit his friends." Then he added aloud:—"Ha, ha, ha! How does the dog of the pale face like the invention?" and turning abruptly away, he strode to the door, passed a few words with the guard, and disappeared.

About an hour later, several inferior chiefs and warriors made their appearance, and after walking around the prisoners, and examining them, and occasionally turning them over with their feet, in a careless manner, they gathered themselves together in a group near the door, and a very animated discussion took place, of the nature of which Miller was ignorant, the conversation being carried on in a tone too low to reach his ear.

Suddenly, all ceased speaking, and drew back with deference, and a man of venerable appearance entered the council house. The new comer was decorated with all the trappings of a great chief; but even had he not been, there would have been no mistaking his character and position; for his erect carriage, dignified mien, graceful step, and lofty bearing, would at once have proclaimed him a man of no inferior grade and intellect.

His features were venerable and striking. He was apparently not less than eighty years of age; but his movement was as graceful and energetic as one who had numbered only half his winters. In his rather handsome countenance was more than ordinary intelligence; and his slightly Roman nose, prominent and well turned chin, compressed lips, and eagle eye, gave him a look of lofty decision. In his ears he wore heavy jewels, which came down almost to his shoulders; and the skin around his loins, the belt around his waist, his leggins and moccasins, were all richly and tastefully ornamented with wampum. A bright red scarf passed from left to right across his back and breast, and was carelessly tied around his waist; and his long gray scalp-lock was adorned with feathers of beautiful colours. Such was Catahecassa, or Black Hoof, one of the most cunning, sagacious, and successful warriors of the Shawnee nation. He was a great orator; and ever used the most flowing, sublime, and effective language. Stepping forward to where the prisoners lay bound, he regarded them a few minutes, with a stern, almost vindictive, expression; and then said, in a full, sonorous, majestic tone—

"Is there one among the pale-faces that speaks the language of the great Shawnee nation?"

"There is," replied Miller, in Shawnee.

"Let him be unbound and stand forth!" said the chief, turning to one of his attendants.

Instantly a warrior sprang forward to Miller, cut the cords that confined his limbs, and led him into the circle that had now silently formed around Black Hoof, much to the astonishment of all the rest of the prisoners, who, not understanding what had been said, could not, of course, divine what was about to take place.

In detailing the interview between Miller and the chief, as also in recording other remarks and speeches of the Shawnees, we wish the reader to understand that we give a free translation, but at the same time preserve the true spirit of the Indian language, with all its striking vigour, eloquence, and poetical imagery.

"Warrior of the pale-face," began Black Hoof, in a calm, dignified, almost haughty tone, drawing up his handsome form to its full height, and fixing his eagle eye keenly and sternly upon the captive—"warrior of the pale-face, whose race is from the rising sun, how is it that the language of the great nation of the South\* is upon thy tongue?"

"Because I have mingled much with the red man, and have closely noted his speech," replied the undaunted scout, in a firm tone.

"So have you learned much that is good," was the proud rejoinder; "for the Shawnee is a great nation; and he who hears and understands its mighty men, gains wisdom. But why, like a cat upon its prey, did the pale-face warriors last night steal into the stronghold of my people?"

"The old bear will follow as usual—the dove will seek its mate," was the figurative reply of Miller, who well understood how much the prolonging of the interview with the great chief depended on his skillful answers.

"Yet those you sought were the rightful property of those who conquered the pale-faces, and gathered scalps, as the harvester gathers corn. Warrior of the pale-face, you and your companions were more brave than wise, to enter the stronghold of the red man on such an errand."

"Is the she-bear wise that rushes upon the hunter's bullet in defence of her cub?" was the interrogative reply.

\* Shawnee—or, as it is more correctly spelled, Shawanese (though, for various reasons, we have adopted the common orthography) means "the South," or "people from the South."

"The she-bear takes the consequences of her temerity—the pale-face must take his," was the rejoinder of the Shawnee chief. "Warrior, the red man was once as the leaves of the forest in numbers, and, like the deer that runs free, was happy on his own domains. The pale-face came, and the red man retired to give him room. But not content with territory, the pale-face still intruded upon the hunting-grounds of the red man, to rob him of his own, and drive him farther towards the setting sun. Let him go peacefully, and what then? The pale-face, more arrogant and avaricious from easy victory, will follow his trail; and seek to drive him farther. There are no bounds to his cravings. But he must and shall have limits. Already the red man knows he is not invincible. Does the pale-face warrior want proof let him seek the wigwams of my people, and he will there behold the long bending with the weight of trophies, as the tree bends with the weight of fruit. Let the pale-face ask whence came these trophies, and the red will point him to a great victory, where the arms that took them were made weary by numbers. The warriors of the pale-face were there that day in all their strength, with their women and children by to cheer them on, and nerve their arms for deeds of valour. Yet the red man conquered. He shall always conquer. Yes!" (raising his voice, and throwing into it all the powerful eloquence of lofty, energetic passion, while his eyes brightened till they fairly seemed to flash,) "yes, he shall always conquer. The pale-face shall be driven from the land that is not his own; and then, and not till then, shall there be peace. He shall wait for his women—he shall weep for his young. He shall sue for mercy, but find it not. He shall tear his hair, and curse the hour that he was born. His women shall become squaws of the red man—his children shall hunt with their fathers' victors, and forget the race they are of, and the mothers that bore them. The war-cry is sounded, the hatchet is red, the pipe is broken, and the pale-face shall never know peace, till he finds it in dust, or his trail leads toward the rising sun, and crosses the Great Hills\* that divide him from his fatherland. Warrior of the pale-face, the lips of a great chief have been opened, and thou hast heard words of prophetic wisdom. Catahecassa has spoken."

Nothing could exceed the dignity, the majestic bearing, of Black Hoof, as, upon ending his brief speech, he turned away from the captive, amidst outbursts of applause from the hearers of his own nation. His eyes emitted almost unearthly gleam, his nostrils expanded, his form towered aloft, and he did, indeed, seem a prophet of the olden day, who had just broken the seal of the great book of the future and read its contents.

As he drew near the door of the council-house, several of the minor chiefs and braves surrounded him, and a short consultation was held in a tone too low to reach the ears of Miller, who still remained unbound, but surrounded by a strong guard. The scout had seen and heard enough, however, to know that his own doom, and that of his companions, was sealed. In fact, he believed, when taken, that no mercy would be shown; and therefore had

fought with desperation, until overpowered by numbers. The words of his brother, however, were not forgotten; but the more he reflected upon them, the less ground there seemed to build a hope upon. His brother, whom at first he considered false, he now believed to be true. Yet what would it avail, save in the consoling reflection that he had one friend among many enemies? What could Posetha do? His will might be good enough—but what could he do? What was one man among hundreds? What was one voice among thousands?

While revolving these thoughts in his mind, a young athletic warrior, from the party near the door, came up to Miller, and tapping him on the shoulder, made signs that he should follow him. At the same time, another party, numbering one to each prisoner, approached our friends, and proceeded to cut them loose. The Indians then made signs that the captives should arise and follow them; but in attempting to stand, only one of them succeeded at the first trial. The exception was Lieutenant Wilkes, who, by some means, had not been as tightly bound as the others, and did not therefore experience the same numbness, in consequence of the stoppage of the circulation of the blood. He, however, felt very much stiffened from cold, and weak from loss of rest and food; for the reader must bear in mind that the party had not tasted any thing—not even so much as a drink of water—since their capture.

After repeated trials, during which the Indians exhibited their haste, and entered a small share of their hatred, by repeated kicks on the bodies of our friends, the latter succeeded in getting upon their feet. Edward was the first to rise; and when he finally did so, it was only by a great effort he could stand. He felt stiff, numb, and weak, with occasionally sharp darting pains through his body, and a slight dizziness in his head.

"Cheer up, poor lad!" said Colonel Danforth, in a low, tender tone. "It is a great trial we are about to undergo, and I sincerely pray we may be able to bear it as becomes American officers."

These were the first words the Colonel had ventured to address to one of his companions since being taken a prisoner, and he was now warned against repeating the offence, by receiving a back-hand blow across the face from one of the savages, which caused his lips to swell. The Colonel started, his eyes flashed, and he instinctively placed his right hand to his left side, as if to draw his sword; but instantly recollecting himself, his countenance fell, and turning a hopeless, mournful look upon Edward, he bowed his head upon his bosom, and quietly walked alongside of the young savage—him in charge.

As one by one our friends passed out of the council-house, each a sight which involuntarily made him recoil. But ere we describe what they saw, we will open another chapter.\*

[Continued in No. 13.]

## THE HOME COMPANION PORTFOLIO.

We strongly recommend to our Subscribers the adoption of the "HOME COMPANION PORTFOLIO," for the preservation of the Weekly Numbers or the Monthly Parts. These Portfolios are made with elastic cords at the back, to hold Fifty-two Numbers, or Twelve Parts, which comprise one Volume. At the end of each year they may be taken out and bound, and the Portfolio may be employed to preserve the Numbers or Parts of the succeeding Volume. The price is Two Shillings. The outlay will be saved by the preservation of the Numbers, which, hereafter, may be difficult to obtain. The Portfolio is beautifully embossed, and illuminated with silver, by a new invention introduced by LEIGHTON, SON, & HODGE. It is an ornament for the drawing-room table.—Order of any Bookseller.

PART I. price 6d., and PART II. price 5d., of the HOME COMPANION, are now ready.

## THE HOME COMPANION:

A WEEKLY MAGAZINE.

## PRACTICAL ILLUSTRATIONS OF POPULAR FALLACIES.

## No. VI.—"WHEN AT ROME, DO AS THE ROMANS DO."

If we are sojourners in a strange land it is well not to attack the prejudices of the inhabitants, nor to set ourselves up as the censors of their habits and customs. In minor points of difference between us, in non-essentials, it is better perhaps to conform to these customs; but in essential variances we must pause before we follow them. We may easily accommodate ourselves to eat macaroni with the Romans, but we need not hire a bravo to run a stiletto into the back of any one who has offended us. He who would journey easily through the world must be possessed of the spirit of accommodation as to the minor customs of life—must learn to appreciate molasses as a sauce for roast pork with the Americans, and not altogether despise blubber and train-oil if located among the Esquimaux. Our limbs may find some difficulty in accommodating themselves to the attitude of a Turkish exquisite, but we need not pull him by the beard or laugh in his face because he chooses to sit cross-legged like a tailor. If the proverb we have quoted were applied only on occasions similar to those we introduced, we should not have a word to say against it; but, unfortunately, it has been allowed a much wider scope—has lost, as it were, its first meaning, its simple warning against attacking the habits of foreign countries, and has been enlarged into a command that we should do as others do; as if it were pitted in direct opposition to the Scriptural exhortation "not to follow the multitude to do evil;" for, in almost all cases, it is used to urge us on to some evil course, to plunge us into some vice, or lead us into some extravagance. It most effectually binds us the slaves of fashion; and sends its follies, and too often its vices, downwards through every grade of society.

In a work lately published by Parker, and attributed to a member of the family of Archbishop Whately, called *English Life, Social and Domestic, in the Middle of the Nineteenth Century*, the influence of fashion operating through the maxim "do as others do," is thus admirably described:—"To maintain our proper (or improper) places in society, that is, in the circles of what we call fashionable life—to keep the numbers on our visiting list, in order that we may fill our mansions and add our persons to the throng assembled in the saloons of others—to entertain our acquaintance properly, that is, not according to our own means and in harmony with our ordinary habits of life, but according to their expectations, and to the mode of entertainment adopted by persons of good style; to do as others do; to speak, look, and dress after the fashion; not of those whom our own judgment and taste approve, but of those who are esteemed the most fashionable in the society to which we belong; and to repress every manifestation of taste and sentiment which is not stamped with their approbation; all these are among the self-imposed cares which injure our independence of character and dignity of mind, and destroy our individuality by making one person's life and manners the type of another's; but they also involve us in the commission of acts of the greatest injustice. To run into debt; to reduce our tradesmen to distress; to put our servants to inconvenience by an irregular discharge of their wages; to neglect the sale of charity and kindred; to involve our children in future adversity, or to neglect their present claims; these are among the temptations to which we expose ourselves by the self-imposed necessity of doing as others do; not as the wise and good do, but as the world does—that part of the world, at least, by which we are influenced, and to which we still give the almost worn-out name of 'fashionable world.' Nor are the very persons whose wealth and position would seem to raise them above all fear of losing caste by non-conformity, more independent in their habits than those less favourably placed. They are still the same assimilating principle at work. They, too,

must do as others of their own rank and pretension do—they must multiply to themselves estates and mansions, and adopt a style of living in conformity with the tastes and habits of their associates, often at the cost of obliging themselves to neglect the just claims of their children and dependents, and of denying themselves the gratification of promoting many a good work which others, with much smaller means, have set afoot."

These remarks refer particularly to what is called the fashionable world; but they are equally applicable to all parts of society: we know not where the influence of "do as others do" ceases. It was possible for the barber in Dickens's tale to draw the line somewhere—to stop at bakers' men and refuse to shave the coalheaver—but "do as others do" will have no line drawn; it influences alike the duke and the coalheaver, the baron and the chimney-sweep. Chimney-sweep! we beg their pardon; the name and the calling are both obsolete: they have been "doing as others do," and adopting a fine title to cover a dirty, though useful, trade. Chimney-sweeps are no longer employed to cleanse the flues; the Secretary of the "Patent Ramoneur Company" comes in his brougham to take orders; and his soot-despatching attendants arrive in gilded tourgon, to carry away the superfluous carbonized materials. The glories of May-day are fast disappearing, and the grave of "Jack-in-the-Green" is preparing by the side of the last May-pole. Each class has its own petty world that it must imitate—Mrs. Grundy of whose sayings it is afraid.

There are cases in which this imitation is useful and commendable. When it is not adopted in the spirit of rivalry, but in that of improvement; when it seeks to elevate the character, to purify the taste, to cultivate the love of the beautiful; and not merely to encourage habits of expense. We love to see a cottage garden bright with flowers tastefully arranged, although we cannot expect the rare exotics of the wealthy; the grand conservatories may be wanting, but the cottage window can guard some of the more delicate species from the inclemency of the weather, and give a grace and beauty to the humble room: the gathered nosegay may not be exhibited in alabaster vases on gilt brackets, but it may be arranged with taste, placed in a jar of humble materials, but elegant in shape, and shed its light and fragrance around; we may not have all the expensive nicknacks that strew the aristocratic drawing-room—all the books with gorgeous bindings and expensive plates lying on the tables; but, happily, the pink and yellow parrots and spotted cats of former days have given place to cheap statuettes of classic form; the miserable paintings, of gaudy colouring, are superseded by others correct in drawing and chaste in design; and, above all, books are placed within the reach of all, and may be had in every home, at once its ornaments and its chief pleasures, gratifying the taste and improving the intellect. Wherever we see a humble hearth surrounded with such imitations of the more wealthy classes, we feel the owner, in thus "doing as others do," has been rightly construing our adage—has been adding to his own self respect, elevating himself in the scale of society, and is a much superior person to the sordid neighbour, who, perhaps possessed of more wealth, chooses to live in a mud-floored hovel with no ornaments on its bare walls, no objects around him to excite his taste, no humanising influences, no intellectual employments.

Unfortunately, however, the general tendency of the imitative process in the human mind has a peculiar aptitude to copy that which is evil more readily than that which is good. It is more easy to imitate the expense than the taste which directs it. Thus, a man with only fifteen hundred a-year, in his rage for "doing as others do," seems to fancy that he must have the same description of plate on his table, the same variety of wines, the same kind of carriages and number of horses, as the man with twenty thousand a-year; he cannot get them all, but he goes as near to it as his credit will stretch; and so, descending in the scale, the imitation goes on, each striving to do as those do who have their place in the class immediately above them. And thus, family after family are brought to ruin and decay. We once heard it stated that there was no situation in life so unfortunate as that of having an income just sufficient to live on without the necessity of professional or other employment, and without the tastes to find proper occupation for one's self. The life of James Harding will illustrate this position, and is precisely apposite to our adage of "do as others do." He was the son of a highly respectable yeoman, who lived on his own estate, which he farmed himself, and was possessed of considerable property besides. He gave his son a better education than yeomen's sons generally receive, but not enough to create a taste for literature, or to give stability of character. James Harding came into the possession of his property upon the death of his father; he was in the first dawn of manhood, high-spirited, good-looking, of strong social feelings, when he found himself in the uncontrolled receipt of about eight hundred a-year. He carried on his farm as his father had done, was spirited in his improvements, was liked by his neighbour farmers; he possessed, indeed, considerable influence with them, for he was in many things intelligent, and always hearty and hospitable. He had, however, another circle of associates besides his agricultural friends. The country squires and some of the best families in his neighbourhood hailed his acquaintance as an acquisition; he was an adept in field sports, and earnest in their pursuit; a cheerful and jovial companion at the festival board; had a ready wit, sung a good song, told a good story. With the "fast men" of this set he soon became closely allied; like them he kept his hounds and hunters, sported his champagne and other luxurious wines, which were served without restraint in his house, there being no female to exercise a salutary influence upon the potations of the company; it was "Bachelor's Hall" at which the "good fellows" met to enjoy themselves after their own fashion; then he became a sporting character, kept race-horses, and made a book; rode his own hurdle-races and steeple-chases; in short, plunged into all the follies and many of the vices which thoughtless young men embark in—he was only "doing as others do." During this time he was living, as it were, in a

double circle of society. One day entertaining his brother farmers; the next feasting the fastest of the fast. One day presiding at the market ordinary; the next as steward at a race-dinner. With one set looked up to as their head and chief; with the other looked down upon as one just tolerated. And more was recklessly spent for the privilege of being looked down upon by fashionable men, than for being looked up to by his own class; but both were expensive. The master's eye was seldom on the farm-yard; his fields knew him not; the farm which laid the foundation of the fortune he inherited ceased to be profitable, became a dead loss; he soon "did as others do" who want to raise the wind; bill transactions became familiar to him; his stock dwindled away; mortgage grew upon mortgage; he never tried retrenchment, for "What would people say?" At length, the day of reckoning came, and before he was thirty he found himself without a penny in the world. Then he found the friendships of the world were hollow; that those who had been encouraging him to "do as others do," had not yet learnt the maxim which should have taught them to "do unto others as ye would they should do unto you." No hand was stretched out to save him; that, indeed, was scarcely possible—they could not replace what he had recklessly squandered away—but no hand was stretched out to aid him, to make his fall more gentle. He passed away from the knowledge and even from the remembrance of his former associates, and drives a coach for a maintenance.

O imitators! servum pecus! O slavish herd of imitators! readily following the multitude to do evil; slowly and with difficulty copying that which is good. The "fast men" of the aristocracy are putting on the drag; the vulgarity of their imitators has stripped the veil from their vicious habits, and shown them in their naked deformity. The bell-ringing, knocker-twisting, cab-driving exploits—the drunken debaucheries and rows which formerly brought many "sprigs of the aristocracy" to the police office, are discarded by them; but they have descended to their imitators—the government clerks, the medical students, and other hot-blooded youths who have a notion that they are "doing the fashionable." Even these, however, are beginning to find out that they have made a mistake—that vulgar "fastness" draws after it the finger of scorn. It is true, the aristocracy have still their Tattersall's and their clubs, where fortunes are dissipated on the speed of a horse, the colour of a card, or the turn of a die; but the worshippers of the fickle goddess, Chance, are fast diminishing in the higher circles. With sweepstakes in every pot-house, tobaccoist's shops parading the announcement that there a book is to be made, and dignifying itself with the title of "Betting Office," we shall soon have "the turf" brought to as low an ebb as "the ring," and left to the sole guidance of blacklegs and blackguards, cheats, and their dupes. Tattersall's will go out of fashion, and gambling will only be known to snobs and knaves.

The stream of life, with its customs, its habits, its extravagancies, is a hurried and turbulent one; once fairly drawn within the vortex—once fairly started upon the wave of "do as others do"—like the poor Indian in his canoe above the rapids of Niagara, you lose command of your bark, and are swept over the face of the cataract and dashed to pieces. How many a youthful spirit, full of hope and daring, has launched his little bark on the stream; has struggled perhaps for a short time against the influences which surrounded him, but, at length, folding his arms in despair, has yielded to the current, and been swept away into the nothingness of "doing as others do." What a miserable ambition is this! To be always walking behind another man—treading in his steps. If we always walk behind the object of our imitation, we can never be his equal; we are merely his *umbræ*, his shade, his parasite. An actor who contented himself with walking behind Macready, would never represent Lear, or Macbeth, or *Virginus*; he would only give you an exaggerated notion of the faults of Macready, without attaining to any of his excellencies. Mere imitation is unworthy man: it is the monkey's doom. In man it will be attended with the same results as when the monkey swallowed a whole box of pills from which he had seen his master take one. So, in our imitations of fashionable life, we overdo the thing; we exaggerate its very absurdities; we take the whole box, and are not content with one pill. And, after all, what is this fashionable life which we are so anxious to imitate?

Although it seems both prominent and pleasant,  
There is a sameness in its gems and ornaments:  
A dull and family likeness through all ages,  
Of no great promise for poetic pages.  
With much to excite, there's little to exalt;  
Nothing that speaks to all men, and all times;  
A sort of varnish over every fault;  
A kind of common-place, even in their crimes:  
Factitious passions; wit without much salt;  
A want of that true nature that sublimates  
Whatever it shows with truth: a smooth monotony  
Of character, in those at least who have got any.

And with all our struggles to appear members of this fashionable world, in which "there's a little to exalt"—with all our ambition "to do as others do," what do we gain? Nothing, that we know of, except the fear of "what people will say." The one is the necessary consequence of the other. Mrs. Smith must have a new bonnet—when she has got a very good one already, and she can ill afford the purchase—for fear Mrs. Brown should say she was shabby. Mrs. Jones must give a ball and supper, not to indulge her love of hospitality, but for fear Mrs. Robinson should say she could not afford it. And then springs up the spirit of rivalry between them, and Mrs. Brown puts her errand-boy into a many-buttoned jacket, and christens him a page, that she may spite Mrs. Smith, who has only a maid. And Mrs. Robinson sets up a carriage, that she may "astonish the Browns." And Mrs. Jones goes to the opera to outshine Mrs. Robinson. And Mrs. Smith hires a tall footman, who kicks "the Browns" page into the gutter. And thus

Smith, Brown, Jones, and Robinson, ring the changes upon each other, until envy, hatred, malice, and all uncharitableness, spring up in their hearts, and we wish they were all under the hands of the pedagogue in the old spelling-book tale. Then springs up a system of exclusiveness, based upon "doing as others do," mingled with fear of "what others will say." Lord Noodle will not visit Mr. Doodle, because Baron Foodle says he is not genteel. Mrs. Tomkins, the lawyer's wife, will not invite her cousin, Mr. Jenkins, the printer's wife, for fear lest Mrs. Priggins, the parson's wife, should refuse to visit Mrs. Tomkins. And thus a heartlessness is generated, permeating through all society.

And then into how many absurdities does this "do as others do" lead us. We need hardly point at the anomalies of dress—at the strange notion of the Chinese ladies, and the martyrdom they undergo to reduce the natural size of the foot to the fashionable standard of two inches in length; at the still stranger practice of some Indian nations, of compressing the heads of their children into smaller dimensions than the head of an ape; or at that grievous abomination of our *own* land, where the crushing of the ladies' waists to a deformed smallness, has destroyed the health and life of so many thousands of the fairest of God's creatures: if they would only be content with the form which God has given them! But besides these grievous absurdities, there is another and still greater evil arising from an adherence to the maxim of "do as others do;" and that is when it becomes, as is too often the case, "a worm at the root of good intentions"—when the fear of what the world will say prevents us from doing that which conscience tells us is right, erects a barrier across the path that leads to good, and turns us aside into the paths of vice. How many a drunkard has acquired the habit from "doing as others do"—has been deterred from casting it off by the fear of ridicule—the dread of what others will say. How often has the stream of charity been stopped by the fear of being thought ungentle and dubbed a saint by those who are ready enough to follow the multitude to do evil, but shrink back with the utmost disgust from those who would lead them to do good. This "do as others do" is a one-sided proverb: it has a squinting look, that sees only the evil side of things; and a sinister influence which is most pernicious. But if you will make it the guide of your life—if you will choose it for a Home Companion, try to squint out of the right eye, and make the good the exemplars of your life.

## THE QUARREL.

BY MARY BENNETT.

How now, Johnny! Can a child  
Speak so fiercely, look so wild—  
Scarcely four years old, to show  
Eyes that flame and threaten so!

Stamp imperious on the floor,  
Cheeks with crimson blood flushed o'er;  
Defiant gesture, breathing hard,  
A pretty picture, on my word!

All because your elder brother  
Took one marble, gave another—  
Took a marble that you prize,  
With handsome markings, rosy dyes;

Gave you one of common grey—  
Twas unfair, but all in play,

As you would have seen anon,  
If you had but patience, John.

Ho, kind boy, had bought for you,  
Other playthings—marbles, too;  
If he teased you, it was mean,  
All in love and merriment.

Johnny hung his curly head:  
"Are we friends?" his brother said  
Johnny in his arms he held,  
Passion checked, and fury quelled.

Repentant, lovingly they wept,  
Prayed together ere they slept;  
Closed their eyes in faith and  
Thus should every quarrel end.

## AN EXCITING SCENE.

A few days since, on board a steamer from Memphis to Cincinnati, was a large crowd of passengers. We found a man in a Quaker-like attire, upon a large chest, declaring that it should not be broken open unless they killed him. Soon from the chest, as if in distress, was heard a voice—apparently of a coloured person.

"Let me out—I had rather go back to massa; oh, mercy! I can't stay here any longer."

"Look here, my friend," says the captain; "you will have to get off that chest."

"I'll be darned if I do," he replied.

"Oh, dear! let me out, let me out!" came distinctly from the chest, as if in apparent suffocation.

"Mate!" said the captain, "bring some men; take that person off the chest, and break it open."

The person, showing fight, was seized by the passengers; all believing he was carrying off Mr. Darkey, contrary to law made and provided. The mate seized an iron bar, and forced it between the lid and body of the chest.

"Oh, don't! you'll kill me," says the stifled voice; "I want to get out; I want to go back; oh dear! I shall die!"

"Hold out for a few minutes longer," says a good-natured, philanthropic person, stepping out; "you shall soon be released."

Quite an intense feeling was now raised in the crowd, when the mate forced off the lid; as it came from the chest an unearthly, demoniac laugh came from the old clothes with which it was filled, and no sign or appearance of any living thing. Amusement appeared on the countenance of the before, but now bewildered lookers-on. We were shortly after let into the

by the captain, who informed us of what he was before aware, but had forgotten—that the immortal ventriloquist, the "Fakir of Siva," stood by, apparently an anxious spectator of the proceedings.—*American paper.*

## ONWARD!

**SAFETY OF RAILROADS.**—The Vermont Legislature, at its late session, passed a capital Act, designed to protect the lives of travellers on railroads. It forbids the employment of conductors, engineers, brakemen, or switchmen, "who shall make use of intoxicating liquors as a beverage;" and the employment of such a person, with the knowledge of the president, superintendent, or any of the directors, exposes the company to prosecution, and to a fine of 300 dollars to 3,000 dollars, besides being liable for all damages that may result.

**GUTTA PERCHA IN PHOTOGRAPHY.**—Mr. Fry has exhibited some charming pictures on glass, obtained by a combination of gutta percha and collodion. To the ordinary collodion—gun-cotton dissolved in ether—a small quantity of gutta percha is added, which readily dissolves. This is employed with the ordinary materials for the processes on glass,—the picture being developed by pyro-gallic acid. The extraordinary sensibility of this preparation may be inferred from the fact, that a positive copy from a glass negative has been obtained in five seconds by gas-light. The film formed on glass is far more adherent than the ordinary collodion or albumen:—we may, therefore, expect many valuable results from Mr. Fry's discovery.—*Athenæum*.

**PROGRESS OF STEAM NAVIGATION.**—Lines of steam ships will soon traverse all the great oceans of the earth. The German Ocean was scarcely bridged by steam before men began to speculate on the possibility of a similar feat on the Atlantic. That accomplished,—the Indian Ocean next occupied attention. Presto!—and Plymouth, Lisbon, Liberia, the Cape, Bengal, and Sydney, are joined together. There now remains only the wide waste of the Pacific:—and we understand that Government is already seriously engaged in preparations for future experiments in the steam navigation of that, the largest ocean in the world. Two vessels, the *Harold* and the *Arrow*, are under equipment as an expedition to the Southern Pacific—their object being a search in that region for coal stations and an appropriate place for a new penal settlement.—*Athenæum*.

**IMPROVEMENTS AT PARIS.**—We understand that Monsieur Hittorff has been directed to prepare for the municipal authorities designs for two large schools of mutual instruction and Christian doctrine (!)—the one for 600, the other for 1,200 pupils; the site intended for the latter being one that affords an opportunity for very effective treatment. He is also engaged upon a "cirque d'hiver," to be erected on the Boulevard du Temple. The central area will exceed 136 feet in diameter; and the roof to cover this vast space will be so ingeniously arranged as to be carried directly by the enclosure walls, without any intermediate pillars, or being suspended like his roof to the Panorama in the Champs Elysées. Some changes are in contemplation in the Place de la Concorde, and it is whispered that the Prince President, anxious to mark his government by some striking architectural feature, has directed M. Hittorff to prepare a colossal project, so vast, nay, gigantesque, that the conceptions of the loftiest fancy do not exceed it, and it will vie with any of the most magnificent designs of ancient Rome.—*Builder*.

**BUILDING SOCIETIES.**—We have before us a Prospectus of the London Suburban and Home Counties' Permanent Benefit Building Society, from which it appears that the amount of rent upon the value of house property varies from £7 to £10 per cent. The Society lends its funds according to a fixed table of principal and interest, calculated at £5 per cent.; so that the difference is the *gain* to the borrowing member—he is allowed 15 years to pay off the loan and interest, thus enabling him to purchase his residence by paying, in equalized easy monthly instalments, about the same amount annually, as he is now paying to his landlord for rent. The Society lend its funds as fast as they accrue, thus gaining compound interest, which after paying the expense of management, (judiciously limited to one per cent. of profit) returns altogether £6 per cent. to its investing members. The shares are £30 each, which can be paid by monthly instalments of 10s. per share; if paid up at once, the interest will be receivable at the end of every year. The entrance fee, which in the old societies was perpetually increasing, is in this Society fixed at 2s. 6d. per share, and persons may become members at any time, without having increased or back subscriptions to pay. Members may withdraw their money upon seven days' notice.

**ELECTRO-TELEGRAPHIC PROGRESS.**—The submarine Telegraph Company are getting made several new metallic cables, in addition to that already in operation—one conductor being already insufficient to convey the multitude of despatches now exchanged between London and the Continent. The facility and certainty with which the telegraph has worked have already effected a great revolution in commercial arrangements, which would be thrown into confusion by the rupture of the communication. Night and day

There is still a space of about a mile (from East Cliff to the Telegraph Office) unconnected by the wires. The distance by horse express, and, consequently, causes a few minutes delay in communication. The desideratum is, however, to be speedily accomplished. A number of telegraph stations now open and in connexion with the central station of the Electric Telegraph Company in Lothbury, amount to 226, embracing all the principal towns in the kingdom. Nearly seventy are principal commercial stations, at which the attendance is day and night: the length of the telegraph communication extend over 2,500 miles, with 800 in progress of suspension. Since the partial reduction of charges, it is said, persons of all classes are availing themselves of its advantages for business purposes.—*Builder*.

## POETICAL QUOTATIONS.

*We purpose continuing under this head, in the Home Companion, a series of poetical quotations from the best authors. As these extracts will be carefully selected and arranged in alphabetical order, they will form, with the completion of the volume, a valuable dictionary of reference to the student of poetry, and, indeed, to all lovers of literature.*

## ABSENCE.

LIKE as the culver on the bared bough,  
Sits mourning for the absence of her mate,  
And in her songs sends many a wishful vow  
For his return that seems to linger late:  
So I, alone now left, disconsolate,  
Mourn to myself the absence of my love;  
And wandering here and there all desolate,  
Seek, with my plaints, to match that mournful dove.

Edmund Spenser.

Though absent, present in desires they be;  
Our souls much further than our eyes can see.

Michael Drayton.

Our two souls, therefore, which are one,  
Though I must go, endure not yet  
A breach, but an empanation;  
Like gold to airy thinness beat.  
If they be two, they are two so  
As stiff twin compasses are two;  
The soul, the first foot, makes no show  
To move, but doth, if th' other do.  
And though it in the centre sit,  
Yet when the other far doth roam,  
It leans and harkens after it,  
And grows erect, as that comes home.  
Such wilt thou be to me, who must,  
Like th' other foot, obliquely run;  
Thy firmness makes my circle just,  
And makes me end where I begun.

Dr. John Donne.

It is night should shade noon-day,  
Or sun was here, but forced away;  
And we were left, under that hemisphere,  
Where we must feel it dark for half a year.

Ben Jonson.

Short absence hurt him more;  
And made his wound far greater than before;  
Absence not long enough to root out quite  
All love, increases love at second sight.

Thomas May's Henry II.

I do not doubt his love, but I could wish  
His presence might confirm it: when I see  
A fire well fed, shoot up its wanton flame,  
And dart itself into the face of heaven,  
I grant that fire, without a fresh supply,  
May for a while be still a fire; but yet  
How doth its lustre languish, and itself  
Grow dark, if it too long want the embrace  
Of its loved pyle! how straight it buried lies  
In its own ruins

Robert Mead's Comfort of Love and Friendship.

If she be gone, the world, in my esteem,  
Is all bare walls; nothing remains in it  
But dust and feathers.

John Crown's Ambitious Statesman.

What! keep a week away? Seven days and nights?  
Eight score eight hours? and lover's absent hours,  
More tedious than the dial eight score times?  
O weary reckoning!

Shakespeare's Othello.

Without your sight my life is less secure;  
Those wounds you gave, your eyes can only cure;  
No balm in absence will effectual prove,  
Nature provides no weapon salve for love.

Sir Robert Howard's Vestal Virgin.

Thus absence dies, and dying proves  
No absence can subsist with loves  
That do partake of fair perfection;  
Since, in the darkest night, they may,  
By love's quick motion, find a way  
To see each other in reflection.

Suckling

## SEEK!

I was before man, I am o'er his doom.  
And I dwell on his mind like a terrible gloom.  
In my garments the whole of Creation I hold,  
And these garments no being but God can unfold.  
Look upward to heaven I baffle your view,  
Look into the sea and your sight I undo.  
Look back to the Past—I appear like a power,  
That looks up the tale of each unnumbered hour.  
Look forth to the Future, my finger will steal  
Through the mists of the Present, and affix its dread  
seal. (shines,  
Ask the flower why it grows, ask the sun why it  
Ask the gems of the earth why they lie in its  
mines. (space,  
Ask the earth why it flies through the regions of  
And the moon why it follows the earth in its race.  
And each object my name to your query shall give,  
And I know again why you happened to live.  
The world to disclose me pays terrible cost,  
Yet, when I'm revealed, I'm instantly lost.

## CHARADES, REBUSES,

For my *first*, you may take almost half a stocking;  
My *second* the ducs of the parish proclaim;  
And my *whole*, though he met with treatment quite shocking  
You surely will say, was by no means to blame.

He was gentle, forbearing, kind-hearted and wise,  
Though a vixen, we're told, he had for a wife:  
But he, when she stormed, shut his ears and his eyes,  
And so far, poor man, led a peaceable life.

Neither wisdom, good humour, nor truth could avail,  
To protect this good man from the malice of foes;  
The Sophists opposed him, such men could not fail,  
To crush him to death, yet, could not break his repose.

So now, I presume, that I've told you enough;  
For if I say more you'll too quickly discover.  
The name of the sage that was treated so rough,  
And sent, in such haste, from this world to another.

1. The transmitting our thoughts to a friend at a distance,
2. The liquid required to lend its assistance;
3. An event that no mortal on earth can escape,  
Unless by a change he may suddenly make;
4. A circle that always is seen in a crowd;
5. A letter that's doubled, when used in a word;  
Then take the initials, and they'll plainly show,  
An object of pity, of sorrow, and woe.

3.

1. Inclos'd within a cask you'll find,  
A something that will suit your mind:  
When you have got it, then from nine,  
2. Take one, and what remains subjoin.  
Two well-known capitals, will then  
Appear; nay, very likely ten.  
Now then you'll find, without delay,  
The county which they will betray,  
For more than half they give away.

[The whole answered in No. 12.]

## "PAPA'S COME!"

Oh! Billy and Nannie, and Harry and  
Jane,  
And nearly half a score more,  
Ran laughing and jumping, as merry as  
larks,  
To welcome my *last* at the door.  
He had brought home my *first*, and they  
wanted to see  
The presents that they were to share;  
He had come from my *whole*, and of  
course he had brought  
For them presents both costly and  
rare.  
For Nannie a *basket*, for Nancy an  
*apron*,  
For Mary a *gown* and a *doll*;  
For Harry an *album*, for Charlie a  
*desk*—  
In fact there was something for all.  
Now, a glance at the articles brought  
by my *last*,  
Will show whence my *first* and *last*  
came;  
If you cannot find out my known where-  
about,  
You dunces! 'tis a very great shame!

## ANSWER TO THE BIRMINGHAM ENIGMA, P. 172.

- |                      |                   |                    |                        |

## ANSWERS TO THE PASTIME OF LAST EVENING, P. 173

## PICTORIAL CHARADES.—1. Mis-deed. 2. Miser-able.

1.

1. A bat flies low;
2. A bat makes a ball go.
3. Few like a bat to fly against them.

2.

1. A ballroom assembly.
2. Shot-balls to play with.
3. Small shot—bullet.
4. Balls cause grief in war,  
Merriment in society.

3.

1. Sun.
2. Aurora, according to the Grecian My-  
thology, is sister of the sun, and  
always immediately precedes the  
appearance of the sun.
3. The sun stood still on Mount Gilboa,  
for the whole day by Divine command.

4. EYE.

5. PRINCE ARTHUR.

6.—ACOSILAVE.

AFTER Ages, place I, is, us, the French  
article is between U and I, and before us.

7.

1. A cork is often thrown aside.
2. Nor quits the room till guests divide.
3. By the poignancy of some liquors,
4. The corkscrew drawing the cork,
5. Bribed by the liquor obtained.

8.

1. The letter C.
2. In a pipe.
3. A disappointed strain.

9.—A BOOK.

1. Frank of leaves.
2. Found sometimes in Morocco;  
Sometimes in Russia.
3. More pages than a Monarch.
4. It is well known that public opinion is  
influenced by fashion.

## OUR CORNER CUPBOARD!

Being once asked how long he meant to be a disciple, said, "As long as I am not ashamed of growing better and wiser."

What trade does the sun regularly follow?—Those of a tanner and portrait-painter.

Money is to merit as shades to figures in a picture; giving it strength and beauty.—*Brayere*.

HEN, on being told that Bunyan stands at the head of allegorical writers, sagely remarked that he had always thought *visions* were confined to the feet.

It is more from carelessness about truth, than from intentional lying, that there is so much falsehood in the world.—*Johnson*.

"Can you tell me, Billy, how it is that Chanticleer always keeps his feathers so sleek and smooth?" "No." "Well, I'll tell you. He always carries his 'comb' with him."

The man who threatens the world is always ridiculous; for the world can easily go on without him, and, in a short time, will cease to miss him.—*Johnson*.

"There is nothing," said Sir Samuel Romilly, "by which I have through life more profited than by the just observations, the good opinion, and the sincere and gentle encouragement of an amiable and sensible woman."

There is no use of money equal to that of beneficence; here the enjoyment grows on reflection, and our money is most truly ours when it ceases to be in our possession.—*Mackenzie*.

To reject and repel all foreigners, is so much a national principle in Japan, that, on the landing of the captain of a vessel which lately put in to Nipaking, the shops were all closed, and sixty men were appointed to guard him.

Over and above the delight and the virtue of obliging, one good turn is a shoeing-horn to another. This, of all hints, is, perhaps, the most effectual, as well as the most generous.—*Seneca*.

An open countenance is generally considered a mark of honesty. Still, you will observe that a shark presents an open countenance at the very moment he is taking you in.

The business of constancy chiefly is, bravely to stand to, and stoutly to suffer these inconveniences which are not otherwise possible to be avoided.—*Montaigne*.

"BIDDY," said the landlady of a boarding-house to a new recruit in the kitchen, "did you bake the bread we had for dinner, or boil it?" (The bread had been soggy.) "Faj," replied Biddy, anxious to appear *au fait* in the noble art of cookery, "an' be sure, mistress, I did both."

A GENTLEMAN, of the name of Pepper, had been several times thrown from a spirited young horse, and was relating the circumstance to a friend, and at the same time observing that he had never given his horse a name. "I think," replied his friend, "you should call him Peppercaster."

"I HOPE to live to see the day," said Lord Brougham, "when every peasant in England can understand Bacon." "His lordship," replied Cobbett, had much better hope to see the day when every peasant will be able to eat bacon."

A BLACKSMITH made out a bill against one of his customers, in which a charge was intended to be made for *steeling two matlocks*; but the son of Vulcan, who had been more used to wielding a sledge-hammer than studying Dr. Johnson, wrote the following item: "To *stealing two mad ducks, two shillings*."

I AM not concern'd to know  
What to-morrow fate will do:  
'Tis enough that I can say,  
I've possessed myself to-day;  
Then, if happily midnight death  
Seize my flesh and stop my breath,  
Yet to-morrow I shall be  
Heir to the best part of me.—*Watts*.

THE AFFAIRS OF GREASE.—Fat cattle did not sell well this year. Their over-obesity seems to have been one of the causes of their going off so heavily—which is no wonder. Fat oxen cannot be expected to be brisk. Now this truth has been brought home to graziers, perhaps they will abandon the system of fattening animals so enormously; which is the merest in-fat-uation.

A DISTINGUISHED member of the legislature was addressing a temperance society, and he got rather prosy, and showed no disposition to "let up," although the audience waxed thinner. Finally the presiding officer got excited, and replying to a friend of the speaker's, inquired how much longer he might reasonably be expected to speak? Whereupon the friend answered, "He didn't exactly know—when he got on that branch of the subject, he generally spoke a couple of hours." "That will never do; I've got a few remarks to make myself," said the president; "how shall I stave him off?" "Well, I don't know; in the first place I should pinch his left leg, and then if he shouldn't stop I'd stick a pin in it." The president returned to his seat, and his head was invisible for a moment. Soon afterwards he returned to the "brother" who had prescribed "the pin style of treatment," and said, "I pinched him, and he didn't take the least notice at all; I stuck a pin into his leg, and he didn't seem to care; I crooked it in, and he kept on spouting as hard as ever." "Very likely," said the wag, "that leg is cork!" Nothing has been seen of that president since.

## OUR MEMORANDUM BOOK.

TO-PARENTS.—Boys that have been properly reared are men in point of usefulness at sixteen, whilst those who have been brought up in idleness are a nuisance at twenty-one.

TRUTH.—The temple of Truth is, indeed, built of stones of crystal, but inasmuch as men have been concerned in rearing it, it has been consolidated by a cement composed of baser materials. It is deeply to be lamented that truth herself will attract little attention, and less esteem, until it be amalgamated with some particular party, persuasion, or sect; unmixed and unadulterated, it too often proves as unfit for currency as pure gold for circulation. Sir Walter Raleigh has observed—That he that follows truth too closely must take care that she does not strike out his teeth; but he that follows truth too closely, has little to fear from truth, but he has much to fear from the pretended friends of it. He, therefore, that is dead to all the smiles and to all the frowns of the living, alone is equal to the hazardous task of writing a history of his own times, worthy of being transmitted to times that are to come.

MYSTERY OF THE AMERICAN LAKES.—Lake Erie is only 60 or 70 feet deep; but the bottom of Lake Ontario, which is 468 feet deep, is 280 feet below the tide-level of the ocean, or as low as most parts of the Gulf of St. Lawrence; and the bottoms of Lakes Huron, Michigan, and Superior, although their surface is so much higher, are all, from their vast depth, on a level with the bottom of Lake Ontario. Now, as the discharge through the river Detroit, after allowing for the full probable portion carried off by evaporation, does not appear by any means equal to the quantity of water which the three upper great lakes receive, it has been conjectured that a subterranean river may run from Lake Superior to Huron, and from Huron to Lake Ontario. This conjecture is by no means improbable, and will account for the singular fact that salmon and herring are caught in all the lakes communicating with the St. Lawrence, but in no others. As the falls of Niagara must have always existed, it would puzzle the naturalist to say how these fish got into the upper lakes without some such subterranean river; moreover, any periodical obstruction of this river would furnish a not improbable solution of the mysterious flux and reflux of the lakes.

THE LADY TRAVELLER ROUND THE WORLD.—Madame Ida Pfeiffer, whose adventures during a journey round the world have been laid before the public, is a remarkable instance of female courage and cleverness. Undeterred by privation and fatigue, this heroic lady is already at the Cape, on her fourth journey to explore some of the unknown portions of the interior of Africa, prepared, we are informed, to note the bearings and the distances on the way, make meteorological observations, and keep a careful diary; relying for protection on her sex, and prepared to brave the uncertain humours of savage life, in her ambition to aid the cause of science. Such confidence and determination is admirable in a man, endowed by nature with more sturdy powers of endurance; but, in a woman, what shall we say? Madame Pfeiffer appears to have long felt this erratic impulse, before she had the means of gratifying it. She was twenty years saving sufficient money to undertake her first journey to the Holy Land, and now, with the insignificant donation of one hundred pounds from the Austrian government, and the precarious assistance of a few friends, this lady is endeavouring to achieve her visit of inquiry to Southern Africa, believing that her sex would enable her to penetrate into regions guarded with jealous care against the approach of armed and iron-nerved men. Heaven guide the footsteps of Ida Pfeiffer, and soften the hearts of the savage tribes among whom she may wander!

ENGLISH STATUE-MAKING.—We must consent to have a few hard knocks on this subject, for certainly the abortions of art that meet our gaze in the most conspicuous parts of London, are far from flattering to our national vanity. A correspondent of the *Builder* observes:—"For some time past, the English have been endeavouring to acquire a reputation for statue-making. There never was a more unfortunate mania. The grand defect of this people is, in respect of art, a total want of taste and feeling—taste for what is noble and great, feeling for what is true and beautiful." Without accepting this unqualified censure, we must say that the want of encouragement to art in our country has been a serious obstacle to its progress, and has prevented men of real genius from attempting a reform; consequently, bad paintings and burlesque representations on pedestals continue to disgrace our galleries, and disfigure our public squares, to the great scandal of those among us who are even tolerable judges of art, and to the lasting ridicule of foreigners. To whom is the student of art to look for support? Where are the private individuals or rich societies who should be emulous to raise him into distinction, and stimulate his efforts by a judicious and liberal patronage? And if apathy and neglect are to be the portion of those who labour in the higher departments of art, who should we accuse but ourselves for any languor or paucity of native talent? It is with surprise and regret, therefore, that we find so few of the rich city Companies among the purchasers of objects of art from the late Exhibition. We have heard, it is true, of one or two fine statues having been purchased at barely remunerative prices to the artists, and one patriotic Guild has expended some thousands of pounds in decorating a great Hall; but these are solitary instances. Well may the *Times* insinuate that the work of a great sculptor or painter is weighed in the balance with the *meté* and *entrées* of civic festivity, and that the culinary science must be shorn of its accustomed dainties, to secure the acquisition of such noble works of art as would grace for centuries the precincts of the city, and prove that, out of their abundance, the present elders of the corporation know how to appreciate native genius.

**THE FIFTH VOLUME OF THE FAMILY FRIEND** is now ready, Price 2s. 6d., elegantly bound. Covers for Binding the Volumes, uniformly with the above, Price 6d. each.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**THE SECOND VOLUME OF THE FAMILY TUTOR**, containing a Complete System of NATURAL GEOGRAPHY, and a Useful and Interesting Miscellany, is now ready, Price 2s. 6d.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

With No. 25 of *The Family Tutor*, is presented, Gratis, a beautiful Allegorical Engraving, 22 inches by 18 inches, illustrative of the Scriptural Maxim—

**"TRAIN UP A CHILD IN THE WAY HE SHOULD GO."**

Designed and Engraved by George Meason. The Engraving forms a Handsome Present, eminently adapted for extensive use by the Promoters of Education. The execution of the Design is wholly unexceptionable. Now Ready.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**HANDSOME CHRISTMAS PRESENT, OR NEW YEAR'S GIFT.**

**THE FIRST FOUR VOLUMES OF THE FAMILY FRIEND**, Price 2s. 6d. each, elegantly bound, form a Complete First Series, with a general Index to the Contents of the Four Volumes, arranged in one alphabetical order, and comprising about Three Thousand Five Hundred references to matters of every-day interest and utility.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

Copy the address:—The Royal Blue Houses, Islington and Shoreditch.  
E. W. Freestone, Proprietor.

## THE HOME COMPANION PORTFOLIO.

We strongly recommend to our Subscribers the adoption of the "HOME COMPANION PORTFOLIO," for the presentation of the Weekly Numbers or the Monthly Parts. These Portfolios are made with elastic cords at the back, to hold Fifty-two Numbers, or Twelve Monthly Parts, which comprise one Volume. At the end of each year they may be taken out and bound, and the Portfolio may be employed to preserve the Numbers or Parts of the succeeding Volumes. The Price is Two SHILLINGS. The outlay will be saved by the preservation of the Numbers, which, hereafter, may be difficult to obtain. The Portfolio is beautifully embossed, and illuminated with silver, by a new invention introduced by LITTON, Sew, & HODGE. It is an ornament for the drawing-room table.—Order of any Bookseller.

## THE QUADRUPLE INDEX.—The

Fourth Volume of the *Family Friend* contains a Quadruple Index, embodying upwards of Three Thousand Five Hundred References to the Contents of the Work. Persons wishing to judge of *The Friend*, may receive copies of this Index Gratis, by applying, post-paid, to Mr. J. BENNETT, 69, Fleet Street, London.

The only memento of the Great Exhibition produced within its walls.

Just published, complete in Two Volumes, price 5s. each, elegantly bound in cloth and gold, with a View of the Crystal Palace gilt upon the cover.

## THE PARLOUR MAGAZINE

OF THE LITERATURE OF ALL NATIONS, Printed in the Crystal Palace, Hyde Park, at Machines No. 158, and 162, Class 6.

We have no doubt that the two volumes of the PARLOUR MAGAZINE will be treasured by many future generations. People flocked to the Crystal Palace after its close, and eagerly bought up, at enormous prices, articles that had been exhibited there, that they might possess some memento of the Exhibition. We supply not only a work exhibited therein, but one actually produced by machinery within its crystal halls, and in the view of millions of spectators. The value of our book will therefore increase with the advance of years, until it will be regarded as a curiosity and a treasure.

These volumes contain translations of Literary Treasures from the

CHINESE.	HUNGARIAN.	POLISH.
DANISH.	HINDOSTANI.	RUSSIAN.
DUTCH.	IRISH.	SPANISH.
FRENCH.	ITALIAN.	SWEDISH.
GERMAN.	MEXICAN.	TARTARIAN.
GREEK.	MOULACHIAN.	WELSH, &c.
	PERSIAN.	

With original ENGLISH Contributions by celebrated authors, and choice adaptations from the American. Each Volume is embellished by a superior Steel Engraving and by numerous Woodcuts.

## RE-ISSUE OF THE PARLOUR MAGAZINE.

In order to meet the wishes of numerous persons of the middle and working classes, who, during the excitement of the Exhibition, were unable to obtain the memento of that great event, the work will be RE-ISSUED in Weekly Numbers, price 2d., and Monthly Parts, price 8d. or 10d. Order of any Bookseller.

London: HOULSTON & STONEMAN, 65, Paternoster Row.

## EXQUISITE OIL PICTURES.—Six-

pence each. KNIGHT & FOSTER, agents for the sale of Baxter's Oil Pictures. They are perfect gems of art: no lady's scrap-book can be perfect without them. A few of the subjects are named below, but an enlarged list will be sent on application;— Windsor Castle—Prince of Wales—Lover's Seat, Hastings—Dripping Well, Ditto—Bouquet of Flowers—Ben Nevis—Tarantella Dance—Tintern Abbey—Welsh Drover—Netley Abbey—Bala Lake—Brougham Castle—Water-mill on the Wye—Llangollen—Lake Como—Warwick Castle—View on the Rhine. Two sent free by Post for 14 Stamps.

When the value of five Shillings is taken, they will be sent post free.—The above are each neatly mounted on Drawing Paper, 7½ by 6½. KNIGHT & FOSTER, Stationers, &c., 5, Eastcheap, London.

## PRIZE MEDAL FOR STEEL PENS.

This was given to KNIGHT & FOSTER, the celebrated Pen Manufacturers, of Eastcheap. Their Pens have been for several years extensively used in the Bank of England, Post Office, and Custom House, London, and in addition to the already brilliant success that has rewarded the Proprietors, for the care bestowed on the Manufacture of these Pens, they have the gratification to announce that to them was awarded the

PRIZE MEDAL AT THE GREAT EXHIBITION, for their great Excellence, Superior Merit, Utility and Cheapness.—See Class 25—689, and 694: also Lord Canning's Report.

Sold by most stationers and booksellers. 1s. per box of 3 dozen and holder, or direct for 15 stamps from the Proprietors, KNIGHT & FOSTER, Stationers, 5, Eastcheap, London.

## LADIES' BONNETS, of the most Fashionable kind.

The richest & best materials, at moderate prices.  
Millinery Bonnets, 10s. 6d. to 15s. 6d.  
Mourning Bonnets, Patent Crapes, 2s. 6d. to 10s. 6d.  
Dunstable, 1s. to 10s. 6d. Fancy Silks, 2s. 6d. to 10s. 6d.  
BETHEL WARE,  
Manufacturer, 217, Tottenham Court Road.

## GRATIS WITH THE "DISPATCH"

of SUNDAY, Jan. 4.—The subscribers to the *Weekly Dispatch* were presented with a highly-finished coloured Chart, showing by diagrams and at one view, the number of persons who daily, during a period of five months, visited the Crystal Palace; the amount of money taken at the doors and received from various sources; and other statistics of an interesting character. And on the following Sunday, Jan. 11, the Chart will be given to all Purchasers of the *Dispatch*, who are not regular Subscribers. The Chart, which is surmounted with an engraved view of the Great Exhibition of the Industry of All Nations, has been prepared by permission of the Royal Commissioners, from designs by Corporals A. GARDNER and J. MACK, of the Royal Sappers and Miners, and, revised by a gentleman, whose intimate acquaintance with all matters connected with the management, must ensure its correctness. Orders may be given to all newsvendors in town and country, or forwarded to Mr. R. J. Wood, 139, Fleet Street, London.

## Now publishing, No. I. of GRANDFATHER WHITEHEAD'S CATECHISMS;

designed to make the Acquisition of Useful Knowledge by the Young, and by Beginners of all Ages, easy and pleasing. The Catechisms are published Monthly, each containing 82 pages, crown 8vo., illustrated by numerous Diagrams. The price of each Catechism will be 2d., stitched in a neat Wrapper. The whole Series, bound in cloth, 2s. 6d.

## THE FAMILY TUTOR, AND SCHOOL COMPANION.

—Was published on the 1st of January, 1851, and subsequently on the 1st and 15th of each Month, in Parts price 2d. each.

THE FAMILY TUTOR, as its name implies, is a Work of a highly instructive character, and, realised, as far as can be accomplished in print, the advantages of a PRIVATE Tutor to every reader—a Tutor whose teachings are lively, kind, and comprehensible, making the acquirement of knowledge a PLEASURE, not a TASK.

The First Volume contains—A COMPLETE ENGLISH GRAMMAR, improved and Simplified; FAMILIAR LECTURES ON CHEMISTRY; TABLES OF HISTORY AND OF TRAVEL; ZOOLOGY; THE PHYSICAL HISTORY OF MAN; THE PHYSIOLOGY OF HEALTH AND DISEASE; CELESTIAL AND TERRESTRIAL PHENOMENA OF THE MONTHS; MATHEMATICAL, GEOMETRICAL, ARITHMETICAL, AND OTHER PROBLEMS; EDUCATIONAL EXERCISES; "THE TUTOR AND HIS PUPIL," being Answers to Educational Questions; and A VARIED MISCELLANY.

THE SECOND VOLUME contains a Complete System of NATURAL GEOGRAPHY, with Pictorial Illustrations, displaying the Costume and the Architectural and Natural Features of the various Peoples and Countries of the world.

THE FAMILY TUTOR may be had complete up to the end of 1851, in Two Volumes, price 2s. 6d. each.

London: HOULSTON & STONEMAN, 65, Paternoster Row.

## THE FAMILY FRIEND, an established

Magazine, published upon the First and Fifteenth of every Month, price Two-pence. Thirty-two pages, beautifully printed, and neatly covered. The following is a type of the opinion formed of THE FAMILY FRIEND, and expressed by upwards of THREE HUNDRED NEWSPAPERS:—

"The Boys and Girls will like it, for it contains good Stories; the Young Ladies will like it, for the sake of its pretty Poetry, and its Receipts for various kinds of Fancy-Work; Young Men will like it, for it contains of Science; the Women will like it, for it abounds in useful Household Receipts; the Men will like it, for it treats of Gardening and Natural History, and advises wives to be kind to their husbands; those who love amusement will like it, for it swarms with Conundrums; everybody will like it, for it has a corner for everybody; and nobody need be afraid of finding any harm in it."—*Gatehead Observer*.

The Work may be had up to the end of December, 1851, in FIVE VOLUMES, price 2s. 6d. each.

The Fourth Volume contains a QUADRUPLE INDEX to the First Four Volumes, embodying about THREE THOUSAND FIVE HUNDRED REFERENCES to matters of every-day usefulness. The Work forms a most perfect Compendium of Domestic Economy.

London: HOULSTON & STONEMAN, 65, Paternoster Row.

## Editor's Note-Book.

**THREE IMPORTANT FACTS.**—Never be influenced by external appearances in forming your judgment of a person's worth. This is an important rule: for many a noble spirit is covered with habiliments of poverty, whilst not unfrequently a showy exterior conceals a villain of the basest kind. Dean Swift says that nature has given every man a capacity of being agreeable though not of shining in company; and "there are a hundred men sufficiently qualified for both, who, by a very few faults, that they may correct in half an hour, are not so much as tolerable." The world would be more happy, if persons gave up more time to an interchange of friendship. But money engrosses all our defence, and we scarce enjoy a social hour, because we think it unjustly stolen from the main business of life.

**LADY.** F. F.—This term is an abbreviation of the Saxon *lad day*, which signifies "bread giver."

**POSITION.** V. G.—The London Police was remodelled by Mr. (afterwards Sir Robert) Peel, by royal statute, in 1829.

**TO REMOVE RECENT STAINS OF INK.** H. P.—Rub the part with lemon-juice, tartaric acid, or purified wood-vinegar, and afterwards wash it with soap and water.

**MAIL-COACHES.** B. B.—These were first set up at Bristol in 1784, and were extended to other routes the year following; when they became general in England.

**EARS ACHES.** F. T. C.—This may be relieved by dropping two or three drops of laudanum into the ear, with or without a little sweet oil.

**FRANCO LANGUAGE.** S. B.—Among the best aids in obtaining an elementary knowledge of French is Cobbett's Grammar of that language, which we can confidently recommend to our inquirer.

**NORMAL SCHOOLS.** C. F. G.—This word is derived from the Italian *norma*, which means, literally, a carpenter's rule; and is applied in our language as a model or pattern.

**TEETH.** T. C. F.—A simple mode of cleansing the teeth may be adopted by taking a tooth-brush, and, after dipping it in water, rub it on a cake of soap. The mouth can easily be cleared of soap-suds by rinsing with water.

**TO EXTRACT GREASE-SPOTS FROM LINEN.** B. D.—Take magnesia in the lump, wet it, and rub the grease-spots well with it; in a little time brush it off, when no stain or appearance of grease will be left.

**SALT FOR HORSES.** W.—Salt is often given to horses, but the propriety of its daily use is questionable. Most quadrupeds appear to be fond of salt; but they probably seek for it only when instinct impels them to desire it as a remedy.

**SIGNS FOR INNS.** A. M.—These are of great antiquity. Originally signs were probably mere simple symbols; but in course of time they became professional badges, and art being employed to embellish them, innkeepers and shopkeepers made a great parade of their sign-posts.

**CLERK.** C. R. D.—The clergy were first styled "clerks," owing to the judges being chosen, after the Norman custom, from the sacred order, and the officers being clerical; this gave them that denomination which they keep to this day.

**DAMP WALLS.** S. B.—The following method is recommended to prevent the effect of damp walls on paper in rooms:—Line the damp part of the wall with sheet lead, rolled very thin, and fastened up with small copper-nails. It may be immediately covered with paper. The lead is not to be thicker than that which lines tea-chests.

**TO PROMOTE THE GROWTH OF THE HAIR.** W. S.—Mix equal parts of olive oil and spirits of rosemary, add a few drops of oil of nutmeg. If the hair be rubbed every day with this, and the proportion be very gradually increased, it will answer every purpose of facilitating the growth of the hair.

**TO REMOVE GREASE FROM CLOTH.** M.—Take soft soap and spirits of turpentine, of each half a pound, beat them well together in a mortar, and form into cakes. The spot, first moistened with water, is rubbed with a cake and allowed to dry, when it is well rubbed with a little warm water, and afterwards rinsed or rubbed off clean.

**TO EXTINGUISH A FIRE IN A CHIMNEY.** B. R.—Throw some powdered brimstone on the fire in the grate, or ignite some of the hob, and then put a board or something in the front of the fire-place, so that the fumes descending into the room. The vapour of the brimstone ascending the chimney will then effectually extinguish the fire.

**TO POLISH SEA-SHELLS.** S. S.—This requires much care and experience. The shells are first burned to get rid of the animal matter that remains in them. Their rough outside is next removed by mechanical means. They are then carefully treated—some with nitric, others with muriatic acid, according to their nature, until the proper surface is reached. This is then polished by friction, with leather and the hand.

**ALMANACKS.** G. G.—Almanacks, in their present shape, are comparatively of modern date. The first almanack in England was printed at Oxford in 1673. "There were," says Wood, "near fifty thousand of them printed, besides a sheet almanack for twopence" that was printed for that year; and because of the novelty of the said almanack, and its title, they were all vendid. Its sale was so great, that the Society of Booksellers of London bought off the copy for the future, in order to engross it in their own hands."

**THE LAMP OF KNOWLEDGE.**—It was a beautiful thought of Owen Feltham when he said, "If I die to-morrow, my mind will be somewhat the sweeter to-day for knowledge;" so true it is that upon the culture of the mind depends all our chances of happiness. But the refinement of our own intellect should also be communicated to others. We should share with them the enjoyment we have derived from habits of reflection and study, and encounter, with the weapons of reason and experience, the intolerance and prejudice that impede the progress of knowledge. As Milton wrote:—

"All my mind was set  
"Serious to learn and know, and thence to do  
What might be public good."

It is an obligation we owe, in return for the sweet comfort that wisdom has bestowed upon us, to hold the lamp of knowledge constantly in the path of ignorance, and to detect the insidious distillers of mental poison, who prow like the crouching thief in the night; to become trusty guardians of the public mind, and promote its healthy improvement; to divert the thoughts from all that is unreal and morbidly exciting, to a true sense of the actualities of life. By steadily adhering to these principles, great good may be effected, and vice, in its most specious disguise, may always be exposed, by opportunely

THROWING A LIGHT UPON THE SUBJECT.

**VALUE OF GOOD BOOKS.** S. S. B.—The observations of our correspondent on the enjoyment he has derived from reading certain choice books, remind us of what Dr. Arnott has said on the same subject:—"By my books I can conjure up before me to vivid existence all the great and good men of antiquity; and for my individual satisfaction I can make them act over again the most renowned of their exploits. The orators declaim for me; the historians recite; the poets sing;—in a word, from the equator to the pole, and from the beginning of time until now, by my books I can be wherever I please."

**EXERCISE.** G. C. W.—We have the authority of Mr. Curtis in declaring that exercise should not be continued after the effort has become at all painful. Our muscles, like the rest of our bodies, are made susceptible of pain for the beneficent purpose that we may know that they are in danger, and may thus be excited to do everything in our power to remove them from it. It is a mistaken notion that exercise of all kinds and under all circumstances is beneficial. Unless it is adapted to the condition of the muscles, it will prove the agent of death—not the giver of health.

**KITCHEN GARDENS.** T. R.—The kitchen-gardens of England were but scantily supplied with vegetables until about the end of the sixteenth century. It was not until the end of the reign of Henry VIII. that any salads, carrots, turnips, or other edible roots were produced in England; the little of these vegetables that was used was imported from Holland and Flanders. Queen Catherine, when she wanted a salad, was obliged to despatch a messenger thither on purpose. Their fruits were neither numerous nor good, being chiefly confined

to gooseberries, currants, and strawberries; the apples and pears were generally indifferent, and their plums and cherries bad.

**BREVITY.**—We must impress upon our correspondents generally the importance of brevity in their communications. A long letter, containing frequent repetitions of the same subject, however good the purport may be, is often laid aside, from want of leisure to examine and simplify the details. Brevity is not only the soul of wit, but it is the hinge of business, and an indispensable requisite in letter-writing. None valued this quality more highly than Dr. Abernethy, who could also appreciate it in another, as the following anecdote proves:—A woman, having burnt her hand, called at his office. Showing him her hand, she said—"A burn." "A poltice," quietly answered the learned doctor. The next day the woman returned and said—"Better." "Continue the poltice." In a week, she made her last call, and her speech was lengthened to three monosyllables:—"Well; your feet?" "Nothing!" said the pleased physician: "you are the most sensible woman I ever saw!"

**COMMUNICATIONS RECEIVED.**—ROB ROY (the subject is well known)—M. C. B. (they should be framed and glazed. A complete index will be added to each volume).—LOOOS (the suggestion is worth consideration).—T. J. W. (We cannot enlighten our correspondent. All puffing remedies are dangerous).—S. J. R. (a mere allusion was intended to a superstition that prevails in some parts of Ireland).—STEAM (you can make such articles for your own use, but not for sale).—FAREND, Glasgow (many thanks for the suggestion).—W. W. B. (the fears expressed by our correspondent are unavoidably justified, for the paper sent is much too long).—J. S. H. H. (any practical scientific work will give the required information; we have no opportunity of referring).—GREENALD (we do not remember the game mentioned).—R. P. (the receipt given has been often practised with success).—WAG (thanks).—J. G. G. (the question is too simple to need arbitration).—WELL-WISHER (our fair correspondent will find a series of the subjects alluded to in the *Family Friend*, of which the fifth volume has just been published).—W. S. (the tablet to the memory of William Caxton, the father of the British Press, in St. Margaret's, Westminster, was erected at the expense of the Roxburgh Club, in 1820).—W. S. T. (the best mode of destroying moles is by the common trap, made with noose, frame, and bent stick).—M. C. (to remove the sealing-wax from table covers, dissolve the spots by touching them repeatedly with spirits of wine or naphtha. Apply the spirit with a camel-hair pencil).—THOMAS (we think not).—S. S. B. (it is an erroneous supposition to suppose that only three of Queen Anne's farthings were struck. Many hundreds were circulated).—JOHN (thanks).—D. B. (it is often a disease, and not a sign of health, in some persons. Moderate living and exercise are the best remedies for reducing corpulence).—NINA (thanks).—R. C. (the paper is too long for insertion).—WILLIAM (a person may be prevented by the Herald's Office from using a name to which he is not entitled).—DERRY (the following recipe for promoting the growth of the hair has been handed to us.—One ounce of beef marrow, three drachms of tincture of cantharides, one drachm of powdered cinnamon; mix. To be well brushed into the hair night and morning, the head being first washed with salt and water: the hair to be kept short for a time).—B. B. (to preserve the colours of sea-weeds, dissolve two or three lumps of gum-mastic in two-thirds of a small phial of turpentine. The gum must be dissolved by placing it in a warm place. This solution should be carefully brushed over the sea-weed).—JUVENILE (the best method for teaching birds to speak, is to wake them gently up at night, and repeat slowly what you wish them to learn).—J. HAYES (for magic-lantern slides, prepared colours are sufficient).—G. W. (thanks for the advice offered).—(Our Poetical Contributors are so very numerous, that we are unable, from want of space, to comply with the often repeated request to notice the receipt of such compositions).—FAN-DEKA (should apply to a music publisher).—A. X. (thanks).—SCIENCE (we do not think that the discovery alluded to by our correspondent has yet received the sanction of the Académie des Sciences).—SIR WILLIAM HERSCHELL (father of the present Sir John Herschell died in 1822).—E. R. (many thanks, but the comment is declined).—T. W. (thanks).

## TO THE MOON.

BY R. KEMP PHILP.

QUEEN of the solemn night, to thee  
My thoughts arise;  
While thou art smiling placidly  
Down from the skies,—  
Ostling the earth with thy heart-soothing  
light,  
Thy love-inspiring ray—Queen of the  
Night!

Thy lustre falls upon the lakes,  
Like angels' wings;  
In the deep glen the blackbird wakes,  
And sweetly sings.  
The winds are lull'd, save where the spor-  
tive breeze  
Invites thy dancing beams among the clus-  
tering trees.

How truthful seems thy placid face!  
Yet—false art thou—  
Type of the cold and heartless race,  
Whose worthless vow  
Dies with the hour that swiftly flies away,  
And leaves the trusting ones to deep dismay.

No! thus I wrong thee, Night's fair Queen,  
For thou art true;  
And all the changes on the scene  
Spring from our view.  
Thou art unchanged—the same sweet orb  
of light,  
Though we behold thee not, amid our night.

Faithful as thou may I for ever be,  
Through good or ill;  
And when mistrustful eyes some failing see,  
Be constant still.  
Though clouds may gather and their gloom  
impart,  
May light for ever radiate from my heart.

Child of the Sun! thou dost obtain  
The parent ray;  
But from thy arms it soon again  
Flies fast away.  
So may I seek to spread the light I here  
enjoy,  
And that which I receive, for good employ.

## FLORENCE DE ROHAN.

A FRAGMENT FROM THE HISTORY OF NAPOLEON.

### CHAPTER I.

"THE triumph and the vanity,  
The rapture of the strife,  
The earthquake voice of victory,  
To thee the breath of life."—BROOK.  
"Is this the man of thousand thrones,  
Who strowed our earth with hostile bones?"  
BROOK.

"From the bounds of truth careering,  
Man's strong spirit wildly sweeps,  
With each hasty impulse veering,  
Down to passion's troubled deeps;  
And his heart contented never,  
Chaseth its own shadow for ever!"

Of the many dark events in connexion with Napoleon's wonderful career, there is none on which the historian has so often been obliged to ponder, as that of the death of the Duke D'Enghien.

The death of the Duke D'Enghien was as undesigned as it was sudden and violent; the most subtle ingenuity has been continually engaged in the endeavour to provide for this act a solution that may be admitted with the most boundless admiration for the hero. The common feeling of mankind, which seldom for any length of time can err, has finally referred the most efficient cause of this deed to Napoleon's fear that the Duke might ultimately thwart his imperial projects. The connexion that the life of the Duke had with Napoleon's fortunes, Napoleon himself best could tell.

We will trace in outline the historical position of the event before bringing into view, and into as orderly arrangement as possible, its concurrent incidents and circumstances. We can do no more: these incidents, these circumstances can by no possibility be *blest*—they possess neither unity nor fitness. The unchecked development of a wicked and powerful heart, like the flowing of a heated volcano, can make only waste and desolation; all that is good it isolates. Yet is its work not wholly uninteresting; affection, love, devotion, lifted high above its power, resplending in this the scattered stars of verdure on the pale steeps of Etna, bloom on us with an almost unearthly beauty—the preachers of mortal constancy and of spiritual immortality. Alas! as we gaze the stems are scorched, the flowers fall, their fragrance ascends to heaven, and their dust is scattered!

The time of the mournful tragedy which constitutes this fragment, was when France, by the success of her arms, was executing plans unprecedented in their character. The magnitude, together with the atrociousness of the deed, may be estimated by the fact, that though Europe at the period of its occurrence had become inured to scenes of blood, and could hear without emotion of armies being swept away in fewer days than had been required to collect and equip them, yet, limited almost personally as it was, it sent a thrill of horror through all the veins of European society, and effected a revelation of feeling that has no parallel in the moral annals of mankind.

In this issue it was that Napoleon's character shone out boldly and confessedly as the enemy of mankind. The steel-written declaration that no innocence, no rank, no sanctity could render life inviolable, dismayed even the most active promoters of the Revolution, who till now had imagined

that the French nation had recovered at last the long-lost rights of freedom, and that the system of government framed according to their wishes was surely tending to secure their happiness.

The tale of sorrow now to be opened out cannot, therefore, want a background—a background, the sombre hue of which is only illuminated by the startled enthusiasm of those who would offer to Napoleon the highest worship that man can give his fellow: those with whom—and it is no rare creed—

"One murder makes a villain,  
Millions a hero!"

Just within the boundary line of Austria—whose populous and fertile provinces had excited at once the envy and jealousy of Napoleon—and on a sloping plain, hemmed in by wooded plantations, and dotted by a few straggling cottages, he and his great army halted, immediately after engagement in one of the most brilliant battles that history has recorded. Brilliant, but inglorious! Austria had presented a noble, though useless opposition. The French army, inspired by an almost supernatural excitement, and aided by local circumstances, had fully evinced its own superiority. There was an advantage of another kind on which Napoleon had well and safely calculated. The dominions of the house of Austria being unconnectedly situated, a long time was necessary for the march of Austrian levies from one extremity of the empire to another. These battalions, too, being composed of a variety of nations, differing in manner and opposed in interest, it was frequently a difficult matter to unite as to collect them. The resources of France, on the contrary, were immediately at hand; its soldiers were united in one compact body, so closely concentrated as to admit of no embarrassment. As it was, the genius of Napoleon was adjudged to have won the day; and from all the clamour and confusion common to a noisy and reckless army, there arose from this place of encampment, clear and distinct, those ascriptions of praise on which Napoleon was wont to set so high a value.

It was evening as the division sent in pursuit of straggling parties of the enemy drew itself up above the base of the broad hill. As twilight deepened, the battle-field close by faded gradually from every eye, till the lighted camp-fires brought portions into view, tenfold more horrible by the heavy crimson mist that hung around the flames, now made fantastic by sudden and furious gusts of wind. The officers of the army, elated by a success that promised a speedy advancement in their respective ranks, had relaxed a good deal of their usual discipline—the extreme severity of which was, perhaps, the only expressed cause of discontent on the part of Napoleon's soldiers—soldiers who followed him with a half-inspired devotion, ready at any moment to sacrifice life, if they might enhance his fame.

As though fierce passion, in all its varieties, had been completely expended, the merry flow of mirth was to be heard in every division of the camp. The men, assembled in little bands, drank heartily to the health of their comrades. As night wore on, the best and illest tales were told; the most wonderful feats were alluded to; each recital being occasionally heightened by a few fictitious touches, whilst all the meritorious deeds of the dead, who, alas! could never contradict them, were credited to their own individual selves. It was no time for those gentle thoughts, which no deeds of blood can ever effectually eradicate from the human heart, and which, however pressed down, will yet always bloom again, giving to the oppressed a respite, and to the tyrant a season for repentance. Now and then, a few of the loquacious and excited multitude would look sad and grave, rather, perhaps, from the undefined apprehension of retribution than from the workings of remorse. Each one needed rest: scarce one but felt too excited to wish repose. Our regiment after another, however, dropped down exhausted, yet not to sleep; for from where they lay were heard wide-awake expressions—the language of men wholly wrought upon by their inflated senses. The officers of the army took good care to ensconce themselves in the private dwellings which happened to be situated at convenient distances on the slope. The best one of these was, of course, reserved for their commander.

We have little to do with the external aspect of the French commander's head-quarters. It was simply a pile of stone, of no describable shape or form, but bearing marks of age in the ivy that clung about it. Its inhabitants had fled the previous night, and probably were not so much as thought of in this summary action of possession. The light in the second story flashed down on two sentinels, engaged in the mechanical operation of pacing to and fro as guardians of the hallowed precincts. The interior of that apartment, only made noticeable by the presence of its transient guest, exhibited an extreme paucity of furniture—furniture, however, a memento of better and richer times.

A high mantel-piece, rudely carved, extended over a fire, made up of every burnable material that could be laid hold of. The flames of this fire employed themselves in multiplying the shadows of three antique chairs; while, on an oaken table, a lamp burned with a quiet and contented air, despite the gambols of the shadows on the floor and on the walls. Close by sat Napoleon,

dictating a series of despatches to his private secretary; a task that was no sooner got through than the secretary was dismissed. Napoleon, now sitting up, threw off the greater part of his military dress, and commenced pacing up and down that large chamber, with a restless and unsatisfied air: a mood to be remarked in a man whose placidity the most alarming incidents could hardly ruffle. At intervals his hand passed rapidly over his brow, his lips were compressed, his countenance lost its meaning, and his eyes their animation.

It was at this time that one of his marshals, *sans cérémonie*, entered the apartment, and referred to the advantages sure to result from the late conflict. His companion, with that ready command of thought that he possessed in so wonderful a degree, entered warmly into topics as diverse from his former meditations as possible. His remarks went to show how long he had resolved the conquest of Austria in his mind, and with how clear a foresight he had formed his plans of policy respecting it. It was thus an hour passed away; and the visit terminated with mutual expressions of satisfaction. On the comparison of opinions, both had satisfied themselves that though the territories of Austria were disadvantageously situated in respect to foreign trade, its robust and hardy population could enable France to levy numerous armies, on which they might depend for conquest, whenever the enthusiasm that characterised the French nation should by any accident subside.

Truly, there was that which lay heavy on Napoleon's heart, for no sooner had the door of his apartment closed, than his broad chest heaved like the motion of the sea at the approach of storms; his eyes, too, resumed their former dulness. Ah! had he felt for those who lay stiffened in death beneath the open sky, this might well have been. No, only of himself thought Napoleon, and of his destiny. He remembered that no purple robes had yet fallen on his shoulders; he had not yet touched the diadem he coveted, and had pressed but the lower steps of that throne which he afterwards ascended. Had his final greatness been clear that night, with all its sequence of unutterable misery, the prospect might well have tortured him. It was not so; and yet his limbs shook at intervals, whilst, apparently unconscious of the act, he would take up and throw down the military cap that he had worn during the day, and continually loosen and refasten the button of his grey surtout. These incidents are not wanting in significance, for Napoleon was wont to assume, on almost all occasions, a reposeful manner. His present mood, if like the inroad of a sullen tide over golden sands, like a tide went as quickly down, giving way to that rejoicing expression which feeds on bright anticipation. A disposition to cheerfulness was scarce ever absent from Napoleon, and when his career as conqueror of nations for ever terminated, his buoyant mind brought round him at fitful seasons, in strengthening splendour, the charmed imaginings of youthful days. With such a man was cheerfulness to be wondered at on the eve of a victory that made more tangible the object of his ambition? The wildest aspirations that can enter a mortal heart were about being fulfilled; France would recognise him as her most successful general; and what was more, his sagacity and intelligence had enabled him to estimate the extent of his power.

Hitherto France had exhibited the unpromising spectacle of a nation divided into a number of discordant factions; its military force in a disorganised state, without an army capable of looking the enemy in the face, and without any general in whom the nation could place confidence. The armies of the confederates, at the same time, were numerous and well disciplined, flushed by expectation, and encouraged by the most probable appearance of success, a condition met by defeat and disaster. As a statesman, Napoleon had reason to feel proud; for not only did he perceive the most successful method of subjugating mankind, but knew himself able to prepossess their minds in favour of any yoke he chose to impose. He had adopted a matchless system of proselytism, and one most easy to carry out. The minds of all classes in France had been put in a state of delusion from visionary theories, or become corrupted by the expectation of advancing their private interests in the bustle of innovation, and amidst the vicissitudes of political confusion. Austria had always been able to present a formidable front, affording an apparently insurmountable obstacle to the extension of French dominion and power in that quarter. Napoleon remembered this and rejoiced; and, as he pondered in that empty room, he inwardly determined to assume a more dictatorial tone. He could not forbear from plotting his next return to France—to that people whose interests had now become identified with his own. It was no dream; but again a shadow fell over the beaming pathway. His step became less rapid, and at intervals he gave utterance to sentences abrupt, impassioned, but almost meaningless. A calm and quiet gravity succeeded; and, seating himself upon a chair, he fixed his eyes on the fire, which an attendant, who had just entered the apartment, was piling up. In a short while, and probably without intention, he bent over the outspread map that lay on the table at his side; but, strangely enough, a roll of parchment rolled down upon it: the sight did not please Napoleon, and again he relapsed into his former listless mood. That parchment was the undepatched order for the immediate execution of the Duke D'Enghien, and lay here awaiting his signature. God alone knows the unbidden thoughts that pressed round Napoleon during that inward conflict of conscience with the darkest passions. A moment more, and smiles of mockery were traced on his stern features, as if at his own imagined weakness. Napoleon was forgetful that his hesitation sprang from the very humanity of the nature that he wore, vindicating itself, despoiled and dimmed in glory as it was.

"This must not be," he exclaimed at length; "time flies, and — Why do I hesitate? Let this man be weighed against the millions that have perished, and what is his worth?" In an instant more the scroll was opened, but ere the pen could touch the document, a loud challenge of the guards without arrested his attention.

"A friend," was the reply. At that late hour the rejoinder was perfectly audible to Napoleon, who, glad of interruption, rose from his chair, and walked towards the window. It was a night so beautiful with moon and stars as ever blessed the earth. His quick sight detected a lady, together with two attendants. The appearance of the three strangers he could not but regard as somewhat curious: the circumstance, at least, was sufficiently surprising to raise many a head from its uneasy pillow, and fix many a roving eye that fain would have caught a glimpse of the intruders. Napoleon, at a loss to understand the object of the visit, stood motionless until an *aide-de-camp* opened the door of the chamber to request permission, on behalf of the visitor, for an interview.

Napoleon directed the immediate admission of the applicant.

In a few moments a lady arrayed in deep mourning was ushered in. Her dress was evidently assumed for disguise; and the observant general discovered at a glance, what indeed no disguise could conceal, that she was of rank and station. The first sensation of the stranger, on finding herself in the presence of Napoleon and his *aide*, appeared to be that of shrinking delicacy; but, quickly recovering her accustomed air of quiet dignity, she took an offered seat near the fire. After a most embarrassing pause, Napoleon abruptly broke the silence.

"To what, madam, am I indebted for the honour of this visit?"

"General Bonaparte," was the reply, in a voice sweetly clear, "I wish to speak to you in private for a few moments."

"We will retire," said Dupont, with courtesy.

As the last footsteps of the officer became inaudible, the lady threw aside her cloak and hood, which had effectually concealed her features. Her companion started in amazement: he could scarcely credit the evidence of his senses, when he saw before him the lady with whom the Duke D'Enghien was known to have exchanged vows of affection, the consummation of which had been suspended by the Duke's untimely arrest. Napoleon's ultimate design had plainly been anticipated. To conceal a momentary surprise, the perturbed warrior crossed the room and closed the door, which was still ajar. Returning to his seat, he said coldly:—

"I know not whether to censure or admire the energy that has led the daughter of a Bourbon to enter my camp at this unseasonable time, although not unaware of the motives by which you may seek to justify this act."

The intruder instantly rose from her chair, dismayed at these sarcastic tones, so foreign to human feeling and sympathy. Astonishment seemed to grow upon her, till she looked more like a beautiful statue than a living being. As she sank down, her face buried in her hands, tears—those most eloquent of witnesses to the heart's sorrow—flowed abundantly; but quickly recovering that dignity which never long forsakes a noble woman, she replied, "It is not necessary to tell General Bonaparte, that no trifling errand would tempt me to such a venturesome act." The speaker hesitated, and with difficulty added: "I believe that my person is known to you."

"Undoubtedly," returned Napoleon, who had the faculty of remembering all whom he had once seen; "you are the betrothed bride of the Duke D'Enghien."

"If, then, you know of my engagement, you will at once acknowledge strong cause for my interest in his welfare. There was a time when I should have shrunk as from death from such an avowal; but now I hesitate not to own my love for him."

A quick and restless motion of the man whom she confronted followed this appeal; and she looked into his face as if to gather some sign of mercy. Rigid as ever where those features; and yet she was speaking to one who held in his hands the destiny of her lover!—whose one word could restore him from the gloom of a prison to the liberty of life!

"The Duke D'Enghien," replied Napoleon, "is my prisoner, under charge of the heavy crime of treason. He has incurred its penalty, by acting as spy of the enemies of France."

This was not without its effect upon the listener. She exclaimed, "This charge is false! Could I forget my position and my sex for one so unworthy of his country's regard? But even if he has erred, give him the advantage of a fair trial."

Napoleon's eye rested with a gentler expression upon her glowing face. "The Duke D'Enghien," he replied, "ought indeed to value an affection which can dare all things; but I cannot allow it to interfere with my duty to my country."

She grew paler as she whispered, with an earnestness that rendered the soft tones of her voice doubly impressive, "I have come here to learn the truth, General Bonaparte; and it would be cruel in you to conceal your intention."

Napoleon gazed on the feminine loveliness of the beautiful creature before him, and at the suspended animation on her countenance; but the beholding her had no influence to turn him from his firm purpose, for he said, coldly: "I shall not conceal anything. I will allow that you possess the fullest right to learn everything connected with one so nearly related. His is no ordinary crime, mademoiselle; and it becomes my painful duty —"

He paused.

"Proceed!" cried the excited girl, nearly ceasing to breathe in the intensity of her interest. Napoleon, without trusting himself to any utterance, drew forth the death-warrant, and placed it in her hands. She took it with a sort of charmed submission; but the instant her eye fell on the engrossing, formula words, an absorbing curiosity concentrated every feeling. The reader read the roll a second time, from the first to the last letter, before it produced any clear impression on her mind. She could not bring home to herself the possibility that her lover was immediately to be consigned to death. There must be some mistake, she thought; it could not be that he to whom she had united every thought of earthly happiness was thus to die. This was

truly a happy doubt, but for which the shock of that sudden blow might have proved fatal. When she had a third time read the scroll, her looks turned eagerly to her companion, anxious to detect signs of mercy in his countenance. But Napoleon's intention was too plain to be long misunderstood; and when by degrees this painful dream became a conviction, her whole frame seemed giving way. Yet she continued in full consciousness; the very immminence of the danger endued her with strength to embrace in its most disheartening aspects; and as she closed her eyes, and leaned back wearily, in the chair, she tried to collect some sustaining consideration; but no; her lover's death appeared inevitable.

As Napoleon stood watching her in silence, she suddenly raised herself from her posture of grief, and in a voice so low that her lips scarcely moved with the utterance, she whispered:—"General Bonaparte, you have doomed an innocent man to die—to die without guilt. Yes," she added, with a look of touching anguish, "you have destroyed my last hope! and yet—oh! what is this strange impulse of prophecy!—an inward voice whispers to me that, as surely as I shall see perish from before my eyes all that I love on earth, for want of a fellow-being's mercy, so will it be with you!"

The speaker paused; her feelings, excited as they were, could sustain her physical frame no longer; and before Napoleon could reply, she became insensible. On recovery from her swoon, she was seated in a chair, her dress damp with the water that had been sprinkled in her face; and in that moment of illusion she fondly trusted that the impression on her mind had been all a dream. The sight of Napoleon, who still supported her, dispelled the fancy; and instantly withdrawing herself from his encircling arms, she walked to the door, descended the solitary stairway, and recrossed the threshold.

The sentinels dropped their arms and interchanged expressive glances, as if seeking in the countenances of each other some solution of the interview. Several officers, with an air of the deepest respect, pressed forward to accompany the mysterious stranger to the extremity of the camp.

Napoleon, after her abrupt and sudden departure, turned with a look of chagrin towards the yet unsigned death-warrant, and again his gaze recoiled quickly, with the air of one not sufficiently at ease to feel any desire for repose. For an hour he did no more than watch the motions of his time-piece—motions that increased, in place of lessening, his own impatience. Once more he sought employment for his mind in looking on the lifeless moon—pale and sorrowful as the face he had just seen—moving in the tranquil heavens, without voice or sound to soothe his troubled spirit. As he pursued the current of his thoughts, he became himself appalled at his meditated purpose, and a virtuous indignation was about frustrating the intention, when his ambition once more sprang up to cancel the resolution. The master of armies took up the fatal document for the third time—reperused it this time with less reflection. Seizing his pen, and thrusting open the recoiling parchment, he wrote—*Napoleon*—and all was over! All over? Nay, not so! The cloud of doom rose in that moment unperceived, and began to overshadow him. He felt, scarce knowing it, a sad regret at the quick departure of the midnight visitor, who, at the eleventh hour, had preached to him repentance. What, if the prophecy should be fulfilled! the prophecy of his fall from that towering height to which arms were pledged to raise him? Was a solemn and a gloomy thought.

The last shades of night were fading, when orders were issued to the army to put itself again in motion. As the soldiers sprang from their brief rest, and cast looks towards the scene of their late warfare, they uttered the most extravagant expressions of delight. The very horrors of that warfare had made every heart more sensible to the quiet loveliness of nature, exhibiting—how truly!—that the fiercest passions cannot entirely efface the heart's tenderest sentiments. Forests, valleys, and gushing streamlets were lit up by the rising sun; a warm southern wind blew sweetly over, and the sky above bore only those light, fleecy clouds that sweep in the higher altitudes. Though the eventful night was long since over, and in the memory of the roving legions, was no more than a recollection, the dark act which ere this had consigned a living being to the grave, still darkened one spirit with an aspect of malignity. The bugle sounded shrill and clear, inspiring a spirit of exultation in every soldier's breast; but without the camp, far away, was one who could never hope again.

An hour after the orders had been given, every piece of artillery, every baggage-wagon, was in motion. The straggling houses on the slope, and the hamlets that dotted the vast surrounding plains, were once more left to their old sweet quiet; and the reassured villagers, now creeping from their hiding-places, felt the joy of the condemned on receiving a sudden reprieve.

During the march now commenced, the officers of Napoleon made various attempts to introduce to his attention the subject of the last night's adventure, little deeming how gladly he would have forgotten it. A severe reproof was the only answer to these vain endeavours, so that all expressions of curiosity were very readily suppressed, under fear of exciting his displeasure.

#### CHAPTER II.

"Thy sword, the sceptre, and that sway,  
Which man seem'd made but to obey,  
Wherewith tenous was life—  
All quell'd!—Dark Spirit! what must be  
The madness of thy memory!"—BYRON.  
"Thine evil deeds are writ in gore,  
Nor written thus in vain—"

Thy triumphs tell of fame no more,  
Or deepen every stain.  
If thou had died as honour dies,  
Some new Napoleon might arise  
To shame the world again—  
But who would soar the solar height  
To set in such a starless night!"

Two months had elapsed from the period in which the incidents recorded in the last chapter transpired; two weary months, replete with events that concerned all Europe, and which were made especially famous by the incessant

marches of the French armies. Through all Europe, and along the people's borders of Asia, flew the tidings that Napoleon, the Lieutenant, the General, the Cohaut, was to receive as his gift—the crown of France. Yet so great had been the slaughter, so many the hearths endangered or bereft, as seriously to check that hilarity which a triumph scarce ever fails to excite in a victorious nation. Through blood Napoleon had marched onward to the goal of his ambition; and the evening of the 2nd of December found him Emperor of France. In spite of the distresses of war, the common people had by this time been in a great measure restored to former comfort; and, sharing in one common and united hope, they enjoyed heartily the day of pomp, the like of which had not been witnessed since the time of Charlemagne. Every public place was crowded with the gay Parisians, while shouts of *Vive Napoleon!* in every direction rent the air. From the suburbs of Paris to the waters of the Seine, snatches of popular songs were constantly mingling in the shouts of the gay revellers. But the day for Paris was this time eventful; the country from every nook poured in her artisans and labourers, to pay homage to the meteor which blazed so brightly. Yes; the lofty pinnacle was won. That day witnessed ambassadors from every city in Europe, bearing tokens of favour and distinction.

As night drew on, the interior of the palace of the Tuilleries became illumined with a splendour which made every stone of that magnificent and ancient pile, and every slate of the high-slanting roof, clear to the shining multitudes who thronged the gardens round. In their midst, breast-high in foliage, and canopied by rustling boughs, rose the white marble forms that Italy had loved; while towards the Elysian Fields, the bright watery columns of a fountain sustained themselves almost as tranquilly. Beneath the central arch, and at the foot of the grand staircase leading to the reception rooms, stern sentinels were stationed; these, however, challenged none. So there went up whoever listed—the young to see something new; the old to revive their faded dreams of royalty, both alike feverish with an undefined expectancy. It seemed as though all the world that night would welcome its oppressor.

Surrounded by his brave marshals—a chief amidst chiefs—Napoleon suffered group after group to gather before him, reading by short and piercing glances the character of each individual, and with a wonderful aptitude suiting his words to the capacities of whomsoever he addressed. Early in the evening he withdrew; yet not till a triumphant shout had risen from the dense mass that still heaved, billow-like, without—a shout taken up and repeated over and over by thousands yet beyond.

Napoleon, satiated with the glories of the day, repaired at an early hour to his own room—not, however, to rest. When midnight came, he was still sitting pensive and alone. He noted not that the illumination was fading away—that activity and merriment were being changed to silence and forgetfulness.

The room he occupied was furnished in a style that, if not suitable to a soldier, or remarkably adapted for the president of a republic, was at least worthy of an emperor. To look on Napoleon himself, his visage was strikingly altered since the midnight interview with the betrothed of his murdered victim; the lines about his mouth were deeper, and constant exposure to unkindly climates had darkened his complexion. His pallid features told not only of months of hardship, but nights of wakefulness. The proportions of his frame, too, were enlarged. These outward changes had been observed by the least observing; but the most shrewd could have detected more than one cause—incessant labours and watching—for so striking a change. The posthumous journals of Napoleon discover the fact, that recollections which had lain torpid under the excitement of successive triumphs, now sprang up within him with severe fidelity. Each particular event in his life seemed, with wonderful distinctness, to stride forward into the present.

He remembered, as it were but yesterday, the joyous season of his youth; the fostering hands which caressed him, the nursery on the floor of which he had once so demurely played. Again he sat within the charmed circle of youthful hearts, and heard merry voices and noisy laughter, or stood hand in hand with loved companions. His mother, too, appeared to rise out of the grave, like one who had not seen corruption, and to pass before him in all the beauty and sanctity of love. The innocent passion, the guileless serenity of those days, seemed revived. Prattling voices, and the voices of the wind, the vision of green fields, and the fragrance of fresh flowers, came over him; and then, suddenly, the whole scene died off, and wretchedness was in their stead.

What, after all, had power and fame brought him? Nothing but inquietude.

In bitterness of heart he started up, and paced the room with hurried steps. As he did this, the very atmosphere seemed to teem with unnatural life. A mist came gradually up, and a thousand living shapes were in it. He saw forms and faces that he knew were amidst the dead, and heard the moans of the dying, and the supplications of the lost. His eye wandered round with a vague gaze, as if following some imaginary form. Amidst those dreadful gazers was the noble victim to his late revenge, the Duke D'Enghien, in the pangs of dissolution. In vain he willed the apparition to be gone; there it was, and would abide—its sad, reproachful look, growing more reproachful still.

Napoleon now resorted to the excitement of stimulants to support his spirits. Approaching a side-table, he filled a goblet with the sparkling fluid, and swallowed its contents. When in the act of replacing the glass, a distant clock tolled out with a piercing distinctness the hour of one. The tones, aided by the lateness of the night, fell mournfully upon his ear, and as the echo ceased, he started, hearing a footstep on the stairs. To his surprise the steps neared his own door. A moment after, one of his body-guards

stepped in. The entire expression of his countenance underwent an instant change, and he completely recovered the stern manner so habitual to him—a manner to which may perhaps be ascribed no small part of the influence he exercised at will over inferior minds.

The man handed to Napoleon a note from the court physician. He snapped the seal asunder, and read as follows:—

"Sire,—I have been called to attend a lady of distinction, who suffers from a lingering illness that must very soon prove fatal. It is her request that your Majesty come to her immediately after this intimation is received.  
"MONTESQUIEU."

Napoleon ordered out his carriage, and a few minutes afterwards he descended the grand stairway, on the steps of which lay scattered a few sleepy guards. The coachman in waiting had already received his directions, and as quickly as Napoleon entered, drove towards the "Pont Royal," and thence along the broad road that runs parallel with the Seine.

There was that in the appearance of the night—the plunging of the moon amidst sombre clouds, the splash of the water of that shallow and untroubled river, and in the fresh breathings of the air destined to feed the life of the morrow—that was grateful to his feelings. Nature is ever refreshful after being shut out from the heart, and her voice is ten thousand times sweeter to the wearied mind than the attuned symphonies of the most gifted minstrels, charm they never so wisely.

Napoleon, nevertheless, could not avoid dwelling on the singular message he had received; that mystery might soon be unravelled. He was able to trace by his eagle glance some connexion between his recent feelings and the object of his present visit. What this distinctly was, he knew not. His surmises brought no satisfactory conclusion. Suddenly his carriage rolled beneath a massive arch, and a side-door opened on the lighted interior of a mansion, the outward appearance of which was one of age and gloom. Napoleon, as he set his feet on the steep and narrow steps, felt for the first time a surprise at the alacrity and readiness with which he had obeyed the summons. Still, he had no misgivings, and passed in. Without making of receiving an inquiry, he was ushered through a long, narrow hall, and up a flight of stairs. "I may advance no farther," said the domestic, pointing expressively to a chamber door. Napoleon, at the page's pause, imagined that he heard the suppressed sounds which usually precede a visit of death to the chambers of the sick; and so softly did he step, and unclose the door pointed out to him, as to enter without apparent notice.

The scene that presented itself was a strange one, and to his mind—not yet relieved from the active terrors of the imagination—an awfully impressive one. On a bed, propped up by cushions, lay the emaciated figure of a young female. The Emperor, almost shrouded in the gloom of curtains, advanced to the bedside. The very first glance was enough to show him that, in the midst of suffering and death, he saw Florence de Rohan, the betrothed of the Duke D'Enghien, from whom he had last parted in the pride of health. There was a fearful history in those sunken temples and wasted features—a change which told Napoleon, in startling accents, what mental suffering had been compressed into that interval of time. He stood with arms folded across his breast, and gazed upon the altered face of that dying girl. The heart-rending appeal on that eventful night, his signing of the death-warrant, and her words at parting—words so fearfully prophetic—all these were traced with indescribable rapidity on his mind.

The hollow eyes of the invalid at length unclosed, and, strange to say, lighted up with a ray of joy as they rested upon the Emperor. This smile might be compared to that which illumines the ocean in the pauses of its storms—sad and unattractive in its sweetness. Presently, the low voice of Florence was heard, and Napoleon bent forward to listen.

"Pardon me, sire! If on the verge of the grave I have so far forgotten the prerogatives of royalty as to sink for a moment the subject in the Emperor. It needs not that I repeat to you what I have suffered since our interview, for I will soon be in a land where the weary are at rest."

This, from one so frail and yet so resigned, served as a crowning stroke to the remorseful feelings of Napoleon, whose sinking head and continued silence told the working at his heart. The sufferer's face was suffused with a more life-like tint as she witnessed Napoleon's relenting manner, and she spoke again with a sudden strength that apparently contradicted the professional knowledge of her medical attendant. As her tears fell softly upon Napoleon's hand, she said—"It is the living, not the dead, who need our grief and ask for sympathy. Support from above has enabled me to meet death with composure, and before I depart from earth, receive my forgiveness. I shall not have lived in vain, if you bear this lesson of ambition's doings to your royal home. It may serve, perhaps, to curb you for the future, and to instruct you that conscience is ever true to her trust. Remorse must visit the heart which yields itself to unrighteous dictates."

As she paused, and leant back child-like on her mother's bosom, a faint but beautiful smile rested on her features, as though of satisfaction at this interview with her destroyer. Her respiration grew fainter and fainter, and her visitor felt the damp, chill hand, relax its hold. Silently turning away, Napoleon left the room.

We have seen how futile was the supplicating anguish of Florence de Rohan on that eventful night, when her devoted affection drove her to the French camp on a vain errand of mercy. She had accompanied her attendant, on leaving his presence, almost without consciousness; but from the moment that she reached her own home, amidst its many comforts, she pined rapidly away, disappearing without whisper of complaint. Yet over her death-bed hovered a glorious and assured hope—the hope of being united to that one spirit that had animated for her every earthly prospect.

It was amidst the festivities that filled up the week of Napoleon's coronation,

that the ancient vault of the De Rohan family, situate in the cemetery of "Père la Chaise," was opened, and from one of the most magnificent mansions in Paris issued a coffin. This was laid upon a plumed hearse, and preceded by a long train of carriages, amidst the emblazoned arms of which could be distinguished those of the French Emperor. Various causes were assigned to account for its presence at the interment of a member of the house of Bourbon; the most general conjecture being, that he had overlooked political animosities in his desire to do honour to so much loveliness and goodness.

It remains but to be added, that the death-bed scene, with whatever had concerned it, never passed from the memory of the Emperor; that by his private confessions, recently disclosed, it served to cloud his most glorious prospects of ambition, and to stir a baneful poison with every political triumph; and when all his brilliant achievements came to nought—himself a prisoner, restlessly pacing the barren summits of St. Helena—it dwelt with the gloom of all his terrible remembrances. Not for any mortal pen is given the task to recount its still torturing signs in the hour of death, or for any mortal mind to anticipate in its full reality the tribunal at which every secret work will be revealed.—

"Days are gone, by many a token  
Long foretold, but slighted yet;  
Now the seventh last seal is broken,  
And the sun in blood hath set."

While from the eye of the reader all record of this story fades away, may not his heart treasure up its simple lesson—a lesson to warn us that human happiness comes neither from splendid talents nor brilliant achievements; that intellect, however exalted, unless sanctified by pure and lofty purposes, does little more than prepare for its possessor a wretched fate.

With every right judgment of events, the mind improves; and it is something to become free from those prejudices which have warped at times the best balanced minds, when such have had occasion to pass judgment on the prominent names delivered up by history from her great treasury of wrecks. Through the same gate—the gate whose portals stand by the grave of all things earthly—have gone the victor and his victims. The gates again close, and we see nothing, hear nothing. On the bright pathway, illumined by the flames of vast cities and the burning torches of unnumbered soldiery, darkness closes, and night is come. Oh! if we would pierce that heavy veil, let us image in the sky of celestial azure a martyr's bright crown—a re-union of those whom mortal love was fit to gladden, but who, called hence, find themselves thrice and inseparably blessed. The love of heaven, continuous and unalloyed, is the oil which hope pours on the flickering flame that glimmers amidst this low terrestrial air—faith pointing to the time when all the lamps of God's kindling shall be lifted up beyond the firmament of stars, and hung amidst the changeless beauty of the heaven of heavens.

## THE LESSON.

BY MARY DENNETT.

"THOMAS, Aunt is ill to-day,  
Be less noisy in your play;  
I have spoken twice before,  
Yet you jump and shout the more.  
Do you think it good to be  
Wayward, void of sympathy;  
Thomas, must I plead in vain,  
Can you riot, causing pain?"

"Sister, cease your foolish talking;  
Do you think I can be walking  
Like a shadow or a mouse,  
Or creeping worm-like through the  
house—  
Or sporting silent as Tom Noddy,  
Dancing free of feet and body?  
Can I help the shaking floors,  
Rattling windows, creaking doors?  
Not I—nor shall I whisper faint,  
Like a spilt or a saint,  
To please my aunt or any one—  
Tell her I must have my fun.  
So Charley, come, let's have a game,  
Don't slink away—I'll bear the blame."

So Thomas spoke, and had his will,  
But soon, lo, he himself is ill;  
Auntie watches by his side,  
(His wit and spirit are his pride,  
Though she'd teach him how to be  
Forbearing with infirmity.)  
"Aunt, my head is aching so,  
And there's such a noise below;

"Tis Charley, beg him to be still,  
Tell him I am sick or ill.  
"Dear," said Auntie, "Charlie knows,  
You need silence and repose,  
Yet refuses to be quiet,  
Will have fun, and sport, and riot."  
"Unfeeling Charley," Thomas said,  
Shed tears, and press'd his throbbing  
head;

At that instant conscience came,  
Said—to you be all the blame;  
You perverted his young heart,  
From a gentler, nobler part.  
"I remember," Thomas cried—  
"Aunt, come sit down by my side,  
When you came to nurse me, say,  
Thought you that the other day,  
When in health and pride I sent  
A message, harsh and arrogant,  
To your sick bed—and, O Aunt,  
Your forgiveness can you grant?"

"Yes, my boy, here Charlie comes,  
To put away his trampets, drums,  
And all his noisy toys—for he  
Only played a part, you see,  
Just to help me, dear, to show,  
Experimentally, we owe  
To every living, sentient thing  
Respect for grief and suffering."

"In other's good we find our own,  
We live not to ourselves alone;  
If we slight another's peace,  
Our own will very quickly cease."

INFLUENCE OF THE WEATHER ON TEMPER.—I do not say that the state of the weather will always point out the condition of a man's temper, because there may be counteractions in the state of his health or affairs; but I do say that, whatever may be his peculiar situation in those respects, he will be more or less affected by the secret influence of the condition of the atmosphere and the direction of the wind. Consequently, if we know what will be the probable effect of the weather upon certain temperaments, we must look to that effect, as well as to other peculiar circumstances, in selecting a proper rule to make our advances.—*Correspondent of the New Monthly.*

## CONTRAST; OR, ORDER AND DISORDER.

CAPTAIN Wideopen's house stands in a broad street that runs for a mile in length through the village of Decay. It is an old farm-house one story high, with its gable end to the street. In front of the house is the wood-pile, spread out so as to cover a rood of ground. As you pass by, the barn, cow-house, and yard, with its deep morass of manure in high flavour, salute the eye and nose. The pig-pen, wide open and in full view, is between the house and barn. In a warm day the congregation of vapours is overwhelming. The well, the wash-shed, the wood-shed, all are in full view to the passers-by. The space around the front door is defiled by the pigs, who root and grunt there by day, and by the geese, who roost there by night.

Thus, all the unsightly and unseemly objects are spread out to view, and the scene is embellished by the addition of broken aleighs, sleds, ploughs, waggons, carts, old posts, &c. There lies a shapeless heap of stones; yonder is a gate with one hinge, which will soon be broken for want of care. Here is a pair of bars thrown down; there the stone wall has tumbled over!

Such is the scene presented by the residence of a wealthy, respectable farmer in New England; and I am sorry to say that there are hundreds, nay, thousands, like it in Old England!—ay, in Old England! Not that every village is a Decay, or every farmer a Wideopen. No! some of our villages are delightful, and some of our country people are patterns of good order and neatness. But I am speaking of those who are not so. And if these pages should come into the hands of any person, in Old England or out of it, who is ignorant of the advantages of neatness and order, let me urge upon him, as worthy of immediate attention, the following remarks, drawn from observation and experience:—

1. A man whose house, like Captain Wideopen's, is out-of-doors marked by disorder, confusion, and want of cleanliness, is generally the same in-doors.

2. Where there is confusion and want of neatness, though there may be plenty of bread, butter, milk, cheese, fuel, clothing, and other necessities, there is little comfort, little thrift, little good-nature, little kindness, little religion, little beauty, little peace or happiness.

3. Children brought up in the midst of confusion and want of cleanliness, are likely to be low, vulgar, and vicious in their tastes, and in their character. Let fathers and mothers consider that, if they bring up their children in this way, they are schooling them to be drunkards, profane, mean, base, wicked, and despised; that the schooling of home is the most lasting of all schooling; that the ferule of the schoolmaster cannot efface what the father and mother have taught; that the preacher cannot destroy the die stamped upon the young heart at home by parental example! Look to this, ye fathers and mothers; and if for your own sakes ye are indifferent to neatness and order, for the sake of the young immediately around you be no longer so.

4. There is a certain tendency, in the want of order and neatness, to cause ruin and waste; consequently a man who, like Captain Wideopen, allows things to go on in this way, generally gets poorer and poorer, till at length mortgages, embarrassment, debt, losses, and the law, bring him to poverty.

5. Neatness and good order contribute to health, wealth, and happiness; while opposite habits tend to disease, misery, poverty, vice, and short life.

Let us now turn to another scene. The village of Thrivewell is also a New England village, and is remarkable for its pleasant, cheerful aspect. Every person who rides through it is delighted; and the place has such a reputation, that the land is worth more, and the houses will sell for more, than in almost any other place of the kind you can name. And this arises from the good taste, neatness, and order, which characterise the inhabitants. I will give you a sketch of the house belonging to Captain John Pepperidge; a careful, correct, upright man, who has risen from poverty to ease and competence, by industry, economy, and prudence.

His house stands three or four rods back from the street; the front yard is green, grassy, and decorated with handsome trees. The wood-pile is fenced in; the barn-yard, pig-pen, &c., are also tidily fenced. It is a favourite proverb with Pepperidge, that there should be a place for everything, and that everything should be in its place. This is his great maxim; and he not only observes it himself, but he requires every man, woman, and child about him to observe it also. He says it saves him one hundred pounds a year.

He has other rules, such as a *stitch in time saves nine*; thus, as soon as a stone falls off the wall, he puts it up; when a rail gets out of the fence, he replaces it; when a gate is broken, it is forthwith repaired; if a clapboard is loose, a nail clenches it. Thus, matters are kept tight and tidy. On a wet day, instead of going to the tavern, he spends the time in making little repairs. At odd moments of leisure, he sets out trees and shrubs; thus, year by year beautifying his place, and rendering it not only more comfortable, but also worth more money in case he should ever desire to sell it.

Farmer Pepperidge takes great pleasure, and perhaps a little innocent pride, in his place, though, to say the truth, it is by no means costly. He loves better to spend his time in making it more convenient and pleasant, in setting out trees, improving the grounds, mending the fences, &c., than in going about to talk politics, or gossip upon other people's business, or haunting a tavern bar-room. In short, his home is comfortable, pleasant, delightful. It is neat and orderly, inside and out. And he has made it so; though his wife, having happily caught the influence of his example, contributes her share to the good work. His children are well dressed, well educated, well behaved. Can such a man be a drunkard? Can he be vicious? Can he be wicked? Who has so good a chance of health, wealth, and happiness? Who so likely to be respected by his neighbours? Who so likely to do good by his influence and example? Come, Captain Wideopen, I pray you, and learn a lesson of farmer Pepperidge!

Let us look at the practical effect of Pepperidge's example. Formerly,

the village of Thrivewell was called Uneasy Swamp, and was inhabited by a set of people becoming the name. They were poor, ignorant, idle, and uneasy. They were jealous of all rich people, and considered the unequal distribution of property a dreadful evil. They were equally jealous of the wise, and considered the unequal distribution of knowledge a nuisance to be abated. They were also jealous of the virtuous, and hated nothing so much as a just and honest man. In short, they were half a century ago—where some conceited, but ignorant and ill-minded people are now—willing to level every body and thing to their own standard. If a candidate for office was up, who addressed their prejudices, and coaxed them with promises, though meaning to cheat them, he was the man for them. If he was known to be mean, slippery, and unprincipled, fellow-feeling seemed to render them kind, and the more ardently they espoused his cause. Such was Uneasy Swamp; a place which may have its images still in some parts of the country.

GOODRICH.

## HUMBLE FRIENDS.

BY MRS. SIGOURNEY.

KINDNESS to animals shows an amiable disposition, and correct principles. The inferior creation were given for our use, but not for our abuse or cruelty. Many of them add greatly to the comfort of domestic life, and also display qualities deserving of regard. The noble properties of the dog, the horse, and the "half-reasoning elephant," have long been known and praised. But among the lower grades of animals, especially if they receive kind treatment, traits of character are often discovered that surprise or delight us.

Cats, so frequently the objects of neglect or barbarity, are more sagacious than is generally supposed. The mother of four young kittens missed one of her nurslings, and diligently searched the house to find it. Then she commenced calling upon the neighbours, gliding from room to room, and looking under sofas and beds, with a troubled air. At length, she found it in a family in the vicinity, where it had been given by her mistress. Taking it in her mouth, she brought it home and bestowed on it her nursing cares, and maternal caresses for a few weeks, then carried it back to the same neighbour, and left it in the same spot where she found it. It would seem as if she wished to testify her approbation of the home selected for her child, and desired only to nurture it until it should be old enough to fill it properly.

A cat who had repeatedly had her kittens taken from her, and drowned immediately after their birth, went to a barn belonging to the family, quite at a long distance from the house. She so judiciously divided her time, as to obtain her meals at home and attend to her nursery abroad. At length she entered the kitchen, followed by four of her offspring well-grown, all mewing in chorus. Had she foresight enough to conclude that if she could protect them until they reached a more mature age, they would escape the fate of their unfortunate kindred?

A little girl once sat reading with a large, favourite cat in her lap. She was gently stroking it, while it purred loudly, to express its joy. She invited a person who was near, to feel its velvet softness. Reluctant to be interrupted in an industrious occupation that required the use of both hands, the person did not immediately comply, but at length touched the head so abruptly that the cat supposed itself to have been struck. Resenting the indignity, it ceased its song, and continued alternately rolling and closing its eyes, yet secretly watching, until both the busy hands had resumed their employment. Then, stretching forth a broad, black velvet paw, it indicted on the back of one of them a quick stroke, and jumping down, concealed itself beneath the chair of its patron. There seemed in this simple action a nice adaptation of means to ends; a prudent waiting, until the retaliation that was meditated could be conveniently indulged, and a prompt flight from the evil that might ensue.

The race of rats are usually considered remarkable only for voraciousness, or for ingenious and mischievous inventions to obtain the gratification of appetite. A vessel that had been much infested by them, was, when in port, fumigated with brimstone, to expel them. Escaping in great numbers, they were dispatched by people stationed for that purpose. Amid the flying victims, a group was observed to approach slowly, upon the board placed between the vessel and the shore. One of those animals held in his mouth a stick, the extremities of which were held by two others, who carefully led him. It was discovered that he was blind. The executioners suffered them to live! It was not in the heart of man to scorn such an example.

Another of our ships, while in a foreign port, took similar measures to free itself from those troublesome inmates. Amid the throngs that fled from suffocating smoke to slaughtering foes, one was seen moving laboriously, as if overburdened. Climbing over the bodies of his dead companions, he bore upon his back another, so old as to be unable to walk. Like Aeneas, escaping from the flames of Troy, perhaps it was an aged father that he thus carried upon his shoulders. Whether it was filial piety, or respect for age, his noble conduct, as in the previous instance, saved his life and that of his venerable friend.

Sheep are admired for their innocence and meekness, more than for strong demonstrations of character. Yet the owner of a flock was once surprised by seeing one of his feeble people rushing to and fro beneath his window, in great agitation and alarm. Following her to the pasture, where she eagerly led the way, he found a fierce dog tearing the sheep. Having put him to flight, he turned in search of the messenger, and found her in a close thicket, where she had carefully hidden her own little lamb, ere she fled to apprise the master of their danger. This strangely intelligent animal was permitted to live to the utmost limit of longevity allotted to her race.

The instinct of the beaver approaches the bounds of reason. Their dexterity in constructing habitations, and rearing mounds to repel the watery element, surpasses that of all other animals. A gentleman, who resided where they abound, wished to ascertain whether this was inherent, or the effect of imitation. He took, therefore, to his house, an infant beaver, ere its eyes were opened. It was an inmate of his kitchen, where one day, from a leaky pail, a small stream of water oozed out upon the floor. Out ran the little beaver, and collected sticks and clay, with which it built a dam to stop the passage of the tiny brook.

An Indian, going out to shoot beavers, saw a large one felling a lofty tree. Ere he gave the finishing strokes, he ascended a neighbouring hill, throwing his head about, and taking deep draughts of air. The Indian, who steadfastly regarded him, supposed that he was taking an observation of which way the wind blew, as when he made his last effort on the tree, he made use of this knowledge to shelter himself from injury at its fall. He then measured the trunk into equal lengths for the height of the house he was to build, and loading his broad tail with wet clay, made snub at each division. Uttering a peculiar cry, three little beavers appeared at their father's call, and began to gnaw asunder the wood at the places which he had designated.

"When I saw this," said the Indian, "I turned away. Could I harm such a creature? No. He was to me as a brother."

Among the insect tribes, the ant sustains a good character for foresight and industry, having been cited by the wise monarch of Israel, as an example and reproof to the sluggard. Their almost resistless force, in the tropical countries, where they move in bodies, shows the power that the feeble may acquire through unity of effort and design.

When Dr. Franklin was on his embassy in France, soon after the American Revolution, he one morning sat musing over his solitary breakfast, and perceived a legion of large black ants taking possession of the sugar-bowl. His philosophic mind being ever ready for experiments, he caused it to be suspended from the ceiling by a string. They returned. The sweet food was above their reach. It was worth an effort to regain it. One placed himself in a perpendicular position, and another mounted upon his shoulders. Others ascended the same scaffolding, each stretching to his utmost altitude. Down fell the line. Yet it was again, and again renewed. Then the Rabel-builders disappeared. Had they given up the siege? No. They had only changed their mode of attack. Soon they were seen traversing the ceiling, and precipitating themselves upon the coveted spoil, by the string that sustained it. Here was somewhat of the same boldness and perseverance that led Hannibal across the Alps, to pour his soldiers down upon astonished Italy.

Thus the spider that sought so many times to fasten its frail thread, and at length succeeded, gave a profitable lesson to King Robert the Bruce, when he ruminated in discouragement and despair on his failing enterprises.

Parrots are generally considered as senseless repeaters of sounds and words, that convey neither sentiment nor feeling. Now and then, there seems some variation from this rule. A parrot who had been reared with kindness, selected as his prime favourite, the youngest child in the family. By every means in his power he expressed this preference. The little girl was seized with a severe sickness. He missed her in her accustomed haunts, and turning his head quickly from side to side, called loudly for her.

At length, the fair form, stretched in its coffin, met his view. In wild and mournful tones, he continued to utter her name. He was removed far from the room, but the shrill echo of his voice was still heard amid the funeral obsequies, pronouncing with frantic grief, the name of his lost Mary. Ever afterwards, when the sound of the tolling-bell met his ear, the fountains of memory were troubled, and the cry of "Mary! Mary!" mingled with the mournful knell, till it ceased.

Since so many interesting properties are discovered in the inferior creation, where, perhaps, we least expected them, it is well to search for such traits of character as deserve our regard, and consider them as humble friends, that we may better do our duty to them, and please Him who has entrusted them to our protection.

### KEEP YOUR BACK WARM.

About twenty years ago, I read a medical treatise, which stated "that the back is the most vulnerable part of the human system, through which most of the colds enter."

Recollecting that when I took cold suddenly, I noticed that my back was generally cold, I had my waistcoat cushioned along the back, six or eight inches wide, since which time I have not taken cold one-quarter as often as before. Several who have tried the experiment at my suggestion have informed me that in their opinion they have been materially benefited thereby.

The philosophy of it is, that by putting more clothing along the spine than elsewhere, other parts become chilly first, and warn to guard against taking cold, while the increased clothing at the same time prevents such a sudden change of temperature. "Take care" coming from the back is generally too late—the cold has already become seated.

I hold that cold and damp feet cause many colds, more because they induce to chill the back, than because they cool the extremities.

None of all the lower animals the Lord has clothed, has less clothing on the back than upon other parts of the body. To me it looks frightful to see so many delicate persons go with their backs and feet half clothed. But while hosts are cracking up for agricultural societies and bureaus to improve the breed of our domestic animals, the favoured of the people are worshipping the great Moloch of fashion, and sacrificing upon his shrine multitudes of the choicest portions of our race.

## COLONEL CRICKLEY'S HORSE.

BY PAUL CREYTON.

I HAVE never been able to ascertain the origin of the quarrel between the Crickleys and the Drakes. They had lived within a mile of each other in Illinois, for five years, and from the first of their acquaintance, there had been a mutual feeling of dislike between the two families. Then some misunderstanding about the boundary of their respective farms, revealed the latest flame; and Colonel Crickley having followed a fat buck all one afternoon and wounded him, came up to him at dark, and found old Drake and his sons cutting him up! This incident added fuel to the fire, and from that time there was nothing the two families did not do to annoy each other. They shot each other's ducks in the river, purposely mistaking them for wild ones, and then, by way of retaliation, commenced killing off each other's pigs and calves.

One evening, Mr. Drake the elder was returning home, with his "pocket full of rocks," from Chicago, whither he had been to dispose of a load of grain. Sam Barston was with him on the waggon, and as they approached the grove which intervened between them and Mr. Drake's house, he observed to his companion—

"What a beautiful mark Colonel Crickley's old Roan is over yonder!"

"Hang it!" muttered old Drake, "so it is."

The horse was standing under some trees, about twelve rods from the road. Involuntarily Drake stopped his team. He glanced furtively around, then with a queer smile the old hunter took up his rifle from the bottom of the waggon, and raising it to his shoulder, drew a sight on the Colonel's horse.

"Beautiful!" muttered Drake, lowering his rifle with the air of a man resisting a powerful temptation. "I could drop old Roan so easy!"

"Shoot," suggested Sam Barston, who loved fun in any shape.

"No, no, 'twouldn't do," said the old hunter, glancing cautiously around him again.

"I won't tell," said Sam.

"Wal, I won't shoot this time, any way, tell or no tell. The horse is too nigh. If he was fifty rods off instead of twelve, so there'd be a bare possibility of mistaking him for a deer, I'd let fly. As it is, I'd give the Colonel five dollars for a shot."

At that moment the Colonel himself stepped from behind a big oak, not half a dozen paces distant, and stood before Mr. Blake!

"Well, why don't you shoot?"

The old man stammered in some confusion—"That you, Colonel? I—I was tempted to, I declare! And as I said, I'll give a 'V' for one pull."

"Say an 'X,' and it's a bargain!"

Drake felt at his rifle, and looked at old Roan.

"How much is the horse worth?" he muttered in Sam's ear.

"'Bout fifty."

"Gad, Colonel, I'll do it! Here's your X!"

The Colonel pocketed the money, muttering—

"Hanged if I thought you'd take me up!"

With high glee, the old hunter put a fresh cap on his rifle, stood up in his waggon, and drew a close sight on old Roan. Sam Barston chuckled. The Colonel put his hand before his face and chuckled too.

"Crack!" went the rifle. The hunter tore out a horrid oath, which I will not repeat. Sam was astonished. The Colonel laughed. Old Roan never stirred!

Blake stared at his rifle with a face black as Othello's.

"What's the matter with you, hey? 'Fus time you ever sarved me quite such a trick, I sware!"

And Blake loaded the piece with great warmth and indignation.

"People said you'd lost your knack o' shooting," observed the Colonel, in a cutting tone of satire.

"Who said so? It's a lie!" thundered Blake. "I can shoot——"

"A horse at ten rods! ha! ha!"

Blake was livid.

"Look yere, Colonel, I can't stand that!" he began.

"Never mind, the horse can," sneezed the Colonel. "I'll risk you."

Grinding his teeth, Blake produced another ten-dollar bill.

"Here!" he growled, "I'm bound to have another shot, any way."

"Crack away," cried the Colonel, pocketing the note.

Blake did crack away—with a deadly aim, too—but the horse did not mind the bullet in the least. To the rage and unutterable astonishment of the hunter, old Roan looked him right in the face, as if he rather liked the fun.

"Blake," cried Sam, "you're drunk! A horse at a dozen rods—oh, my eye!"

"Just you shut your mouth, or I'll shoot you!" thundered the excited Blake. "The bullet was hollow, I'll swear. The man lie says I can't shoot. Last week I cut off a goose's head at fifteen rods, and kin dew it again. By the Lord-Harry, Colonel, you can laugh, but I'll bet, now, thirty dollars I can bring down your old Roan at one shot."

The wager was readily accepted, and the stakes placed in Sam's hands. Elated with the idea of winning back his two tens, and making an "X" into the bargain, Blake carefully selected a perfect ball, and even buckskin patch, and beaded his rifle.

It was now nearly dark, but the old hunter boasted of being able to shoot a bat on the wing by starlight, and, without any hesitation, he drew a clear sight on old Roan's head.

A minute later, Blake was driving through the grove, the most enraged, the most desperate of men. His rifle, innocent victim of his ire, lay with broken stock on the bottom of the waggon. Sam Barston was too much

frightened to laugh. Meanwhile, the gratified Colonel was rolling on the ground convulsed with mirth, and old Roan was standing undisturbed under the trees.

When Blake reached home, his two sons, discovering his ill-humour and the mutilated condition of the rifle-stock, hastened to arouse his spirits with a piece of news which they were sure would make him dance for joy.

"Clear out!" growled the angry old man—"I don't want to hear any news; get away, or I shall knock one of you down!"

"But, father, it's such a trick!"

"Confound you and your tricks!"

"—Played off on the Colonel!"

"On the Colonel?" cried the old man, beginning to be interested. "Gad, if you've played the Colonel a trick, let's hear it."

"Well, father, Jed and I this afternoon, went out for deer——"

"Hang the deer! come to the trick."

"Couldn't find any deer, but thought we must shoot something, so Jed banged away at the Colonel's old Roan—shot him dead!"

"Shot old Roan?" thundered the hunter, "By the Lord Harry, Jed, did you shoot the Colonel's horse?"

"I didn't do anything else."

"Oh! oh!" groaned the hunter.

"And then," pursued Jed, confident the joke part of the story must please his father, "Jim and I propped the horse up, and tied his head back with a cord, and left him standing under the trees exactly as if he was alive. Hal ha! Fanny the Colonel going to catch him! ho! ho! ho! wasn't it a joke!"

Old Blake's head fell upon his breast. He felt at his empty pocket-book, and looked at his broken rifle. Then, in a rueful tone, he whispered to the boys—

"It is a joke! But if you ever tell of it—or if you do, Sam Barston—I'll skin you alive! By Lord Harry, boys, I've been shooting at that dead horse half an hour at ten dollars a shot!"

At that moment, Sam fell into the gutter. Jed dragged him out insensible. Sam had laughed himself almost to death.

## QUARRELS.

"The beginning of strife is as when one letteth out water." A truer maxim than this was never uttered. The outbursts of an angry spirit can be likened to nothing more apposite than the *cruevasse* on some great and mighty river, which breaks down strong boundaries and embankments, lays waste fruitful plantations, and perhaps threatens destruction to entire towns. It is at first but a feeble rill, trickling drop by drop through an unobserved and imperceptible passage; but before the danger has become apparent, the insignificant breach suddenly widens and deepens, the barriers yield before it, and the waters leap through the opening with a force which mocks the power of the human arm, unaided by mechanical appliances.

Many a quarrel which has set whole families and communities by the ears, commenced in an equally small way. Had danger been apprehended in season, it might have been nipped in the bud with perfect ease; but it is now too late. The bud which a child might have crushed has expanded into a poisonous weed, and exhaled its deadly influence, and scattered its noxious seeds around; and many strong arms will it take to eradicate it from the earth. The almost imperceptible spark has fallen upon tinder, and spread hither and thither, and long will it be ere the last smolderings of that fire have gone out. What broken friendships, what desecrated hearth-stones, what malicious revenges, what murderous conflicts have resulted from an angry thought, which a very little self-control might have checked in the beginning, but the consequences of which a life-time of sorrow and repentance cannot obliterate. A few months ago, a boy fourteen years old bought a cigar at a German's refreshment stand in Hoboken. A dispute arising as to whether he had paid for the article, the German became angry and seized the lad by the neck. The latter positively asserted that he had paid for the cigar, and while struggling beneath the gripe of the excited German, a young man interfered in his behalf, a fight ensued, the belligerent spirit spread till it became general, and the great German riot was the result, which is still fresh in the memory of every reader.

How many fierce wars have sprung from a paltry private quarrel, or a hasty fit of anger! History is little else than a record of commotions, quarrels, and wars, commenced in anger, carried on in madness, and too often ending in the ruin of both parties. The myth of the "Kilkenny cats" is not without a sober moral for men of unbridled passions. Sometimes a feud is transmitted from one generation to the next, as though the sons could not get up quarrels fast enough for themselves, without the aid of nest-eggs from their fathers. The "war of the Roses," which originated in a feud between two cousins of royal birth, extended over a period of eighty years, during which time England was almost uninterruptedly overwhelmed with bloodshed and devastation. But perhaps the most remarkable hereditary quarrel of which we have any account, was that which sprang up between the two brothers, Esau and Jacob, and which became a national affair, and was handed down from generation to generation for thousands of years, terminating only in the utter extermination of the Edomites, or descendants of Esau. So great a matter does a little fire sometimes kindle. Who will not say, "Blessed are the peace-makers?"

"Some do first, think afterwards, and repent for ever," says an old maxim, referring to those who yield to the hasty impulses of passion. Let those who are naturally inclined to this way of doing things, beware lest they raise more spirits than they can conjure down. 'Tis the second blow that makes the fray, and by guarding against this, we shall have no difficulty in "keeping the peace."

## THE PIONEER'S DAUGHTER:

### A TALE OF INDIAN CAPTIVITY.

(Continued from Page 108).

#### CHAPTER VII.—THE GAUNTLET AND TRIAL.

The morning was cold and disagreeable, with a sharp north wind. It had ceased storming; but heavy, dreary-looking clouds were floating through the icy atmosphere, if we may be allowed such a phrase, and the ground was covered with a thick sheet, making it very slippery. But this was scarcely noted by any but the old scouts, and only by them as it regarded their chances of escaping from immediate death, even as the sailors scrutinize each object on the coast against which he knows his vessel is about to strike. What more especially arrested the attention of all, were the slight preparations made for the prisoners to run the gauntlet. About a dozen or twenty yards from the council-house, and extending down nearly to the bank of the stream, forming two parallel lines of something like a quarter of a mile in length, were arranged the majority of the men, women, and children of Piqua, armed with muskets, tomahawks, knives, and war-clubs. They were indiscriminately mixed as regarded sex, age, and size; but the lines were very straight, the distance between them being about ten feet.

The moment our friends neared the assemblage, accompanied by their savage guard, they were greeted with one universal yell of atrocious delight; and as they passed down the lines, several old squaws and children, with now and then a warrior, came up to them and indignantly rebuked them with foul epithets, pinching them with their fingers, striking them with their hands and fists, and sometimes with the weapons they carried; so that before they reached the other end, most of them were considerably bruised. But here the greatest trial of all awaited some of them; for here were assembled all the female prisoners, to the number of ten, among whom were Mrs. Danforth and Lucy, and the wife of Lieutenant Wilkes.

Of course, it is useless for us to attempt to describe the feelings of the Colonel, the Major, and Lieutenant, as each beheld the being he best loved on earth surrounded by a strong body of savages, who would permit no communication, but who seemed to take a demoniac delight in the more refined mode of torture of exhibiting one to the other, as it might be for the last time; for there was a great uncertainty that either would be able to run the gauntlet successfully, and the chances were greatly against them. Mrs. Danforth, Lucy, and Mrs. Wilkes, were weeping bitterly, and wringing their hands; and tears of sympathy were coursing the cheeks of the others, although there were none among the prisoners of any kin to them.

"This is the severest blow of all," groaned the Colonel. "Better for me had I died on the field of battle."

"Oh! could I see my friends in safety, how willingly would I purchase the boon with my life!" sighed Edward.

At this moment some half a dozen warriors, whom our friends had not before observed, approached the prisoners; and, fixing their eyes upon the Colonel, a few hurried ejaculations passed between them; and then suddenly rushing up to the veteran officer, much to the surprise of all, they peered eagerly into his countenance, and uttered loud, peculiar whoops. Then they commenced dancing around him, shouting in Shawnee—

"The chief that dodged the balls! The chief that dodged the balls!"

The cry was immediately taken up by others, the lines were instantly broken, and in a few moments the prisoners found themselves surrounded by the whole assemblage, all eager to get a sight of one so distinguished; and their whoops and yells of delight made the welkin ring as with the orgies of demons.

At first, it was the belief of the Colonel and the other officers, that they were to be sacrificed on the spot; but a hurried translation of the Shawnee words, made by Miller, re-assured them and solved the mystery. The warriors who last approached the party, and uttered the whoops, had discovered in the Colonel, notwithstanding his disguise, the brave officer who commanded a regiment on St. Clair's ill-fated field of battle, and in him the living target which so many unerring marksmen had failed to touch. The capture of so noted an individual, of course, caused great rejoicing among the savages, mingled with a degree of respect they had not before felt for any of the prisoners, whom, hitherto, they had considered rather in the light of thieving vagabonds than of personages of any greater consequence.

The Indian is a being of great natural superstition; it is a part of his early training, and, when he is brought in contact with a mystery his limited mental attainments will not enable him to solve, he experiences a feeling of awe in some cases amounting to veneration.

This, to a certain degree, was the effect produced on the unlettered minds of the savages, on hearing each warrior of the six declare that the Colonel had been the mark against which they had collectively directed more than fifty bullets, and that all had failed to take him from his saddle, a thing before unknown in their experience. He must, they argued, have been especially protected by *Mishemenetoc*,\* and was, in consequence, rightfully entitled to a degree of respect and consideration never bestowed upon ordinary victims. A hurried consultation among the principal men of the nation decided that the Colonel should, for the present, at least, be exempted from running the gauntlet; and he was immediately escorted back to the council-house by a large party of warriors, who were in turn followed by a great number of women and children.

This diversion in favour of the Colonel was doubtless the means of saving his life, and, it may be, the lives of more than one of his fellow prisoners;

\* The Great God, or Good Spirit.

*"Looking upon her, somehow, seemed to renew his strength, and nerve him for the dreadful task before him; and when, at length, he suddenly bounded forward, it was with such fleetness, that for a time he fairly escaped the blows aimed at him on both sides. But he had not run more than twenty yards, when a stroke on the head from a war-club, in the hands of an old squaw, made him reel."*

for the lines being immediately formed again, of course the number withdrawn reduced the chances against those doomed to the race. Edward was the first selected to make the trial; and, as he prepared to start, he turned his eyes for a moment upon the being he loved, who seemed to implore him with anguished looks to make an effort for his life, if only for her sake. We have said, that when brought upon the ground, he was very weak and exhausted; but looking upon her, somehow, seemed to renew his strength, and nerve him for the dreadful task before him; and when, at length, he suddenly bounded forward, it was with such fleetness, that for a time he fairly escaped the blows aimed at him on both sides. But he had not run more than twenty yards, when a stroke on the head from a war-club, in the hands of an old squaw, made him reel, and he heard Lucy shriek in terror. Again he redoubled his efforts; but the blows now unfortunately fell thick, fast, and heavy, and he was on the point of sinking ere them, when he heard the voice of Miller shouting—

"Break the lines! break the lines, and escape outside!"

This he had before heard, according to the Indian code, was a lawful mode of proceeding, and he determined to take advantage of it. Turning suddenly upon the right line, therefore, where it chanced to be supported by women and children only, he exerted his remaining strength and burst through. He now knew if he could reach the council-house, he would for the time be safe; but this required another almost superhuman effort, for a hundred yells behind assured him he was followed, and the way before him was blocked up by a large crowd, who had forsaken the gauntlet to bar his progress. With no time for thought, but acting rather by instinct or impulse, he bounded away to take a circuit, while the most active of his enemies darted forward to intercept him. By this means his chances of escape were reduced to the very smallest number; and, already looking upon himself as lost, he was on the point of yielding to their mercy, when a guardian Providence again interposed in his favour; for his friends, seeing the lines broken, thought it a favourable moment for themselves to gain the place of refuge, or Indian sanctuary, and instantly set out; and the cry that the prisoners were escaping, drew down the whole assemblage upon the latter, and left Edward's course unobstructed, who, instantly profiting by his good fortune, reached the council-house, but so exhausted that he fell fainting at the door.

As for the others, though in some instances badly bruised, all reached the council-house save one. This was the scout named Hale, who, chancing to slip on the sleety ground, was struck on the head with a tomahawk and instantly killed, much to the regret of his enemies, who mourned the loss of another victim to the stake.

The running of the gauntlet over, the captives were again bound, but with their hands at liberty. They were then offered food, which they eagerly devoured; after which water was given them, and they were informed that their trial would immediately take place.

In the meantime, the party that had been sent out as scouts, returned, and reported that they had fallen upon the trail of three white men, who had escaped from the village the night previous; that this trail they had followed several miles, but finding it led directly toward Fort Jefferson, and the pursued having had several hours the start, they had deemed it advisable to return and state what they had seen. This report was made to Black Hoof just as he was on the point of entering the council-house the second time, to take part in the trial of the captives. On hearing it, he immediately advanced to Miller, and questioned him concerning those who had escaped. The answers of the scout tallying with what he had heard from his own informants, the chief nodded his head, in token of approval, and moving away toward the centre of the council-house, signified to his subordinates that he was now ready to proceed with the grand business of the day.

About fifty persons were present, consisting of chiefs and the most distinguished warriors, whose signal and daring feats in battle had entitled them to take an active part in the councils of the nation. These were all that were allowed to enter the council-house; but a large crowd, composed of inferior warriors, women, and children, surrounded the building, all eager to catch the words of wisdom that were sure to fall from venerated lips.

Black Hoof, making known his readiness to open the trial, the prisoners were all brought forward, Colonel Danforth among the number, and placed in the centre of the building; while the chiefs and warriors proceeded to seat themselves upon the benches ranged around the walls, with all the solemn gravity of judges of civilised countries, deeply impressed with the importance and responsibility of their functions.

For some moments a deep and solemn silence prevailed, during which the eyes of the captors were fixed with savage sternness upon the captives, while here and there a sudden gleam of vindictive malice, which the former could not wholly restrain, warned the latter that all hope of mercy must be abandoned. At length an aged man arose, whose wrinkled features, white scalp-lock, and palsied limbs, proclaimed him bending under the weight of a century, and after looking upon the prisoners for a short time, during which his still keen black eyes seemed to burn with a deep-seated, unconquerable hatred, he slowly turned towards Black Hoof, and raising his right hand, thus delivered himself, in a cracked and tremulous tone:—

"Many, many snows have fallen upon the head of Unemake,\* and it is white with years of wisdom—therefore let my brother's ears be open, that his words may enter. A great many moons before any here beheld the Sun, Unemake was a warrior, on the trail of his red foe. The trail led along the sands of the salt waters of the south, and there were no spreading feet † to

\* Thunder.

† Alluding to the whites turning their toes out when walking—a thing never done by a savage.

come after, and hide it from the eyes of Unemake. When Unemake had taken the scalp of his red enemy, and hung it upon his lodge-pole, he was done—there were no more foes to conquer, and the pipe of peace was smoked, and the deer bounded free in the hunting-grounds of the great Shawnees. The wives and young of Unemake then laughed in their security, and gave thanks to Mishemenetoc for all his blessings.

"Now it is not so," pursued the aged speaker, growing impassioned with his subject, while a heavy scowl deepened the wrinkles of his forehead. "from the rising sun has come the detestable pale-face, who seeks to destroy the red-man, root and branch. Not content with hunting his game, laying waste his fields, and burning his towns, he seeks to kill the rightful owners of the soil, that there may be none to dispute his possessions. Have my brothers forgotten the awful destruction of ten snows gone by, when the Piqua people were made outcasts, without a hut to shelter them, and all by the white blood-hounds? The Great Spirit has ever since been angry with his children for being women, and he demands constant sacrifice to be appeased. When the combined nations of the red-man won the last great victory over his enemy, the Great Spirit looked down and smiled, for he was glad to see that all were not squaws. But he still demands victims, and the Shawnees must offer him all they have. The prisoners must die by torture, that the Great Spirit may continue pleased, and that the bones of murdered friends may rest in peace. So says Unemake, and years give him wisdom."

As the old man ceased speaking, and resumed his seat, there was considerable sensation among his auditory, and many were the nods and grunts of approbation which he received. As soon as perfect silence was restored a young chief, in whose grim countenance were depicted the most fiendish passions, arose, and in a fierce, harsh voice, and with a manner truly ferocious, gave utterance to the following:—

"Brothers, the words of the great Unemake are true. The Great Spirit is angry with his children for being cowards. He demands the blood of the pale-face dogs to appease his wrath. The dogs are here, ready for the sacrifice. Let them die! Wishemuck would have them burned at a slow fire. Wishemuck will be there to make them howl. The women and children of the brave Shawnees shall have a day of rare sport. The old and the young shall laugh to crying at the howls of the coward dogs. Let them die!—let them die! Wishemuck has said."

Several short speeches were now made in quick succession by chiefs and warriors, all similar to those we have recorded. All were for the death of the prisoners—all were for having them die at the stake. At last it came to Black Hoof's turn to give the closing address. The most profound silence now reigned in the house, and every eye was fixed upon him—for such are the marks of deference which the true orator never fails to command whether in the senate of a civilised nation, or in the councils of the untutored savage.

"Slowly, calmly, and with grace and dignity combined, the great chief rose to his feet, and glanced his dark, eagle eye over the assembly. There was no expression on his countenance by which one could tell the thoughts of his soul. Every feeling, whether of mercy or revenge, was so controlled as to leave no outward sign. At length, in his peculiarly distinct and sonorous voice, he broke the impressive silence.

"Brothers," he said, and again his dark eye wandered over all present—over the prisoners as well as those of his own tribe—"brothers, when the Great Spirit made man, he made two races. To one he gave a white skin, and the knowledge of books, with great power of invention; to the other, a red skin, with all the facilities of hunting. The one he placed on the land beyond the great waters—the other on the hunting-grounds between the mighty seas. The Great Spirit knew that the two races were not alike—could not live in harmony together, and thus he divided them. Brothers, a great many hundred snows came and went, and still the two races remained separate, and neither knew aught of the other. At last the pale-face, not content with what the Great Spirit had given him, built him a big canoe, and paddled over the great waters to seek new lands. When he came he was an infant, and the red-man could have killed and scalped him; but he begged so hard to stay a few moons, when he promised to go away peacefully, that the red-man, full of mercy and kindness, bade him remain and eat his hominy."

"Now, mark the result! Brothers, the pale-face spoke with a forked tongue. When the time came for him to go, he went not; but more pale-faces came, and all declared they would stay. The red-man, indignant at their falsity, made war upon them; but still more pale-faces came, and they kept their ground. They brought with them poisoned water, and made beasts of the red-men—made them idiots and madmen—and when they lacked reason the pale-faces took advantage of it, and, by many false devices, got possession of their hunting-grounds. A hundred and fifty snows came and went, and the red-children of the forest had no home beyond the Great Hills, and could no more bathe in the salt waters of the rising sun. But they said to themselves, the land of the setting sun is ours, and we will be content to live in peace."

"Brothers, have the red-men been allowed to smoke the pipe of peace, and bury the hatchet for ever? No!—for the pipe is already broken; the hatchet has been dug up, and is now red. Why is it so? Because the pale-faces have made their trails toward the setting sun, and have sought to trample under foot the red-children of the Great Spirit, who gave them the lands for a possession for ever. The Great Spirit is angry with the pale-faces for seeking what is not their own, and he has made the arms of his red-children strong against them in battle. The lodge-poles of his red-children

are always heavy with the scalps of the pale-faces, and, ere many moons pass over, they shall break with the weight that shall be upon them.

"Brothers, the pale-faces must be exterminated or driven back to father-land! The Indian must have his hunting-grounds, his home, his forests; and the wild beasts must roam unmolested by other hands than those for whom the Great Spirit made them. The red-man and pale-face cannot live together, unless one has the supremacy. Who shall it be? Shall the red-man, who, for hundreds of snows, has walked freely and proudly from the salt waters of the rising sun to the salt waters of the setting sun, and has said boldly, 'These are my hunting-grounds; here will I build my wigwams; there will I plant my corn;—where will I shoot my deer?'—shall he, the favoured child of the Great Spirit, now cringe, and bow, and bend the knee, and peaceably wear the yoke of his white invader? Shall he forget the proud face he owns, the hot war-blood that courses in his veins, the deeds of his fathers, and become a squaw, an infant—ay, worse than these, a servile slave? Shall he sink to that depth of degradation, that the spirits of his fathers, who have gone to the Spirit-land hunting-grounds, shall be forced to bewail him as lost, and thus be rendered unhappy? Brothers, shall all this be?"

Then pausing, and sweeping his auditory with an eagle-glance—an eye of fire, the old chief raised himself to his fullest height, till he fairly seemed to tower aloft like some giant, and stretching his arm upward, and bringing them down with wild vehemence, he thundered forth:—

"Catahecassa says no!—his people say no!—a hundred nations of red-men say no!—the running deer, the stealthy catamount, the leaping panther, the hugging bear, the forests, the rivers, the mountains, the lakes, the winds—all, all, all shout no, no, no!—and last, and best, and greatest, the Great Spirit says no, through the mouths of his prophets!"

As Black Hoof uttered the last words, a fierce, universal yell of delight, from the assembled chiefs and warriors, and also from the listeners without, attested the popularity of his language, and the great power he had of working up the feelings of his people to the highest degree. In fact, the instances were very rare that a grave council, like the present one, had ever been known to be disturbed by such fierce outbursts of applause; and the speaker that could so readily overcome the apparently cold indifference of the Indian, might be set down as possessing natural gifts of the very highest order, and only needed the refinement and enlargement of a proper education, to fit him for the lofty station of a statesman in the civilised world.

Waiting quietly till silence had again been restored, the chief resumed, in a deep, solemn tone:—

"But, brothers, though the Great Spirit is now on the side of his red-children, and is pleased with their success in battle against the pale-face, he desires not the sacrifice of victims at the stake."

"No! the cries wrung from torture are not music in his ears, whether he be white man or red. It is right to slay in battle, and gather scalps; but to burn prisoners is wrong, and unworthy of a brave people. The offences of the captives before me are great, and perhaps death should be their punishment; but let it be a quick and speedy death. Our ends would be answered all the same, for there would be so many foes the less to come against us. Catahecassa would even go still further, and spare the lives of the pale-faces, on condition they would become Indians; for then the red-man would not only weaken the forces of his enemies, but add so much strength to his own. But Catahecassa will not urge this point; for he sees his brothers are set against it, and he will be satisfied with their death without torture. Against torture, in any form, he now utters his solemn protest, and warns his brothers that the Great Spirit will be angry. Brothers, let reason and right have ascendancy over passion and wrong, and great shall be the blessings which Mishemenetoc will shed upon his chosen people. Truth from the heart has passed the lips of Catahecassa, and entered the ears of his brothers—let them retain it and be wise. The great chief of the Piquas has spoken."

The closing remarks of Black Hoof were not without their effect upon his hearers; but still it was plainly to be perceived, even by those of our friends who understood not his language, that what he had just spoken was far from being as popular as what he had uttered previously. But the time had now come for deciding the fate of the prisoners by vote, and accordingly no more speeches were made. The voting was done in this manner. A war-club was passed around the circle, and whoever was in favour of putting the prisoners to death by torture, struck it fiercely on the ground; whoever was opposed to his handing it quietly to his neighbour, the votes for and against being recorded by cutting notches on opposite sides of a stick, which were afterwards counted. Black Hoof passed it in silence, as did some half a dozen others; but the majority decided against the prisoners, and accordingly their doom was sealed.

A short discussion now followed, in regard to the time and place for the execution of the horrible sentence, which was finally settled for the following day, on an open piece of ground just below the southern limits of the village.

The council now broke up, and the hands of the prisoners were bound, and guard set over them. They were informed of the decision by Miller, who added, that unless Providence interposed in their favour, they had not over twenty-four hours to prepare themselves for the last great change of death.

But the night following the doom of the prisoners was one of strange, startling, and thrilling events, which shall be related in the next chapter.

(Continued in No. 14.)

\* In 1782, General Clark, with an army of one thousand men, attacked and destroyed the Piqua towns.

\* Though a great and daring warrior, and for a long time a bitter enemy of the whites, Jack Hoof was ever distinguished for the possession of many noble virtues; and among the rest, that rare attribute in an Indian—humanity towards his enemies, when left to his mercy. He was ever opposed to torturing prisoners, and to polygamy. After the peace of 1795, he became a warm friend of the whites. He lived to the great age of 110 years.

## No. VII.—"MARRIAGE IS A LOTTERY."

Is this saying he true, it ought not to be so. "Marriage a lottery!" the holiest bond of life a thing of fortune's wheel, with blanks and prizes; and the blanks counting by thousands, the prizes by units! Oh, fortunate bachelors! if you only knew your own good fortune. Oh, happy old maid! if you would but be content with single blessedness. But, surely, this proverb is a lie—a something; in which the "wisdom of our ancestors" must have been mistaken. Let us dive a little deeper into their sayings, and try if they will not throw a ray of light upon this gloomy prospect. Ay, here we have it; here is something like wisdom. "Happy is the wooing that is not long a doing." Here is a ray of comfort, at all events; it teaches us the way to draw the prizes and avoid the blanks; we will not be long "a doing." But stay; what is this that glares upon us in the very next line?—that makes our flesh creep, "our seated heart knock at our ribs," and, though we had "bent up each corporeal agent to this terrible feat," makes us start back from our resolve. We read and are appalled: "Marry in haste, and repent at leisure." Out, mocking fiends! ye cannot both be true. And is the "wisdom of our ancestors" no guide to us in this important matter? Were their sage brains quite bewildered, addled, confused? Could they give us nothing but contradictions? Was it, indeed, a lottery? We remember a grave modern divine, who, when lecturing at a Mechanics' Institute, laid it down that the first two things we were to do when we entered on that holy state, were to insure our life and make our will: a pretty strong symptom that he felt marriage to be a very fatal kind of lottery. Such a prologue to the happiness of the married state very nearly made us forswear it altogether. But we determined to seek further, to take other, and, if possible, better advice. Shakspeare is at our elbow; we turn to him—the great prophet-poet, the best interpreter of humanity—for guidance and instruction. Our paper-knife is thrust between the pages for our first chance in the *sortes Shaksperianæ*; and, lo! it is written—"Your marriage comes by destiny." What, for ever harping on this string! Destiny, chance! We are no better off than we were before. But, then, we observe these words are put in the mouth of a fool—a bitter, gibing fool, who has no reverence for the holy state of matrimony, but seems to think a fear must attach to it because men will not be contented "with being what they are." We will not trust to the fool. And these words are found in a play with the title *All's Well that Ends Well*; and the end is the triumph of love and the recognition of marriage. There is life in it yet. Now for our second venture. Behold:—

"Ah, me! for aught that ever I could read,  
Could ever hear by tale or history,  
The course of true love never did run smooth:  
But rather it was different in blood;  
Or else misgranted, in respect of years;  
Or else it stood upon the choice of friends;  
Or, if there were a sympathy in choice,  
War, death, or sickness did lay siege to it;  
Making it momentary as a sound,  
Swift as a shadow, short as any dream,  
Brief as the lightning in the collied night,  
That, in a spleen, unfolds both heaven and earth,  
And ere a man hath power to say—Behold!  
The jaws of darkness do devour it up:  
So quick bright things come to confusion."

Ah, me! still full of impediments, uncertainties! "The course of true love never did run smooth." Not smooth, perhaps, but overcoming obstacles. "True love" does not easily yield either to "difference in

blood," or difference in years; nor stands it much upon the "choice of friends;" nor "war," nor "sickness stays its course, unless the third grim tyrant, "death," steals it away with the last ebbing pulse of life. False, simulated love may be "momentary," "swift as a shadow, short as any dream;" but not so with those who truly love. Is this really "an oddest in destiny?" Are we ever to meet with nothing but fate, chance, destiny, when we seek for love? Once more, and for the last time, let us try the mystic page. What have we here?—

"In love, the heavens themselves do guide the state;  
Money buys lands, and wives are sold by fate."

Again, we are mocked with destiny and fate. But here, at any rate, the heavens take part with the true lovers, to the discomfiture of mercenary fathers and scheming mothers. Sweet Anne Page is rescued from her "father's choice," the foolish Master Slender; and from her mother's woman's fancy, the foreign Dr. Caius, to be won and won by her own true choice, the Master Fenton. And thus she did

"—evitate and shun  
A thousand irreligious, cursed hours,  
Which forced marriage would have brought on her."

This, our last chance in the mystic volume, seems to throw a glimmer of light on the subject—to give us, as it were, the key to the true explanation of these oracular sentences. For, while we are told that the heavens take an interest in love, and where love is, "do guide the state," we have put, in opposition to this heavenly care, fate, chance, destiny, which operates when "wives are sold,"—when we make merchandise of our affections, and purchase a wife with money, as "money buys lands." Then, indeed, "marriage is a lottery;" it can no longer be said to be "made in heaven;" the Mammon spirit of earthiness is upon it. It is our own Mammon-worship that sets the fickle wheel of fortune rolling,—our own selfish feelings which desecrate the name of love, and turn us over to the dominion of chance. It is the sensual fool who first tells us "marriage comes by destiny." The chief impediments to the "course of true love," are differences in rank and station, the interference of friends, ambition, all springing from the intensely selfish spirit of humanity; and then, most potent of all, comes the money-craving appetite, which sacrifices every true feeling to its own absorbing meanness. And thus, by our own follies and infirmities, we make "a lottery" of that which should be our "bed of smiling peace."

It were a curious speculation to trace the habits and customs which have, from the earliest ages and in all communities, helped to fasten upon us those cold feelings which make marriage something like a gambling transaction. In all barbarous nations, the father of a girl conceived he had a right to some compensation from the husband, for the loss of her services, and as a remuneration for the trouble and expense of bringing her up. In the early history of all nations in their uncivilized state, the custom prevails: the woman is sold for a price. Among the Hebrews and the Arabs the price paid to the father was sometimes very considerable. An ordinary price was five or six camels, and if the bride was very beautiful, or highly connected (rank and station had their influence even in the earliest ages) then fifty sheep, and a mare or foal were added. At the siege of Troy an accomplished lady was valued at four oxen. And when Danaus found he could not get his daughters married, he advertised that he was ready to receive suitors for them without expecting any presents—that is, that he was ready to get rid of them at any price, or at no price. Among the savage tribes of our own days the custom still prevails. The red-man of America still bargains for his wife, and the price varies from four horses down to a bottle of brandy. The Russians do not mince the matter as more civilised nations do, but when a marriage is proposed, the lover accompanied by a friend, goes to the home of the bride, and says to the mother—"Show us your merchandise, we have got money." The ancient Assyrians deserve some credit for the custom they introduced. every year they put all their beauties up to auction, and the prices that were given for these, were applied by a way of portion to those who were not beautiful. Thus, all, of both sorts, got married; the one for their beauty; the others for the money which beauty not their own had gained for them. They made sensuality give a dowry to avarice; but still marriage was a lottery.

Let us come down to more modern times, and I fear we shall see but little improvement taking place. In the days of feudalism, the lords of the creation seemed to have tyrannized pretty severely over the affections of woman, and as far as she was concerned, to have determined that marriage should be even worse than a lottery. In the feudal kingdom of Jerusalem—which was founded by the pious and chivalric knights, the Crusaders, who started upon their warlike pilgrimage to relieve the Holy Land from the oppressions of the infidels—a law prevailed that the lord of the manor might summon any female vassal to accept one out of three suitors whom he should propose for her husband. No respect was paid to the maiden's coyness, or to the widow's affliction; neither aversion to the proffered candidates, nor love to one more favoured, were allowed as legitimate excuses. One, and only one plea, could come from the fair one's mouth who was resolute to hold her estate in single blessedness; it was, that she was past sixty years of age. "After this unwelcome confession," argues a grave and learned lawyer of those days, "the lord could not decently press her into matrimony against her consent." The law of England was not exactly similar to this, although sufficiently barbarous to deserve the execration of all who respect the privileges of woman. It was a lucrative mode of extortion, even down to so far as the days of Charles I., both with the crown and the inferior nobility, to sell their wards in marriage. This most barbarous custom gave to the lord of the manor the right of tendering a husband to his female wards, while under age, whom they could not reject without forfeiting the value of the marriage; that is, without forfeiting as much as any one chose to offer the

guardian for such an alliance. And the larger the property of the ward, the larger was the value of the marriage. Thus, our fair readers will perceive that in those days of chivalry and honour, of knightly feeling, and romantic generosity; when lances were set in the rest to uphold the beauty of an eyebrow, or maintain the perfection of an ankle; when the Queen of Love and Beauty presided over the tournament held in honour of the ladies; in those chivalric times, they were bought and sold like cattle, and men made blanks and prizes of them in the lottery of life.

In the first stages of savage life, men regularly bought their wives from their parents. In the next stage, men paid just the same, but the father did not receive the money; it was applied to increase the dowry of the bride. Then, in our law, if the bride were converted into a widow, she became entitled to one-third of her husband's lands in right of her dower; but the masculine intelligence of modern legislation has found out that this was inconvenient, and has assisted the poor woman with facilities to get rid of her right. Now, in a more advanced stage of civilisation, the husband no longer pays money for his bride; but the bargaining spirit is still preserved, and the wife pays money for the husband. Paley looks upon this alteration with great satisfaction; and, as a masculine moralist, commends it as having "proved of no small advantage to the female sex; for their importance in point of fortune, procures for them, in modern times, that assiduity and respect which are always wanted to compensate for the inferiority of their strength, but which their personal attractions would not always secure." Still, with all the changes of customs, the Mammon-worship goes on; the lottery-wheel is ever in request, and yet we profess to feel astonishment when "marriage vows are false as dicers' oaths."

In this bargaining work, the "father's choice" is not always agreeable to the daughter's affections; where he sees nothing but the wealth, she sees the faults which the wealth hides—

"This is my father's choice.  
O, what a world of vile ill-tormented faults  
Looks handsome in three hundred pounds a-year."

But the "potent piece of imbecility," Master Slender, who owns the three hundred a-year, is not moved towards the lady by her virtues or her beauty; he finds himself drawn to her solely by the "seven hundred pounds of monies, and gold and silver," which her grandsire had left her, and the consideration that her father can give her as much more. Is it any wonder that "marriage is a lottery" when it is contracted after this fashion—when the first "motion" of it is propounded on such considerations? The Welsh Parson and the Gloucestershire Justice lay their heads together.

*Evans:* It were a good motion if we leave our pribbles and our prabbles, and desire a marriage between Master Abraham and Mistress Anne Page.

*Shallow:* Did her grandsire leave her seven hundred pounds?

*Evans:* Ay, and her father is to make her a better penny.

*Shallow:* I know the young gentlewoman; she has good gifts.

*Evans:* Seven hundred pounds, and possibilities, is good gifts.

And Master Abraham Slender, whose only observation of the damsel had been that she had "brown hair, and speaks small like a woman," when asked if he can "affection the woman?" if he can carry his "good-will to the maid?" "if he can love her?" is only able to hope, that he will "do as it shall become one that would do reason." But when he is asked if he will, "upon good dowry, marry her?" he wakes up a little. "I will do a greater thing than that, upon your request, cousin, in any reason." And then, being further pressed if he "can love the maid?" he arrives at this wise conclusion: "I will marry her, sir, at your request; but, if there be no great love at the beginning, yet heaven may decrease it upon better acquaintance, when we are married, and have more occasion to know one another. I hope, upon familiarity, will grow more contentment; but, if you say 'marry her,' I will marry her; that I am freely dissolved, and dissolvedly." And a dissolute affair would such a marriage have been. The only topics that he can find for her amusement, when an interview is purposely afforded, is how he "bruised his shin the other day with playing at sword and dagger with a master of fence;" and his delight in the sport of bear-baiting. Just as some modern youth, of similar taste, would describe a boxing bout with one of the faucy, and enlarge upon the merits of his horses and dogs, in a sort of canine conversation, for the edification of the lady he would wish to wed. And when he has arrived at the critical period when the question must be put, he has nothing to say for himself. The uncle, indeed, suggests for him what seems to the uncle to be his greatest recommendation, "he will make you a hundred and fifty pounds jointure." But the would-be bridegroom himself heins, and stammers, and refers to his uncle; until, fairly driven into a corner by Anne's blunt question of "What would you with me?" he has nothing left for it but to blunder out, "Truly, for mine own part, I would little or nothing with you: your father and my uncle have made motions. If it be my luck, so; if not, happy man be his dole! They can tell you how things go better than I can. You may ask your father; here he comes." When such is the lover, we cannot wonder that it was not his luck to win the lady, but had tricks played with him, and was fobbed off with "a great lubberly postboy," when he thought he had run away with "sweet Anne Page."

In real life, the lady is not always so fortunate as to escape. We have known daughters sacrificed by mercenary fathers; gentle, affectionate, accomplished women, tied by the Mammon bond to a churl without one idea in common with her, whose whole soul was in his kennel and his stable, but who found favour in the father's eyes by the length of his purse. Verily they had drawn blanks in the lottery of marriage. They were mated, not matched: joined together "as they join wainscot;" and most probably some of them will prove "a shrunk panel, and, like green timber, warp, warp." But thus it ever will be, as long as we suffer ourselves to be actuated by the

Mammon spirit—the mere sensual and selfish feeling, which profanes the gratification of the eye and the pocket, to that of the judgment and the affections. Our old English satirist, *Deane*, says—

"Whoever loves, if he do not propose  
The right true end of love, he's one that goes  
To sea for nothing but to make him sick."

And that "right true end of love" has been trampled on and despised from the earliest ages down to the present time, until we in vain seek for its spirit in the heavens above, but are driven down to the gnomes and elfs that preside over mines and metals—fit gods to regulate the lottery to which we have sold ourselves. We wilfully embark on a troubled sea, almost with the aim the poet describes. Milton makes Adam reproach Eve with the "innumerable disturbances on earth through female snares;" but he makes him forget that man is not the only sufferer by such disturbances on earth; that he has himself helped to create and perpetuate those causes by which we have made "marriage a lottery;" by which we

"Never shall find out fit mate, but such  
As some misfortune brings him, or mistake;  
Or whom he wishes most shall seldom gain  
Through her perverseness, but shall see her gale'd  
By a far worse; or, if she love, withheld  
By parents; or his happiest choice too late  
Shall meet, already link'd and wedlock bound  
To a fell adversary, his hate or shame;  
Which infinite calamity shall cause  
To human life, and household peace confound!"

## THE BARRISTER AND THE WITNESS.

THERE is a point beyond which human forbearance cannot go, and the most even of tempers will become roused at times. At an assizes held during the past year, both judge and counsel had a deal of trouble to make tift timid witnesses upon a trial speak sufficiently loud to be heard by the jury; and it was possible that the temper of the counsel may thereby have been turned from the even tenor of its way. After this gentleman had gone through the various stages of bar pleading, and had coaxed, threatened, and even bullied witnesses, there was called into the box a young oastler, who appeared to be simplicity personified.

"Now, sir," said the counsel, in a tone that would at any other time have been denounced as vulgarly loud, I hope we shall have no difficulty in making you speak out."

"I hope not, zur," was shouted, or rather bellowed out by the witness, in tones which almost shook the building, and would certainly have alarmed any timid or nervous lady.

"How dare you speak in that way, sir?" said the counsel.

"Please, zur, I can't speak any louder," said the astonished witness, attempting to speak louder than before, evidently thinking the fault to be in his speaking too softly.

"Nay, have you been drinking this morning?" shouted the counsel, who had now thoroughly lost the last remnant of his temper.

"Yea, zur," was the reply.

"And what have you been drinking?"

"Coffee, zur."

"And what did you have in your coffee, sir?" shouted the exasperated counsel.

"I spunc, zur!" innocently bawled the witness, in his highest key, amidst the roars of the whole court—excepting only the now thoroughly wild counsel, who flung down his brief, and rushed out of court.

## THE SOURCE OF THE THAMES.

WITHIN two miles of Cirencester is the source of the Thames—a clear fountain in a little rocky dell, known by the name of Thames Head. This is the little infantine stream, so great a giant when it arrives at full growth. This little well, whence issues the gentle stream, is, in hot seasons, perfectly dry; but the drought that stops the supply at the fountain head, has but slight effect on the course of the stream. It has so many different feeders from various parts of the country, that at Lechlade and Cricklade, it runs on its usual course uninfluenced by the scarcity at the head. There is an amusing story told of a simple Cockney, who on his way from Bristol to London, turned aside to visit the source of the river he was so proud of. It was a warm summer, there had been no rain for three weeks, and the spring was dried up. "Good God!" said he, with an expression of the utmost alarm and sorrow, "what ruin this must cause to London! whatever will the poor people do for water?"—and his busy fancy conjured up a direful picture of a thousand ills consequent upon the stoppage of the stream: no more ships arriving at London laden with the wealth of the world, the bankruptcy of rich merchants, the shutting up of 'Change, the failure of the Bank of England, the anguish of families, and the death of thousands in the agonies of thirst!

The Germans tell a similar story of a traveller who visited the springs of the Danube; and which, as we are upon the subject, may serve as a pendant to the story of our Cockney. The traveller in this case was a Swabian, and whenever the Germans wish to palm off a joke, a Swabian is sure to be the butt. On noticing in what a small stream the water trickled at the source of that great river Danube, he formed the bold resolution of stopping it up. He put his hand across it; and as he fancied the various cities upon its course deprived of water by this deed, he exclaimed, in the pride of his heart, "What will they say at Vienna?"—(*The Thames and its Tributaries*.)

## ONWARD!

**CHELSEA NEW SUSPENSION BRIDGE.**—According to the late report of Woods and Forests, the Commissioners of Public Works are to advance £120,000 for the new Suspension Bridge and Thames embankment at Chelsea.

**SAVINGS' BANK.**—That the working classes of Sheffield have of late been in a prosperous condition is very clearly shown, according to the *Sheffield Independent*, by the accounts of the Sheffield Savings' Bank for the year ending 20th November, 1851. Notwithstanding the large expenditure of the artisan class in their visits to the Great Exhibition, and the sums invested by them in numerous freehold land societies, building societies, &c., the savings' bank deposits show the large increase over the previous year of £15,669 17s. 8d., the amount of deposits being—in 1850, £54,862 8s. 8d.; and in 1851, £70,032 6s. 4d. The number of depositors in 1850 was 8,346; in 1851, 10,033, showing an increase of 1,687. As contrasted with 1849, the amount of deposits show a still further increase.

**ISTHMIAN OF SUEZ RAILWAY AND CANAL.**—From Alexandria, the line proceeds in a south-eastern direction to Damanhour, passing at short distances from Salamoun, Nadir, Warden, and Kelioub, to Cairo. The proposed route across the Desert, from Cairo to Suez, branches off from the Alexandrian line at Bulah, a few miles north of Cairo, and proceeds nearly parallel with the present Great Hadj route to Suez, on the Red Sea. The route of the proposed ship canal commences in the Mediterranean at the mouth of the Tineh, the entrance to the ancient Pelusiac Canal, and proceeds in a southern direction to Suez, terminating in vestiges of the ancient canal of Senosis or Necho. Mr. Wyld, of Charing Cross, has published a map, in which these routes are traced out.—*Bulldoz.*

**A NEW BUILDING MATERIAL.**—The Californian papers contain an account of a new building material, which has recently been discovered near Bernicia, and which, they think, will be extensively used for building purposes in that country. Several houses have already been constructed of it, and the pliability with which it can be worked, the ease with which it can be transported to market, its durability and its power of resistance against fire, will, it is thought, render it hereafter very popular as a material to be used in the construction of houses. It is a kind of sand-stone, and can be wrought into different shapes more easily than oak. By subsequent exposure to the weather, it becomes exceedingly hard, and pieces which have been tested by fire, have been little if at all affected by it. Its colour is light brown, and when properly worked with the hammer, it gives to a building an exceedingly ornamental appearance. Those who have used it say that a house can be built of it more cheaply than of brick.

**RELIEF BOARDS IN SCOTLAND.**—At this very moment an extensive series of operations are being brought to a close in the Scotch Highlands and Islands, partaking, in the most decided manner, of the nature of a great experiment—and a perfect successful one, too—in political economy. It is well known, that the potato famine of 1846, and the subsequent years, extending with distressing severity to the remoter districts of Scotland, that great sufferings were endured by the people of the afflicted regions, that a Central Relief Board was established at Edinburgh, and that an organisation of succour was set on foot. The Central Board was established on the 5th of February, 1847, and it has been in active operation during the five years that have since elapsed. The administration of the Board was divided between two sections—one at Edinburgh and one at Glasgow. The Edinburgh section have just given an account of their proceedings; and it is drawn up with so much modesty, clearness, and force, that the volume in which it appears will meet, it is to be hoped, with a fate somewhat better than that which usually awaits similar publications. We have read no composition lately, that has struck us more forcibly as a happy illustration of the effects produced by knowledge when applied to the ordinary concerns of life. The committee found themselves suddenly called on to provide food and employment for a numerous, rude, and scattered population in a difficult and poor country. To have given promiscuous alms would have introduced a reign of pauperism, work was therefore required in return for relief. But the nature of the country admitted of work of certain kinds only being undertaken. To make roads and harbours on the estates of the landholders without exacting from the landholders some corresponding return, would have been taxing the community for the benefit of a few fortunate private persons. Still, roads and harbours were the great wants of the district. The committee removed the difficulties by combination. Treaties of co-operation were entered into with the landholders—the people were employed on public works—and an efficient labour test was provided. By this means, something like a revolution has been effected in the means of locomotion in the remoter islands. But that was not all. Means were adopted for stimulating the industry of the "crofters," or small farmers, by giving them leases of their holdings in return for a certain amount of capital expended. Further successful efforts have been made to introduce a manufacture of hosiery into the Highlands for the employment of the female part of the peasantry; taking care, however, that the manufacture shall be a natural, not a forced one; that is to say, that it shall depend on the ability of the Highland women to compete successfully in the markets of the world as producers of articles of hosiery. If it is found that they can do this, and are willing to do it, and that is all that can be desired. The Edinburgh section are now resting from their labours. They have covered themselves with honour, and deserve the thanks of the nation for what they have accomplished.—*Edinburgh.*

## POETICAL QUOTATIONS.

## ABSENCE.

Love reckons hours for months, and days for years;  
And every little absence in an age.

*Dryden's Amphitruon.*

Every moment  
I'm from thy sight, the heart within my bosom  
Moans like a tender infant in its cradle,  
Whose nurse had left it.

*Olway's Venice Preserved.*

All flowers will droop in absence of the sun  
That waked their sweets.

*Dryden's Aurencasbe.*

Condemn'd whole years in absence to deplore,  
And image charms he must behold no more.

*Pope's Eloisa.*

No happier task these faded eyes pursue;  
To read and weep is all they now can do.

*Pope's Eloisa.*

Of all affliction taught a lover yet,  
'Tis sure the hardest science to forget!

*Pope's Eloisa.*

Unequal task! a passion to resign,  
For hearts so touch'd, so pierced, so lost as mine!  
Ere such a soul regains its peaceful state,  
How often must it love, how often hate,  
How often hope, despair, resent, regret,  
Conceal, disdain—do all things but forget!

*Pope's Eloisa.*

There's not an hour  
Of day or dreaming night but I am with thee;  
There's not a wind but whispers of thy name,  
And not a flower that sleeps beneath the moon  
But in its hues or fragrance tells a tale  
Of thee.

*Proctor's Miranda.*

Methinks I see thee straying on the beach,  
And asking of the surge that bathes thy foot  
If ever it has washed our distant shore.

*Cowper's Task.*

Not to understand a treasure's worth  
Till time has stol'n away the slighted good,  
Is cause of half the poverty we feel,  
And makes the world the wilderness it is.

*Cowper's Task.*

Against diseases here the strongest fence  
Is the defensive virtue abstinence.

*Robert Herrick.*

Hex faery follow'd him through foaming waves  
To distant shores, and she would sit and weep  
At what a sailor suffers. Faery, too,  
Delusive most where warmest wishes are,  
Would oft anticipate his glad return,  
And dream of transports she was not to know.

*Cowper's Task.*

Where'er I roam, whatever realms to see,  
My heart untravell'd, fondly turns to thee:  
Still to my brother turns, with ceaseless pain,  
And drags at each remove a lengthening chain.

*Goldsmith's Traveller.*

O, tell him I have sat these three long hours,  
Counting the weary beatings of the clock,  
Which slowly portion'd out the promised time  
That brought him not to bless me with his sight.

*Joanna Baillie's Rayner.*

Yes,  
The limner's art may trace the absent feature,  
And give the eye of distant weeping faith  
To view the form of its idolatry;  
But oh! the scenes 'mid which they met and parted.  
The thoughts—the recollections sweet and bitter,  
Th' Elysian dreams of lovers, when they loved,  
Who shall restore them?  
Less lovely are the fugitive clouds of eve,  
And not more vanishing.

*Maturin's Bertram.*

Long did his wife,  
Suckling her babe, her only one, look out  
The way he went at parting,—but he came not!

*Rogers's Italy.*

## EXCELSIOR!

I DRY the fear; I still the throbbing heart;  
I whisper peace when loving friends depart;  
I travel where the hardy seamen roam,  
And dwell within the confines of their home.  
I go with warriors to the battle-field,  
Fighting with both sides until one doth yield.  
I ease the couch whereon the dying lie;  
And where the word of Truth is, there am I.  
The tide of stern Adversity may roll;  
I still its waves, and calm the troubled soul.  
I am not light or heat, but I can give  
Great light and warmth, and bid the dying live.  
I'm born of Sorrow, and am the sweetest child,  
That ever on my weeping mother smiled.  
And wouldst thou know a place where I may be,  
Look at the single branch upon the stricken tree.

## ENIGMAS, CHARADES, REBUSES, &amp;c.

1. A title bestow'd that is not very mean;  
2. The most beautiful arch that ever was seen;  
3. A statue or idol, take next, if you please,  
4. Then a female magician, who conjures for fees;  
5. And a prank, or a story invented, or tale,  
Th' initials will bring you, I think, without fail,  
To a sick'ning sorrow, that makes one look pale.

2.  
Just a couple behead,  
Without exaggeration,  
'Twill give you instead  
A complete generation.  
Behead once again,  
And my rebus is done,  
When you'll find there remains  
But an unit of one.

3.  
My first I have been taught at school,  
To make from many a puzzling rule.  
My second was a virgin fam'd,  
That oft in holy writ is nam'd.  
My whole together rightly brought,  
Will be compendious, brief, and short.

4.  
Of times in the Merchant of Venice I'm named,  
A seaport of Syria in history famed;  
A coat of defence the Queen's champion put on,  
A fish from the depths of the Dee or the Don;  
Some luminous bodies that never display  
Their glorious forms on a bright summer day.  
The initials and finals of these, prithee take,  
Gentle reader, my true appellation to make.

5.  
When this world was form'd by its Maker Divine,  
With its first stage of existence I had mine.  
I'm very abundant all over the earth (1);  
I'm a thing of great beauty, brilliance, and worth (2):  
Of colours various—white (3), blue (4), grey (5), and red (6),  
I lie in the sand of the river's bed (7),  
In the ground and rocks, you will find me there (8);  
And I aid in adorning the wealthy fair (9).  
I'm in the crown of our gracious Queen (10);  
And at her table I'm usually seen (11).  
I am in the cottage and the noble's hall (12); [small (13)].  
And am daily used by both great and low;  
Flowers I hold—common, costly, or rare (14),  
I ought to be treated with very great care.  
I cover a building, well known to fame (15);  
Some people still hold very sacred the same (16). [small (17)];  
I was well known in Greece ages long past  
And some of their work as models still last (18).  
The fine polish of glass is owing to me (19);  
Without me the marble so smooth would be (20).  
In drying cloth I lend my aid (21);  
I'm in the whitest wood that's made (22).  
By artists I have been painted upon (23);  
I bring the money when the work is done (24).  
I am such a costly, beautiful thing (25);  
I'm considered a present fit for a king.  
I deck the hearth (26), the table (27), and the door (28);  
I sparkled on the glove Cœur de Lion wore (29). [make (30)].  
The most elegant statues and figures I And, strange to say, I am often a fake (31).  
But now, gentle reader, I must bid you farewell;  
If you know what I am, my name pray tell.  
This simple enigma is perfectly true;  
And I'm sure I am very well known to you.

6.  
Behold a particle of time,  
And then surtail the same:  
Behold a prognostic good or ill,  
It speedily will name.

7.  
If right defin'd, my whole will be  
What all does that obscurely see.  
Beholded, you will then obtain  
A perfect part of every chain.  
Again behead: 'twill leave behind  
Something most useful to mankind.

8.  
For me men brave the raging seas,  
And treat death as a sport;  
For me they dance, and sing, and play,  
And truth and right distort.  
Take but one letter from my name—  
How great's the change! I vow  
There is not one in all the earth  
Would be what I am now.

9.  
I am a word of six letters; divided in half,  
My second and whole do my first every day;  
My whole is my second, and though you may laugh,  
My second may not be my whole, or it may.

10.  
I come, and I go: the free and the bold;  
No fetters can bind me: no prison can hold;  
I court not man's smile, I fear not his frown,  
For beggar and king are to me all as one.  
I come and I go. The storm is my car,  
The tempest's my courser, to speed me afar.  
O'er sea, and o'er land, through all climes I range;  
I'm steadfast in nothing, unless it be change.  
And life being spent (an end we all have),  
In sure hope to arise, I drop to my grave.  
Try then, ye skillful, my riddle to scan,  
And quickly reveal me, if truly you can.

11.  
In courts of justice I am seen (1),  
And sometimes, too, on meadow green (2);  
On roads, I stop the traveller's way  
At night, and also in the day (3);  
Each honest man must wait till I  
Allow him freely to pass by;  
For which I do him pardon crave,  
My use being mostly 'gainst the knave (4).  
In palace, mansion, pigsty, hut,—  
On iron chest where deeds are put,—  
In jewell'd casket—I am found,  
And in every inn and stove abound (5);  
Musicians, too, hold me in awe (6);  
I'm also quite well known in law (7).  
I'm long and short, and round and square,  
And often seen the worse for wear.  
The convent, madhouse, and the jail,  
My loss would bitterly bewail;  
For here I'm seen in full perfection,  
The friend of order and subjection.

12.  
My first denotes a falsehood or a lie;  
My second with a man of dress dancy;  
My whole the lousy traveller may light  
When shrouded in the darken'd gloom of night.

13.  
In a beautiful garden, 'midst flowers was growing  
My first just unfolded and lovely to view;  
In the day-time 'twas nurs'd by the sun-  
beam then glowing,  
And was fostered at night by a fresh  
bainy dew.  
My second beheld it one day, and unsparring,  
Pluck'd it carelessly, just to adorn the  
gardens.  
(Then left the dear spot where it long dwelt  
unaring).  
For the thought it would bloom and look  
elegant there.  
But, alas! it soon shrivel'd when placed in  
the bower;  
Its sleek silver leaves lost their beautiful  
It sicken'd and wither'd in less than an hour,  
For it mis'd the gay sunbeam and beau-  
tiful dew.  
Why did she not leave it alone in its glory,  
Where for days, e'en for weeks, it might  
sweetly have bloom'd!  
These joined, an herb will reveal, 'tis no  
story—  
An emblem of Constancy—often con-

14.  
I am old as creation,  
Yet young ev'ry day;  
I'm found in each nation,—  
On land and on sea,  
I am made, and I change;  
I am bought, I am sold;  
I cheer, I annoy;  
I am timid, yet bold;  
I drive some before me,  
I allure others on;  
And thus lead to danger  
My dupes, by my fun.  
Without me, your friends  
Were darkness and gloom;  
A welcome I find in  
Each honest man's room.  
My colours are various,  
'Tis very well known,—  
I am white, red, green, blue,  
But not often brown;  
In a word, I am sure,  
By day and by night,  
When found—you will find me,  
Nix heavy, but light.  
Having found out my parts  
So plainly and true,  
To discover my name  
You need not a clue;  
So therefore, young people,  
Set to work with your senses,  
Or some will pronounce you  
Very stupid young dunces.

## NAMES OF TOWNS IN ENGLAND ENIGMATICALLY EXPRESSED.

1. My first is an agricultural instrument,  
My second is an opening,  
My whole is a town in Yorkshire.
2. My first is profit,  
My second is a corporation town,  
My whole is a town in Lincolnshire.
3. My first is a girl,  
My second is a mineral,  
My whole is a town in Kent.
4. My first is a man's name,  
My second is a town,  
A town in Northamptonshire.
5. My first is the enemy of peace,  
My second is a circle,  
My third a weight.  
A town in Lancashire.
6. My first is a covering for the head,  
My second is an indefinite article.  
A town in Lancashire.
7. My first is a ligage,  
My second a harbour.  
A town in Cheshire.
8. My first is a crossing,  
My second a point of the compass.  
A town in Shropshire.
9. My first is a creditor,  
My second is a house for horses,  
My whole is a town in Bedfordshire.
10. My first is a tree,  
My second is a cured leg of pork.  
A town in Rutlandshire.

[The whole answered in No. 14.]

## ANSWERS TO THE PASTIME OF LAST EVENING,

Page 189.

PICTORIAL CHARADES.—"SEEK!"—MYSTERY. "PAPA'S COME!"—BAG-DAD.

## ENIGMAS AND REBUSES.

1. Soc-rates.—SOCRATES.

1. WRITING, conveys the thoughts to a distance;
2. INK, is the liquid that lends its assistance;
3. DEATH, an event that we cannot escape,  
Unless, when all ends—our departure we take,  
By a change, St. Paul tells us, we're destined to make.
4. O is a circle that's seen in a crowd;
5. W, the letter that's used in a word;  
And these five initials certainly show,  
An object of pity, of sorrow, and woe.—WIDOW.

1. S, within a Cask.
2. X from IX take I.  
Two capital letters will discover the county—Essex.

## OUR CORNER CUPBOARD:

ONE to-day is worth two to-morrow.

RATHER go to bed supperless than rise in debt.

WE fret against the doubtful; we submit to the inevitable.

THE ugliest and most mischievous Miss we ever knew was Mis(s)-government.

A MAN who is not ashamed himself, need not be ashamed of his early condition in life.

A HARD life, that of a cobbler—for ever struggling to make both ends meet.

THE labouring man in the present age, if he does but read, has more helps to wisdom than Solomon had.

HENRY IV., of France, used to say, "You can catch more flies with a spoonful of honey than a tun of vinegar."

WHAT is the most proper punishment for quack doctors? They should be confined in the pill-ory.

NEVER purchase love or friendship by gifts; when thus obtained, they are lost as soon as you stop payment.

WHAT's the worst article in the market to speculate in? Do you give it up? Tea, of course. Because it is always sure to go to pot.

IF a man have not correct principles, and if his practice be not in agreement therewith, all the advantages in the world will never make him what he should be.

THERE will come a time when three words, uttered with charity and meekness, shall receive a far more blessed reward than three thousand volumes written with disdainful sharpness of wit.—Hooker.

A FELLOW stole Lord Chatham's large gouty shoes; his servant, not finding them, began to curse the thief. "Never mind," said his lordship, "all the harm I wish the rogue is that the shoes may fit him."

IN every journey there are some tedious passages, the very remembrance of which is wearying; and in the pilgrimage of life, the analogy holds good in this instance also.

FAMILY jars sometimes contain pickles, and sometimes preserves; sometimes plunge the family into a bad pickle, and are never well calculated for preserving harmony.

"HEROINIS" is, perhaps, as peculiar a word as any in our language; the two first letters of it are male, the three first female, the four first a brave man, and the whole word a brave woman.

As lamps burn silent, with unconscious light,  
So modest ease in beauty shines most bright;  
Unaiming charms with edge resistless fall,  
And she who means no mischief does it all.

"WARTS on the mind!" exclaimed Aunt Hannah the other day, as she glanced into a library through her dim spectacles. "I have heard of warts on all parts of the human cistern, but never before on the mind. Oh, dear, I should think it would defect the brain."

DESCENT.—Francis I. asked one day of Dutcheat, the learned Bishop of Orleans, if he was a gentleman. "Sire," was the prelate's reply, "in the ark of Noah there were three brothers—I cannot tell from which of them I am descended."

"THERE is no truth in men," said a lady in company; "they are like musical instruments, which sound a variety of tones." "In other words, madam," said a wit, who chanced to be present, "you believe that all men are lyres!"

THE GOOD OLD TIMES.—"1535.—Paid 11s. 8d., the expense of bringing an heretic from London; and for one and a half load of wood to burn him, 2s.; for gunpowder, 1d.; a stake and a staple, 8d."—Extracted from the Records of the Corporation of Canterbury.

A QUAKER, who was examined before a court for not using any other language than "thee," "thou," and "friend," was asked by the presiding functionary—"Pray, sir, do you know what we sit here for?" "Yea, verily, do I," said the quaker, "three of ye for two dollars each day, and the fat one in the middle for one thousand dollars a year."

OUR primitive ancestors distinguished themselves, in pride or simplicity, as Brith and Brithon; Brith signifying *stained*, and Brithon a *stained man*. The predilection for colouring their bodies induced the civilised Romans to designate the people who were driven to the Caledonian forests as *Picts*, or a painted people.

A LADY ordered her servant one morning to prepare eggs for her master's breakfast. Nelly: "How long will she boil them?" Lady: "Three minutes." Nelly: "Ay, and how'll she ken about the minutes?" Lady: "You will see by the house clock." Nelly: "Well, noo, mem, that'll no do; did she'll not know that oor clock's twenty minutes afore the toon?"

THE Rev. Dr. Cox, of Brooklyn, America, has recently published a long argument on the question whether the bride should stand on the right or left side of the bridegroom, during the marriage ceremony. He decides that she should take the right, and proves it by elaborate arguments, and copious extracts from the Bible. For instance, when Solomon married an Egyptian princess, "on his right hand ~~she~~ stand the Queen, in gold of Ophir.

## OUR MEMORANDUM BOOK.

LOVE OF DRESS.—The person whose clothes are extremely fine, I am too apt to consider as not being possessed of any superiority of fortune, but resembling those Indians who are found to wear all the gold they have in the world in a bob at the nose.—Goldsmith.

PRECEPTS OF THE SIAMESE.—1. Do not stay animals. 2. Do not steal. 3. Do not commit adultery. 4. Do not tell lies, or backbite. 5. Do not drink wine. 6. Do not eat after twelve o'clock. 7. Do not frequent plays or public spectacles, nor listen to music. 8. Do not use perfume, nor wear flowers, or other personal ornaments. 9. Do not sleep or recline upon a couch that is above one cubit high. 10. Do not borrow, nor be in debt.

A BENEFICIAL RULE.—The following fact is mentioned by Dr. W. C. Taylor as having occurred within his knowledge. A gentleman who employed several labourers, made it a rule never to pay any ~~sum~~, however small, without getting a receipt. The shame which those who were unable to write their names felt in setting their marks, though no observation was made on the circumstance, had a perceptible effect in inducing them to seek instruction for their children, and, in more than one instance, for themselves.

MISERIES OF INDOLENCE.—None so little enjoy life, and are such burdens to themselves, as those who have nothing to do. The active only have the true relish of life. He who knows not what it is to labour, knows not what it is to enjoy. Recreation is only valuable as it unbends us. The idle know nothing of it. It is exertion that renders rest delightful, and sleep sweet and undisturbed. That the happiness of life depends on the regular prosecution of some laudable purpose or calling, which engages, helps, and enlivens all our powers, let those bear witness who, after spending years in active usefulness, retire to enjoy themselves. They are a burden to themselves.

## THE DEVONSHIRE CLIMATE.

THE west wind always brings wet weather;

The east wind wet and cold together.

The south wind surely brings us rain;

The north wind blows it back again.

If the sun in red should set,

The next day surely will be wet;

If the sun should set in grey,

The next will be a rainy day.

THE MOST UNHAPPY.—Cosroes, King of Persia, in conversation with two philosophers and his vizier, asked—"What situation of man is most to be deplored?" One of the philosophers maintained that it was old age, accompanied with extreme poverty; the other, that it was to have the body oppressed by infirmities, the mind worn out, and the heart broken by a series of misfortunes. "I know a condition more to be pitied," said the vizier; "and it is that of him who has passed through life without doing good, and who, unexpectedly surprised by death, is sent to appear before the tribunal of the Sovereign Judge."

PROMISERS.—If Performance, the steward, were half as punctual in payment, as Lord Promise, his master, is generous in proffer, what a bounteous world would this be to live in! One of those emigrants from the promised land, was repeating and enforcing again and again his wordy endeavours to persuade a poor man of genius how much he meant to serve him, when the poor wit, who knew too wisely the worth of words, interrupted him by requesting—"Pray, sir, write your promises in chalk round the crown of my hat, or I shall forget them when I brush it to-morrow." The promise was dumb, for he saw that he was understood.

THE PRODUCTION OF VALUABLE MATTER FROM THE MOST WORTHLESS MATERIALS.—Instances of this nature are constantly occurring. The skins used by the goldbeaters are produced from the offal of animals. The hoofs of horses and cattle, and other horny refuse, are employed in the production of the prussiate of potash—that beautiful yellow crystallized salt which is exhibited in the shops of some of our chemists. The worn-out saucepans and tin-ware of our kitchens, when beyond the reach of the tinker's art, are not utterly worthless. We sometimes meet carts, loaded with old tin kettles and iron coal-scuttles, traversing our streets. These have not yet completed their useful course. The less corroded parts are cut into strips, punched with small holes, and varnished with a coarse black varnish, for the use of the trunkmaker, who protects the edges and angles of his boxes with them. The remainder are conveyed to the manufacturing chemists in the outskirts of the town, who employ them, in conjunction with pyroligneous acid, in making a black dye for the use of calico printers.

TO MAKE HOME HAPPY.—Nature is industrious in adorning her dominions, and the man to whom this duty is addressed should feel and obey the lesson. Let him, too, be industrious in adorning his dominion—in making his home, the dwelling of his wife and children, not only convenient and comfortable, but pleasant. Let him, as far as circumstances will permit, be industrious in surrounding it with pleasing objects—in decorating it, within and without, with things that tend to make it agreeable and attractive. Let industry make it the abode of neatness and good order—a place which brings satisfaction in every inmate, and which, in absence, draws back the heart by the fond association of comfort and content. Let this be duty, and this sacred spot will surely become the scene of cheerfulness, kindness, and peace. Ye parents, who would have your children happy, be industrious to bring them up in the midst of a pleasant, a cheerful, and a happy home. Waste not your time in accumulating wealth for them, but fill their minds with the seeds of virtue and true prosperity.

**LADIES' BONNETS, of the most**  
Fashionable kind.  
The richest & best materials, at moderate prices.  
Millinery Bonnets, 10s. 6d. to 31s. 6d.

E. W. Freestone, Proprietor.

The only memento of the Great Exhibition produced within its walls.

Just published, complete in Two Volumes, price 5s. each, elegantly bound in cloth and gold, with a View of the Crystal Palace gilt upon the cover.

**THE PARLOUR MAGAZINE**  
OF THE LITERATURE OF ALL NATIONS, Printed in the Crystal Palace, Hyde Park, at Machines No. 158, and 162, Class 6.

We have no doubt that the two volumes of the PARLOUR MAGAZINE will be treasured by many future generations. People flocked to the Crystal Palace after its close, and eagerly bought up, at enormous prices, articles that had been exhibited there, that they might possess some memento of the Exhibition. We supply not only a work exhibited therein, but one actually produced by machinery within its crystal halls, and in the view of millions of spectators. The value of our book will therefore increase with the advance of years, until it will be regarded as a curiosity and a treasure.

These volumes contain translations of Literary Treasures from the

CHINESE.	HUNGARIAN.	POLISH.
SPANISH.	HINDOSTANI.	RUSSIAN.
FRANC.	IRISH.	SPANISH.
GERMAN.	ITALIAN.	SWEDISH.
HEBREW.	MEXICAN.	TARTARIAN.
GREEK.	MORILLIAN.	WELSH, &c.
	PERSIAN.	

With original English Contributions by celebrated authors, and choice adaptations from the American. Each Volume is embellished by a superior Steel Engraving and by numerous Woodcuts.

**RE-ISSUE OF THE PARLOUR MAGAZINE.**

In order to meet the wishes of numerous persons of the middle and working classes, who, during the excitement of the Exhibition, were unable to obtain this memento of that great event, the work will be RE-ISSUED in Weekly Numbers, price 2s., and Monthly Parts, price 6d. or 10s. Order of any Bookseller.

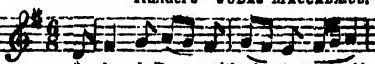

London: HOULSTON & STONEMAN, 65, Paternoster Row.

**GRANDFATHER WHITEHEAD'S**

**THE FAMILY TUTOR**, containing a  
Complete SYSTEM OF NATURAL GEOGRAPHY, and a Useful and Interesting Miscellany, is now ready, Price 2s. 6d.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

Handel's "JUDAS MACCABEUS."  
  
O love-ly Peace, with plen-ty crown'd,

**NOVELLO'S MUSICAL CHRISTMAS PRESENTS.**  
—Octavo Editions of HANDEL'S Israel in Egypt, 6s. 6d.; Messiah, 6s. 6d.; Samson, 7s. 6d.; Judas Maccabeus, 6s. 6d.; Jephtha, 6s. 6d.; Joshua, 5s. 6d.; Solomon, in progress. HAYDN'S Creation, 5s. MENDELSSOHN'S St. Paul, 6s. 6d.; Lobgesang, and As the Hart Pans, 5s. 6d. Three Masses by Mozart, Haydn, and Beethoven, 8s. 6d.—LONDON SACRED MUSIC WORKHOUSE, 69, DEAN STREET, SOHO, and 24, FLOUSTRY.  
Catalogues, postage free, six penny stamps.

**THE FAMILY TUTOR, AND SCHOOL**  
COMPANION.—Was published on the 1st of January, 1851, and subsequently on the 1st and 15th of each Month, in Parts price 2d. each.

THE FAMILY TUTOR, as its name implies, is a Work of a highly instructive character, and realises, as far as can be accomplished in print, the advantages of a PRIVATE Tutor to every reader—a Tutor whose teachings are lively, kind, and comprehensible, making the acquirement of knowledge a PLEASURE, not a TASK.

The First Volume contains—A COMPLETE ENGLISH GRAMMAR, Improved and Simplified; FAMILIAR LECTURES ON CHEMISTRY; TALES OF HISTORY AND OF TRAVEL; ZOOLOGY; THE PHYSICAL HISTORY OF MAN; THE PHYSIOLOGY OF HEALTH AND DISEASE; CELESTIAL AND TERRESTRIAL PHENOMENA OF THE MONTHS; MATHEMATICAL, GEOMETRICAL, ARITHMETICAL, AND OTHER PROBLEMS; ELUCUTORY EXERCISES; "THE TUTOR AND HIS PUPILS," being Answers to Educational Questions; and a Varied MISCELLANY.

The Second Volume contains a Complete System of NATURAL GEOGRAPHY, with Pictorial Illustrations, displaying the Costume and the Architectural and Natural Features of the various Peoples and Countries of the world.

THE FAMILY TUTOR may be had complete up to the end of 1851, in Two Volumes, price 2s. 6d. each.

London: HOULSTON & STONEMAN, 65, Paternoster Row.

**LONDON, SUBURBAN, AND**  
HOME COUNTIES PERMANENT BENEFIT  
BUILDING SOCIETY. Established 9th April, 1851.—  
Enrolled under 6 and 7 Wm. IV. c. 32.

Bankers: Messrs. Spooner, Attwood & Co., Gracechurch Street, London.

Shares £50 each, payable at 10s. monthly per share. Fixed entrance fee, 2s. 6d. per share.

The funds, as far as they accrue, are lent to members, in relation of their applying for loans, at five per cent., to enable them to purchase a house; repayable by equal monthly or quarterly instalments, distributed over a period of fifteen years from the time of borrowing. No charge or deduction of any kind is made by this Society, beyond the interest. Surveyor's fee, 10s. per cent. on the loan. Solicitor's fee for mortgage, 2s. 6d.

This Society offers better security to those who now invest their money in Savings Banks, as the directors lend money only upon real or leasehold property, which is carefully examined and valued before any advance is made.

The Society's plan of lending its funds as far as they accrue, swells the interest of depositing members to six per cent., and they can draw out their money at any meeting on seven days notice.

**SUBSCRIPTION MEETINGS** on the Second Wednesday of every month, at the George and Vulture, City Hotel, George Yard, Lombard Street, London, from Six to Eight o'clock, P.M.

Every information may be obtained, and shares taken daily, of G. W. CHURCH, Esq., at Robert Street, Adelphi; Mr. BLACKMAN, 49, Fenchurch Street, London; Mr. CROSS, Rose Cottage, Vauxhall Road, Brixton, Surrey; and of Mr. W. L. HARVEY, the Secretary, 3, Goddard Street, Doctors' Commons.

**FROM 700 to 800 PER CENT.**  
The following is the list of names of certain persons who used by more than nine-tenths of the community. The Receipts (in 10 numbers) will be forwarded by enclosing 1s. in cash and a Postage Stamp. Address to Mr. Geo. STANHOPE, 21, St. James's Street, London.

**AN ACCOUNT OF THE CHINESE**  
COMMISSION;  
THAT WAS SENT TO REPORT ON THE GREAT EXHIBITION.

Wherein the opinion of China is given. As not corresponding at all with our own. The whole from the Chinese Reports now collected, By SIR RICHARD EDWARDS, and by him translated, And put into rhyme with about enough reason. To suit the demands of the holiday season. Illustrated with sketches, as may be believed, By the overland mail from China received. London: Printed at 18, and 16, GOWER STREET, By H. VERNER, and sold by him there. To be had of all Booksellers throughout the land; And likewise at each Railway book-stall or stand. To suit the occasion the Publisher's willing. To charge the mere nominal price of One Shilling.

**GRANDFATHER WHITEHEAD'S**  
CATECHISMS, designed to make the Acquirement of Useful Knowledge by the Young, and by Beginners of all Ages, easy and pleasing. The Catechisms are published Monthly, each containing 32 pages, crown 8vo., illustrated by numerous Diagrams. The price of each Catechism will be 3d., stitched in a neat wrapper. The whole Series, bound in cloth, 2s. 6d.

**THE FAMILY FRIEND**, an established

Magazine, published upon the First and Fifteenth of every Month, price Two-pence. Thirty-two pages, beautifully printed, and neatly covered. The following is a type of the opinion formed of THE FAMILY FRIEND, and expressed by upwards of THREE HUNDRED NEWSREADERS:—"The Boys and Girls will like it, for it contains good Stories; the Young Ladies will like it, for the sake of its pretty Poetry, and its Receipts for various kinds of Family Work; Young Men will like it, for it smacks of Science; the Women will like it, for it abounds in useful Household Receipts; the Men will like it, for it treats of Gardening and Natural History, and advises wives to be kind to their husbands; those who love amusement will like it, for it swarms with Conundrums; everybody will like it, for it has a corner for everybody; and nobody need be afraid of finding any harm in it."—Gateshead Observer.

The Work may be had up to the end of December, 1851, in FIVE VOLUMES, price 2s. 6d. each.

The Fourth Volume contains a QUADRUPLE INDEX to the First Four Volumes, embodying about THREE THOUSAND FIVE HUNDRED References to matters of everyday usefulness. The Work forms a most perfect Encyclopedia of Domestic Economy.

London: HOULSTON & STONEMAN, 65, Paternoster Row.

### Editor's Note-Book.

**I LEARN SOMETHING FROM EVERY MAN WITH WHOM YOU MEET.**—The observation or neglect of this rule will make a wonderful difference in your character long before the time that you are forty years old. All act upon it, more or less, but few do it as a matter of habit and education. Most act upon it as a matter of interest, or of curiosity at the moment. The great difficulty is, we begin too late in life to make everything contribute to increase our stock of practical information. Sir Walter Scott gives us to understand that he never met with any man, but his calling he what it might, even the most stupid fellow that came rubbed down a horse, from which he could not be a few moments' conversation, learn something, which he did not before know, and which was valuable to him. This would account for the fact that he seemed to have an intimate knowledge of everything. When he would stop in the street and note down a word he had dropped among the mouths of two angry men, a word that which he had been looking for months. It is quite as important to go through the world with the ears open, as with the eyes open.

**SPONGE.** W.—This is a marine production, now classed as belonging to the animal kingdom, although this was for a long time doubted.

**PLEAS.** H. M. C.—The greatest security against these invaders of domestic comfort, is that of keeping rooms as free from dust as it is possible.

**GREASE IN CARPETS.** L. D.—This may be removed with spirits of turpentine as well as by fuller's earth, or by soda, or gall, and pipe clay.

**TO DESTROY BEETLES.** H. M.—Since a number, sent for about their haunts, and in a few hours numbers of them will be found dead.

**ORIGIN OF THE AURORA BOREALIS.** D. J.—It seems natural to attribute it to the electric fluid contained in the atmosphere, which at great heights, where the air is rarefied, must become luminous.

**PEARLS.** W. W.—These are calcareous bodies, of the same nature as mother of pearl, only purer, found in the inside of certain shells, particularly a large one called the pearl-oyster.

**COD LIVER OIL.** T. H.—The light brown colored oil is supposed to be the best for pulmonary complaints, it contains the most iodine, and, in addition, phosphorus, which is, perhaps, equally valuable.

**TEA-MAKING.** S. D.—Dr. Kitchener recommends that all the water necessary should be poured off at once, as the second drawing is bad. When much tea is wanted, it is better to have two tea-pots instead of two drawings.

**GILDING OF METALS.** LENA.—Iron is gilt by polishing its surface, and then heating it until it has acquired a blue colour. When this is done, leaf gold is applied slightly burnished down, and exposed to a gentle fire, after which it is burnished again. Copper or brass may be gilt in the same manner.

**SEWING NEEDLES.** EMILY.—The invention of that useful implement, the needle, is unknown; but it is said that those used at present, made of steel, at first called Spanish needles, were introduced in the reign of Queen Elizabeth.

**ETIQUETTE.** P. R. A.—We think our correspondents attach too much importance to the rules of etiquette in common. A modest, unobtrusive behaviour is preferable to any studied manners and will generally be found to succeed in society.

**STATURE OF MAN.** J. J.—We do not think that persons engaged in manufactures from an early age, become stunted in their growth. It is well known that Lancashire and Yorkshire furnish the tallest specimens of Englishmen.

**FRIGNON LANGUAGE.** J. T.—We advise our correspondent to persevere in his endeavours to acquire this language, which has been well called "the algebra of tongues," from its being a sort of common medium of communication, current over the greater part of the earth.

**KNOCKING AT DOORS.**—"Peter" complains of the laziness of servants at such houses where he is accustomed to call, who despite of a waking summons, are very slow in answering him. We will recommend the plan of Lord Erskine, who always directed his tiger to knock at the house where he intended to call with a postman's knock, finding that servants always more punctually answered knocks of that kind than any other.

**INDIA-ROUBER.** J. D. G.—This may be dissolved in some of the essential oils, as oil of turpentine, and also in the fat oils, as that of olives and almonds. It may be dissolved by boiling in spirits of turpentine, and putting in small pieces until dissolved, but the solution does not dry perfectly.

**EARLY MENTION OF FORKS.** J. J. W.—This occurs in a curious passage of *Græcorum Crustacea*, a singular book of travels, published in 1611—"The Italian, and also most strangers that are comestant in Italy, do always, at their meals, use a little fork when they cut their meat."

**ETIQUETTE.** F. W. W.—The ancients were very superstitious respecting religion. Many are recorded and mentioned as happening at the same time with important events in history, and so described that they may be recognised by the astronomer, who can calculate with perfect accuracy the time of every eclipse that has happened.

**LABOUR AND RECREATION.**—We are informed that Messrs. Peter Parbury & Co., the machine-makers, of Leeds, have purchased for the use of their workmen, as a means of affording them agreeable recreation, a stock of Save-homes and their instruments, which will form one of the largest and most complete brass bands in that part of the country. The instrument is of the same description as those used by the British Army. Mr. Whiteley, leader of the Brindley Band and of the Leeds troop of Yorkshire Hussars, is appointed leader of the new band. We cannot but fully commend this spirit of harmony between employers and their workmen, especially in presence of the discord that unhappily prevails in other quarters, but which, we trust, will be of transient duration. The goodness of both instruments and the assiduous must procure the necessary effect of mutual cooperation, arising from healthy recreation. Never was a more judicious example of the value of "Ourselves" when the above critical verdict is being sung with a spirit of invention, and Art is being done to its best advantage, in the battle of industry—perpetual and healthy, with its operation, and progress in its result. There is no reaching on the way, only "pushing and true" must point the tanks. The paper should be a little wider.

THE MARCH OF THE DEAF.

**POWASH CHINA CHAI.** S. S. A. E. F.—If the tea be good, these articles of dress are not so bad as they are frequently as may be required, and no imputation of their beauty will be discernible, even when the various shades of green are been employed among the colours in the patterns. In cleaning them make a strong lather of boiling water, suffer it to boil, when cold or nearly so, wash the scarf quickly and thoroughly, dip it immediately in cold hard water in which a little salt has been thrown (to preserve the colours), rinse, squeeze, and hang it out to dry in the open air; put it on its extreme edge to the line, so that it may not in any part be folded together, the more rapidly it dries the clearer it will be.

**ORIGIN OF THE TERM "BLUE-STOCKING."** Y. Y.—Barwell, in his life of Dr. Johnson, relates that about the year 1750, it was much the fashion for several ladies to have a room assembled, where the fair sex might participate in conversation with literary and ingenious men, and could be a natural desire to please. These societies were denominated *Blue stocking Clubs*, from the following circumstance—One of the most eminent members was Mr. Stoughton, whose dress was remarkably grave and in accordance it was observed that he wore blue stockings. Such was the excellence of his conversation, that his acquaintance cut it as a rare treat, and it used to be said, "We are all blue stockings," and thus the name, the club was established.

**ORIGIN OF THE TERM "CHAPEL," APPLIED TO PRINTING.** A Young Printer—There is a Moxon, who published, in 1677, a manual of the various customs used in a printing office, states that a "chapel" or printing-house is, by custom out of mind, called a "chapel," doubtless conferred upon it by the courtesy of some great churchman, who, for the looks of decency that issued from a printing office,

gave it the reverend name of "chapel." Pardon says that "the place of conference among printers is by them called a chapel, because the first work printed in England was executed in a chapel of Westminster Abbey;" and this seems to be the most probable origin of the expression.

**STAMMERING.** Stammer on.—The natural indication for the cure of impeded speech, is to bring under command of the will the associated movements of the lips and tongue with those of the larynx. One method of doing this is by singing the words which are difficult, or reading aloud in a singing manner. The raising of the point of the tongue by two peas placed under it, is often beneficial. The patient should practice himself in reading sentences from which all letters that cannot be pronounced without a vowel should be omitted. He should especially never attempt to speak without filling the chest with a deep breath; and, in reading, take breath frequently—at least, every five or six words.

**COMMUNICATIONS RECEIVED.**—J. H. W. (coloured paper will perhaps serve the purpose required).—ALPHA (will not his wishes be satisfied later).—G. J. L. (the "Portfolio" of the *Home Companion* can be obtained of any bookseller, and will preserve the work until the volumes are bound).—D. O. J. (in any thanks to our intelligent correspondent, whose suggestions we shall always be happy to receive).—J. WHITE (morning is undoubtedly the best time for study).—A. H. S. (the best cure for head-ache is exercise, both body and mind should also be kept in good subjection).—LAW (water cannot injure them).—M. GNEY (we are unable to decide the question, so much depends upon circumstances).—LAW (Graham's *Domestic Medicine* will probably serve the purpose).—We are not aware of a permanent counteracting power, except it may be the constant admission of fresh air).—H. O. V. (will find his question answered in our last number).—S. O. (white lead forms the basis of oil painting for houses, and when different tints of colour are required, a certain quantity of various pigments are added).—THOMAS (many thanks for your notice).—L. W. (you will find the information in No. 6 of our work).—M. LIVER (very properly the salt larks of which the tusk of the elephant consists, though the name is also given to the tusk of the walrus, and of the hippopotamus).—WILLIAM ASH (mother of pearl is easy to work, and takes a fine polish. As it is easily calcarious, it is easily corroded by acids).—T. D. W. (we are indebted to any opinion on the subject).

**REMARKS.** (We recommend *Watts's Logic*).—ISQUEEN (papers were not noticed into France from Paris by Henry IV).—B. (rattles, extended from the lungs, and stored in a cool, wet dry place, are generally improved by a year's keeping).—CHIRO (the earliest dresses of mankind probably consisted of the skins of animals, and it appears that these were employed as clothing long after the invention of the art of weaving).—C. F. (we cannot answer the question).—SUNSHINE (many thanks).—C. RAM (the colour of a and moderate living are the best indications of health).—X. Y. Z. (we have many reasons for withholding our opinion on the desirability of emigration).—It is too important a question for hasty decision).—L. A. (the colour gives the brightest crimson in wool-dyeing).—B. T. F. (many thanks).—V. A. (the Quadrangle Index to the *Edinburgh Encyclopedia* contains a complete list of receipts in that work, and may be had gratis).—W. S. (there are several kinds of rouge, but they are all composed of one or more of the following:—powdered French chalk).—EMMA (common oil of nutmeg is made of equal parts of best or nutmeg-net and long-hand melted together).—M. J. (essential oils are chiefly obtained by distillation, a few are obtained by expression, a those of the orange, lemon, or bergamot).—QUINTON (the Greek and Latin name of the diamond is *adamas*—invincible, in allusion to its hardness, whence is derived the English adjective adamantine).—E. J. (the use of slaves is familiarly known to the ancients, and was procured in abundance from Egypt).—YOUNG (thank).—CHARLES M. (it is being acquainted with the circumstances of the person alluded to, we cannot offer any opinion).

**REMARKS.** (The best plan for getting children to sleep is by laying them down to rest at stated hours, when, if a bad night, the inclination to sleep is overpowered).—S. B. (many thanks for the suggestion).—M. A. (reading aloud is one of the best exercises that can be taken by any one, particularly if it be done of the chest).

# THE HOME COMPANION:

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL

No. 14.—Vol. I.]

SATURDAY, APRIL 3, 1852.

[PRICE ONE PENNY.]

## LIFE'S PROGRESS.

"We bring our years to an end as it were a tale that is told."—Psalms.

CHILD! that so securely clingest  
To thy mother's side,  
And thine arm around her flingest,  
Lost some harm be tide!  
Thou who art so archely smiling,  
Void of care thy brow;  
No wrong thought thy soul defiling—  
Child, how old art thou?

And the child looked up with a face of  
glee,  
Which beamed with a smile of ecstasy;  
But his lipping tongue no words expressed,  
As he closer clung to his mother's breast:  
And the guileless glance of that smiling  
eye

Was all the innocent one's reply.  
Boy! that mournfully art creeping  
To thy tasks to-day,  
And to-morrow high art leaping  
On thy joyous way,  
Thou whose every thought is bounded  
By the present now;  
Thy prospects all by hope surrounded,  
Boy, how old art thou?

And the boy answered haughtily,  
And his bosom swelled perceptibly:—  
"Call me not Boy—I am in my teens,  
And long have forgotten my childhood's  
scenes;  
And five brief years will soon be gone,  
Then hail I all hail to twenty one!  
Hurrah! for the day that shall set me  
free,  
When none shall dare to dictate to me!"

Man! that through the crowded city  
Passes in thy prime,  
Doing forth superfluous pity  
To the sons of Time;  
Thou, whose half of life is wasted,  
Undeemed thy vow;  
Religion's waters scarcely tasted—  
Man! how old art thou?

And the man replied abstractedly,  
In a voice that sounded remorsefully:—  
"Oh! ask me not—the days are past,  
That I vainly thought for aye would last!  
The plane that I sown in my early  
years,  
Have brought to me only griefs and  
tears,  
And those whom in youth I did not  
despise,  
Have been lifted up in the nation's eyes,  
Whilst, unimproved, the powerful sway  
Of my forty summer's hatu passed  
away!"

Grey-haired, old! that totterest weakly  
'Cross thy chamber floor,  
Drinking sounds, benign and meekly,  
Soon thou'lt hear no more!  
Thou whom "mere oblivion" shroudeeth,  
Whose last days are now,  
Ere "sans speech" upon thee crowdeth,  
Say, how old art thou?

And the grey-haired man essayed to speak,  
And a tear passed over his withered cheek,  
But there came no sound—he bowed his  
head—  
His age untold, he was with the dead!

## TWO FACES UNDER ONE HOOD.

BY EMMA C. EMBURY.

"The land hath bubbles as the water hath,  
And these are of them."

"Who is she?"

"Ay, that is precisely the question which everybody asks, and nobody can answer."

"She is a splendid-looking creature, be she who she may."

"And her manners are as lovely as her person. Come and dine with me to-morrow: I sit directly opposite her at table; so you can have a fair opportunity of gazing at this new star in our dingy firmament."

"Agreed; I am about changing my lodgings, and if I like the company at your house, I may take a room there."

The speakers were two gay and fashionable men: one a student of law, the other a confidential clerk in a large commercial house. They belonged to that class of youths, who, while in reality labouring most industriously for a livelihood, yet take infinite pains to seem idle and useless members of society; fellows who at their outset in life try hard to repress a certain respectability of character, which after a while comes up in spite of them, and makes them very good sort of men in the end. The lady who attracted so much of their attention at that moment, had recently arrived in the city; and, as she wore the weeds of widowhood, her solitary position seemed sufficiently explained. But there was an attractiveness in her appearance and manners which excited a more than usual interest in the stranger's history. She had that peculiar fascination which gentlemen regard as the most exquisite refinement of frank simplicity, but which ladies, better versed in the intricacies of female nature, always recognise as the perfection of art. None but an impulsive, warm-hearted woman, can retain her freshness of feeling and ready responsive sympathy after five-and-twenty; and such a woman never obtains sufficient command over her own sensitiveness to exhibit the perfect adaptability and uniform amiableness of deportment which are characteristics of the skillful fascinator.

Harry Maurice, the young lawyer, failed not to fulfil his appointment with his friend; and at four o'clock on the following day, he found himself the *vis-à-vis* of the bewitching Mrs. Howard, gazing on her loveliness through the somewhat hazy atmosphere of a steaming dinner-table. If he was struck with her appearance when he saw her only stepping from a carriage, he was now completely bewildered by the whole battery of charms which were directed against him. A well-rounded and graceful figure, whose symmetry

was set off by a close-fitting dress of black bombazine; superb arms, gleaming through sleeves of the thinnest crape; a neck of dazzling whiteness, only half concealed beneath the folds of a *fichu à la grand'mère*; features not regularly beautiful, somewhat sharp in outline, but full of expression, and enlivened by the brightest of eyes and pearliest of teeth, were the most obvious of her attractions.

The ordinary civilities of the table, proffered with profound respect by Maurice, and accepted with quiet dignity by the lady, opened the way to conversation. Before the dessert came on, the first barriers to acquaintance had been removed, and, somewhat to his own surprise, Harry Maurice found himself perpetrating bad puns and uttering *gay bon-mots* in the full hearing, and evidently to the genuine amusement, of the lovely widow. When dinner was over, the trio found themselves in the midst of an animated discussion respecting the relative capacity for sentiment in men and women. The subject was too interesting to be speedily dropped, and the party adjourned to a convenient corner of the drawing-room. As usual, the peculiar character of the topic upon which they had fallen led to the unguarded expression of individual opinions, and of course to the development of much implied experience. Nothing could have been better calculated to display Mrs. Howard as one of the most sensitive, as well as sensible of her sex. She had evidently been one of the victims to the false notions of society. A premature marriage, an uncongenial partner, and all the thousand-and-one his attendant upon baffled sentiment, had probably entered largely into the lady's bygone knowledge of life. Not that she deigned to confide any of her personal experience to her new friends, but they possessed active imaginations, and it was easy to make large inferences from small premises.

Midnight sounded ere the young men remembered that something was due to the ordinary forms of society, and that they had been virtually "talking love" for seven hours, to a perfect stranger. The sudden reaction of feeling, the dread lest they had been exposing their peculiar habits of thought to the eye of ridicule, the frightful suspicion that they must have seemed most particularly "fresh" to the lady, struck both the gentlemen at the same moment. They attempted to apologise, but the womanly tact of Mrs. Howard spared them all the discomfort of such an awkward explanation. She reproached herself so sweetly for having suffered her impulsive nature to beguile her with such unwonted confidence—she thanked them so gently for their momentary interest in her "melancholy recollections of blighted feelings"—she so earnestly implored them to forget her indiscreet communications with persons "whose singular congeniality of soul had made her forget that they were strangers," that she succeeded in restoring them to a comfortable sense of their own powers of attraction. Instead of thinking they had acted like men "afflicted with an extraordinary quantity of youngness," they came to the conclusion that Mrs. Howard was one of the most discriminating of her sex, and the tear which swam in her soft eyes as she gave them her hand in parting, added the one irresistible charm to their previous bewilderment.

The acquaintance so auspiciously begun was not allowed to languish. Harry Maurice took lodgings in the same house; and thus, without exposing the fair widow to invidious remark, he was enabled to enjoy her society with less restraint. Unlike most of his sudden fancies, he found his liking for this lady "to grow by what it fed on." She looked so very lovely in her simple white morning dress and pretty French cap, and her manners partook so agreeably of the simplicity and easy negligence of her breakfast attire, that she seemed more charming than ever. Indeed, almost every one in the house took a fancy to her. She won the hearts of the ladies by her unbounded fondness for their children, and her consummate tact in inventing new games for them; while her entire unconsciousness of her own attractions, and apparent indifference to admiration, silenced for a time all incipient jealousy. The gentlemen could not but be pleased with a pretty woman who was so sweet-tempered and so little exciting; while her peculiar talent for putting every one in good humour with themselves—a talent, which in less skillful hands would have been merely an adroit power of flattery—sufficiently accounted for her general influence.

There was only one person who seemed proof against Mrs. Howard's spell. This was an old bank clerk, who for forty years had occupied the same post, and stood at the same desk, encountering no other changes than that of a new ledger for an old one, and hating every innovation in morals and manners with an intensity singularly at variance with his usual quietude, or rather stagnation of feeling. For nearly half his life he had occupied the same apartment, and nothing but a fire or an earthquake would have been sufficient to dislodge him. Many of the transient residents in the house knew him only by the *sobriquet* of "the Captain," and the half-dictatorial, half-whimsical manner in which, with the usual privilege of a humourist, he ordered trifling matters about the house, was probably the origin of the title. When the ladies who presided at the head of the establishment first opened

their house for the reception of boarders, he had taken up his quarters there, and they had all grown old together; so it was not to be wondered at if he had somewhat the manner of a master.

The Captain had looked with an evil eye upon Mrs. Howard from the morning after her arrival, when he had detected her French dressing-maid in the act of peeping into his boots, as they stood outside of the chamber-door. This instance of curiosity, which he could only attribute to an unjustifiable anxiety to be acquainted with the name of the owner of the said boots, was such a flagrant impropriety, besides being such a gross violation of his privilege of privacy, that he could not forgive it. He made a formal complaint of the matter to Mrs. Howard, and earnestly advised her to dismiss so prying a servant. The lady pleaded her attachment to a faithful attendant, who had left her native France for pure love of her, and brought him to forgive a first and venial error. The Captain had no faith in this being a first fault, and as for its veniality, it she had put out an "L," and called it a *venial* affair, it would have better suited his ideas of her. He evidently suspected both the mistress and the maid; and a prejudice in his mind was like a thistle-seed—it might wing its way on gossamer pinions, but once planted, it was sure to produce its crop of thorns.

In vain the lady attempted to conciliate him: in vain she tried to humour his whims, and pat and fondle his hobbies. He was proof against all her allurements; and whenever, by some new or peculiar grace, she won unequalled expressions of admiration from the more susceptible persons around her, a peevish "Fudge!" would resound most emphatically from the Captain's lips.

"Pray, sir, will you be so good as to inform me what you meant by the offensive monosyllable you chose to utter this morning, when I addressed a remark to Mrs. Howard?" said Harry Maurice to him, upon a certain occasion, when the old gentleman had seemed more than usually caustic and observing.

The Captain looked slowly up from his newspaper: "I am old enough, young man, to be allowed to talk to myself, if I please."

"I suppose you meant to imply that I was 'green,' and stood a fair chance of being 'done brown,'" said Harry, mischievously, well knowing his horror of all modern slang.

"I am no judge of colours," said he, drily, "but I can tell a fool from a knave when I see them contrasted. In old times it was the woman's privilege to play the fool, but the order of things is reversed now-a-days." So saying, he drew on his gloves, and walked out with his usual clock-like regularity.

Three months passed away, and Harry Maurice was "foll five fathoms deep" in love with the beautiful stranger. Yet he knew no more of her personal history than on the day when they first met, and the old question of "Who is she?" was often in his mind, though the respect growing out of a genuine attachment checked it ere the words rose to his lips. On more than one occasion he had been favoured with a commission to transact banking business for her. "He had made several deposits in her name, and had drawn out several small sums for her use. He knew, therefore, that she had moneys at command, but of her family and connexions he was perfectly ignorant. He was too much in love, however, to hesitate long on this point. Young, ardent, and possessed of that pseudo-romance, which, like French gilding, so much resembles the real thing that many prefer it, as being cheaper and more durable, he was particularly pleased with the apparent disinterestedness of his affection. Too poor to marry unless he found a bride possessed of fortune, he was now precisely in the situation where alone he could feel himself on the same footing with a wealthy wife. He had an established position in society, his family were among the oldest and most respectable residents of the city, and the offer of his hand under such circumstances to a lone, unfriended stranger, took away all appearance of cupidity from the suitor, while it constituted a claim upon the lady's gratitude as well as affection. With all his assumed self-confidence, Maurice was in reality a very modest fellow, and he had many a secret misgiving as to her opinion of his merits; for he was one of those youths who use puppyishness as a cloak for their diffidence. He wanted to assure himself of her preference before committing himself by a declaration, and to do this required a degree of skill in womancraft that far exceeded his powers.

In the mean time the prejudices of the Captain gained greater strength, and although there was no open war between him and the fair widow, there was perpetual skirmishing between them. Indeed, it could not well be otherwise, considering the decided contrast between the two parties. The Captain was prejudiced, dogmatic, and full of old-fashioned notions. A steady adherent of ruffled shirts, well-starched collars, and shaven chins, he regarded with contempt the paltry subterfuges of modern fashion. At five-and-twenty he had formed his habits of thinking and acting, and at sixty he was only the same man grown older. A certain indulgence of temper prevented him from investigating anything new, and he was therefore content to deny all that did not conform to his early notions. He hated fashionable slang, despised a new-modelled costume, scorned modern morality, and ranked the crime of wearing a moustache and imperial next to the seven deadly sins. His standard of female perfection was a certain "lady-love" of his youth, who might have served as a second Harriet Byron to some new Sir Charles Grandison. After a courtship of ten years, during which time he never ventured upon a greater familiarity than than of pressing the tips of her fingers to his lips on a New Year's day, the lady died, and the memory of his early attachment, though something like a rose encased in ice, was still the one flower of his life.

Of course the freedom of modern manners was shocking to him, and in Mrs. Howard he beheld the impersonation of vanity, coquetry, and falsehood. Besides, she interfered with his privileges. She made suggestions about certain arrangements at table; she pointed out improvements in several minor household comforts; she asked for the liver-wing of the chicken, which had

heretofore been his peculiar petquisite, as carver; she played the accordion, and kept an Eolian harp in the window of her room, which unfortunately adjoined his; and, to crown all, she did not hesitate to ask him questions as coolly as if she was totally unconscious of his privileges of privacy. He certainly had a most decided grudge against the lady; and she, though apparently all gentleness and meekness, yet had so adroit a way of saying and doing disagreeable things to the old gentleman, that it was easy to infer a mutual dislike.

The Captain's benevolence had been excited by seeing Harry Maurice on the highroad to being victimised, and he actually took some pains to make the young man see things in their true light.

"Pray, Mr. Maurice, do you spend all your mornings at your office?" said he, one day.

"Certainly, sir."

"Then you differ from most young lawyers," was the gruff reply.

"Perhaps I have better reasons than many others for my close application. While completing my studies, I am enabled to earn a moderate salary by writing for Mr. —, and this is of some consequence to me."

The old man looked inquiringly, and Maurice answered the silent question.

"You know enough of our family, sir, to be aware that my father's income died with him. About a hundred pounds per annum are all that remains for the support of my mother and an invalid sister, who reside in the country. Of course, if I would not encroach upon their small means, I must do something for my own maintenance."

The Captain's look grew more pleasant as he replied, "I do not mean to be guilty of any unpertinent intrusion into your affairs, but it seems to me that you share the weakness of your fellows, by thus working like a slave and spending like a prince."

Maurice laughed. "Perhaps my princely expenditure would scarcely bear so close a scrutiny as my slavish toil. I really work; but it often happens that I only seem to spend."

"I understand you; but you are worthy of better things; you should have courage to throw off the trammels of fashion, and live economically, like a man of sense, until fortune favours you."

The young man was silent for a moment, then, as if to change the subject, asked, "What was your object in inquiring about my morning walks?"

"I merely wanted to know if you ever met Mrs. Howard in the street in the morning."

"Never, sir; but I am so seldom there, that it would be strange if I should encounter an acquaintance among its throngs."

"I am told she goes out every morning at nine o'clock, and does not return until three."

"I suppose she is fond of walking."

"Humph! I rather suspect she has some regular business."

"Quite likely," said Maurice, laughing heartily, "perhaps she is a book-clerk—occupied from nine to three, you say—just banking hours."

The Captain looked sternly in the young man's face, then uttering his emphatic "Fudge!" turned upon his heel, and whistling "A Frog he would a wooing go," sauntered out of the room, thoroughly disgusted with the whole race of modern young men.

The old gentleman's methodical habits of business had won for him the confidence of every one, and as an almost necessary consequence had involved him in the responsibility of several trusteeships. There were sundry old ladies and orphans whose pecuniary affairs he had managed for years with the punctuality of a Dutch clock. Before noon, on the days when their interest monies were due, he always had the satisfaction of paying them into the hands of the owners. It was only for some such purpose that he ever left his post during business hours; but the claims of the widow and the father's came before those of the ledger, and he sometimes stole an hour from his daily duties to attend to these private trusts.

Not long after he had sought to awaken his young friend's suspicions respecting Mrs. Howard, one of these occasions occurred. At noon he found himself seated in a pleasant drawing-room, between an old lady and a young one, both of whom regarded him as the best of men. He had transacted his business and was about taking leave, when he was detained to partake of a lunch; and, while he was thus engaged, the young lady was called out of the room. She was absent about fifteen minutes, and when she returned her eyes were full of tears. A pile of gold lay on the table (the Captain would have thought it angel-dunlike to offer dirty paper to ladies), and taking some from the heap she again vanished. This time she did not quite close the door behind her, and it was evident she was conversing with some claimant upon her charity. Her compassionate tones were distinctly heard in the drawing-room, and when she had ceased speaking, a remarkably soft, clear, liquid voice responded to her kindness. There was something in these sounds which awakened the liveliest interest in the old gentleman. He started, fidgeted in his chair, and at length, fairly mastered by his curiosity, he stole on tiptoe to the door. He saw only a drooping figure, clad in mourning, and veiled from head to foot, who, repeating her thanks to her young benefactress, gathered up a roll of papers from the hall table, and withdrew before he could obtain a glimpse of her face.

"What imposter have you been seeing now?" he asked, as the young lady entered the room, holding in her hand several cheap French engravings.

"No imposter, my dear sir, but a most interesting woman."

"Oh, I dare say she was very interesting, and interested, too, no doubt; but how do you know she was no swindler?"

"Because she shed tears, real tears."

"Humph! I suppose she put her handkerchief to her eyes and snivelled."

"No, indeed; I saw the big drops roll down her cheeks, and I never can doubt such an evidence of genuine sorrow; people can't force tears."

"What story could she tell which was worth so much money?"

"Her husband, who was an importer of French stationery and engravings, has recently died insolvent, leaving her burdened with the support of two children and an infirm mother. His creditors have seized everything, excepting a few miserable prints, by the sale of which she is now endeavouring to maintain herself independently."

"Are the prints worth anything?"

"Not much."

"Then she is living upon charity quite as much as if she begged from door to door; it is only a new method of levying contributions upon people with more money than brains."

"The truth of her statement is easily ascertained. I have promised to visit her, and if I find her what she seems, I shall supply her with employment as a seamstress."

"Will you allow me to accompany you on your visit?"

"Certainly, my dear sir, upon condition that if you find her story true, you will pay the penalty of your mistrust in the shape of a goodly donation."

"Agreed! I'll pay if she turns out to be an object of charity. But that voice of hers—I don't believe there are two such voices in this city."

What notion had now got into the crotchety head of the Captain no one could tell; but he certainly was in wonderful spirits that day at dinner. He was in such good humour that he was even civil to Mrs. Howard, and sent his own bottle of wine to Harry Maurice. He looked a little confounded when Mrs. Howard, taking advantage of his "melting mood," challenged him to a game at backgammon, and it was almost with his old gruffness that he refused her polite invitation. He waited long enough to see her deeply engaged in chess with her young admirer, and then hurried away to fulfil his engagement with the lady who had promised to let him share her errand of mercy.

He was doomed to be disappointed, however. They found the house inhabited by the unfortunate Mrs. Harley; it was a low one-story rear building, in — Street, the entrance to which was through a covered alley leading from the street. It was a neat, comfortable dwelling, and the butcher's shop in front of it screened it entirely from public view. But the person of whom they were in quest was not at home. Her mother and two rosy children, however, seemed to corroborate her story, and as the woman seemed disposed to be rather communicative, the old gentleman fancied he had now got upon a true trail. But an incautious question from him sealed the woman's lips, and he found himself quite astray again. Finding nothing could be gained he hurried away, and, entering his own door, found Mrs. Howard still deeply engaged in her game of chess, though she did not look up with a sweet smile when she saw him.

A few days afterwards his young friend informed him that he had been more successful, having found Mrs. Harley just preparing to go out on her daily round of charity-seeking.

When suspicions are once aroused in the mind of a man like the Captain, it is strange how industriously he puts together the minutest links in the chain of evidence, and how curiously he searches for such links, as if the unmasking of a rogue was really a matter of the highest importance. The Captain began to grow more reserved and uncommunicative than ever. He uttered oracular apothegms and dogmatisms until he became positively disagreeable, and at last, as if to show an utter aberration of mind, he determined to obtain leave of absence for a week. It was a most remarkable week even in his history, and as such excited much speculation. But the old gentleman's lips were closely buttoned; he quietly packed a valise, and set out upon what he called a country excursion.

It was curious to notice how much he was missed in the house. Some missed his kindness; some his quaint humorosity; some his punctuality, by which they set their watches; and Mrs. Howard seemed actually to feel the want of that sarcastic tone which made the *sauce piquante* of her dainty food. Where he actually went no one knew, but in four days he returned, looking more bilious, and acting more crotchety than ever; but with an exhilaration of spirits that showed the marvellous effect of country air.

The day after his return, two men, wrapped in cloaks and wearing slouched hats, entered the butcher's shop in — Street. Giving a nod in passing to the man at the counter, the two proceeded up stairs, and took a seat at one of the back windows. The blinds were carefully drawn down, and they seated themselves as if to note all that passed in the low, one-story building, which opened upon a narrow paved alley directly beneath the window.

"Do you know that we shall have a fearful settlement to make if this turns out to be all humbug?" said the younger man, as they took their station.

"Any satisfaction which you are willing to claim, I am ready to make, in case I am mistaken; but—look there."

As he spoke, a female, wearing a large black cloak and thick veil, entered the opposite house. Instantly, a shout of joy burst from the children, and as the old woman rose to drop the blind at the window, they caught sight of the two merry little ones pulling at the veil and cloak of the mysterious lady.

"Did you see her face," asked the old man.

"No, it was turned away from the window."

"Then have patience for awhile."

Nearly an hour elapsed, and then the door again opened to admit the egress of a person apparently of less stature than the woman who had so recently entered, more drooping in figure, and clad in rusty and shabby mourning.

"One more kiss, mamma, and don't forget the sugar-plums when you come back," cried one of the children.

The woman stooped to give the required kiss, lifting her veil as she did so, and revealing the whole of her countenance. A groan burst from the lips of

one of the watchers, which was answered by a low chuckle from his companion; for both the Captain and Harry Maurice had recognised in the mysterious lady the features of the bewitching Mrs. Howard.

There is little more to tell. The question of "Who is she?" now needed no reply. Mrs. Howard, Mrs. Harley, and some dozen other aliases, were the names of an exceedingly general adventuress, who is yet vividly remembered by the charitable whom she victimised a few years since. She had resided in several large cities, and was drawing a very handsome income from her ingenuity. Her love of pleasure being as great as her taste for money-making, she devised a plan for living two lives at once, and her extreme mobility of feature, and exquisite adaptability, enabled her to carry out her schemes. How far she would have carried the affair with her young lover it is impossible to say, but the probability is that the "love affair" was only an agreeable episode "*pour passer le temps*," and that whatever might have been the gentleman's intentions, the lady was guileless of ulterior views.

The Captain managed the affair his own way. He did not wish to injure the credit of the house, which he designed to call his home for the rest of his life, and therefore Mrs. Howard received a quiet intimation to quit, which she obeyed with her usual unruffled sweetness. Harry Maurice paid a visit to his mother and sister in the country, and on his return found it desirable to change his lodgings. The Captain kept the story to himself for several years, but after Maurice was married, and settled in his domestic habits, he felt himself privileged to use it as a warning to all glib young men, against bowitching widows and mysterious fellow-boarders.

## THE CONSUL'S DAUGHTER.

### A SEA SKETCH.

"LAND O!"

"Where away?"

"Right ahead, sir."

"Very well. Lay down."

"That is Cape Blanco, I take it, Mr. Muller," said Captain John Wilson to his mate.

"Yes, sir; from yesterday's observation, we must be well to windward. The *Belle* has not done much since the mid-watch. We'll be late in getting into port, I'm afraid."

"It will take us until nightfall with this breeze, Mr. Muller, and the land-breeze will then be blowing a perfect hurricane. Get up the chains, if you please, and have the anchors on the bows."

"Ay, ay, sir." And the mate went forward.

Such was the dialogue between Captain Wilson and his mate, on board the good ship the *Belle*, then bound to Payta (Peru) with merchandise.

We were sailing pleasantly along, at the rate, possibly, of six miles in the hour. The ship rose and pitched very lazily with the low swell; and as my hammock swung with every motion (I had been confined to it for weeks) I could see the peculiar "golden haziness" which always hangs over the land when you are making an approach from the west in the earlier hours of the morning. There is a very expressive word for the appearance among sailors; but an elderly gentleman's memory may be forgiven some small shortcomings.

Captain Wilson had been in the habit for several days—while I was slowly recovering from a violent fever—of having my hammock swung upon the poop-deck. On the morning of the day which commences my story, the decks were not yet dry from the morning scrubbing, when I climbed wearily on deck, with the assistance of the second mate and Ben the steward, and lay down in my hammock. As we stood in for the land, I could catch occasional glimpses of its outlines; and when we had passed Payta Head, there came deliciously to me an odour of the land. I remember that, in the girl-like weakness of my exhausted energies, the hot tears rolled down my cheeks, as I murmured,—

"Thank God! I shall live to set foot on land!"

As we approached Payta, the fresh land-breeze increased our speed to ten knots; and, just at night-fall, as Captain Wilson had anticipated, we came to anchor. During the last few tacks that we made in beating up nearer the town, the land-breeze had freshened to almost a gale. We were only showing whole top-sails, jib, and main-top gallant-sails; and even with that amount of canvas, there was a clatter of ropes and blocks, and a *stalling* of sails, as the top-sails were clewed up, that rendered it almost impossible to hear the loudest order. The holding-ground at Payta is excellent; and our scope of seventy fathoms on the smaller cable held the *Belle* to her moorings.

We were to remain but four days; and Captain Wilson urged me to remain for the next two months under the care of the physician at the consulate. Accordingly, I was carried ashore the next morning, and placed under the protection of old Pilar, who dignified his doggerly of a house with the title of hotel. He was a Frenchman. He had married a Spanish-American lady some years before; a good-looking woman, with large, liquid eyes, that I had a wonderful fancy for gazing into; to whose care I probably owe it that I was not gathered, years ago, into the sheaves of the Grim Reaper.

The front apartment on the first floor was a bar-room. Old Pilar had several other invalids under his care. Indeed, I believe the consul gave him the preference in that regard, as several men were added to our number during the short period of my sojourn.

He had, also, a little boy, who answered to the name of Whong (Juan), and who so far took a fancy to me as to provide me with many a coveted

delicacy, for the want of which, so far as old Pilar's attentions were concerned, I might have gone to my last home.

Oh, how wearily the weeks dragged their hours away in that Spanish hovel. My sick-couch was an old settle. No one thought of retiring before midnight; for two hours of the morning, and the time from night-fall until midnight, were the only endurable portions of the whole twenty-four hours; and then, as soon as we laid our heads upon our pillows (mine was my monkey-jacket), the fleas carried the war into Africa. Groans and imprecations followed their ravenous onset; and there were few hours of the night in which I could not hear some gruff old sea-dog anathematizing the fleas. As the night waned, however, the enemy drew off their forces; and we slept the sleep of the weary.

We breakfasted at ten. The coffee—bah! let it pass. The principal dish was a huge omelet, consisting of eggs, onions, beef, vegetables—what not? and this, with a very palatable roll of baker's bread, was our bill of fare. We had no water, except such as was brought in casks, on the backs of mules, from some place leagues away. It was warm, muddy, brackish; and, but for a cup of tea with our four o'clock dinner, I must have died of thirst.

During the third week of my sojourn, old Pilar announced to us that we had best "bug up a little," as the consul was about to pay us a visit. We complied with the suggestion, and had but just completed our toilet, when his arrival was announced.

"Mon Dieu!" exclaimed old Pilar, in the tones of alarm, (his usual Spanish epithets were always exchanged for the native French when he was excited) *de consul 'ave bringe de ladies. Caramba!*"

Even so. Following the consul, and a grey-haired gentleman who accompanied him, were two ladies, one, as I thought, most unmistakably the consul's wife, the other, I conjectured, the old gentleman's daughter. The consul made some general inquiries, as a matter of form; but his aged companion, as well as the ladies, looked from one to another of the invalids, with an expression of genuine kindness that I can never forget. The old gentleman was drawn aside by the consul to look at old Pilar's temple-like bird-cage, which hung in the balcony, while the ladies lingered and questioned us as to our improvement. The younger said nothing. She was a fair-haired, beautiful girl of seventeen, with blue eyes, that peered timidly forth from a mass of curls, that fell from the slight restraint of a rich ribosa; and, as her eye met my own, I silently promised myself that, if human energy could accomplish it, she should be mine. They left us.

It was wonderful how I recovered. I gained new strength every day. I made the necessary inquiries of old Pilar, with the proper degree of caution, and learned that the old gentleman was Mr. Bathurst, the incumbent of the consulate many years before, and, for a long period, a resident of Payta. The young lady, he added, was his daughter; and both were about to embark for the United States.

"Indeed!"

"Yes."

"In what vessel?"

"In that barque—the *Angelina*," and he pointed to a vessel, at whose peak the French ensign was flying.

"When does she sail?"

"Next Monday."

"Thank you."

"Pas de tout, monsieur!"

It was but a few evenings afterwards that I was passing the residence of the captain of the port; an important dignitary, by the bye, in all the Spanish-American ports. He was holding a fandango. A violin, a clarinet, and a tenor drum, were the instruments used; and these were accompanied by singers in the nasal, minor tones of Spanish music. Of course there was a great deal of noise, to say nothing of the music. The door was open, and several sailors were standing around it, some of them very manifestly intoxicated. I paused a moment, and looked in. And there, dancing with a handsome Peruvian officer, was Miss Bathurst. It was late. The dance ceased. My charmer first left the room, accompanied by her father, who, I thought, seemed to be little pleased with the attentions of the young officer. He had left the door, when his host, the captain of the port, recalled him.

"Amigo mio!"

"Señor?"

Mr. Bathurst turned toward the house; leaving his daughter standing a few paces from the door, and saying to her—

"Stay here a single moment. I won't go in."

He went, accordingly, to the door, and was speaking in a low tone, when suddenly a drunken sailor approached the fair girl, and said—

"I say, sweetie; (hiccup!) shan't I (hic!) see ye home?"

He was in the act of seizing her arm, when I sprang forward, and, dealing him a blow that sent him reeling into the gutter, I turned toward the trembling girl, to assure her of her perfect safety, when I met the alarmed father face to face.

"'S death, sir! what are you doing here?"

"Protecting your daughter from insult, sir," I replied; and, turning on my heel, I sought my lodgings. The old gentleman called the next day at old Pilar's; apologised, thanked me, made proffer of his services "in any way," and ended by saying that it would afford him great pleasure to see me at his residence, but for the fact that he was busily engaged in making the necessary arrangements for sailing, on the following Monday, for the United States. I am afraid I did not receive his civilities with the best grace in the world; for, although he seemed a very benevolent, urbane old gentleman, he gave his shoulders the slightest possible shrug as he left me, as if he would have said—"Queer fellow, that. Can't approach him."

I went, that very day, to the consul, who very kindly waited on the captain

of the *Angelina*, and secured my passage to Valparaiso; where, he said, we should be obliged to procure a passage in some American homeward-bound vessel. The day arrived. I had been half an hour on board, when Mr. Bathurst and his daughter came alongside in the government barge, under the personal escort of the captain of the port. I now discovered that that functionary was a sailor, for he worked the *Angelina* gallantly out of the harbour. At length, he laid the main topsail to the mast, got on board his beautiful barge, and left us.

For many days we sailed, close-hauled, southward and westward. On that coast it never rains, and the air is so dry and clear that a ship seems like a thing of enchantment as she glides quietly along in the sunshine and the deep blue of the Pacific. We were well-nigh three weeks out when we passed Juan Fernandez, and as we were becalmed within three miles of it, it was decided that we should go on shore. So far, there had been little intercourse between the other passengers and myself. The occurrences at Payta caused a feeling of awkwardness that kept me aloof from them. On that day, however, the excitement of a jaunt on classic ground banished all reserve.

It is exceedingly difficult to land at Juan Fernandez. We had a crew, however, that was accustomed to land in the surf, and no danger was apprehended. We reckoned without our host; for, in urging the jolly-boat toward the shore, on the back of an enormous swell, an oar broke; and, in the confusion, she capsized. I was sitting by the side of Miss Bathurst. The wave was receding; and, as I fell, I very fortunately struck the bottom near a sharp spur of a mass of rocks. I grasped the arm of the fair girl, and clutching a point of the rock, I succeeded in getting a safe footing just in time to catch her in my arms and bear her to the shore. As it was, the swell reached my knees as it broke furiously upon the beach. Captain Dubois had not been idle, and with the assistance of his men, he had borne the old gentleman safely to land, and secured the boat and oars. Mr. Bathurst was considerably bruised; and, in our drunken condition, it was desirable to return at once to the ship. The mate had seen our mishap and sent us a boat. By the direction of the captain she lay at a short distance from the shore. A warp was thrown to us; and by her assistance we succeeded in getting safely through the surf. In a few minutes we were again on shipboard.

With a fresh breeze from the south-west we shaped our course for Coquimbo, at which port the *Angelina* was to discharge some two hundred tons of salt. There we were so fortunate as to find the good ship *Chili*, of Boston, Knowles, master, in which we obtained a passage home. I will not dwell upon the incidents of the passage. Enough to say, that we had a pleasant run of one hundred and four days to Cape Cod. It was near nightfall when we passed the cape. The wind being from the south-west, we hugged the southern shore, and two hours later took a pilot. The wind grew light and baffling. We bore away with the intention of going to leeward of "The Graves;" a reef on which I have, since that time, narrowly escaped shipwreck. We were quite near the reef, when suddenly the wind changed to the north-east. I was at that moment on the top-gallant fore-castle, a few moments before I had been conversing in low tones with Julia Bathurst. We spoke of the past. I ventured to say, for all reserve had long since been banished, that I hoped our intimacy was not to end with the voyage.

"Surely not!" was the reply; and she spoke of the obligations she had incurred in the earlier stage of our acquaintance. I know not what I said in reply, for I was in a flutter of excitement, but I have a tolerably distinct recollection that Julia dropped her eyes very suddenly to the deck, the seams of which she seemed to be making the subject of a philosophical investigation, while she picked the whipping from the end of the signal halyards with the very prettiest of all pretty fingers. We were interrupted, and with a light heart I went forward.

As the squall, with which the wind changed, struck the ship, the spunkier men flew fiercely to starboard prostrating Captain Knowles, Mr. Bathurst, and the mate to the deck. All were so much injured that they were incapable of giving any assistance in the management of the ship. The second mate was so much frightened that he stood irresolute. We were going rapidly astern, directly towards the rocks on which the surf was breaking in snow-white sheets, with a deafening roar, and a glance showed me that a moment's delay would be fatal.

"Hard a-port! Down with your helm! Hard down!" I shouted, at the top of my voice; and I sprang to the wheel, and aided the man in shifting it. It saved the ship. She grazed the rock as she made a stern-board. The second mate ordered the men to the braces; the ship was speedily got out of irons; and we bore away for Long Island light. At midnight we anchored.

A flattering letter from the owners of the ship, with the proffer of the berth of first officer on board the *Chili*, for her next voyage, were my reward. I entered at once on my new duties. A conversation with Julia, on the day before we sailed, gave me no grounds for despair. The next voyage, I took the weather side of the quarter-deck; and, on my return, Miss Julia Bathurst very obligingly exchanged her maiden name for that of—bless me, good reader, I had almost made you my father confessor.

NEWSPAPER READERS.—Shepstone, the poet, divides the readers of a newspaper into the following general classes:—"The ill-natured man looks to the list of bankrupts; the tradesman, to the price of bread; the stock-jobber, to the lie of the day; the old maid, to marriages; the prodigal son, to deaths; the monopolist, to the hopes of a wet harvest; and the boarding-school miscreant, to everything that relates to Gretchen Green!"—"No man is ever satisfied," says Bishop Horne, "with another man's reading a newspaper to him; but the moment it is laid down, he takes it up and reads it over again."

# REVIEW.

GRANDFATHER WHITEHEAD'S CATECHISMS. No. I.—NATURAL PHILOSOPHY. London: Houston & Spensman.

"GRANDFATHER WHITEHEAD" of *The Family Friend*, has commenced a series of *Catechisms*, that will be found alike acceptable to teachers and pupils. Something of the kind has been long needed. The *Scientific Dialogues*, by Joyce, once a very acceptable work, have gone out of date. These *Catechisms* introduce newly discovered facts in science, and the treatment of the subject is entirely novel.

"Montaigne says remarked, that 'a tutor should not be continually thundering instruction into the ears of his pupil, as if he were pouring it through a funnel; but after having put the lad, like a young horse, on a trot before him, to observe his paces, and see what he is able to perform, should, according to the extent of his capacity, induce him to taste, to distinguish, and to find out things for himself; sometimes opening the way, at other times leaving it for him to open; and by abating or increasing his own pace, accommodate his precepts to the capacity of his pupil.'

Once excited curiosity, then inquiry will follow, and the consequence will be, a desire to gratify that curiosity by acquiring knowledge. The ignorant or uneducated mind requires cultivation quite as much as the unproductive land on the good-side. In these *Catechisms* the pupil is led step by step, by a familiar and easy method, to acquire the requisite knowledge of the subject studied, which is still further elucidated by numerous diagrams and experiments.

The experiments are so contrived, that the apparatus required is of the most simple and inexpensive kind in most instances, and due regard has been paid throughout to simplicity and usefulness, rather than magnificence; the object being to render everything as plain and intelligible as possible, commensurate with the subject."

Introductory narratives are given to fix the attention, and increase the interest of the subject to the learner.

"These narratives are all founded upon facts, or are the actual biographies of eminent scientific men. The lessons have been constructed for weekly tuition, it being desirable that the first five days should be devoted to catechising, and the sixth to recapitulation, examination *à la voce*, or essay writing upon the subjects contained in the week's course of study."

## The first Catechism is founded upon

### THE STORY OF HALLAM, THE WEAVER'S BOY.

"Nearly a century and a half ago, great distress prevailed in a certain district in England, where there were but a few houses, peopled by labourers in the humblest condition of life; and, as the land was unproductive, and marshes, hemmed in by mountains, were to be seen far and wide, the earth did not bring forth sufficient to supply the wants of the people, so that many of them were obliged to leave the home of their childhood, and settle elsewhere. A poor lad, who had only received sufficient education to enable him to read, was removed from school to assist his father in his employment of stuff-weaving. The love of knowledge—the ardent desire of becoming a scholar—had taken possession of the youth, who devoted all his leisure moments, and even a portion of the time which his father required of him, to reading and writing. The father, instead of encouraging his son's fondness for study, forbade him to open a book, behaved with great harshness, and at length drove him from the house, telling him to go and seek his fortune where and how he chose. Weary, and uncertain where to go, he threw himself upon the earth, to reflect upon the course he must take; and, having refreshed himself at an adjoining brook, walked to the neighbouring village, and took up his abode in the house of a tailor's widow, with whose son he had been previously acquainted. He contrived to support himself by industry and frugality, and to add to his stock of knowledge by careful observation and reading. Soon after his arrival, a pedlar, who combined fortune-teller and astrologer with his own trade, came to lodge in the same house; and becoming intimate with Hallam—for such was the boy's name—instructed him in the various branches of knowledge that he was acquainted with, while pursuing his own trade of pedlar and itinerant merchant. From the astrologer-pedlar, he obtained the knowledge of the first principles of Natural Philosophy; and his naturally active and intelligent mind, improved by reading, extracted new and important facts from the incidents of every-day life with which he was surrounded.

The time for the departure of the pedlar arrived, and previous to setting off on his journey, he lent Hallam *Cooker's Arithmetick*, which had bound up with it a treatise on Algebra, and a work upon *Physics and Cosmology*. These he studied so thoroughly, that when the pedlar returned, he was astonished to find his quondam pupil had almost eclipsed his tutor, and forthwith proceeded to draw his horoscope, as he termed it, in order to discover the probable career of this wonderful lad.

Having concluded his observations, the pedlar predicted that in two years Hallam would surpass his tutor, and ultimately rise to be a great man; and the youth promised that, if such came to pass, he would not forget in his prosperity the instruction of the pedlar, and his kindness towards him.

Eighteen years have elapsed, and the prediction has been fulfilled, the lad abandoned his trade of weaver, turned schoolmaster, and married his landlady—the tailor's widow. He has passed through many phases in his journey through life; and notwithstanding the privations and hardships he encountered, has risen to a considerable eminence as a scholar, has been appointed Professor of Mathematics, and elected a Fellow of the Royal Society.

The few houses that were scattered upon the borders of the wild and desolate district where Hallam's father formerly lived, have increased in number and size; the marshes have been drained, the land tilled, the mountains quarried, and the whole aspect changed from desolation to the busy hum of commercial activity. Jacquard-looms have been erected, mills and factories built, and long lines of streets; so that, from being a village at first, it has grown into a city. He seeks out the aged pedlar, who still instructs the young, and labours for his bread; the old man has almost forgotten his pupil, but tears of joy suffuse his eyes, as the remembrance of other days is recalled. At eve, the two stroll towards the brow of the hill, Hallam supporting his aged tutor, and as they approach a mill on the road-side, they halt, for the pedlar is wearied and wishes to rest himself.

"This spot," said Hallam, "is where I reclined when my father drove me from his house; but how changed the prospect! The mountain's side is now peopled; and where the heath and furze grew around marshy land, the golden-earred corn bends to the breeze. Observe you how green it moves along the road; 'tis mine—aye, and all the factories beyond! So you must now leave off telling, and share them with me; for to your instruction I owe all."

"To mine!" replied the pedlar. "Yes, 'twas through the knowledge obtained from you, that I have risen to my present position. Your prediction ever before me, and with the desire of reaching the highest pinnacle of fame and honour, I worked incessantly; success crowned my efforts; and now, surrounded with wealth and honours, I must not forget the pedlar-astrologer, and his gift book of—*NATURAL PHILOSOPHY*."

Here is one of the lessons founded upon the above narrative.

LESSON V.—*Impenetrability, &c.*—We have learned how bodies may be extended, and how compressed; and have also ascertained that all bodies are porous. Now these facts are all very important, especially when they are associated with other matters which we shall consider hereafter. They are intimately connected with the affairs of every-day life, and are therefore of great consequence. Hallam had become conversant with the laws which regulate them, and was led on step by step until he applied the knowledge he thus acquired to useful purposes. He learned that even solid bodies may be made to expand or contract without diminishing their mass, and he also learned that solid bodies have pores or interstices between their particles. Hallam had, yet to learn more of the principles of Natural Philosophy; so have we.

QUESTIONS.—52. T.—You said that all bodies have pores at intervals between their particles; how do you know this?

P.—It has been discovered by experiment, and I know it by reading. More than two centuries ago it was proved by experiment, at the Academy Del Disegno, in Florence, that gold was porous; the experience was the result of accident, but is established the fact that water may be made to pass through gold.

53. T.—Then you would imply, that because all bodies are compressible, there are interstices between their particles.

P.—Certainly, but the size of the pores varies in different substances. Thus, one substance may contain 10,000 pores in a square inch, and another 100,000 pores in the same space. In the former case, the pores are considerably larger than in the latter.

54. T.—What is the effect of the pores of a body being closer together?

P.—The substance itself is rendered more dense.

55. T.—What do you mean by being dense?

P.—The density of bodies depends upon the proximity of their particles; and therefore, the greater the density of any substance, the less will be the porosity. The density of a body is the relation of its weight to its volume, and therefore indicates its specific gravity, a property we shall consider on another occasion.

56. T.—How can you prove that bodies have pores?

P.—By a very simple experiment. [Experiment 10.] I have here a piece of wood, with a wire fastened to it, and a tumbler of water. I will plunge the wood into the water, and keep it at the bottom of the tumbler by means of the wire (performing the experiment). You see that several bubbles of air are rising to the surface; they have escaped from the pores of the wood, which are being filled with water instead. If there were not any interstices it would be impossible for the air to be in the substance of the wood, because it is contrary to one of the established general laws of Natural Philosophy.

57. T.—Is the knowledge of the porosity of bodies applied to any useful or scientific purposes?

P.—Yes; filtration is based upon, and electrotyping is under obligations to it.

58. T.—Can you adduce any further proofs of the universal porosity of bodies?

P.—Yes; many bodies are capable of compression merely by mechanical force, and this I will explain by a simple experiment. [Experiment 11.] I have here a basin of water, and a piece of cork floating upon the surface; I will take an empty tumbler (which is commonly termed, but actually filled with air) and invert it over the cork, so that the edge shall just be below the water; the air is now confined within the tumbler, and occupies a given space, but if I plunge the tumbler below the surface, and keep it there, it will be found that the water rises to a certain height above the level of the basin, and the deeper that it is plunged the more the cork rises in the tumbler; but as the pressure is removed and the goblet rises, it will be found that the water descends and the cork with it, because the air expands. Thus you will see that air is capable of being compressed—a sufficient proof of its porosity.

59. T.—Why did not the water fill the tumbler when you plunged it below the surface?

P.—Because, as the air was in the tumbler, the water could not occupy the same space at the same time, and, therefore, the experiment also proves the IMPENETRABILITY of the air.

60. T.—What do you mean by impenetrability?

P.—By the impenetrability of bodies is meant, that no two particles of matter can occupy the same identical portion of space at the same moment.

61. T.—How can you prove this?

P.—By experiment. [Experiment 12.] I have here a piece of clay, and a bullet, which I will enclose within the clay. Now it is quite impossible to make another bullet occupy the cavity that contains the first bullet as long as it is there. This you will readily understand, because it is like trying to pour a pint of water into a pint measure already full of water. Again, if I drive a nail into a piece of wood, the effect is only to compress the wood, because it is impossible that the wood and nail can be in the same identical space at the same precise time.

62. T.—Has this knowledge of the impenetrability of bodies been usefully employed?

P.—Yes; the principle of the wedge is founded upon it. In the annexed diagram you will see the explanation of the law; the point of the wedge has been inserted into a block of wood by a blow from a hammer, and has displaced the wood by compression. The substance of the wood is dividing, because it cannot be compressed any more.

63. T.—If you remove the wedge, does the wood resume its former shape, and occupy the space it did before the wedge was driven in?

P.—No; because, unlike the air in the tumbler, it is not elastic, otherwise it would resume its former dimensions.

64. T.—Are not all bodies elastic?

P.—No, lead or iron may be compressed or diminished in size, but they cannot resume their former volume, and therefore we learn that elasticity does not always accompany compressibility.

65. T.—Then am I to understand that elasticity is the power by which a body resumes its figure or volume, after that figure or volume has been altered by the action of any force?

P.—Yes, undoubtedly, after the force that caused the alteration of the figure has ceased to act—not otherwise; and that power is found in solid and fluid bodies.

GENERAL QUESTIONS ON LESSON V.—1. How do you know that all bodies have pores between their particles?

2. What is the result of the greater proximity of the pores of bodies?
3. What is meant by the density of bodies?
4. Can you prove the porosity of bodies?
5. Is it possible for two bodies to occupy the same space at the same time?
6. What do you call this natural law of bodies?
7. How can you prove the impenetrability of bodies?
8. Has the knowledge of the impenetrability of bodies been practically applied?
9. Do all bodies possess the property of resuming their former volume after being compressed?
10. What is this property of matter named?

These *Catechisms* will be found to supply excellent "HOME COMPANIONS," and as such we strongly recommend them. The series will be completed in twelve numbers, price twopence each, and will include the whole range of the natural sciences.

## THE ROAST TURKEY

A LADDER FOR THE DISSENTING.

A GENTLEMAN, one of the eastern towns of Massachusetts, had a servant in his employ, who gave him not a little trouble on account of the complaints he made on the subject of his victuals.

As is usual in many families, whatever remained from the table of the dining-room was placed upon that in the kitchen—the inmates of the latter fared in all respects as well as those in the former, with the exception of their being last served.

The gentleman, of whom we speak, took especial pains that there should be no lack of provisions for the supply of all in his house, and was therefore at a loss to understand the grounds of complaint thus made by his servant.

One day, as he was passing through the kitchen, an opportunity presented itself for making some inquiries on the subject. While the other servants were partaking of their dinner with a keen relish, Sam, the disaffected servant, was tasting of it as reluctantly as if poison had been mixed with his food.

"How is it, Sam," said the gentleman, "that you are dissatisfied with your living—you fare the same as I do, and yet you are not contented?"

"I know it," said Sam, who was fresh from the country, "but then I guess you are a little more fonder of corned beef than I be, to make a meal of it so often."

"Corned beef!" said the gentleman, "I am indeed very partial to that dish, and am sorry that it is not equally as agreeable to your taste—but since you are so fastidious, tell me what dish of all others you would prefer, and you shall be entertained with it."

"Why, roast turkey, to be sure," quoth Sam. "I guess I aint seen nothing of that sort this many a day."

"And do you think, Sam, you would be contented to fare on roast turkey every day?"

"I guess, miester, if you'd only try me, you'd think so—nothing I relishes so hugely as roast turkey."

"Well, then," said the gentleman, "to-morrow you shall be gratified—a turkey shall be roasted for your especial benefit—no one but yourself shall partake of it, and you shall eat of no other meat till the turkey is gone."

"By gumption!" exclaimed Sam, "I agree to that willingly."

The next morning the gentleman went into the market and purchased the largest and fattest turkey he could find, and sent it home with directions to be roasted and placed upon a separate table for Sam.

In this he was strictly obeyed—the turkey was stuffed and roasted in the best style, and when Sam made his appearance at the dinner hour, he found it smoking on the table which had been set for his sole occupation.

"By gauley, now! if that ain't curious, thought!" said Sam, drawing up a chair to the table, at the same time sinacking his lips and casting his eyes on the scene before him.

Forthwith he attacked the turkey in his own fashion, cutting a slice here, and a slice there, just as inclination led him, without undertaking the slow and tedious operation of carving it, and having finished his dinner, he stretched himself out with the self-complacent air of an alderman.

The next day, the turkey was again served up as before, upon which, and upon which alone, Sam made his dinner with apparent satisfaction.

The third day, when the gobbler, shaved of his pinions and his exterior, was placed upon the table, Sam was not quite so prompt in commencing operations.

Casting a wistful glance at his fellows, who were regaling themselves to a variety of dishes, Sam offered to exchange with them a portion of his turkey for a slice of beef. But to this proposition, having received instructions how to act in such an event, they all declined acceding, so Sam was forced to make out his meal upon the cold carcass of the turkey.

The fourth day and the fifth came and departed, and found Sam still at work upon his turkey, more than two-thirds of which was now consumed. He was by this time heartily sick of his bargain—pride prevented him from making complaint, while hunger compelled him to eat what had become an object of disgust and loathing. At the end of a week's time, the turkey was reduced to a mere skeleton, and Sam was thanking his stars that he should soon see no more of it, when his master entered the kitchen and found him at his last meal.

"Well, Sam," said he, "I see you've about finished the first turkey—it is high time for me to look out for another."

"What, another!" echoed Sam, "another turkey! you don't think a man can live on nothing but roast turkey, do you?"

"Certainly, I think you can—you cannot find fault with roast turkey—it is a dish of your own choosing."

"I know it—I know it," said Sam; "but who would have thought of turkey to-day, and turkey every day—why, I'd as lief feed on corned beef at that rate, and a little hief."

"But, Sam, you are neither satisfied with living as I do, nor with living as you prefer yourself—neither with corned beef nor with roast turkey—what shall I do in such a case?"

"Oh! anything! I'll feed on cats—roast dogs—anything but roast turkey—I can't go that—don't make me eat another."

"Well, then," said the gentleman, "if you think you can content yourself to fare as I do—to take pot-luck when I take pot-luck and roast turkey when I do, and if you can do so without complaining, I consent that to-morrow you return to your old way of living."

"Oh, yes, I consent to anything," said Sam—"anything but roast turkey."

## THE HOME COMPANION—UNIVERSAL DIAL.

We present to our readers at page 214, a *DIAL*, showing the difference of time in every quarter of the world, calculated with extreme care, and revised by Mr. Bennett, watchmaker, of Chesapeake, by the aid of which, those of our friends who have connections in far-distant lands, will be enabled, by the powerful aid of fancy, to conjecture the various occupations in which those removed from them may be engaged, by the hours marked on the dial, and also contrast them with their own pursuits "at home!" Thus, when "night's sable mantle" veils our own portion of earth, and we may be in our beds dreaming of those endeared to us by ties of friendship or relationship, dwelling beyond the ocean, the objects of our visions are actively engaged in the duties of their several avocations, with the glorious sunshine cheering them on to exertion; and when we, in our European homes, may be gathered round the domestic board, partaking of its social comforts, the "absent ones" in far Australian climes are resting from their labours, and gathering fresh strength in slumber for the duties of the morrow.

The novel and interesting *Dial* now presented to our subscribers, will, we have no doubt, awaken many pleasing associations of thought, to which, as their "Home Companion," we are always desirous to contribute.

The time at any particular place on the surface of the earth, is determined by the position of that place with regard to the sun. If the sun be on the meridian, it is 12 at noon; and all places east will have had their time earlier, and all places west will have their time later than 12. The distance of any place east or west is called its longitude.

The earth turns on its axis from west to east, thus bringing all places eastward opposite to the sun earlier. If we take any place, as Calcutta, it will have noon 5 hours 52 minutes earlier than London; so that when the sun passes the meridian at London, it has passed the meridian at Calcutta 5 hours and 52 minutes; and this is the mean solar time at Calcutta. Mean solar time is to be understood as that time which is measured by the rotation of any point on the earth's surface from the sun to the sun again; and as the sun has moved in the interval by the annual revolution of the earth, it differs from sidereal time, which measures the true rotation of the earth on its axis; namely, any particular place moving by the rotation of the earth from one star to the same star again.

## THE PIONEER'S DAUGHTER:

A TALE OF INDIAN CAPTIVITY.

(Continued from Page 201).

## CHAPTER VII.—THE MYSTERIOUS GUIDE.

It was past midnight, and silence once more reigned in the Piqua village. Chief, warrior, woman, and children, all had retired to their several places of repose. We say all; but we must except the sentinels that guarded the town, the guard set over the prisoners, and the prisoners themselves, with whom poignant thought was too busy to permit of sleep, or even rest. The morrow was looked forward to by one party as a day of splendid amusement and savage delight—by the other, as a day of calamity the most terrible.

In one of the largest lodges the female captives were all confined together—an unusual occurrence—and three old hags were placed over them, whose duty it was to sit up and watch all night, to prevent the recurrence of a scene similar to the one we have previously described. The night was cold, but still cloudy and dark, and the female prisoners were huddled together, in one corner, with no other bed than the damp ground, and no other covering than the few pieces of wearing apparel which they had been allowed to retain since being robbed of the balance. The old hags, with warm skins thrown over their shoulders, and wrapped around their persons, were squatted upon the earth, near the only door of the wigwam. Till a late hour they smoked their pipes and talked over the events of the day, and at last became silent, and, if the truth must be told, began to doze, and nod, notwithstanding they had been repeatedly charged to be very watchful. Had there been but one, it is altogether probable she would not have suffered her eyes to close for an instant; but there being three, all felt more confidence, and became more careless, in consequence of each relying upon her companion's vigilance. Suffice it to say that it was hardly an hour past midnight, ere, from nodding and dozing, in a dreamy state, all glided into the utter forgetfulness of a heavy sleep. Even the white females, with all the painful incidents of the past day fresh in their memory—with all the horrors of the coming day staring them in the face, began to doze; for such is our nature, that long fatigue and excitement will cause us to sleep upon the very brink of death—the awful threshold of eternity.

Lucy and her mother had, by the arrangement of the night, been brought together, and left to comfort each other—a circumstance which had not before occurred since their captivity. Entwined in each other's arms, they had mingled their tears, and had both united in a fervent prayer to the great Father of Mercy, that he would deliver them from the hands of the enemy, with the friends they loved, or take them to himself. Weeping, and praying, and striving to console each other with words of hope, which each believed to be fallacious, and which were spoken in whispers too low to reach any ears but their own, they gradually fell into that state which can neither properly be called sleeping nor waking, but which partakes very strongly of both.

"Yes, it was a human being—an Indian—and if not an Indian, it at least had all the appearance of one, even to the habiliments and paint. As this mysterious nocturnal visitant rose to his feet, he moved softly around the lodge, and, at the point where the prisoners were huddled together, began to remove the outside covering, as if to effect another entrance.

At this moment, had you, reader, been standing close beside the lodge without, within a step of the entrance, with your eyes fixed on the ground at your feet, you would doubtless have observed some object, which, owing to the darkness, you would, without closer inspection, have pronounced a log of wood, a stone, a slight elevation of the ground, or anything in short, but what it really was. But had you watched it closely for a few minutes, you would have been undeceived as to its being a collection of inanimate matter; for though you might not have seen or heard it move, you could not have failed to be made aware that its length gradually shortened, as if it were being drawn into the wigwam. Three minutes later, you would have found it had entirely vanished, without being much the wiser as to what it really was.

In another five minutes, had you waited patiently, you might have seen the same object reappear, but much quicker than it had disappeared, and, by its suddenly rising to an erect posture, you would have pronounced it a human being, and made no mistake.

Yes, it was a human being—a man—and if not an Indian, it at least had all the appearance of one, even to the habiliments and paint. As this mysterious nocturnal visitant rose to his feet, he moved softly around the lodge, and, at the point where the prisoners were huddled together, began to remove the outside covering, as if to effect another entrance. In this proceeding he was not long engaged, when, from the dark hut, a single female figure glided to his side, and then another and another, till at last not less than ten surrounded him, all as silent as spectres, and to which, in the manner of making their appearance, without noise, they might be truly likened.

Not a word was spoken—not a whisper breathed—not a respiration, sigh, or sound of any kind was audible, as the liberator of the captives proceeded to close up the orifice he had made in the building. When he had completed this, he drew close to each female, and made signs of silence, by placing his finger upon his lips; and warned them of the danger of discovery, by rapidly going through the motions of taking a scalp. He then glided away in the darkness, apparently without touching the earth, and the ten figures followed, Indian file, in the same silent and stealthy manner.

For something like ten minutes, they carefully threaded their way among the clustering lodges, which could just be discerned in time to be avoided; and then, with a degree of joy amounting almost to wildness, but which they were forced to restrain, the prisoners found themselves on the outskirts of the town, and on the borders of a mighty forest. The guide still continued, with stealthy tread and guarded silence, to pick his way among the trees, as he had done among the huts; and, as well as they could, the captives imitated his movements. It was of course impossible to prevent their feet from causing the dead leaves to rattle; while here and there the sharp snapping of a dry twig made many a heart beat almost audibly with fear.

For several minutes all went well, and the prisoners were just congratulating themselves, mentally, upon having passed all immediate danger, when the guide suddenly stopped, and in the lowest possible whisper, said, "Hist!" so low, indeed, that it had to be repeated half way down the file to make the last one hear it.

It must be confessed that, for females, the captives had so far behaved with the most praiseworthy prudence; and for once ten females' tongues had done sufficient penance to pardon ten hundred gossips, by keeping still at a time when a few inquiries, if only for curiosity sake, would have been a wonderful relief to minds wrought up to the highest degree of mysterious excitement. And now, when all heard the word "hist," the questions, "What is it? what has happened? is there great danger?" were upon every tongue, but fortunately were not spoken.

As soon as the guide had uttered his warning exclamation, he dropped upon his knees, applied his ear to the ground, and listened. Then rising to his feet, he made signs to the one nearest to him not to speak nor stir; and she, in the same silent way, communicated it to the next behind her, and so it went down the line. The guide then strode forward, and a single moment sufficed to lose his figure in the pitchy darkness; but the unavoidable crushing of the dry leaves could be heard some time longer, indicating the course he had taken.

At last all became still, and a short but painful suspense succeeded. Suddenly, all were startled by an Indian exclamation, like the challenge of a sentinel. There was a reply in another voice, and then a conversation in low tones followed. This lasted only a few moments, and was apparently broken off by the treacherous commission of a terrible crime—for a sentence, seemingly only half completed, was ended by a sharp groan; and then was heard a dull sound, as of the fall of some heavy body.

The females now became really terrified, and, no longer able to control their feelings, had just begun to consult one another, in startling whispers, upon what was the best thing to be done under the circumstances, when a voice close to them said—

"Follow!"

It was the voice of their liberator; and though it in a great measure reassured them, yet it was with trembling steps and palpitating hearts they complied with his request. The recollection of that groan, and the fall and silence that succeeded it, made them shudder; for the suspicion that murder had been done seized upon them, and could not be reasoned away. True, it might be it was murder in self defence, to save their own lives, and the life of their conductor; but it was still a fearful thing to think of, even under the exciting circumstances in which they were placed. No questions were asked of their guide, however, and no explanations were made by him, but all continued to move forward silently and stealthily.

At length they came to a small stream, one of the tributaries of the

Miami, which the guide entered, followed in turn by the others. The run was not deep, but rapid, and it was with no little difficulty that the females could maintain a foothold on the slippery stones that formed its bed. The water, too, was so cold as to be painful, and the persons who had previously known but few or no hardships, this walking a rivulet in the late hours of a freezing night, was a trial of a very severe nature. And when we add the fact that the prisoners knew nothing of whether they were going, or for what purpose, we think we can safely say, that they displayed a degree of prudence and firmness that might well place them in the rank of heroines.

True, they believed they were escaping from a barbarous captivity; but the only reason they had for supposing so, were the few sentences in broken English, which the guide had conveyed to one of them, in whispers, during the interval of his entering and coming out of the hut in which they were confined. It so chanced that the first one he addressed was the wife of an officer who had fallen in the battle we described in the opening chapter, and one of the six that sought to escape under the escort of Sergeant Bomb. She was a woman of great firmness, and strong nerve; and when she was suddenly aroused from a kind of dreamy doze, by feeling a strange, cold hand touch hers, she had sufficient presence of mind not to make the least noise.

"Would pale-face escape?" was whispered in her ear.

"Yes," was the eager reply.

"Hist! no noise—squaw wake!" was the rejoinder. "Tell friends so. When pale-face squaw see hole in lodge, him come. If speak, if scream, him lost;" and with this the hand was withdrawn, and, by the slightest movement of the skin at the door of the hut shortly after, she felt certain that the mysterious visitant had made his exit.

She had then proceeded to gently rouse the others, and communicate what she had heard: and had so well succeeded in conveying the information, and impressing upon them the importance of silence, that all escaped, as we have seen, without creating the least alarm; and believing their fate could not be changed for the worse, all had quietly followed their guide, who, so far, had offered no explanation. But to return.

After continuing up the stream for some thirty or forty yards, the guide came out of the water, and held the same course on the land for a similar distance, when he again entered the stream, and facing about, proceeded to retrace his steps, the females still following, but greatly wondering what would be the result of this apparent change of purpose—they not having had experience enough in Indian wiles and cunning to know that the object of their conductor was to break the trail, and, if possible, baffle the parties that were sure to be out in pursuit, as soon as the escape of the captives should become known.

Continuing now down the bed of the stream, the guide passed the place where the whole party had at first entered the water, and, as the creek ran close to the northern extremity of the village, the captives began to entertain fears that he had changed his first generous intentions, and was now leading them back to savage bondage.

"Why do you return, friend?" queried the foremost, in a whisper—the same the guide had first spoken to, and who was the widow of Captain Marvale, slain in battle.

"Tush!—no speak!—lose scalp!" was the warning reply; and again a long silence followed, during which nothing could be heard but the rippling murmur of the stream, as it dashed along its rocky bed, with occasionally a splash, as now and then a foot slipped in the water; and which slips were rendered more frequent, in consequence of the feet being benumbed with cold.

At last the party came opposite the village, and the stream, which thus far had ran swift and shallow, now began to grow still and deep. The guide here came to a halt, and merely whispering, "Squaw no breathe now," he continued to move forward some eight or ten yards, in which distance the water deepened from eight inches to three feet. Approaching the bank farthest from the town, this mysterious individual now unloosed three canoes, and waded back, drawing them after him. These canoes were securely lashed together, side by side, with strips of deer-skin; and in consequence of this, were rendered almost secure against upsetting, even in a rapid and serpentine current.

The mysterious Indian now informed the prisoners, in whispers, and in his own peculiar manner, that they must enter these boats, and in no case allow the slightest exclamation to escape them, no matter what might happen, nor how severely they might be tried by perceptible dangers. Seating four in each of the side-boats, and the remaining two in the centre one, he entered this last himself, and standing erect in the bow, with a long paddle in his hands, made a few vigorous but silent sweeps, and then allowed his singular craft to float quietly down the stream.

For a time all went smoothly, safely, and silently, and the town was almost passed, when the musical sound of running water began to be audible, gradually growing louder, till presently all became aware they were approaching either a cascade or furious rapids. Had there been light sufficient for the purpose, there might have been seen many a pale face and compressed lip in that triple barge, as it slowly but surely floated down towards the rushing waters, whose first low, distant murmurs were now changed to a solemn, heavy roar.

"Hist!" whispered the guide; and his words were uttered with that fearful distinctness which, more than louder tones, impress one with something awful and mysterious; "Hist! Squaw no speak—no move."

Scarcely was the warning given, when a slight shock was felt underneath, and the boats were sent forward with a velocity that showed they had struck the rapid. Now to this side, now to that, were they suddenly shifted by the winding current; dipping here and dipping there, and jerking, and rocking,

and obeying every vibration and impulse of the water, but still floating onward as airy and buoyant as a feather or cork. Swifter and more with now speed the boats, and lower and more loud comes up the roar of the foaming waters from below, giving one the impression of a fearful chaos, down which one is about to plunge and be forever engulphed in a whirling pool.

On, on sped the boats, and every breath is held, and every heart has ceased to beat, in fearful expectation. Now the last dread moment has come. The boats are suddenly lifted, as by giant hands, and flung forward into the boiling, hissing, foaming surge. Round, round, here and there, right and left, up and down they go; and the flailing of the furious element, and its thundering roar, are all that can be seen and heard by their helpless inmates, as, speechless with terror, they cling spasmodically to their frail sides, and to one another, and mentally call on God for mercy. Suddenly a more fearful shock is felt—a downward, lightning plunge is given—and now just at the moment when all hope is lost, and the agonized shriek of despair is about to be uttered, the boats glide off quietly into still water, and the roar of the rapids is heard behind.

"Danger past—squaw brave," spoke the guide, drawing a long breath of relief; and with his single oar, he gave the boats a vigorous shove, which sent them farther from the hissing waters. "Squaw safe," he continued, "if him make no noise;" and still using his paddle gracefully and skillfully on either side, he kept the boats in motion.

Presently a slight grating underneath, and the stoppage of the boats, together with a dark mass of something looming up above them, assured the still trembling captives that they had gained land at last. The guide now bade them remain quietly where they were; and stepping ashore, he made the boats fast, and strode away along the beach, and beside the rocky bluff, that rose almost perpendicularly above him to the height of fifty feet. Suddenly he disappeared into a narrow fissure of the rocks, and was absent some five or ten minutes, when he reappeared, and returned to the females.

"Squaw, now come," he said, in a low, guarded tone; and immediately retracing his steps, he led his wandering followers in between gigantic rocks, where all was total darkness.

The change in the air, and the narrow covered passage, convinced the more experienced of the party that they were entering a cavern; while the others, completely bewildered with their already strange adventures, hardly knew whether the things around them were real, or whether they were being made the sport of some wild, fantastic dream.

At length, after following the guide for a considerable distance, through a winding, zig-zag passage, which apparently had no outlet or termination, Mrs. Mervale, who was still the foremost of the females, came to a halt, and said—

"Mysterious being, be you friend or foe, I will go no farther, till you tell me whither you are leading us."

"Me no traitor," answered the guide, in a tone that showed he felt offended by the suspicion. "Me friend—squaw friend—warrior friend."

"But say, whither are you conducting us?"

"Spouse me ne say?"

"Then you would lead us to suppose you have some sinister intention?"

"What squaw do den?" queried the other.

"Refuse to go," answered Mrs. Mervale, resolutely.

"Squaw no stand there all time, eh?"

"But we would go back."

"Where go? Injun wigwam, eh?"

"Oh! no, not there. Heaven help us; for I perceive we are too impotent to help ourselves, and we must perforce rely upon your mercy."

"Oh! heaven help us, indeed!" exclaimed Mrs. Danforth. "Alas! what will become of us, and my poor husband! Ah! well I know what will become of him, for to-morrow he will die at the stake!" and the poor woman fell to weeping, and moaning piteously.

"Oh, mother—dear, dear mother—do not say that!" cried Lucy, bursting into tears.

The silence once broken by speech, the poor females, one and all, were in a fair way to give loud vent to their long pent-up griefs, when the guide restored order, by exclaiming:—

"Hist! Injun have big ears—hear great way. Squaw be still, and come, and pale-face warrior no die; if don't, him burn to-morrow."

"Lead on, then! lead on!—oh, for Heaven's sake! lead on, and we will do as you desire," returned Mrs. Danforth, in great agitation.

The guide said no more, and the party again proceeded in silence. A few more turns in the rough passage, and they were agreeably surprised to find themselves entering a large dry cave, in the central part of which was burning a fire, whose ruddy blaze formed a cheerful contrast to the cold dreary night without. Near the fire were several large pitch-pine knots, to serve them both for fuel and light; and the mysterious guide showed them a quantity of hominy also, which had been conveyed hither expressly for their own use, in the event of their being obliged to remain here any length of time.

He then warned them they must in no case leave the cave till his return, even though his absence should extend to a week. Giving them some other advice, unnecessary for us to repeat, he left them to themselves, and rethreaded his way through the narrow passage leading to the water's edge. On reaching the canoes, he cut the thongs that bound them together, and proceeded to secrete two of them in the mouth of the cave. This done, he jumped into the third, and with several strokes of his paddle, sent it floating down the stream. For a moment or two, his dark figure, standing erect in the boat, could be faintly traced in the dim light; and then it blended with the darkness, and was lost in the gloom.

(Continued in No. 12.)

**GRANDFATHER WHITEHEAD'S First Catechism [NATURAL PHILOSOPHY] is now ready, price 2d. These Catechisms will appear at intervals of about a month, in the following order:—**

- |  |   |
|--|---|
| 1. NATURAL PHILOSOPHY—ELEMENTARY PRINCIPLES.     | 8. ANIMAL PHYSIOLOGY & ANATOMY.   |
| 2. NATURAL HISTORY—PRINCIPLES OF CLASSIFICATION. | 9. ZOOLOGY.   |
| 3. MECHANICS.                                    | 10. ASTRONOMY AND PHYSICAL GEOGRAPHY.   |
| 4. CHEMISTRY.                                    | 11. GEOLOGY AND METALLURGY.   |
| 5. ELECTRICITY, OPTICS, & ACOUSTICS.             | 12. THE APPLIED SCIENCES—LOCOMOTION, ARTS, MANUFACTURES, NATURAL IMPROVEMENTS, &c., &c. |
| 6. PNEUMATICS, HYDRAULICS, &c.                   |   |
| 7. VEGETABLE PHYSIOLOGY & BOTANY.                |   |

Each subject will be treated with the utmost care; especial attention being paid to the latest discoveries of facts and principles of Science. The Catechisms will therefore supply, when complete, a work eminently adapted by its cheapness, simplicity, and completeness, to promote the diffusion of Useful Knowledge in Schools, and in Domestic Circles. The volume will be ready at the close of the year, price 2s. 6d., elegantly bound.

London: HOULSTON & STONEMAN, and all Booksellers.

### PRACTICAL ILLUSTRATIONS OF POPULAR FALLACIES.

#### No. VIII.—“A YOUNG MAN MUST SOW HIS WILD OATS.”

This is very bad farming. We appeal to the most inveterate protectionist, the most distressed farmer that ever lived, the sturdiest stickler for ploughing as our fathers ploughed, and sowing as our fathers sowed, whether it would not be the very worst possible style of farming, for a young farmer to sow wild oats all over his estate—to plant weeds and thistles in every field. Would it not be found that the wild oats would destroy the crop of grain; that the weeds and thistles would overpower the grass, until the whole presented a wide and melancholy ruin, which long years and large capital could scarcely bring again into a profitable state? As in the physical world, so in the moral world; the seeds of vice once sown are difficult to eradicate, and the wilful cultivation of these in the human heart will produce a still wider ruin than the worst weeds which ever mocked the hopes of the husbandman.

The world has got into a very foolish habit of not calling things by their right names; and, generally speaking, the more foul the thing is, the sorer is the appellation which the world applies to it. In the present instance, the wilder the follies in which a young man indulges, the deeper the vices into which he plunges, the more tightly is the mouth screwed up to call it “sowing his wild oats.” A quaint writer asks and answers this question:—“What doth this phrase of sowing wild oats signify? Doth it not amount to this—that man, having lost his primeval innocence, shall take good care that he never regain it? That he doth well, if, after having given all the cream and richness of his life to Belial, he shall haply carry the sour milk thereof to God?” But we are not going to write a homily, however serious may be the aspect which the subject presents. We fear, indeed, that he who “soweth wild oats” will find, to his cost, that “ill weeds grow apace.” There is many a young man just entering the world, who would avoid those actions which give rise to the saying, if it were not for the veil which this very saying throws over their hideousness. But as he hears the lips of beauty apologetically muttering “he is only sowing his wild oats,” when some instance of vile profligacy is told, or some tale of innocence undermined, related, he begins to look upon such actions as the natural and excusable effects of ardent youth; he thinks that he, too, may be pardoned for scattering similar seeds on the highway of life; and is, perhaps, unconscious that the soil in which they will take the firmest and deepest root is his own mind. “*Nemo repente fuit turpissimus*”—no man becomes vicious on a sudden. The appetite for vice increases with what it feeds on; like the taste for olives, it may be nauseous at first, but by repetition we come to like it, and at length it becomes a fixed desire of the mind; we have sown the seeds, and unfortunately we must reap the fruits. We need not sow these wild oats, but once having so done, we must take the consequences.

An old French writer has said, that “disgust stands at the door of all bad passions.” It may be so; but it is to be feared that we too often put her behind the door as we enter; and it is only when we would come out that we meet her face to face. We cover up her form with all kinds of disguises; we endeavour to cheat ourselves into the belief that disgust is not her real name, and that it is not the door of vice at which she stands sentinel; and as we pass her by and enter, we console ourselves with the thought that we are only having a bit of a spree! that we are in for a lark! or at any rate, that we “must sow some of our wild oats.” We are confident in ourselves, have great reliance on our own correct principles and right intentions, and delude ourselves into the belief that we are only gaining a little knowledge of the world, and showing ourselves to be youths of spirit. And a most miserable delusion this, is—fostered and encouraged by the wretched fallacy we are

illustrating; and by the pernicious habit of gliding over vile things with colloquial names. We begin, perhaps, by sowing our seeds with a careful hand, scattering a few here and a few there, with long intervals between them; we are not alarmed by any very great expenditure of seed; we hardly fancy that the correct principles on which we rely, are disturbed or shaken by their slight deviations from the strict rule of right; we still keep to the common routine of our duties, while we are imperceptibly being led into temptations that, by degrees, cause us to scatter the seeds more thickly, and with fewer intervals between them. And we go on “sowing the wild oats” until the days of our youth are past, and when a miserable and premature old age draws on, we find that the tillage is not yet complete; it is only when infirmities have rendered it impossible to pursue our former course, that the seed time is over; and the harvest comes upon us at once in the shape of pains and penalties grievous to bear. We forsake not the plough until the power to sow is departed. We forsake not the sin until the sin forsakes us.

How often do we hear it said, both by parents and friends, that it is right for a young man to know the world, and that he will avoid vices all the more for having tasted it, and found what it is like. Bad judges of human nature and of human appetites, are these! If, in order to know the world, a knowledge of its vicious habits be necessary, there is no need to enter into them to acquire that knowledge; they meet us at every corner of the streets, in forms loathsome enough to repel us as if from the blast of contagion. But when we mix ourselves up in the scenes of vice, the heated imagination draws a veil over the loathsomeness; our sensual appetites become excited, and we rush into the practice of those very vices which knowledge was to teach us to avoid. Unfortunately for human nature, the first “sowing of wild oats,” the first steps in vice, are accompanied, too frequently, with pleasurable associations, and are recalled to our recollections under the most flattering aspects. It is as a magical stream, so seducing in its bland and genial influence, that having once ventured in so far as to wet but the soles of our feet, it sweeps us onward to the frightful vortex, where all is lost in ruin and desolation. In pursuit of present pleasure, of momentary gratification, men neglect the strongest evidence of future pain; they daily with that which corrupts body and soul, until, like the silly moth, which, at the instant we write this, is wheeling round the attractive flame of the candle, they sink to the earth in incurable agony. And then we find—

“Thus are our pleasant vices  
Ever made the whips to scourge us through the world.”

These first seeds, once sown, we suffer our memories to play the traitor to our consciences, and by dwelling continually on the pleasurable sensations, and carefully excluding from our thoughts the subsequent pains and penalties, we foster within ourselves the morbid desire to repeat the experiment; just as the intemperate continually dwell on the pleasurable sensations of the incipient stages of intoxication, and dismiss as much as possible from their thoughts the subsequent headache and nausea. And too many, encouraged by the false notion that they “must sow their wild oats,” give way to the ungoverned passions of youth, and pursue the reckless enjoyment of the present moment regardless of all its future consequences. And the habit of indulgence once formed, will go on increasing, in spite of all the delusions that we are only learning to know the world—are only “sowing our wild oats.” One vice will promote another, one excess succeed another, sin engenders sin, and—

“Like a rock thrown on the placid surface  
Of the lake, ’twill form its eddies, round succeeding round,  
Each wider than the last.”

We have had several examples lately, of the “sowing of wild oats,” more particularly among the young men connected with the army. Some most disastrous exposures have been made through the publicity of the courts of law. The newspapers, every now and then, speak of defaulters who have been compelled to sell their commissions, and quit their profession; and rumours are rife as to the squandering, by a young soldier, of an enormous property, connected with a most honourable name, in less time than poor peacocks flay a rooster through his scalp. The fatal propensity to gambling seems most common among the idle military who crowd our metropolis; the excitement of the bottle has been voted vulgar among them, and they turn to another excitement, almost equally pernicious. We remember to have heard of one young nobleman, whose name was more familiar in the police courts than in the senate, that, among the plentiful crop of “wild oats” that he had sowed, he could never be tempted to gamble. It was in vain that the profligates and knaves, by whom he was too often surrounded, sought to prey upon his purse in a different and more extensive manner than he chose; it was in vain they sought the opportunity, when wine had wrought its effects upon his brain, and judgment might have been supposed to have been overcome by its fumes. He had one answer always ready for all their solicitations: “Why should I wish to win your money; I have enough of my own, and I prefer spending mine in a different manner, to losing it at stupid cards and dice. Push round the bottle; let us have a jolly spree.” Whatever inroads upon his health and constitution the prodigal sowing of “wild oats” may have caused; whatever injury he may have done to others by the low and vulgar riots, the profligate scenes of debauchery into which his example dragged them, yet no inroads were made upon his property; that still remains to sweeten the “sour milk of life,” when health will no longer permit the same course to be followed—when time and consideration have, in some degree, deprived him of the taste for these vices, and given him an opportunity, it is to be hoped, to eradicate the foul weeds that were so plentifully sown in his early career. But, among our military men, the curse of gambling seems to be the predominant vice—the favourite mode of “sowing their wild oats.” They do not appear to possess the philosophy of the

nobleman we have met, but instead of it, are filled with a kind of mean desire to have their minds in each other's pockets, and to derive by the weakness and folly of their companions. An old clerk of the French parliament—in the days when France had a parliament—gives us a kind of reason, although not a very complimentary one, for this. He seems to fancy that some of the source in a soldier's brain for his acts of folly. "In *anglais* *les idées* *viennent* *des* *rois*," which we may translate thus, "Reason can scarcely flourish in a soldier." And this old clerk of the middle ages seems to be borne out in his theory by the soldiers of modern times. A story was told of an officer in the last war starting back at a ball took off the head of one in line before him, and scattered the brains in his face; upon being rebuked by his commanding officer for betraying a sign of fear, "What, sir, are you afraid?" "No, sir," was the reply, "I was only astonished that a gentleman possessing such a considerable quantity of brains as those which have just been sung in my face, should have come here to be shot at for a shilling a day." However large, then, may be the quantity of brains which our military men possess, the manner in which they go on "sowing their wild oats," proves, pretty effectually, that they have not learned to use them much better than in the time of the old French parliaments; or than the poor fellow who stood up to be shot at for a shilling a day.

The knowledge of the world which the young soldiers whose names have figured creditably in the papers, have gained, appears simply to have been how to empty each other's pockets. Not a very desirable knowledge. But besides this inducement to sow our "wild oats," there is another which is equally fallacious, continually urged upon us. And this one is as mischievous as it is fallacious; for it casts a shade of ridicule over virtuous conduct, and gives a preference to a wild animal life, over a steady, intellectual one. This inducement consists in branding all those who enter not freely into the vices of the world—who avoid drinking, gaming, and other pernicious excitements, as effeminate men. "I hate an effeminate man; I love a man of spirit," says a fashionable beauty, as she turns away from an amiable and excellent youth, to greet with smiles a gambling dragon. A man seems to be valued only for his athletic and animal qualities, and not for his virtues or his intellect. And when it is those with whom all men wish to stand well who put this false stamp of merit on animal life; when we find it is the female world who seem to attach the idea of courage and spirit to the wild and the profligate; it is not matter of surprise that to win their favour so many young men should plunge into those excesses. But who are truly the men of courage and spirit? Not those who give way to every excess, who are conquered by every temptation; but they who struggle manfully with their own passions, and with the realities of the world. The history of those favourites of the fair sex is to be read in the annals of the stable, the kennel, the tavern, the brothel, the gambling-house, the police-court, and the gaol: the history of the truly courageous and spirited may be found in connexion with the pulpit, the bar, the senate, the literature, and the science of the age, in connexion with all that can elevate and purify and improve our nature. It is those who have sown the fewest "wild oats" who are among the "salt of the earth"; those who have scattered them with a prodigal hand too often sink into its dregs.

Howell Price sowed his "wild oats," and reaped their fruits while yet his days were young. Nature had been kind to him, had given him a handsome exterior, a cheerful temper, a kind and courteous spirit; fortune, also, had been kind, and placed him in a position where steadiness and perseverance must have ensured him success in life. In every society he was a welcome guest; his manners, bearing, and accomplishments fitted him to shine amongst the *élite* of the world. But he had mingled with his refinement strong animal passions, which he sought not to control. He scattered his "wild oats" with a prodigal, and even with a graceful hand, and society pardoned the occasional profligacy he displayed, for the sake of his good looks, his graceful manners, and his cheerful spirit. But, though he was addicted "to sports, to wildness, and much company," he was, nevertheless, the hope and the stay of his widowed mother's home; the guardian and protector of his bright young sister's fortunes. And his home was a happy one, and he was its light and its ornament. All around him seemed prosperous; his business was extensive and profitable; his connexions were numerous and wealthy; the society in which he moved was of the highest and the best description. One of the seeds he had been sowing, was beginning to grow, and in its growth blighted all his fair prospects. Intemperance had struck its root deep in him—was grasping him on every side with its foul tendrils. The choice wines of his aristocratic associates were losing their zest and their flavour to his vitiated palate—they seemed only to whet his appetite for stronger and coarser draughts. The feast in a lordly hall became only the prelude to a night's debauch in some selected tavern, and with that portion of his companions who were also "sowing their wild oats," and the society of those whose lips had frequently praised the grace of his form and the spirit of his bearing, was exchanged for that of those unhappy ones of whom "the world is not the friend, nor the world's law." Poor fellow! he felt himself sinking; and once and again he struggled to shake off the bonds by which he was bound. The chains he had forged for himself were too strong to be easily burst asunder; they were binding him closer and closer to the destructive career. Then some of the best of his associates began to look shy on him, and shake their heads, and talk in tones of pity of his follies and his excesses. And then came neglect of his business, and a corresponding failure of his resources. Still his kind heart was unchanged, and loving faces greeted him at home, though sometimes they were pale with sorrow and with anguish. And then his conduct took another and a darker phase. Hypocrisy had grown upon him; he sought not to avoid his excesses, but to hide them from the knowledge of his friends. In his own town he was extremely cautious and sober, would abstain for days and weeks; but under

pretence of business would leave his home, and disappear for days and weeks; no one knowing his haunts; frequently some low-pothouse in some far place, among ruffians and ignorant clowns; and there would his accomplished and courted gentleman spend days together for the mere gratification of a drunken appetite, until some of his clerks or friends discovered him, and brought him home. Oftentimes worse places than the mere pothouses received him, and here at length he met his fate—a marriage with a woman taken from the stew, sunk into the mire. He did not venture to bring her to his native town; he was not quite case-hardened; some good feelings still remained; he could not so far outrage decency as to introduce the creature he had made his wife to his poor fond mother and his pure-minded sister; he had injured them enough already. His business was dropped, and a small pittance secured to him, but to his home he returned no more. A foreign land hid his shame, and here, with only the woman he had made his partner of his life, did he sink deeper and deeper into the vice that had destroyed him; and, at the age of thirty-five, a premature old man might be seen strolling about with the help of a woman's arm, paralysed and almost blind, until the repetition of the draught that was slaying him lent a momentary strength to his frame, a faint glimmering to his intellect, and here, soon, he died. Verily, he had "sown his wild oats," and had reaped the fruits. He had scattered the seeds with no sparing hand, and the crop had overrun and destroyed all the fair prospects of his life—all that was good, and kind, and holy in his soul. Let us no longer gild over these aberrations from the path of rectitude with apologetic terms, and think of vicious lives as marking a youth of spirit; let us cast aside the dangerous fallacy which teaches "young men must sow their wild oats," and adopt instead the teachings of wisdom, which show that the purest, the best, and the happiest of men are those who have the fewest weeds to eradicate, and who have sown no wild oats.

## "PEACE ON EARTH, AND GOOD WILL AMONG MEN."

BY MARY BENNETT.

Peace!—it is the sweetest measure;  
'Twas by angels sung at first;  
Peace on earth—O heavenly treasure!  
May it in each heart be nursed.

May it dwell in every home,  
Dwell wherever man may be;  
From Old England never roam,  
Bless each English family.

Children, learn the love of peace,  
Learn it wisely, learn it well;  
Then grow and bid all warfares cease,  
Strive the Hymn of Peace to swell.

Sound it in your time of action;  
Sound it over sea and land;  
Shut your eyes to war's attraction,  
Break the sword on every strand.

Shun the peace of coward dullness,  
Sound the peace proclaimed from  
heaven!

Goodwill, in all its lovely fulness,  
Such as by the Saviour given.

All mankind in worthy union,  
Wisdom seeking hour by hour,  
One with God in pure communion,  
That were peace, and joy, and power!

## ABOUT NAPKINS.

RECENTLY the proprietors of a fashionable hotel found it necessary to procure another table servant. After searching in vain for an experienced waiter, they concluded to engage a genteel young Irishman, whose only fault was that he had never before seen the interior of a dining-room to a fashionable hotel. His duty was laid down to him in plain words, and particular pains taken to instruct him in the part he was expected to perform. Patrick—for certainly that was his name—did so well. He was polite as a Parisian dancing-master, and almost as swift in his movements as a locomotive. Everybody was pleased with him.

At length, however, a gentleman requested Pat to bring him a napkin. Now this was an article he had never met with in all his life, and to have his soul from purgatory he could not tell what that gentleman meant. His Irish blood forbid him from displaying his ignorance, and what to do he could not tell. He wandered up and down the hall, closely observing the movements of his fellow-servants, but could here see nothing which came up to his notions of a napkin. Almost in despair, he came to the conclusion, as the best way of getting out of the dilemma, to tell a falsehood. Approaching the gentleman, (who had been already waited upon by another servant) he said—

"Faix, sir, will ye be plazed to take sothun' else; *the napkins be all ate up!*"

"Napkins ate up—you are mistaken, surely."

"'Pon the honour of a gentleman, I be not," replied Patrick in a polite whisper; "the gentlemen all preferred them to the praties, and not a scrap be left for ye."

The gentleman now observed that Patrick was a strange servant, and immediately suspected the truth of the case. The story was soon passed round the table, and "Patrick and the Napkins," followed the wine, as it passed from friend to friend during dinner.

THE SACRIFICY OF THE DOG.—A man named Maubernard, of Nîmes, went a few days ago into his field to cultivate his vines. He did not return at his usual hour in the evening; but after a while his dog appeared, barking mournfully. The animal refused to enter the house, and barked and ran about as if inviting some one to follow. When he perceived that he was followed, he went direct to the field, and there beneath a tree was found his unfortunate master bathed in blood, with several deep wounds in different parts of his person. The man was taken home, and medical assistance was procured, but he died in the course of a few hours. It is not known by whom or for what cause he was murdered.

## ONWARD

**HOUSES UNSUITED FOR HABITATION.**—By a clause in the new City Sewers' Act, now in force, the provisions with respect to houses in a ruinous and dangerous state are extended to any house or building, which, in the opinion of the medical officer of health, is permanently unwholesome and unfit for human habitation.

**OMNIBUS IMPROVEMENTS.**—Some new and elegant omnibuses, splendidly fitted and well horsed, and on the cheap principle, are now running on the various lines of road. The new vehicles have better sitting room, and are much wider between the seats; in a few there are covered life-lines extending along the inside of the roof, for the purpose of passengers steadying themselves, either in seeking a seat, or going to alight, and the ventilation is on a better principle. With respect to fares, a person may travel through nearly the whole of the metropolis, on the north bank of the Thames, at a halfpenny a mile, and in some instances for less.

**PROGRESS OF RAILWAYS.**—The aggregate amount of traffic on railways in the United Kingdom, published weekly, from 1st January to 20th December, 1851, inclusive, amounted to £14,207,706; corresponding period of 1850, to £12,513,626; corresponding period of 1849, £10,823,221; and in 1848, £9,858,770. The number of parcels passing in and out of the Euston Square terminus, during the Christmas week, amounted to nearly 40,000. Out of these 40,000 parcels, only two had the addresses lost.—Mr. R. Stephenson is reported to have completed the survey of the Cairo railway. His decision is announced to be, that the plan suggested by the Pacha for carrying the work through the Delta, should be followed out. Instead of the costly bridge work proposed across the two branches of the river, it is probable a pontoon, or floating stage, will be used for carrying the rails. 18,000 labourers, supplied from the respective bordering districts, will be set to work immediately.

**WATER GAS.**—A contract was some time ago entered into with the patentee of the new discovery of "Water Gas" for lighting the streets, shops, and dwelling-houses of Dunkeld. The necessary preparations have now been completed, and on Tuesday evening a preliminary trial was made in presence of the patentee, Dr. Miller, of Manchester, and other gentlemen interested in gas manufacture. There is neither smell nor smoke emitted from the gas, nor during the manufacture, which are two important recommendations. The comparative cheapness of the gas is also an important element in the question, and the more so in a town of limited extent and trade such as this. The principle of the manufacture, is, we believe, of the following nature:—Hydrogen is first extracted in a retort from pure water, and carried in the form of a flue to another retort in which the carbon is formed; and, combined, they are conveyed through a purifier, and thence to the gasometer. It has long been thought that were the principle of the water gas formation carried into that of locomotion by steam, a very valuable improvement might be obtained over the present expensive modes of propulsion by railway and steamer.—*Perth Courier.*

**ELECTRO-TELEGRAPH PROGRESS.**—The Commonwealth states that there are, already in the United States and Canada more than 12,000 miles of wire, involving a capital of 3,000,000 dollars. To work these lines costs annually 730 tons of zinc, worth 57,000 dollars; more than a million pounds of nitric acid, worth 117,800 dollars; and 27,000 dollars' worth of mercury, besides a considerable value in sulphuric acid, &c. On the line from Pittsburg to Cincinnati alone, there were transmitted, in the year 1850, 364,559 paid despatches, and the revenue received was 73,278 dollars.—A telegraphic fire alarm has been carried out by the city government of Boston, and is now in successful operation, the telegraph giving the alarm to every engine-house and church bell over the city, as well as to the mayor's and city marshalls' offices.—Lieutenant Sillemus, inventor of the electro-magnetic telegraphic apparatus employed in Germany, has set out for St Petersburg, by desire of the Czar. He is ordered to suspend a line, in the first instance, between the capital and Moscow, and afterwards another, connecting both with Warsaw and Odessa. Other lines will extend to the Caucasus, to the Ural, and the principal sea-ports.

**LAMP-LIGHTING BY ELECTRICITY.**—A correspondent, "W. N.," not aware, apparently, that we long since made the same suggestion, reiterates the idea that street-lamps of towns might be lit simultaneously by the electric current. The wire, as he remarks, in passing along, would of course require to be supported by isolators, where interrupted in passing each burner. In speaking of this idea some years ago, we suggested that, not only the lighting, but the extinction of the jets might be simultaneously effected by the electric current, or at least, by electro-magnetism, one semi-rotation of the magnet shutting off the gas, and another letting it on; and moreover, that a light sweeping apparatus, or slip of brush-work, might be made to rotate, one inside and another out, on the face of lamp-glasses of a globular form, by the continued rotation of the same magnets, so as to clean the lamps, thus altogether dispensing with the heavy expense of lamp lighting and cleaning. The invention of the magnetic telegraph seems to prove these three latter operations, cleaning, and letting on and off the gas, to be possible with even less expense than ever, while the lighting could still be effected by the attachment of a battery, as so clearly instanced by the firing of gunpowder even across the British Channel. We suspect, however, that "the poor lamp-lighter" would rather be excused from the necessity of availing himself of the "ease and benefit," which we and our correspondent have thus in store for him.—*Punch.*

## PLAYING CARDS

[At Page 221 we commence a series of articles on the history of playing-cards, and shall continue them until the whole pack is completed. It will be easy for our readers to put them out and to gum them upon the pages of old books, provided they do not care about the preservation of their libraries. We would prefer, however, and the Companion bound into volumes than cut into scraps. And probably, in time for Christmas next, we shall publish the pack of Humorous Playing-cards in the usual form at a moderate price.]

True origin of playing-cards has never been definitely settled, some claiming the honour for the Spaniards and others for Jacques Greignemour, a painter of Paris; but we may venture to say this much, that the invention, although productive of much evil in itself, was nevertheless indirectly a most valuable one, as it seems to have given the first hint to the invention of printing, as evidenced from the earliest specimens of that art at Harlem, and those in the Bodleian library.

For our own part, we feel more inclined, for the following reasons, to favour the opinion that they were invented about the year 1390, by the said Jacques Greignemour, to divert Charles VI., then king of France, who had become melancholic. 1. Because no notice of cards is to be found in any painting, tapestry, sculpture, &c., more ancient than the preceding period, but are found posterior to it. 2. No royal edicts are mentioned prohibiting cards, although a few years before 1390, a most severe one was published, forbidding by name all manner of sports and pastimes except archery, so that the people might be in a condition to oppose the English; and it may be inferred that had cards been known at that period they would have been enumerated with the other games. 3. The ecclesiastical canons prior to 1390, make no mention of cards, but in 1410, we find the clergy are prohibited in indulging in games at cards by a Gallican synod. 4. About thirty years after this, a severe edict was issued against cards in France; and another by Emanuel, Duke of Savoy; which reserved, however, the privilege to ladies, for pins and needles.

The first recorded notice of their being known in England is in 1463, when the card-makers of London made an application to parliament against the importation of playing-cards; and from the 3 Edward IV. c. 4, it appears that both card-playing and making were practised anterior to this, or about fifty years after the era of then supposed invention. The Chinese are also said by Mr. Gough (*Archæologia*, vol. viii.), to have known the use of cards, as evidenced from their paintings, and also from a pack of Chinese cards in his possession, though they used different devices from those usually employed.

The inventor designed, by the figures of the four suits or colours, to represent the four states or classes of men in the kingdom. By the *coeur*, or hearts, are meant the *gens de chœur*, choir-men, or ecclesiastics; and therefore the Spaniards have chalices, or copas, instead of hearts.

The nobility, or prime military part of the kingdom, are represented by the aces or points of launces or pikes, which have been denominated spades through ignorance, or a corruption of the Spanish *espadas*, or swords, which they substitute in lieu of pikes.

By diamonds are designed the order of citizens, merchants, and tradesmen; *carreaux*, or squares, stones, tiles, &c. The Spaniards had a coin, *dineros*, which answers to it; and the Dutch call the French word *carreaux*, *stienen*, stones and diamonds, from the form.

The corrupt term of clubs, which is correctly *trèfle*, the trefoil leaf, or clover-grass, alludes to the husbandmen and peasantry. Probably, the term clubs was introduced from the Spaniards having *bastos*, staves or clubs, on their cards.

The four kings are David, Alexander, Cæsar, and Charles; representing the four celebrated monarchies of the Jews, Greeks, Romans, and Franks under Charlemagne.

The queens are intended to represent Argine, Esther, Judith, and Pallas; typical of birth, piety, fortitude, and wisdom, the qualifications found in each person. Argine is an anagram for Regina, queen by descent.

By the knaves were designed the servants to knights. Knaves originally meant only a servant, and, in a very old translation of the Bible, St. Paul is called the knave of Christ.

Some fancy that the knights themselves were designed by these cards; as Hogier and Labric, two names on the French cards, were famous knights at the time cards were supposed to have been invented.

In 1679, historical cards were published, as we learn from an advertisement of that time issued by a certain Randal Taylor, that there were sold by him a pack of cards for one shilling each pack, containing "A History of all the Popish Plots that have been in England, beginning with those in Queen Elizabeth's time, and ending with the last damnable plot against his Majesty Charles II., with the manner of Sir Edmundbury Godfrey's murder, &c. All excellently engraved on copper-plates, with very large descriptions under each card. The like not extant." At the top of each were the marks of the suit; and the value of the lord cards, from one to ten, expressed in Roman numerals; while at the foot was a brief explanation of the plot, trial, and punishment of the conspirators.

In *Hearts*, the king was represented with the privy councillors seated at the council-table; Titus Oates standing before them: inscription at the foot: "Dr. Oates discovereth ye Plot to ye King and Council." The ace: the Pope with the three cardinals and a bishop at a table with the devil underneath: The Plot first hatcht at Rome by the Pope and Cardinals, &c."

*Diamonds*: Knaves: "Pickering attempts to kill ye K. in St. James's Park. The ace: The consult at the White Horse Tavern."

*Clubs*: King: "Capn. Bedlow examined by ye secret Committee of the House of Commons." The six: Capn. Berry and Alderman Brooks are offered £500 to cast the plot on the Protestants.

*Spades*: Queen: The club at ye Plow Ale house for the murder of Sir E. B. Godfree.

## ENIGMA.

BORN of Ignorance, I spread  
A gloom wherever mortals tread.  
None e'er saw me,—none e'er will,  
Yet blood I very often spill.  
I have striven with fearful might  
From the world to shut the light.  
Liberty and I are known  
To struggle for the mental throne;  
I have swayed more minds of men  
Than can be told by poet's pen;  
And often shall the aspiring soul  
Feel the sting of my control.  
The battle-field, the gory sea,  
The golden calf, the hoary tree,  
The prison bar, the scorching flame,  
Bear record of my power and shame.

## ENIGMAS, CHARADES, REBUSES, &amp;c.

1.

When first the countless stars are seen  
To gild the shady sky,  
And throng around the silver queen,  
My first approaches nigh.

My second is a simple thing,  
For which you long may pore;  
Yet, would your eyes behold a king,  
Add but one letter more.

My third, although a gentle power  
That makes the green grass wave,  
And beats the sweets of every flower,  
Can bid the tempest rave.

And when my whole you shall unfold—  
To town and country dear—  
A well-known singer you behold,  
Whose voice we love to hear.

2.

I'm a word of six letters, both handsome  
and plain,  
And to find out my meaning will puzzle  
your brain.  
Take half of my whole, and in Erin you'll  
find—  
A thing very rough to the national mind.  
I cause great amusement, when seen in the  
air—  
But strike with awe, when at funerals  
appear.

Put my four first together, without any  
blarney—  
I'm found very good, in the lakes of Kil-  
buck—  
As a word of endearment, my last half is  
used.

And my whole is a thing very often abused.  
In rough society hindrances, in keeping you  
warm,  
I'm beaten and shaken by many an arm.  
To help you to solve me I'll cheerfully  
lend.

I'm owned by the author of the "Family  
Friend."  
And now, having said thus much to assist  
I will wish you success, and bid you adieu.

3.

"A batter-pudding," cook exclaimed,  
"I'll make for master's dinner,  
He praised the last so very much,  
But said he liked it thinner."

With conscious skill, and honest pride,  
She made her preparation;  
But when she turned to take my first,  
'Twas missing from its station.

She searched it high, she searched it low,  
And much was vexed about it;  
"I cannot make my pudding now!  
Impossible without it!"

The bell now rang, and cook was called,  
She answered in a hurry—  
The man of dough my second gave,  
With—"Pray excuse my hurry."

To tell my whole, you need not be  
Profoundly wise or clever:  
But if you cannot name a bird,  
You'll be a goose for ever.

4.

1. Concealment, long and dark, succeeds  
my birth. [to earth.  
Till the bright sunshine summons me  
2. Thereon my toil ceaselessly I ply—  
Which with the farmer's may be said  
to vie.

His—to renew the oft exhausted soil;  
But mine—a higher object in my toil.  
His—to procure a plentiful harvest  
home;

3. Mine—to provide for races yet to come.  
4. Of parasites I've many, like the great.  
But they, alas! add nothing to my state  
5. Though humble now, and trod beneath  
your feet.

In ages past I had a fate more meet;  
A sacred emblem, honour'd and revered,  
When time-enduring monuments were  
reared.

7. My sculptured forms the virtuous prize,  
And soon them learnedly with curious  
eyes. [define.  
Tall, then, ingenious youths, and clear  
What sin I now so lowly, once so great.

## TRANSFIGURED PLAYING CARDS.

## THE TEN OF SPADES.

My first is a guide,  
As the men of-war ride  
In their loftiness down the stream;  
His foot doth sink,  
But his head's on the brink,  
And nods to fair Luna's gleam.

[The whole answered in No. 16.]

My second is my whole—for it springs into  
air,  
And joyously holdeth its gambold there;  
Nor alighteth again till its wings are lost,  
Then a prey for the voracious to the earth 'tis  
tost.

## ANSWERS TO THE PASTIME OF LAST EVENING,

Page 205.

## PICTORIAL CHARADE—"EXCELSIOR!"—Hops.

## ENIGMAS AND REBUSES.

## 1. GRIFF.

1. GRANDEY, Spanish title.
2. RAINBOW, the finest arch.
3. IMAGE, the statue.
4. ECHIDNUS, the magician.
5. FROG, or FABLE, story invented.

## 2. BRACK, RACE, ACE.

## 3. SUN-MARY.—SUMMARY.

4. Jew, Ace, Mail, Lol, stars — JAMES WELLS.

5.

1. ALUMINA, or pure clay, is very abundant in nature.
2. It occurs in a crystalline form, as the Sapphire and Ruby; in a more massive form, as Corundum, or Emery.
3. Pipe-clay.
4. Sapphire.
5. Corundum or Emery.
6. Ruby.
7. The Ruby and Sapphire are found in the sands of rivers, in Ceylon and the East Indies.
8. It is the chief ingredient of all clays, and of most slaty rocks.
9. In brooches, bracelets, &c.
10. One of the Jewels.
11. In plates, china, vases, &c.
12. China ornaments, &c.
13. As tea-cups, plates, &c.
14. The celebrated pagoda at Nankin, which is covered with a coat of china: it has been built upwards of 400 years, and it is still held sacred by the Chinese (16).
15. The Grecians, who were celebrated for their pottery, whence it passed into Etruria.
16. The Etruscan Vases have served for models to the present day, for the elegance of their shape.
17. Emery or Corundum is used in smoothing the finer sorts of glass.
18. It is used by masons in polishing marble.
19. In the shape of alum, or acetate of alumina, is much used as a mordant in dyeing and calico printing.
20. Alum is much used to whiten bread.
21. The portraits of Her Majesty and Prince

Albert, on china, in the late Exhibition.  
24. On the outside of the Forte Monnaie, as a decoration.

25. The Sevres china services are so exceedingly beautiful and expensive, that they are often sent as royal gifts.

26. The Dutch tiles are used for ornamenting fire-places.

27. Table ornaments.

28. China finger plates and handles.

29. When gloves were first introduced, those appropriated to royalty were richly decorated with jewels over the back of the hand.

30. The finest china is much used for figures.

31. When a solution of alum is mixed with a colouring matter, and the alumina then precipitated by an alkali, the hydrate carries with it all the colouring matter, or the greater part of it, and forms what is called a lake. Carmine is a lake of cochineal; and common lake is merely a lake made with madder or logwood.

## 6. Moment.—OMEN.

## 7. BLINK. LINK. JINK.

## 8.—GOLD. OZD.

## 9. CARPET.

My whole is a Carpet.  
The half of my whole is a Car.  
My four first together, Carp.  
My last half is Pet.

## 10. A CLOUD. 11. A BARN.

## 12. FLAMBEAU.

## 13. ROSE-MARY. 14. EIGHT.

## ANSWERS TO NAMES OF TOWNS IN ENGLAND.

2. Gainsborough.
3. Maidstone.
4. Peterborough.
5. Warrington.
6. Wigan.
7. Stockport.
8. Bridgeorth.
9. Dunstable.
10. Oldham.

## OUR CORNER CUPBOARD!

A MAN'S life, says South, is an appendix to his heart.  
Our greatest glory consists not in never falling, but in rising every time we fall.

SOUTHWORTH said to a low-spirited friend, "Translate *Tristram Shandy* into Hebrew, and you will be a happy man."

If a straw, says Dryden, can be made the instrument of happiness, he is a wise man who does not despise it.

ROBERT HALL said of family prayer, "It serves as an edge and border, to preserve the web of life from unravelling."

THE same care and toil that raises a dish of peas at Christmas, would give bread to a whole family during six months.

WIT is written in that which is well defined, the happy result of thought, or product of imagination.

SYDNEY SMITH said there were three things which every man fancied he could do—farm a small property, drive a gig, and write an article for a review.

HANNAH MORE said to Horace Walpole: "If I wanted to punish an enemy, it should be by fastening on him the trouble of constantly hating somebody."

"PA, how many legs has a ship?" "A ship has no legs, my child."  
"Why, pa, the paper says that she draws twenty feet, and that she runs before the wind."

A SADDLER at Oxford having forgotten to which of his customers he had sold a saddle, desired his clerk to charge it in the bills of all his customers; and he afterwards acknowledged that two-and-thirty of them paid for it.

A BED is a bundle of paradoxes; we go to it with reluctance, yet we quit it with regret; and we make up our minds every night to leave it early, but we make up our bodies every morning to keep it late.

"I SAY," said a dandy to an intelligent mechanic, "I've got an idea in my head." "Well," replied the other, "if you don't cherish it with great care, it will die for the want of companions."

ERSKINE puzzled the wits of his acquaintance by inscribing on a tea-chest the words "*Tu doces*." It was some time before they found out that the wit of it lies in the literal translation—"Thou teachest."

"I THOUGHT you told me that Mr. Brown's fever was gone off," said a gentleman. "I did so," said his companion, "but forgot to mention that he went off along with it."

THE observance of hospitality, even towards an enemy, is inculcated by a Hindoo author, with great elegance:—"The sandal, to impart its fragrance even to the axe that hews it."

PORK, in his old age, said: "As much company as I have kept, and as much as I love it, I love reading better. I would rather be employed in reading, than the most agreeable conversation."

LYING is a hateful and accursed vice. We are not men, nor have other tie upon one another, but our word. If we did but discover the horror and consequences of it, we should pursue it with fire and sword, and more justly than other crimes.

JUVENILE SCENE.—[Two boys as large as pepper-boxes wading in a duck-pond during a heavy shower]. *First Boy*.—I say, Dick, isn't this glorious sport? *Second Boy*.—Yes, capital; and, by the way, Sammy, aren't you glad it rains, so that we can't go to school to-day?

TWO MEN, in dispute, reflected upon each other's veracity. One of them replied, "that he was never whipped but once by his father, and that was for telling the truth." "I believe, then," retorted the other, "the truth was whipped out of you, for you never have spoken it since."

The gloomiest day has gleams of light;  
The darkest wave hath bright thought near it;  
And twinkles through the cloudiest night  
Some solitary star to cheer it.

A boy who was sent to inquire how an old lady, named Wilkins, was in health, asked her servant—"Please, ma'am, missus wants to know how old Mrs. Wilkins is to-day." To which the latter replied—"She is just seventy-four to-day."

AN avaricious person, who kept a very scanty table, dining one Saturday with his son at an ordinary in the city, whispered in his ear—"Tom, you must eat for to-day and to-morrow." "Oh, yes," retorted the half-starved lad, "but I ha'n't eaten for yesterday and the day before yet, father."

### TEMPERANCE.

The sturdy oak full many a cup  
Doth hold up to the sky,  
To catch the rain, then drinks it up,  
And thus the oak gets high—  
By having water in its cups;  
And so must you and I."

A DECEASED chief-justice in America, once addressed a jury in the following model speech:—"Gentlemen of the jury, in this case the counsel on both sides are unintelligible; the witnesses on both sides are incredible; the plaintiff and defendant are both such bad characters, that to me it is different which way you give your verdict."

## OUR MEMORANDUM BOOK.

COMPLAINTS OF LIFE.—Those who most complain of life are those who have made it disagreeable. Some men stuff their beds with the thorns of remorse, instead of the down of repose, and when they lie down on them, they roar with the agony they have wilfully inflicted on themselves. As reasonably might we as complain of the thistles which wound his mouth, when he will persist in chewing them. Those who most feel the load of life complain the least of it.

LIFE is beautiful,—its duties  
Cluster round each passing day,  
While their sweet and solemn voices,  
Warn to work, to watch, to pray.  
They alone its blessings forfeit,  
Who by sin their spirits cheat,  
Or to slothful stupor yielding,  
Let the rust their armour eat.

AUTHORS.—Young authors are very sore when their faults are touched, though with ever so tender a finger. I cannot see why. If a man mount a pedestal to attract notice, we should not wonder, if having a hole or two in his hose, he is told of them by the lookers on. Authors in general are gluttons in praise—very ostriches in digestion; and nothing comes amiss to their proud stomachs but censure. They will bolt any given quantity of praise you can bring them—"the total grain unsifted,—husks and all." But if you add a morsel or so of thirsty advice, or hint a fault, it is worse to them than the presenting of a barrel of gunpowder with a spark in it would be. Yet indiscriminate praise is the ruin of young ability. As there are some men so cynical that they will tell you only of your errors, so there are others who will only flatter you for merits which are not so surely yours. This is like a man praising a button on your coat, and winking at the hole in the elbow of it.

SPITE of all the fools that pride has made,  
'Tis not on man a useless burthen laid;  
Pride has ennobled some, and some disgraced;  
It hurts not in itself, but as 'tis placed;  
When right, its view knows none but virtue's bound,  
When wrong, it scarcely looks one inch around.—*Stillinger*.

HABITS.—How happy the majority of mankind are, when they can get an occasion to laugh at one of their fellows, whom they choose to consider a man of particular and punctual habits, as if all their daily actions were not as habitual, though not so well regulated. If a punctualist goes to rest regularly at ten, they laugh at him as a human machine, and then go themselves as habitually to bed at four. If he puts on his coat every morning at six, they laugh at such clockwork regularity, and think, because they shift off the putting on theirs one day till twelve, and another till two, that they do not as daily and habitually wear a coat. What are nearly all the actions of life but habits? Our hunger, our thirst, our sleeping, our waking; our appeasing the first, and enjoying or quitting the others? Habits. Is there anything about us which is not habitual? Does not Spring arrive at his appointed season, and Summer succeed him, and Autumn finish his glorious labours, and Winter prepare the exhausted earth for new travail and production, though still for the same yearly task? Does not the sun precede the moon, and the moon succeed the sun at habitual and fixed periods? Order is, indeed, the harmony of nature; and it is strange that man will not see it, if he cannot hear it.

CHOICE OF A CLERGYMAN.—A Bishop of Ermeland, of the Lithuanian family of Graborsky, is said to have had many singularities, but he frequently showed great penetration. He once had a very good living to dispose of. According to the statutes, three candidates were presented to him, one of whom he was to appoint to the vacant living. The bishop told them, that as spiritual duties were attached to this living, it was necessary that he should have them for some time under his eye, to be acquainted with their character and abilities. The candidates allowed this remark to be just, and for some weeks did their utmost to merit the good opinion of the bishop. At the appointed time they came to the bishop to be examined, who said to them—"You have doubtless carefully applied to your theological studies; I therefore will not touch upon them, but, according to the example of our Saviour, propose to you only some simple questions from common life. What would you do," said he, addressing one of them, "if a beast of burden, heavily laden, were entrusted to you, to conduct it to a certain place at a certain time, and if, when near the end of the journey, it should threaten to sink under the burden?" "I would beat it," answered the candidate, "till it had completed the small distance to the journey's end." "Well, that would be pretty much in the military style," said the bishop. "And you, young man?" said he, addressing the second. "I would hire a second mule, or a cart, and take the burden from the tired beast, in order to arrive at the journey's end at the right time." "Well, and what would become of the poor beast?" "Oh! I would hire a man to lead it after me." "Very well, but for this a full purse is necessary.—And what would you do in this case?" said he to the third candidate. "Why, I would take from the beast as much of the burden as possible, and carry it myself, that we might arrive happily at our destination." "And you shall have the living," cried the bishop, pleased, "for you have felt that it is our duty to lighten the burden of those who are weary and heavily laden, even at the expense of our own convenience. Act in conformity to these sentiments."

**HOOPER'S FAMILY COUGH PILLS.**—Composed only of the choicest drugs, and from a genuine Medical Prescription, and recommended on high medical authority as the safest and best remedy for Coughs, Colds, Sore Throats, &c.; and may be obtained of or through any respectable chemist from the sole agents, **WILLIAM SUTTON & Co., 10, Bow Church Yard, London.**

STORIES FOR SUMMER DAYS AND WINTER

NIGHTS, First Series. Twelve Stories at 2d. each,

or 2 Vols., neat boards, or boxes, 1s. each.

STORIES FOR SUMMER DAYS AND WINTER

NIGHTS, Second Series. Thirteen Stories at 3d.

each, or in 2 Vols., or elegant cases, 1s. each. (*A New Story on the First of every Month.*)

THE ECONOMIC LIBRARY:

RURAL ECONOMY for COTTAGE FARMERS

and GARDENERS. By Martin Doyle and Others.

2s. cloth.

DOMESTIC HAPPINESS, HOME EDUCATION,

POLITENESS and GOOD BEHAVIOUR. By G. E. Sargent.

1s. 6d. cloth.

CATECHISMS of GARDENING and COTTAGE

FARMING. By Martin Doyle. 1s. cloth.

CATECHISM of DOMESTIC ECONOMY. By Esther

Copley. 1s. cloth.

COTTAGE COOKERY. By Esther Copley, bound in

cloth, 1s.

THE ECONOMIC HOUSEKEEPING BOOK. 1s.

THE WORKING-MAN'S HOUSEKEEPING BOOK.

1s. 6d.

DICTIONARY of DOMESTIC MEDICINE and

HOUSEHOLD SURGERY. By Spencer Thomson,

M.D. To be completed in 12 Monthly Parts at 6d. each.

First Part ready 1st January.

London: GROOMSBURY and BOND, Paternoster Row.

Sold by all Booksellers.

### Editor's Note-Book.

**CARELESS WRITING.** *Hints to our Correspondents.*—Owing to the illegible manner in which many letters addressed to us are written, we are often compelled to enclose them to the waste-basket, not having time to decipher their contents. We have repeatedly urged the necessity of a clear handwriting and brevity of matter. Important interests may be

sacrificed, and immense enjoyments lost, by not learning to write a distinct and legible hand. Sir Walter Scott, while he represents Francis Osbaldistoun's father as a steady merchant, makes him criticize closely the handwriting of his son's letter, and to complain especially that his 'a's are left without loops, and want, beside, the relative height that ought to distinguish them from 't's. It has been somewhere mentioned of a gentleman, whose will expressed that his property was to be left to a Mr. London or a Mr. London, both residing in the same town, but by no means intimate, and that legal proceedings decided in favour of Mr. London, merely because the testator was once seen to speak to him, and because no such evidence appeared in favour of Mr. London. This case occurred on account of the unintelligible handwriting of the testator, whose 'n's were like 'u's, and whose 'u's were like 'n's. This is only one of the many mistakes in the writing of proper names which have deprived rightful owners and deserving persons of their property; and this is also to be avoided by learning to write well in the first instance, and by always writing carefully afterwards.

**DEY ROT IN CELLARS.** T. B.—This may be prevented by whitewashing yearly, mixing with the wash as much copperas as will give it a clear yellow hue.

**GREEN PAINT.** S. D.—Gastar, mixed with yellow ochre, makes an invisible green paint, very useful for preserving coarse wood work, or other articles whose more ornament is required than far alone.

**FIRST ENGLISH NEWSPAPER.** DELTA.—The first newspaper established in England was entitled the "*English Mercury*," and is dated July 28, 1588, one of which is preserved in the British Museum. The "*Gazette*" was first published at Oxford, Aug. 23d, 1612.

**STUDY OF HISTORY.** INQUIRER.—Tables and charts are among the greatest facilities in the study of history and chronology. They bring before the eye at a glance, what can be presented but gradually and slowly by description; the locality of events, and dates on the paper also aid to fix them more firmly on the memory.

**TOOTH POWDER.** E. G. C.—Finely powdered charcoal forms an excellent powder: it cleans the mouth mechanically and chemically; but as alone it is dusty, and not easily mixable with water, it may for this purpose be mixed with an equal weight of prepared chalk, and, if requisite, scented with a drop or two of oil of cloves.

**ORIGIN OF CHARING CROSS.** E. H.—This originated from the fond epithets bestowed by Edward the First on his beloved Queen, to whom no less than fifteen crosses were erected, and from the prevalence of the French language at that time, *Charing* being nothing more than a corruption of *Chère Reine* (beloved Queen). Of course the Cross gave the name to the spot.

**SPRING WATER.** C. J.—The original source of all spring water is rain, which, falling upon high ground, filters through the soil and the strata of the earth, so long as they are porous, until it is stopped by some impervious substance, as rock or hard clay; it will then find its way along the surface of this bed, until it arrives at some crevice or opening through which it forces its way out at the surface. Rain-water is perfectly wholesome.

**CALICO PRINTING.** NEMO.—This art, by means of blocks, has long been practised in Asia Minor, Turkey, and all over the East. It is said to have commenced in London, in 1676, and was much encouraged and improved in consequence of the Government having prohibited, in 1700, the importation of the cheap and beautiful prints of India, Persia, and China, with the view of protecting the woollen and silk manufactures.

**TO PRESERVE IRON AND STEEL FROM RUST.** X. Y. Z.—Melted caoutchouc, or India-rubber, possesses peculiar advantages in preserving the surface of iron from being acted upon by the atmosphere, arising from its little susceptibility of chemical change when exposed to the air, from its tenacious consistence, and strong adhesion to the surface of iron or steel, besides the facility with which it is removed by a soft brush charged with warm oil of turpentine.

**VARNISH FOR BRASS-WORK.** THOMAS.—To a pint of spirits of wine, put one ounce of turmeric powder, two drachms of best annatto, and two drachms of saffron. Let it stand ten days, shaking the bottle often, and filter through coarse muslin into a clean bottle; add then three ounces of clean seed-lac, and shake the bottle often for fourteen days. The brass, if large, must be first warmed, so as to heat the hand, and the varnish then applied with a brush. This varnish gives the brass the look of desks, &c., a beautiful appearance.

**RAPIDITY OF FREEZING.** H. M.—The extraordinary rapidity with which water is converted into ice has often been mentioned by scientific writers. We can cite an example, even more marvellous than that related by our correspondent. In one of the Polar expeditions, an officer took a bottle of fresh water to the main-top of the vessel, and poured the contents through a cullender, and by the time it reached the roofing of the ship, the drops congealed into irregular spherical pieces of ice. The height of the main-top was not above forty feet; so that, according to the laws of falling bodies, the water must have been frozen in less than two seconds of time.

**SELF-DEPENDENCE.**—Every man is the architect of his own fortunes. Fortuitous circumstances may assist some persons on the road to distinction, but it will be generally found that the individuals who have achieved the greatest success in life have been those who have overcome difficulties of no common character by steady resolution. The great and gentle-minded Linnæus, who became the triumphant propagator of a new system of Nature, was in his youth obliged to depend on the charity of his fellow-students for a meal, and mended his shoes with brown paper, because he could not afford to have them sold. Hundreds of similar instances are recorded, to prove how the spirit of man can rise superior to the depressing circumstances that may surround his path. The pursuit of wealth is not productive of happiness, but the attainment of knowledge unlocks all the secret springs of enjoyment. "How much better," exclaims the wisest of men, "is it to get wisdom than gold, and to get understanding rather to be chosen than silver!" The man who has overburdened himself with riches, to the detriment of his mental culture, is at as great a loss to adjust his mind to the beautiful truths of science and learning, as the jolly subject of our illustration finds it difficult to reconcile his obesity with the narrow couch presented for his repose. So true is the old adage, that

"AS WE MAKE OUR BED, SO WE MUST LIE ON IT!"  
Landlady. This is the room, sir.  
Old Gentleman. And is that the bed?

**A SIMPLE BAROMETER.** J. J.—Many plans have been devised for barometres, but the following appears to us both simple and effective:—Take a common phial bottle, and cut off the rim and part of the neck. This may be done by a piece of string, or rather whipcord, twisted round it, and pulled strongly in a sawing position by two persons, one of whom holds the bottle firmly in his left hand. Heated in a few minutes by the friction of the string, and then dropped suddenly into cold water, this will easily come off. Let the phial be now nearly filled with common pump water, and, applying the finger to its mouth, turn it quickly upside down: on removing the finger, it will be found that only a few drops will escape. Without cork or stopper of any kind, the water will be retained within the bottle by the pressure of the external air, the weight of air without the phial being so much greater than that of the small quantity within it. Now let a piece of tape be tied round the middle of the bottle, to which the two ends of a string may be attached, so as to form a loop to hang on a nail. Let it be thus suspended, in a perpendicular manner, with the mouth downwards, and this is the barometer. When the weather is fair, and inclined to remain so, the water will be level with the section of the neck, or rather elevated above it, and forming a concave surface. When disposed to be wet, a drop will appear at the mouth, which will enlarge until it falls, and then another drop, while the humidity of the atmosphere continues.

**COMMUNICATIONS RECEIVED.**—O. P. Z. L. (having property in land or houses constitutes security).—**PERCHASER** (time may easily be divided into certain hours for intellectual improvement, and a due regard to the healthy condition of the body, by exercise).—R. S. C. (we still adhere to our first opinion, which is obviously correct).—**PARROT** (we thank our correspondent for his suggestions).—A. H. (a moderate use of powdered charcoal, frequently rinsing the mouth, and a due regard to temperance and diet, will preserve the teeth).—S. U. Z. A. (the word *apophant* was originally used to denote an informer against those who stole figs, or exported them contrary to law. Hence in time it came to signify a tale-bearer, or informer in general; thence, a flatterer, deceiver, or parasite).—T. P. (in these days of cheap postage, every one ought to prepay their letters).—W. S. (not suitable).—C. B. K. R. (to make a curry powder take two pounds coriander seeds, one ounce and a half cummin seeds, an ounce and a half fenugreek seed, two ounces turmeric, four ounces chillies, and six drachms of cinnamon. The coriander, cummin, fenugreek, and chillies must be pounded separately, put into the frying-pan, and gently heated over the fire for a few minutes, stirring the whole time. The rest ought to be all separately pounded, their husks removed, and the powder passed through muslin. The whole then to be mixed, well pounded together, and again passed through muslin).—T. B. (many thanks).—**THOMAS** (the word alkali comes from a herb called by the Egyptians, *kali*—by us, glasswort).—MARION (Mrs. Copley recommends that a slate should hang in the kitchen or in some convenient place, on which should be entered every penny expended in the course of the day; this is a check against mistakes and omissions).—E. H. G. (*boiling* is the operation by far the best suited for the dyspeptic, the convalescent, and the sick).—H. P. (cannaries require green food, as chickweed in spring, lettuce and radish leaves in summer, endive, water-cress, and slices of sweet apple in winter).—M. S. (Joan is a mixture of clay, siliceous sand, and carbonate of lime).—LEMO (thick curtains closely drawn around the bed are very injurious, because they intercept a current of pure air).—MAXWELL (to improve the growth and softening of the nails, an ointment can be prepared from the yolk of a hard egg and two ounces of fine white wax, incorporated together in a small pot over the fire, and adding a little of the oil of sweet almonds, to reduce them to the consistence of an ointment).—N. P. (no fair can be held in England without a grant from the crown).—T. C. H. (many thanks for the suggestion).—MEMPHIS (Birmingham is the oldest city of manufacture in Europe).—MARTIN (contrabition declined).—BETA (keeping the feet warm is the best preservative against headache).—M. M. C. (the principal ingredient in cleaning kid gloves is spirits of turpentine).—T. B. (the subject is not suited to our pages).—A. J. (we shall consider the matter).—T. O. C. (our correspondent is too late in the field).—J. H. (apply to any publisher of medical works).—F. EXOCH (we shall always be happy to hear from our correspondent).—G. (thank).—M. COLAM (must state his request more clearly).—J. T. H. (cold rain water frequently applied is an excellent remedy).—J. K. (our correspondent had better apply to a surgeon. We do not profess to give medical advice).—S. B. (*gull* is a bird in an animal, like we termed hile. It contains a good deal of soda, hence its use in removing grease from clothes, &c.).—B. (the colours of horses are laid much stress on by many persons, and long experience has shown that certain tints are usually accompanied by certain qualities of person or disposition).—CAROLINE (milk boiled with sugar will keep some time).—CHIRO (tea was wholly unknown to the Greeks and Romans, as likewise to our ancestors previously to the middle of the seventeenth century).—M. M. (salt has the property of causing dough to take up more water than it otherwise would, and thus increases the weight of the bread, but as this increase is mere water, the bread gains nothing in nutritious quality).—P. C. (to prevent liquids, especially milk, from spoiling by what is commonly called *burned to*, double bottoms to all saucepans and boilers used in cooking are recommended).—QUERINA (the finest of all wools is that from the goat of Thibet, of which the exquisite Cashmere shawls are made).—INQUIRER (Sheila is the appellation given to a small but strong horse in Scotland, so called from Shetland, where it is bred).—M. S. (many thanks, but the contribution is unsuited to our pages).

# THE HOME COMPANION.

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 15.—Vol. I.]

SATURDAY, APRIL 10, 1852.

[PRICE ONE PENNY.]

## GIVING AIMS IN SECRET.

In every dwelling on this stricken earth,  
Abides a suffering soul;  
On all the winds that circle us, goes forth  
The cry of human dole.  
"Ye have the poor always," the Lord hath  
said,  
And those to whom was given  
Much, that there might be much required,  
He bade  
His almoners be—the stewards of his  
Heaven!

But let Heaven's work in secrecy be done,  
And with a willing hand,  
As drops the silent dew, as shines the sun,  
As lovely flowers expand,  
Unseen, unmarked, the influence combine  
That brighten Nature's face.  
Oh, build thou like the Architect Divine,  
And let not pride the deep foundation place!

If thou art rich, give of thy plenteous  
store,  
If poor, thy mute bestow;  
But on thy deeds of mercy shut the door,  
That none the good may know,  
Save him who tenderly on us looks down,  
And hears the mourner's sigh,  
And with the sunshine of his smile doth  
crown  
The flower of heavenly root—sweet Charity!

The canopy of earthly pomp shuts out  
That ray of heavenly love;  
Soundeth the multitude's applauding shout  
The "still, small voice" above;  
Doth the world hail with praise thy hon-  
oured name?  
Fremble! thy work is marred;  
Thou that hast, seeking, won the meed of  
fame,  
And in that glory gained thy sole reward!

But them, whom men heed not, or heed to  
scorn,  
Friend of the poor and lone,  
Thy humble task still wrought, thy burden  
borne

With patience all unknown,  
Thy Father sees in secret, plant nor prayer  
Hath passed his pity by,  
And all the self demands thou dost bear,  
Are in a jewell'd crown laid up for thee  
on high.

O, Sun! without thy life bestowing beam  
Love's bud grows cold and dyes;  
O, Fount! if check'd from Thee, the living  
stream,  
The land a desert lies!

Let but Thy presence on our spirits shine,  
Its image will appear  
As in the faithful glass an image clear,  
And answer to that look of charity divine.

## THE LADY OF THE ROCK.

A HISTORICAL TALE OF THE TIME OF CHARLES THE FIRST.\*

### CHAPTER I.

"Splendour in heaven, and horror on the main,  
Sunshine and storm at once—a troublous day."—*Dante the Poet*

ALL readers of English history must be able to recal to mind, with especial distinctness, that period in its annals when the unfortunate Charles I. drew upon himself the odium and mistrust of parliament, and London witnessed the unprecedented scene of the trial of a king for treason before a court chosen from amongst his subjects. It will be recollected that opposing religious interests operated with those of a merely political nature, in leading many of the enemies of Charles to push their aversion to his measures to this extreme. His unwise prohibition of the puritan emigration to the American colonies was not the least of these creating causes; and might be cited by such as are fond of tracing retributive justice in human affairs, as one of those instances in which men are permitted by their forwardness to pass upon themselves the sentence of their own destruction. Since, but for that prohibition, the most powerful opponent of Charles, and the mighty instrument of his ruin, would have embarked for New England, and that country would have become the theatre of Cromwell's actions and renown—supposing that the elements of that remarkable character must have won elsewhere something of the same name he has left behind him—a name to live alike in the condemnation and commendation of mankind.

To the period alluded to, the beginning of this tale reverts. The trial of the king had been in progress several days. Of more than a hundred and thirty judges appointed by the Commons, about seventy sat in constant attendance. Chief in rank and importance among these was General Lisle—a man whom we should not confound either with the mad enthusiasts of that day, or with those dissembling hypocrites who used their religion only as a stepping-stone to power, or the cloak to conceal a guilty and treasonable ambition, since his opposition to Charles was actuated solely by the purest principles of patriotism and religion. He was, at the time of the trial, in his sixtieth year; and his constant attendance and unwavering firmness of purpose—the evident results of preconceived principle—during the whole

\* As the above story is not mere fiction, it is scarcely necessary to remind the reader that its groundwork has been sought elsewhere than in the writer's fancy. The main plot of the legendary portion is taken from Malby's *Tales of the Puritans*; but for the incidents and language, the writer claims entire originality. As many minds have been allured by the stormy grandeur of the fate of the regicide, it is not surprising that several persons have attempted partially to depict it. It will be seen that the authoress has sought to blend with the sterner features of her story, those more delicate shades of feeling and sentiment, which no crime and no misfortune can prevent from mingling with human lot.

sitting of that strange tribunal, were not without great effect in leaving a continued resolution the otherwise faltering minds of many of the younger judges. For it cannot be doubted that compunctious feelings must have had moments of ascendancy in the hearts of a number of those with whom rested the event of this questionable trial. This was evinced in some by their occasional absence; in others, who nevertheless felt deeply, by a nervous tremor at the appearance of the prisoner, and subsequent abstraction of attention from the scene, as testifying a desire to assume as small a share as possible of the deep responsibility belonging to the occasion.

Of the latter class was William Heath, the son of a puritan divine in Sussex. At the opening of the war, he had repaired to the army, and risen by his gallantry and merit to the rank of general. Though still young, he had been afterward conspicuous in parliament, and was one of those who took up accusations against the eleven members. Yet although he was friendly to the king's deposition, he had at first positively refused to sit when appointed one of a court called to make inquisition for his blood. And he had at length only consented to assume the place assigned him there, as it was notoriously believed, through the influence of Lisle, to whose daughter he was betrothed, and his nuptials with whom were to be celebrated on the night on which this narrative opens.

His handsome countenance, as he sat in the court through the whole day preceding, though it contrasted with the pallor which had marked it during those previous, in wearing upon it the anxious flush of the expectant bridegroom, yet bore the same harassed air which had been seen upon it since the commencement of the trial, and which even the blissful hopes he was about to realize could not suffice to dissipate. It was only when he turned his eyes upon Lisle, unflinching in his dignified composure, that he seemed momentarily able to yield himself up to the unalloyed anticipation of happiness. So true is it, that a conscience ill at ease with itself has the power to mar the bliss of heaven.

The count had adjourned, the prisoner had been remanded to the care of Lisle, in whose house he had been kept in strict and harsh confinement ever since his landing in London, during those hours not occupied with his trial, and but one more day remained to decide the doom of the unhappy Charles Stuart.

It was eight o'clock in the evening. In an apartment, far remote from that chamber of Lisle's spacious but sombre-looking dwelling, which held the person of the royal prisoner, were assembled the wedding guests. As much festivity and ornament had been called to grace the occasion as was consistent with Lisle's puritanic views; yet the whole seemed by far too little to celebrate the marriage of the lovely divinity for whom it was prepared. The apartment was in the Elizabethan style of architecture, but devoid of those ornaments of luxurious taste, which, in the reign of Charles I., graced the houses of the opulent and distinguished of the Church of England. A quaint stiffness reigned throughout the furniture and other arrangements. Rows of high-backed chairs, interrupted here and there with a book-case, table, or other heavy piece of mahogany, stood in primi regularly against the wall; tall candlesticks, containing taller caudles, cast their blue light from the mantel-piece; and a large Bible, laid open upon the table, was calculated to infuse devotional or religious sentiments into those youthful feelings belonging to the occasion. No branches of mistle or holly hung around the room, remained as suggestive of the recent Christmas; no superb and glittering chandelier shed its soft flood of light upon the assembly; no damask drapery or luxurious sofas gave an air of elegance and comfort to the spacious dreariness of the apartment; no music was prepared for the enlivenment of the evening; nor were any profane amusements that night to invoke the judgments of heaven upon the approaching ceremony.

The company consisted of more than two hundred guests, gentlemen and ladies, all staunch puritans, and opposers of the king. The countenances of many of the male portion of these were recognisable as the same which had, for the last few days, appeared as the arraigners at the trial so speedily about to be terminated; and a certain peculiar expression, common to each, betokening a mind preoccupied by one deeply engrossing topic, might have enabled an uninformed observer readily to select them from the rest. Yet there were others present, to whom the affair alluded to was not less momentous, and with whom rested fully as much of the responsibility of its now almost certainly dark result.

One of these latter, conspicuously seated near to Lisle, was the mighty mover of the political revolution of the day, and the chief instrument in procuring the king's unhappy position—the aspiring, though still religious, Cromwell. The descriptions of history have made the personal appearance of this remarkable man so familiar to posterity, that it is superfluous here to draw any picture of his coarse and strongly-made form, and severely harsh,

"Would that you had spared me, beloved one, the pain of hearing you ask aught that I cannot and dare not grant. My word of honour to your father is pledged to perform the very act which you implore me to leave undone. It was the condition which sealed my happiness in calling you wife this night. When I would have shrunk from the responsibility of taking an active part in the trial, and resigned my place to an older and more experienced statesman than myself, Henry Lisle, in disgust at what he conceived the indecision and irresolution of my character, would have robbed me of that dear hope which has even now been realised. I was forced to promise your father, Alice, that I would not only accept my place as one of the judges, but that I would be present throughout the trial, and shrink from no act which my position as a member of the court imposed on me—even to the signing of the warrant for Charles Stuart's death. Is there nothing else, involving less than my honour, that you would have me grant you? If there is, ask it, sweet one, and I will move heaven and earth to accomplish it."

"These are idle words of gallantry, William, unworthy the confidence which should exist between us. A wife need have no hope to a husband, unless in a case which involves his own best interests. As a child I could have had thee remain away from the court to-morrow, and I have sought to use our united influence to detain my father here. But it seems he has set his heart upon the matter, even more than I had deemed it proper for him to do. Let his retaliative justice for this particular act fall not heavily on the heads of all of us. If this cause, as ye both believe, he has, can ye not be persuaded that he will avenge himself on the king without human agency. If there be no hope for Charles Stuart? He is in this hour, even now, as we have contrived for his escape?"

"That were impossible, dearest, guarded as he is, with all hands. If it would abate his hauteur, and plead his cause in the eloquent manner he knows how to assume, there might yet, perhaps, exist a possibility for his escape. But this lies only in the chance of escape."

At that moment supper was announced, and Alice and Henry joined with the rest of the company to the refectory.

## CHAPTER II.

"Think, my darling, how  
Prepossessing words are such."

—J. H. ROSS.

THE large hall, where in 1534 Henry had held the first of eleven, after the marriage service, of the late king, and some fifteen or twenty minutes had elapsed since the departure of the guests when the reader is introduced to a small apartment in a corner and on the eastern side. It was as comfortable as any room in the whole apartment, but it did not vary in its long distance from any adjoining room, and it was situated entirely in the eastern rooms, common in large buildings at that period, and seen to be suitable in its arrangements for an apartment from the waste lands and galleries which led to it. Some heavy proportions had been made for the permanent accommodation. Arras had been tacked up, and a fire had been in the grate, which had been long unused, and a wide polished floor in one corner.

Seated before a table in this chamber, was a person of about thirty years of age. He was dressed in plain black velvet, and wore a black hood, which was thrown back, glittered a star belonging to the Order of the Garter.

His face was oval and handsome, the features being regular, not a historian line that his full brown eyes seemed rather dull, he sat in thought, and a peculiar expression of exceeding melancholy rested upon his countenance. This look of melancholy was not reflective, the marks of any strong ruling passion or principle, nor much indication of individuality of character. Yet, withal, it might not have escaped observation, that in the whole aspect there was not wanting a certain air of cold resolution, almost at variance with the mildness of the brow. This person was of the middle height, strongly made, and showing in his entire appearance a dignity denoting the highest birth.

Before him, on the table, lay the miniature of a lovely child, and a large Book of Common Prayer open beside it. He sat gazing upon the picture, until a tear ran slowly down his cheek. It was that of a blooming boy, the bright free shaded by clustered ringlets, and the whole countenance beaming with youthful hope and beauty.

"Sweet child," he audibly said, "may you ascend the throne of the Stuarts under better auspices than I have done! Heaven in its mercy grant that you may never suffer the fate of your wretched father! Oh if, at least, such hope of trial ever come upon you, may you not know what it is to be thus alone in your affliction, and separated from all you love on earth—shut out from the sweet sympathies of wife, children, and home, while your rank and dignity as king of England is trampled upon, and you are imprisoned and tried by your own people!"

His softened mood seemed suddenly to give place to more angry feelings, as, rising up, and the dullness of his eyes brightening to a keen flash, he exclaimed:—

"Let this court continue the mockery of its sitting; let it arraign me day by day, as a traitor, tyrant, and murderer! Am I not Charles Stuart, heir to a mighty line of sovereigns, and shall I stoop to acknowledge its authority, rather than resign myself to whatever fate its villany may impose on me? Mocks already my doom could hardly be aggravated: you matted floor—those wooden chairs—those grated windows—this narrow room—surely a prison were no worse. Yet, perchance—but it cannot—no, it cannot be, that the base Cromwell will dare incite them to shed my blood."

At this moment the door opened, and Alice Heath entered the apartment. "Who is it intrudes upon me at this most noble hour?" angrily

exclaimed the king, turning round, and seeing his fair visitor, who approached him, and dropped upon her knee.

"Spare your displeasure, sire!" she said, in the most soothing voice; "I am General Lisle's daughter, but I come to you as a subject and a friend."

"Rise, maiden," said the king, "and talk not of being subject to an imprisoned and belied monarch. Charles Stuart is hardly now a sovereign in name!"

"Nevertheless, I would perform my duty by acknowledging him as such," replied Alice, taking his hand, and then rising. "But it is not merely to admit his title that I come to him at this hour of the night. I come to beg him to sacrifice his pride as the owner of that same dignity, and stoop to plead his cause for the saving of his life. Know, my liege, that to-morrow, unless you consent to relax your pettiness or refusal to plead your cause, the court signs the warrant for your execution. I am ignorant whether or not you be all that my father and your enemies believe; but if you be, you are then the less fit to meet death."

"Death! And his it come to this!" exclaimed Charles, setting his teeth, and rapidly passing the room in some moments, without replying to his ready visitor, or even heeding her presence.

At length he ventured to reappear.

"I have told you of what I think your hope of averting this awful sentence, my lord. I pray you to forbear, upon this night. A little sacrifice of pride—the mere intercession of a humble vassal—"

"Sacrifice of pride! intercession of humble words!—then knowest not, maiden, when you speak, Charles Stuart cannot stoop so far, even though it be to save his life. Spurns of my royal ancestors!" added he, "spare me from a weakness which would make you blush to own me as your dependent!" And he covered his face with his hands.

"He is pained to a sublimity, to own the feeling for his king. I comprehend your unhappy case, my liege," said Alice, taking his passive hand, while the tears were falling fast.

A few moments' silence passed, which Alice interrupted.

"Can I not induce you?" said she, at length, "to value the precious boon of your life, which he has shewn public which we were speaking? Think, my king, how sweet is certainty, and all its precious ties of pleasure and affection, and she pointed to the miniature on the table. "How awful is a violent death, and how lonely, and dark, and mysterious the tomb! Cannot this consideration of all those things move your purpose?"

"I think you, sweet maiden, for your noble intention, and may God reward you for your words, and wishes of goodness," replied Charles, much touched by her tone of deep interest. "But my resolution is fixed."

"Can you suggest nothing, then, yourself, my liege, less displeasing to you?" "Have you no private friend whose influence I might not this night use in your behalf?"

"No, it cannot be," replied the king, after pausing a moment upon the words. "Charles Stuart is deserted on all hands, and it is the Lord's will that he should be. I begin to look upon it already with resignation. Yet, the best consolation came upon me this stroke of a thunderbolt. Private consolation I have long desired, but a public execution I had never dreamed of. Nevertheless, be it so. I shall meet death like a man and a king."

"Then farewell, since my visit is futile, and the Almighty be your support and comfort in your added affliction," said Alice, as again kissing his hand, and calling it with tears, she withdrew.

Left alone, the king remained for some time in deep thought. All anger and weakness appeared to have passed from his mind, and the remarkable expression of melancholy which we have before described, deepened on his face to a degree never seen except upon a martyr. Not less heightened, however, was his coldly resolute and likewise previously alluded to; so that, evidently and, it might likewise have been seen that Charles Stuart was also determined unto death.

What were his reflections in view of the announcement he had just received from the lips of Alice Heath, and which he saw no means of averting, short of sacrificing the dignity with which his rank as sovereign in England invested him in, we did not attempt to conjecture. None who have not been in his situation, can form anything like an adequate conception of the state of mind; and it were a sacrifice to attempt to invade the sanctity of the human soul in such an hour of agony.

While of his cogitations were, they were of limited duration; for, after a few minutes for a considerable time, Charles pushed back his chair, and falling upon his knees before the table, he drew the Book of Prayer towards him, and, clasping his hands upon it, read aloud:—

"The day of thy servant's calamity is at hand, and he is accounted as one of them that go down to the pit. Blessed Lord, remember thy mercies; give him, we beseech thee, patience in this his time of adversity, and support under the terror that encompass him; set before his eyes the things which he hath done in the body, which have justly provoked thee to anger; and, so much as his continuance appeareth to be short among us, quicken him, so much the more by thy grace and Holy Spirit; that he, being converted and reconciled unto thee before thy judgments have cut him off from the earth, may at the hour of his death depart in peace, and be received into thine everlasting kingdom, through Jesus Christ our Lord. Amen."

Rising, he slowly disrobed, and throwing himself upon the bed, soon sunk into a placid slumber. Strange! that sleep of the prisoner at the prospect of death. The excitement of suspense—the palpitation of hope not altogether dead—these banish rest; but when the feverish perturbation caused by expectation departs, and the mind has no king, to feed upon but one dark and fearful certainty, it turns to seek forgetfulness in sleep.

## MRS. KIRKHAM'S BOARDER.

## CHAPTER I.

"Boy, you will break my heart."

"Mother, you would break not only my heart, but my spirit also, yet if I can help it, you shall do neither."

"No impertinence, Edward! Again I command you to take this note to your teacher," and as Mrs. Kirkham spoke, she bent down, and with flashing eyes and knitted brow looked hard in her son's face.

Edward Kirkham did not reply, and for a few moments both were silent. The little porch, upon which mother and son stood, was shaded and entwined with the creeping wild-rose and scarlet trumpet-flower; the bees hummed merrily amongst the fragrant blossoms, and from the spreading branches of the tall trees near, the morning song of joyous birds floated forth. Mingled with these sweet sounds, came the silvery gurgle of "Blue Stream," which passed through the village, flowed down the fair meadows, and widened as it entered the deep wood. As these melodies of nature broke the strange silence, Edward Kirkham's heart seemed touched. The fierce scowl fled from his face, and turning away from his mother's steady gaze with suffused eyes, he murmured:—

"Please don't ask me to take that note, mother; I cannot do it."

"I don't ask you—I command you to do it. Ned, will you obey me?" Mrs. Kirkham spoke harshly, sternly, as one who expected rebellion, and she seemed not surprised when the answer came—

"In all things reasonable, I will obey you—in this matter, never!" Young Kirkham folded his arms as he spoke, and turned full upon his mother a gaze of defiance.

"And do you look that way upon your widowed mother? you whom I have carried in my arms, my firstborn, my only boy!" The widow's lip quivered, but she did not weep. Again Edward Kirkham seemed moved; again he spoke in the language of entreaty:—

"Mother! I love you," he pleaded; "I will do anything for you, but I cannot go back to school with that note."

"Your boyish whims shall not interfere with your obedience to me. Ned, take the note and I forgive you—disobey me, and you cross not my threshold again." Mrs. Kirkham set her teeth firmly together as she spoke these bitter words; her fierce temper was fully up, but the same spirit lived in her son.

"Very well, I'll drown myself in 'Blue Stream,' ere I carry that cringing note to your school-house. Mother, you have no respect for your son, but he has some for himself," and turning away, Edward Kirkham was about to descend the steps, when his mother laid her hand upon his arm.

"Boy! you have a fearful temper," she muttered; "but your threat shall not frighten me from my duty. My command still rests upon you."

"Does it?" carelessly returned the boy, springing down into the road.

"Take your books," called Mrs. Kirkham from the porch, flinging the school-satchel after her son; "and don't come home until you have obeyed me;" then going in, she closed the house door with a violent bang.

For a moment Edward Kirkham stood irresolute, and then a sudden thought flashed through his mind, he picked up the satchel, and his slender, boyish figure soon disappeared among the trees. Two little girls sat upon the top rail of an old moss-grown fence, near the entrance of the woods. They were evidently expecting some one; they had lingered there a long time, that bright June morning, and their school-books were idly scattered about. When Edward Kirkham approached, they raised a shout of joy.

"I told you, Mabel, he would come," said the younger of the girls, springing to his side; then looking up in his face, she artlessly inquired:—

"What ails you, Ned? What does make you look so sad?"

"Not much, Allie dear—never mind just now; but here, take care of my satchel while I tell Mabel something, down by the spring yonder."

"And not me, too?" asked Allie, looking reproachfully at her brother.

"It is nothing that you would care about hearing—nothing funny, that I am going to tell Mabel, and we won't be gone long;" and with this promise and a bunch of wild flowers, the little girl was satisfied.

"I will tell you, Mabel," said Edward Kirkham, as he walked away with his cousin, "as you are two years older than Allie, and not so childish; besides, I know that you will always love me."

"To be sure I will, dear Ned," returned Mabel Lynn, pressing close to her cousin's side.

"I believe you, Mabel darling; you know I am nearly sixteen (and the boy proudly raised his head); well, this very morning, mother ordered me to take a mean, cringing note of apology to Master Jones; an apology for an offence I never was guilty of; it would have been a disgrace to me to have offered it. I told mother this, but she believed me in the wrong, and urged, until at last she looked and talked more like a fiend than a woman."

"Ned! Ned!"

"Hear me, Mabel! she ordered me from her house, and I shall not darken her doors again. I stopped to tell you this, and bid little Allie and yourself good bye."

"Where are you going? Ned? Are you never coming back again?" gasped Mabel, eagerly clutching her cousin's arm.

"Don't ask me where I am going—don't ask me when I am coming back; I can't tell you, Mabel darling; but promise always to love and remember me?"

"Always! always!" returned the affrighted little girl; and then sobbing choked her voice, and burying her face in her sun-bonnet, she cried passion-

ately. When at last she checked her grief, her cousin reminded her of Allie: he bade her dry her eyes, and they returned to the fence. In vain did Mabel Lynn implore her cousin to tell her where he had so madly resolved to go—in vain did she try to soften his boyish wrath against his mother. Edward Kirkham was firm, and ere they reached Allie, she had ceased to plead.

"Good bye, my sweet Allie!" said Edward, fondly kissing his little sister; and then, turning to Mabel Lynn, he kissed her trembling lip, and pulling his cap over his eyes, to hide the tears, he turned away.

"Ned, why do you bid us good bye? Ain't you coming home for dinner?" asked Allie in surprise.

"No, darling, no!" and Edward hurried toward the woods. Allie Kirkham looked after her brother in mute amazement, and for a moment seemed lost in thought; but directly a bright butterfly sprang up before her, and the gay-hearted little girl forgot Ned's "queer behaviour," in her merry chase. Mabel Lynn was sad and silent all that morning; she said nothing to Allie of Edward's strange determination, although it sorely troubled her heart. Edward Kirkham did not come home to dinner, and when evening shades darkened the village, he was still absent. Mrs. Kirkham grew uneasy; the little girls, frightened; and when a second day had nearly worn away, and Edward came not, she began to think it was something more than "one of Ned's mad freaks." Ere a third day fled by, the villagers went forth to seek Edward Kirkham. Mrs. Kirkham's passion had now gone, and her heart seemed wrung almost to anguish. Not until the close of the fourth day did any light break upon the disappearance of Edward Kirkham. A mournful clue was then furnished to the mystery. The jacket of Edward Kirkham was found floating upon the waters of "Blue Stream," and on the bank near by lay his handkerchief and school-satchel—his footprints were traced in the soft earth, close down to the stream's edge. "Blue Stream" was dragged, but the body of the poor boy could not be found; there was little doubt but that it had been carried far down, and lost in a wider expanse of water. Mrs. Kirkham now fearfully realised the truth of her son's threat, and for weeks was like one bereft of sense. Suddenly she regained her stern, calm composure, and after listening with whitened cheek to Mabel Lynn's tale, forbade that her son's name should ever be mentioned to her again. The villagers respected her grief, and Edward Kirkham was remembered by them only in silence, or in tearful whispers at their own firesides. Mrs. Kirkham felt that she had provoked that storm of passion in which her proud, yet noble-hearted boy, had rushed into eternity, and with this conviction she was miserable. Mabel Lynn and Allie often spoke to each other of Edward, and as months flew by, their pale sad faces told how truly they yet mourned for "Poor Ned!"

## CHAPTER II.

SEVENTEEN years had fled by since Mrs. Kirkham's fearful bereavement—seventeen long years. Mingled webs of mercies and chastenings, joys and sorrows, had passed over the village. It had changed; its houses were more numerous, and a spirit of life and activity had sprang up in its very midst, which seventeen years before slumbered. There was a change in the inhabitants, an absence of well-known familiar faces, a presence of new and strange ones. In her old home, Mrs. Kirkham still lived. Her step had grown heavy, and her eye dim. Silver threads glistened from beneath her widow's cap. The weight of years was beginning to press hardly on Mrs. Kirkham, though her spirit had lost none of its energy. Time and bitter grief had softened her fierce asperity of temper, and Mary Kirkham, sorely chastened, deeply sorrowing, was a subdued and altered woman. Allie Kirkham—the gay little Allie of seventeen years before—was a widow. Childless and alone, her mirthful spirit saddened, Allie Dale returned to her mother's house, poorer than when she left it. Mabel (still Mabel Lynn) lived with her aunt. Her brow was smooth and fair as in earlier years, yet her large black eyes had a mournful gaze, and her cheek was very pale. Many wondered that the gentle and lovely Mabel Lynn had passed thirty years of her life, unsought, unwon; yet Mabel was calmly cheerful, and repined not at her lonely lot. To her aunt's heart she was very dear. Allie and Mabel were Mrs. Kirkham's treasures—all the old lady had.

Mrs. Kirkham grew poor. She had never been wealthy; but now her little fortune seemed fleeing fast away. Unless help came soon, the homestead must pass into stranger hands, and this Mrs. Kirkham shrank from. Mabel and Allie bent over their needles from morn till eve, but their labours seemed in vain. Prospects darkened—money lessened. As a last resort, Mrs. Kirkham decided to take a boarder—a gentleman boarder—and for his use she would appropriate her best bed-chamber, a pretty room over the neat little parlour. With the aid of her old domestic, she could manage household affairs, and her niece and daughter might still pursue their sewing. Allie and Mabel approved of this, and the next week the following notice appeared in the local paper:—"A pleasant room and boarding for one gentleman; to be had on reasonable terms. Apply at Mrs. Kirkham's." No one responded to this advertisement, and for the fourth and last time, it filled a corner in the *Weekly Express*. This time it was successful.

A stranger, whom the stage had brought to the village a half-hour before, carelessly picked up the paper. Sylvester Trehan, for so he had booked his name, read this notice twice, walked the room some dozen times, and then, having apparently arrived at a satisfactory conclusion, desired to be shown the way to Mrs. Kirkham's. During a walk of some minutes, Mr. Trehan asked many questions of his little guide, concerning the Kirkham family, expressing his determination, if he liked them, to remain some weeks. I don't know, reader, what pleased Sylvester Trehan so much at the cottage; but this I do know, that after gazing round the pretty chamber, with its old-fashioned red and green carpet, long white window-curtains, and neatly made

hed with snowy *Mauveilles* quilt, and after a brief conversation with Mrs. Kirkham, he engaged to be her boarder for several months, at least until autumn.

Sylvester Trelan was a tall man. His figure was good, his eyes dark blue and piercing, his features regular, and when he smiled, he looked pleasant. But he was not handsome; his complexion was deeply tanned, and he wore his dark brown hair in thick clustering masses over his brow, which, added to his habitually stern expression of countenance, rendered him rather unprepossessing in appearance. Sylvester Trelan had travelled much; his home had been in foreign countries: and therefore, when he chose, his conversation became singularly interesting and pleasing. He was wealthy, and paid generously, and Mrs. Kirkham was well satisfied with her boarder.

Allie and Mabel did not like him. At times his manners were strangely abrupt; and ere Sylvester Trelan had been two weeks in her house Mrs. Kirkham adopted their sentiments: her feelings suddenly underwent a sudden and violent change toward him.

"I heard something in the village to-day, which interested me exceedingly," said Mr. Trelan to Mabel Lynn, as he sat with her one evening upon the porch.

"Indeed! what was it?" listlessly asked Mabel.

"An old tale to you, I presume; I refer to the drowning of Mrs. Kirkham's son, years ago."

A deep flush spread over Mabel Lynn's face, and her voice quivered as she spoke:—

"An 'old tale,' indeed, and one full of misery. Don't talk to me of Ned, Mr. Trelan; you don't know what heart-rending memories your remark has awakened."

"I am surprised, Miss Lynn; you talk as if you loved this Kirkham."

"Loved him! Yes; child as I was, I loved him dearly, sir; he was my cousin—my brother. Oh, Ned! Ned!" and Mabel Lynn wept bitterly.

Mr. Trelan looked troubled, earnest, and perplexed. "Pardon me; I knew not this subject was so painful to you."

"You might have known," quickly returned Mabel; then, checking herself, she added, "promise never to mention this subject in this house again, especially to my aunt; we never speak to her of Ned." Ere Trelan could reply, they were summoned to tea.

As Mrs. Kirkham took her seat at the tea-tray, Mr. Trelan fixed his large blue eyes intently upon her. "Madam," he said, in a low thrilling tone, which caused Allie Dale to start, and Mabel to look imploringly upon him—"Madam, I heard to-day, for the first time, of your son being drowned near this village, many years ago."

A quick contraction of the mouth, a deadly pallor of the cheek, and otherwise Mrs. Kirkham was calm.

"Talk not to me of Edward Kirkham," she said, hoarsely; "he went to the bar of his God, a wretched suicide."

"And pray, Mrs. Kirkham, why did he commit suicide? had he just cause for it?—was he unhappy?" coolly asked Trelan.

Mrs. Kirkham's hand trembled violently, and she put down the coffee-pot. Allie Dale burst into tears, and Mabel leaned back in her chair, and covered her eyes. Notwithstanding this, and the horror-stricken looks of the old servant, who stood as if petrified, Trelan calmly repeated the question:—"Had he cause?"

"Oh, misery! yes; but who are you that you dare speak to me of Ned?" Mrs. Kirkham rose from the table with a sudden shudder, and Allie followed her. Sylvester Trelan's confused apology was lost upon Mabel; she seemed scarcely to hear it. Shortly after, when he took his hat and left the house, Mabel sought her aunt. That night, the first time for seventeen years, Mrs. Kirkham spoke to Allie and Mabel of Ned.

### CHAPTER III.

It was a stormy eve: fleeting clouds darkened the face of heaven, and wailing winds and dashing rain sounded mournfully together. Mrs. Kirkham sat alone in her parlour. The small lamp threw its rays full upon her face; it was pale, sad, and anxious. For a long while she was silent; and then, the mother's heart throbbing wildly within her, she moaned forth her long pent-up grief.

"Oh, Ned, my precious, lost boy, would that my tongue had been palsied, ere it spoke those bitter words! Oh, miserable child, and yet more miserable mother!" Tears burst forth, and Mrs. Kirkham laid her head upon the table.

"Did you address me, madam?" asked Sylvester Trelan, stepping from the deep window recess, where he had been standing unobserved.

"Address you? No! I knew not that you were in the room," returned Mrs. Kirkham, hastily subduing her grief, and rising from her chair.

"You appeared to be mourning for your—"

"Don't mention his name to me again," violently interrupted Mrs. Kirkham, her whole frame trembling with emotion.

Sylvester Trelan covered his face with his hands, and muttered—"It is well." When he looked up he was alone.

"It is cruel, unaccountable, his behaviour," said Mabel Lynn, as she listened with flushed cheek, some minutes after to her aunt's incoherent tale. "Why this man seeks thus to torture you, I know not."

"Mother!" exclaimed the impetuous Allie Dale, fondly kissing Mrs. Kirkham's faded lips, "mother! Sylvester Trelan shall stay here no longer. Let me this very night bid him seek other lodgings; it matters not if we are poor, better so than have your feelings crushed."

"Allie! stay a moment. Our poverty does matter much; we cannot so hastily cut from us the means of support; but daughter, I promise you, if

Sylvester Trelan mentions my boy to me again, he leaves this house for ever."

"I am satisfied," murmured Allie.

Another evening was stealing over the village; not a dim, misty, weeping one, as that of yesterday, but radiant with golden light, balmy, and fair. Allie Dale sat upon the porch step; nature was joyous, but she was not; and, whilst the birds sang, she sighed.

"You are sad this evening, Mrs. Dale, and wherefore?"

Allie turned, and saw Sylvester Trelan. A shiver of dislike crossed her, and she answered proudly:—

"You need not ask, Mr. Trelan. Permit me to inquire why you have twice cruelly wounded the heart of my mother?—twice, and not two weeks have flown since you entered our family. Why have you done this?"

"For my own satisfaction," hurriedly returned Mr. Trelan.

"Is your heart of adamant? You know what agony to my mother is the mention of Ned; even Mabel and myself have never dared to advert to him, by word, or look, for years; and yet you, a stranger, coolly delight in her misery."

"Not so—not so; I have an object in view," said Sylvester Trelan, with strange emphasis.

Allie Dale did not reply. Again she sighed, and again her companion inquired the reason of her grief.

"I will tell you," she answered, suddenly, "although you have no feeling. To leave mother, Mabel, and myself from bitter poverty, I have partly consented to wed one I can never love; and now, a path of wretchedness lies before me."

"Be comforted, Allie—Mrs. Dale! In that path you shall never walk—I will save you, so help me Heaven!"

Allie looked up through her tears at Sylvester Trelan; but he turned away from her earnest gaze, and left her alone.

An hour later, Sylvester Trelan entered the parlour where sat Mrs. Kirkham, Allie, and Mabel. A chill silence followed his entrance. It was broken at last by Trelan.

"Mrs. Kirkham, I wish not to torture you; but I implore you, tell me, do you yet love your son?" As Sylvester Trelan paused, his frame shook with violent emotion.

"In mercy, speak not his name again to me!" gasped Mrs. Kirkham.

"In mercy, answer my question, and I pledge my sacred honour that I cease to trouble you."

"Man! tormentor! you have pitilessly torn my bleeding heart since you came to this house; now leave it, and take my answer. I love my dead boy with a mad, passionate, undying love!" Mrs. Kirkham almost screamed these words out, and then clasping her hands tightly together, she pressed them on her brow.

"I have probed your heart out to heal. Oh, mother! mother! I have ever loved you, I have pined for you; mother, behold your son!" And with a convulsive sob, the young man threw himself on his knees before Mrs. Kirkham.

"My son!" exclaimed the bewildered mother, looking wildly on Trelan.

"Alas! no; my poor boy was drowned!"

"Mother, he was not; I tell you, I am your son! I am Edward Kirkham! In a moment of fierce anger I vowed to be dead to you, and left my clothes and satchel on the bank, that you might think I had perished beneath the waters. Oh, mother, forgive me!" As Edward Kirkham spoke, he swept back the masses of dark hair from his brow, and his high, bold forehead was uncovered. A deep red scar glowed upon it. As Mrs. Kirkham's eye fell on this, she uttered a scream of joy.

"You are my Ned! That scar was on your brow in childhood. I know you now. Oh, child, for seventeen long years parted from your mother, you are mine again! My God! I thank thee!" And Mrs. Kirkham's arms were wound around her son's neck with a wild, long, and rapturous endearment.

Allie and Mabel knelt by Edward Kirkham, and when his mother's head was on his shoulder, and their soft kisses fell upon his cheek and lip, the weary wanderer of seventeen years acknowledged with a grateful heart that God had richly blessed him.

"I have gathered wealth; I have brought home gold, mother; it is yours! you are poor no longer. Sweet sister! darling Allie! you shall never walk in the wretched path of which you told me one hour ago."

Allie Dale looked fondly in her brother's face as she spoke: "I said many harsh and unkind things to you one hour ago. My precious Ned, can you forgive them?"

"Think not of them. Mother," and Edward turned to Mrs. Kirkham, "forgive my strange conduct since I came to your house. I know my questions seemed cruel, but I felt such a wild yearning to hear from your own lips whether you had forgiven and loved me yet, or had cast me off for ever. Had your heart seemed closed against me, I would have left you, unknowing that other than Sylvester Trelan had crossed your threshold."

"Forgive me. O Ned! I have been fearfully punished for my bitter words to you that dreadful morning. My heart has borne a load of misery ever since, my precious boy."

Mrs. Kirkham's arms were around Edward again, and mother and son felt that, in that earnest, holy embrace, both were forgiven, and the shadows of the past for ever effaced. Mrs. Kirkham chided herself as one blind of heart, for not knowing her son; but, as Mabel and Allie declared, there was little wonder she had failed to do so.

Seventeen years work deep changes, and in the bronzed muscular man of thirty-three, none could have traced the fair slender boy of sixteen. The dark tinge had rested too long on Edward Kirkham's cheek to lightly pass

away; but, as he passed back the rich masses of hair from his brow, and suffered bright heartsome smiles to light up his countenance, Mabel and Allie declared he was their "handsome Ned" again.

Burning with boyish rage against his mother, young Kirkham went to sea a few days after his flight from the village. For years he never wished to return; but as he advanced in life, a wild desire sprang up to revisit his home, and share with his mother, Allie, and Mabel, the fortune he had gained. When Edward Kirkham came to the village, and ere he had time to inquire for his friends, the notice in the paper met his eye. As he read, a strange fancy struck him: it deepened into as strange a plan. Reader, this plan, and the sequel thereto, you already know.

"Mabel! sweet Mabel! Lynn! for whom have you kept that free heart so long? You were the idol of my boyish days, you are the idol of my proud manhood. Darling Mabel! will you give me your priceless heart?" To this earnest question of Edward Kirkham's, I know that Mabel answered "Yes."

Some weeks after, there was a wedding in the "old Lowestead," and Edward Kirkham took to his true and noble heart the fair Mabel Lynn. Allie Dale ever smiles when she speaks of Sylvester Trehan, and her mother declares it to be a blessed day upon which he crossed her threshold. "There was no small excitement and joy in the village, when it was known that the long-lost Ned Kirkham had come back; and down to the present time the villagers regard "Mrs. Kirkham's Boarder" with wonder and interest.

## BEAUTY.

"There's beauty all around our paths, if but our watchful eyes can trace it 'midst familiar things." Mrs. Hemans.

BEAUTY is a principle, either in nature or art, that gratifies the senses, and leaves upon the mind the impression of a certain grace and proportionate fitness of parts. There is, throughout the material universe, a congruity in all the workings of nature, that gives to our observations a peculiar interest; and that, too, in proportion to the vigour of our investigations.

We may admire a rock, because it is one of the features that gives beauty and variety to the landscape; we may have our wonder and interest excited, as we reflect that it may be "as ancient as the sun," and we pause in contemplation of that Power, whose care has imbued it with principles that defy the changes of time, and the war of the elements.

But a new impetus is given to our curiosity, and fresh ardour to our inquiries to learn more of nature, when we perceive that which at a distance appeared to be a homogeneous mass of stone, is bound together by an aggregation of particles, each differing from the other, in hue, consistency, and composition, yet all together forming a grand whole.

Take also the wing of a butterfly—the eye is delighted with the variety and brilliancy of the hues that are depicted on it;—and yet how many, as the bright insect flutters across their pathway, stop to think of the exquisite skill displayed in the construction of that wing? That which to the eye of the attentive observer appears like a soft down, is attentively examined by the aid of a microscope, will prove to be an infinity of delicately constructed feathers.

Flowers, too, the wild wood flowers that greet us by thousands in our daily walks, are teeming with beauty. "They have tales of the joyous woods to tell" by the couch of suffering, and they bear the message of hope to the desponding. "Flowers! ye form the bridal chaplet, and ye go down to the grave with the coffined ones."

At a ball given at Nottingham, in honour of Lord Howe's victory, on the 1st of June, 1794, amidst the glare of diamonds, pearls, and plumes, there was one lady whose head-dress consisted of a simple wreath formed from a branch of natural oak. On the following morning after breakfast, the Countess Howe, in presence of the company, planted three of the acorns taken from the wreath; they germinated, and at this day, form three handsome trees. While thus evincing her taste, the lady could not have found a more efficient method of perpetuating her memory.

The idea of beauty is universal; wherever there are hearts and minds that can be influenced by external causes; wherever there are ears that hear with delight the varied minstrelsy of nature, or eyes that can behold with pleasure the pictures from a master's hand—that are continually free to the view—that can read with interest the volume ever open to the student of nature, beauty has there an empire; and in this perception of the beautiful, not only is the natural taste gratified, but it bestows a graceful refinement upon its votary; it ennobles the intellect, and lends a heightened lustre to the moral qualities.

No less beneficial are its effects upon nations. Look at Italy and Greece. "Their glorious day is o'er." The orators whose eloquence could move a nation, are heard to speak no more; the hand that could give life to marble is palsied by death; and the hand "who struck with magic art the lyre," long ago sang his last song. But are they forgotten? no! their laurels are yet as green, as on the day when accorded amidst the applause of the multitude.

The sun of political power is gone down amid clouds of gloom, yet—

"Pilgrim's pensive, but unwearied throng,  
Hail the bright clime of battle and of song."

For art has there reared to herself a monument, that still commands the admiration of the civilised world, and has erected a shrine at which genius still delights to pay homage.

## DOSING A TRAVELLER.

It was in one of the extensive hostels which are to be "tied up to" in most of the large towns in the interior of New York, that the following scene actually occurred, as can be proved by a host of witnesses who have heard the landlord tell the story!

The hotel referred to was, on the occasion of which we are speaking, rather full, and the nephew of the landlord lay sick in one of the rooms on the third floor. It was to receive medicine during the night from the hands of a person who had been procured to watch with him. The landlord had instructed the watcher to administer a potion of some little physic to the patient at twelve o'clock: the dose to be repeated at certain hours of the night.

"He is rather teetly," said the landlord, "and you had better keep out of his room until you go up to give him his medicine."

"Oh, for that matter," replied the watcher, who was a novice in the vocation, "I prefer to sit here," and he eyed a sofa which was in the apartment, in a suspicious manner.

"Well," said the landlord, "you won't forget the number of his room?"

"No, sir."

"And tell him he must take his medicine without making such a confounded fuss as he made with the last dose. Tell him that I say he must take it—it's good for him."

"Yes, sir."

"Good night."

"Good night."

Boniface retired, and the watcher deposited himself on the sofa, from which he was roused by his own snoring at a quarter before one. In dismay and confusion he seized the potion and hurried up stairs.

The sick man was lodged in No. 52, but the nurse in his haste mistook No. 53 for it, and entering the latter, he saw a person lying in the bed, face upward, with his mouth wide open, resplending with that peculiar gurgle in the throat which indicates strong lungs and a pleuritic habit.

"Ah!" mentally exclaimed the astute watcher, "he makes a fuss about taking his medicine, does he? I'm blowed, though, if he don't take one dose quietly—before he wakes up, in fact!"

The idea of giving a potion of bitter physic to a comolent patient was sufficiently ridiculous; but when we consider that the watcher had entered the wrong room and was about to administer it to the wrong man, the affair becomes still more ludicrous.

Our friend the watcher acted promptly, and having filled the bowl of a large spoon with the nauseating mixture, he forced it down the throat of the sleeping traveller, who happened to be a healthy Irishman that had never tasted physic before in his life. The Irishman struggled and bit the spoon severely, but the watcher plunged it deeper in his throat, saying, as he did so—

"Oh, but you must take it—the landlord says you must."

The nasty dose went down, but when Patrick recovered his breath and began to pour forth his objurgations in his own peculiar rhetoric, the watcher discovered that he had committed an egregious blunder, and seizing his light, fled from the room.

The astonished and enraged traveller sprang from his bed, and was soon heard rushing about in search of the landlord, swearing vengeance against him and all connected with his house. On he came, tearing through the passages, banging the doors, and roaring like a bull.

"Oo-oo-oh! It's kilt I am, be dad, any how. Au-ugh! I'm chawked with pison! Divil a bit is a farrum in the wisthern country wher I buy now—for I am a dyed man! The pison is ating me up just. Och! it's enough to make a dog throw his father in the fire! Landlord! landlord! Imd to o-o-o-r-r-r!"

Pat had, by this time, descended to the floor on which the landlord's apartment was situated, and the worthy host, hearing the hillaullio, opened his door and asked what was the matter.

"Ah! is it there ye are? Come out for a bating—or let me come till ye! A poorty house yere kaping, to send a ere man into an honest thraveller's room to pison the innocent in his slape! Ugh! the bitter, nasty pison!—Come out here, an' I'll lather ye like blazes!"

"What's the matter, my good friend?" inquired Boniface.

"Ow! the matter is it!—when I was waked from my awate slape, and a big, dirty blaggard stood fornint me, rammin a big *lu aule* down me trote full ov pison; 'An', sez he, 'ye must take it—the landlord sez so:—and now, what's the matter, sez you! An' that's one ov yer thricks on thravellers! Come out here an' I'll ba-ate ye—I'll bra-ake ivery bone in yer body! I'll tache ye to pison a decent thraveller that's goin' to buy land in the wisthern country!'"

The Irishman here became entangled in the meshes of a wooden settee which stood in his way; and, at the same time, the landlord's wife seized her worthy lord—although a "hoat" in himself, she was not willing to risk him in a rough and tumble fight in the dark—and having plucked him back into her sleeping apartment, she locked the door, and bolted it securely.

The prospective purchaser of "wisthern lands" having extricated his legs and arms from those of the settee, still thirsted for the landlord's blood,

"Bring me till the murtherin' ould villian—let me come at him!"

At this juncture, however, Mick, the ostler, made his appearance with a lantern, which he held up to the physic-smear'd face of the enraged traveller, with a polite request that he would "hold" his tongue. But Mick was at last compelled to give his fellow-countrymen a good beating, which had the effect to restore him to good humour; and when he found that he was not poisoned, after all, he retired once more to his bed, to dream of the "farrum" which he was going to buy in the "wisthern country."

## MOUNT ETNA

This is the largest and most extraordinary volcanic mountain in the world. It is 10,874 feet high—that of Vesuvius is only 8,979—and measures 180 miles in circumference at the base, and its various regions has three separate zones or climates. Over its sides are scattered no fewer than seventy-seven cities, towns, and villages, occupied by about 115,000 people. To ascend from Catania, is a journey of twenty-four miles. This journey is one of great fatigue, and very few travellers are disposed to undertake it. This mountain produces all the necessities and luxuries of life. The first region is the most fertile, and affords corn, oil, wine, silks, spices, and delicious fruits. The second yields beautiful forests and flocks of game, besides tar, cork, and honey; and the third snow and ice—while its caverns are stored with marbles and mineral productions, such as cinnabar, mercury, sulphur, alum, nitre, and vitriol. Its timber keeps the Sicilians warm in winter, and its ice cool in summer. The sale of snow and ice collected from its cone averages ten thousand dollars per annum.

The *castagna di cento cavalli*, or the chestnut tree of a hundred horse—so called because it is supposed to be capable of sheltering one hundred horses beneath the canopy of its boughs—is situated in one of the spacious fields of the lower circle. The dense forests are occupied by wild beasts, and the loftier heights by that bird of liberty, the eagle—

*The bird that lives  
Her scending plumes in the sun's first gush;  
Drinks his meridian blaze and sun-set flush;  
Worships her idol in his fiercest hour;  
Bathes her full bosom in his hottest shower;  
Rides with the thunder in his blazing march;  
And bears his lightning for yon boundless arch.*

The rays of the rising sun strike the top of the mountain seven or eight minutes before they shine on Catania; at this time, the shadow of the mountain extends over the whole island, and even into the sea. The view from the summit of Etna baffles description. At this elevation the diameter of the horizon commanded by the human eye is estimated at 800 miles, which is equal to a surface of 2,600 miles. It is wonderful that the Empress Adonia and the philosopher Plato were willing to undergo the toil of mounting to this altitude to enjoy the gratification of such a prospect.

A French traveller, speaking of the effect of the rising sun from the height of Etna, says that it is as if the universe had been observed suddenly springing from the night of non-existence. The coasts of Africa and Naples, and all the intervening islands, are under the range of observation. The incynholi of the mountain is seen entire, and the whole island of Sicily, with its rivers, cities, and hamlets in full relief, including the fertile fields of Etna, and the honeyed hills of Hybla. In the spring, when the trees begin to flower, the island appears as if powdered with blossoms. From such a height the people in the vales below seem but as grasshoppers.

But Etna is not always passive. It is subject to eruptions and earthquakes, and when they take place the land and sea become troubled, and the inhabitants are in despair. When such a mountain does speak, it speaks with power. In a calamity of this nature, God is man's only refuge. Of the earthquakes, one of the most remarkable described in history is that which happened in 1693. Its motion was perceived in Germany, France, and England, but Sicily was the chief sufferer. It extended to a circumference of 2,000 leagues, and no fewer than fifty-four cities, with an incredible number of villages, were either destroyed or greatly damaged. The city of Catania, in particular, was completely overthrown. The sea suddenly began to roar, Mount Etna to send forth great spires of flame, and soon after a shock ensued, with a noise as if all the artillery in the world had been at once discharged. The birds flew about astonished, the sea was drunken, the beasts ran howling from the hills, and, although the shock did not continue above three minutes, above sixty thousand of the inhabitants of Sicily perished in the ruins. When it was over, Catania could not be found.

**SLAVERY THE MOTHER OF DECAY.**—When we read Gibbon's eloquent and magnificent description of the Roman empire, under the mild sceptre of the Antonines; an empire comprehending the entire civilised world of that day—full of flourishing cities, guarded at its frontiers by those unconquered legions out of whose camps new cities sprang up—intersected in every direction by great and almost indestructible military roads, whilst its commercial navy united all the coasts of the Mediterranean, and from the Red Sea visited India—internally connected by a regular coast in the service of the Government—covered with the monuments which, even in their ruins, continue to excite the amazement of posterity, and with schools for science and art, not only in Rome and Italy, but in Spain, Gaul, Greece, Africa, and Asia Minor—whose teachers were paid by the state, and encouraged, rewarded, and valued to such a degree, that Marcus Aurelius seems rather to have wished to be a scholastic philosopher than an emperor;—when this picture rises up in our imagination, and we bear in mind the wonderful development of the Roman law, and of all forms, judicial and administrative, it is difficult to conceive that we contemplate a merely protracted decline—material prosperity, which is, nevertheless, partial and fallacious—mechanism with only external moving power—an artificial formation without life—and a general unhealthiness of mind which the upper classes sustain with stoic indifference, whilst the masses sink deeper and deeper in degradation. Yet so it was, and why? The majority in the ancient world were slaves.—Geyer's Essays.

## THE PIONEER'S DAUGHTER:

## A TALE OF INDIAN CAPTIVITY.

(Continued from Page 217).

## CHAPTER VIII.—THE ESCAPE AND ALARM.

Four Indian braves, selected for their keen watchfulness and tried courage, were set as guard over the prisoners doomed to die on the morrow. They were armed with knives, tomahawks, and muskets; and were so placed, that the slightest movement of either of the captives could be seen. But this last precaution seemed unnecessary; for the latter were so tightly and securely bound, that to move at all was next to an impossibility. They were all placed separately in a row, and every man was bound hand and foot, with a strong ligament around his neck, and attached to a stake near his head. Two torches stuck in the ground, on either side, cast a ruddy gleam over their dark figures, and showed the aworthy, painted, and repulsive person of the guard standing over them with that untiring vigilance for which the Indian is so remarkable.

It was perhaps two hours from the release of the female captives, as recorded in the foregoing chapter, that a noise outside of the council-house drew the attention of the guard to that quarter. As the noise continued near the entrance, one of the young warriors levelled his musket, and challenged in his native tongue. At the same moment, the skin was pushed rudely aside, and Posetha staggered into the council-house, holding in one hand a small canteen, which he seemed in vain trying to get to his lips, with a drunken gravity truly ludicrous. The Indian that had pointed his musket at the intruder, now elevated the muzzle, and indulged in a silent laugh—a proceeding in which his companions also joined.

Posetha, apparently not aware where he was, but winking violently from the effects of the light on his eyes, continued to stagger forward, still trying to bring the canteen to his lips, but from the unsteadiness of hand and body, not being able to succeed in his purpose. At length he came to a sudden halt—that is to say, a drunken man's halt—and balancing himself as best he could, stared curiously upon the guard, whom he now seemingly beheld for the first time.

"What are you doing here?" he said, in Shawnee, accompanying his remarks with the usual number of hiccups, and flourishing his canteen with the comical gestures of an intoxicated man endeavouring to appear very wise and dignified. "I say what are you doing here, all drunk as beasts? Go home, and get sober, and take a sensible friend's advice, and don't ever taste liquor again."

Again the guard laughed, and one of them said, "What are you doing here, Posetha? What have you got in that canteen?"

"Poison!" answered the other, fumbling about his dress for a place to hide it, as if afraid it would be taken from him. "Yes, poison," he repeated, beginning to stagger back, as if with the intention of making his escape. "Yes, yes, it wouldn't be good for you, it would make you sick, and so Posetha will take care of it."

"Let us try if it will make us sick," laughed the young Indian, approaching the drunken man, and extending his hand as if to seize it.

"No, no, no!" returned Posetha, with drunken eagerness, fumbling more than ever under his scanty garments, and retreating all the time toward the door. "No, no, no!" he repeated, dropping the canteen on the ground, and, apparently unconscious of it, continuing his retreat with quickened, but still unsteady steps. "It isn't good for ye; its poison, it would kill ye." And as the last words were uttered, he made a sudden lurch toward the doorway, missed it, and fell sprawling on the earth, where he lay as if stunned.

The Indians laughed heartily as they passed the canteen round, each taking some three or four large draughts, and smacking their lips with true relish. This emptied the flask, which was now cast toward Posetha, with good-humoured derision, and the guard resumed their places near the prisoners.

Then it was, reader, had you been near enough for the purpose, you might have seen, in the dark eyes of Posetha, as he still lay extended where he fell, a gleam of intelligence, of malicious triumph, such as the eyes of no really drunken man could by any possibility send forth. And the meaning of this peculiar look was soon apparent; for after the lapse of a few minutes, the heads of the guard, in spite of their efforts to the contrary, began to nod and droop; and in the course of five minutes more, they themselves dropped down in their places, unconscious of everything around them.

The moment Posetha witnessed this, he sprang to his feet, and gliding forward with the stealthy tread of that feline animal from which, and for this reason, he had received his appellation, he approached the prostrate warriors, and bending down, examined each closely, and then carefully withdrew their arms. All this, or as much of it as their peculiar positions would allow, was witnessed by the prisoners, with emotions of hope and joy impossible for us to describe, but with a cautious silence that spoke volumes in favour of their great presence of mind. The hope of liberty, and the fear of failure, caused the blood to alternate between the head and heart, and they, in consequence, experienced an acute sense of suffocation.

The instant Posetha satisfied himself the guard were safe, and deprived of all their weapons, he drew his knife, and with a rapidity that threatened injury to the captives, severed the thongs that bound them. "Brother," he now whispered, in Shawnee, to Harry Miller, "tell your friends to be silent,

"The moment the animal felt a weight upon his back, he made a clean spring from the earth, which nearly overthrew his rider, and, finding himself free at last, darted away like a meteor, bearing directly for the village, in spite of the Colonel's efforts to change his course."

and speedy, and follow me. If they speak or make the least noise, all will be lost. I will go before and lead the way; but the moment I halt, let all sink to the earth, and remain so until they hear my signal."

"Thou art worthy to be my brother, Christopher," returned Harry, brushing a tear from his eye; "and it seems just as if Heaven discovered you to me for the providential preservation of our lives."

He then hurriedly informed the others what Posetha had said, and urged an immediate departure. The force of his words were felt; but, unfortunately, it was impossible to comply with his request, owing to a want of circulation of blood in their limbs, particularly their legs, from being so long and tightly corded. By quick and vigorous rubbings, however, mingled with the desperation of men straining every nerve for life, our friends soon had the satisfaction of finding themselves able to stand, and even walk. The arms of the guard were then distributed among them; and extinguishing the torches, the whole party followed Posetha through the door of the council-house, and in the course of ten minutes our friends had the satisfaction of seeing the last hut left behind them.

It may seem a little surprising to the reader, that two parties should thus have been enabled to leave the town in the dead hours of night, without any disturbance from the dogs; but when we inform him, that all the canine animals which had escaped the deadly drug of Carnele, had been poisoned by Posetha in like manner, there will, we trust, no longer be any mystery.

A little distance from the village, the party came to a large enclosure full of horses. Posetha now informed our friends, through his brother, that they were about to engage in a bold and hazardous adventure, which, if successful, would place them in safety, but that there was great danger in creating an alarm, in which case it was impossible to tell what would be the result, though in all probability it would either be death or captivity, and that the fate of himself, as a traitor to the Indians, would be even worse than their own, if, indeed, such a thing were possible.

"Well," replied the Colonel, firmly, "it may be death—I cannot say—but as for myself, I will never again be taken alive by these inhuman redskins. Oh! my wife and child! my wife and child! if they were only free—if I could only know they were in safety—it now seems to me I could endure any fate; but alas! alas! I fear it is useless to hope. But can we not make another effort to save them?" he added, eagerly. "What say you, my brave comrades?"

"We can, we must," returned Edward; "at least I for one will go, and either liberate them, or die in the attempt."

"Ay, ay, we may as well die now as any time," put in Wilkes. "Come, Posetha must know something of their whereabouts—let us consult him."

"Yes, yes, a good idea," chimed in Edward. "But where is he?" he asked, looking around, and addressing his brother, who stood near.

"He's scouting round the enclosure, to find out if there's any Indian sentinels about; and, if so, where they're posted," answered the other.

"Well, if I might just open my jaws agin, arter havin' on 'em shut for sich a long time by them thar red-niggers, as don't know a B from a buzzard," put in Carnele, who really spoke for the first time since his capture, "I might jest say to you hot-headed gentlemen, that if you think o' going back into these here bloodhounds' den, to hunt for women, this night, with any hope o' gittin' them away, you're ayther downright mad, or thunderin' sight bigger fools nor ever old John tuk ye for, that's all."

"Well, then, what do you advise, Carnele?" inquired the Colonel. "You must recollect that the friends we have in captivity are even dearer to us than our own lives; and hence, we would willingly lay down our lives to save them. You, of course, have no such urgent reasons for again putting yourself in jeopardy; and, therefore, I cannot blame you, if you refuse to return on such a hopeless adventure; but as for myself I am resolved, come what may, I will not go hence without them."

"Nor I," said Edward.

"Nor I," echoed Wilkes.

"Now, ef you think what I said, was said because o' my being afeard to go back with you," rejoined the old scout, "then I've jest got to tell you, that eff you know a heap more'n I do, thar's one thing you don't know, and that's John Carnele, and nothin' else. No, Colonel Danforth, thar's not a man, boy, red-nigger or black, that you could skeer up atween daylight and snadown, that 'ud risk more'n I would, ef I thought as how any good 'ud come on't; but what's the use o' your gittin' killed outright, or captur'd and burnt at the stake, just to show yourself manly like? Eh! tell me that? D'ye think your wife and child 'ud be any the better for't, eh?"

"We run our risks, of course," replied the Colonel, "and if Providence will that we die in the bold attempt, we shall at least have the consolation of knowing we have done our duty, as soldiers and men."

"Yes, that may be powerful consolint' to you; but do ye think it 'ud be so to the women? that's the question."

"But it is possible we might succeed," interrupted Edward. "We run a great risk, of course; but we are not certain of failure; and we are certain, that unless the trial be made, those we love will remain in captivity worse than death. There is an old saying, That if one waits to have all objections first removed, he will never enter upon any great undertaking."

"Well, ef you're determined on goin'," replied Carnele, "here's what'll go along; for nobody never knowed John Carnele desert a friend in need; but I'll tell ye one thing, and that's as true as that we've been in the red-nigger's hands; and that is, ef we go, we'll never come back; and so we might as well say our prayers, look to heaven, and bid good bye to airth."

"But why are ye so positive on this point?" asked Wilkes. "It seems you forget we have once made the trial already."

"No, it's you that forgit—or ef you remember it, it don't seem to do ye much good. You won't say you succeeded that time, I reckon."

"But we might, only for my imprudence," put in Edward. "Had I followed your directions, friend Carnele, as I should have done, doubtless our friends and ourselves would now be in safety, beyond the reach of savages."

"I don't know 'bout it, Major—I don't know 'bout it; we mought, and then agin we moughtn't; but I know we had a better chance then nor we'll ever hev agin, leastwise for the present. Now ef it was men—old Injen hunters—we was goin' to get out o' difficulty, 'thar mought be some chance; for with thar experience in such affairs, they'd know enough to hold thar tongues at the right time; and when once they was free, they'd add so much strength to our party, instead o' weakening it like women would. And, besides, thar's no use in thinkin' as how a feller and a gal as loves one and tother, is ever agoin' to keep their mouths shut when they once git together. The thing ain't in reason, kase it's agin natur, and thar's the upshot of the hull matter. Now ef I was agoin' to advise, I'd say, jest let us git away safely ourselves this time, and then wait for a favourable time for makin' a new trial; and then I'd hev nobody go 'cept old experienced hunters; and then the women wouldn't hev nothin' to scream about. You see, Cunnel, we knows whar they is now, and thar's half the battle."

"There is something reasonable in what you say, I'll allow," replied Colonel Danforth; "but still it seems cruel and cowardly to desert them in the manner you counsel. At least, before I decide either way, I will consult Posetha, and take his advice."

"And here he comes," rejoined Miller. "With your permission, I'll speak to him by himself."

The foregoing conversation, though not exactly carried on in whispers, was spoken in tones too low and guarded to be audible half a dozen paces from where the party stood, within which distance it was well known there were no unwelcome listeners. The return of Posetha put an end to the discussion, and all stood in silence awaiting the result of the interview between the two brothers. Suddenly, Henry Miller made an exclamation in Shawnee, and threw his arms round Posetha's neck. All were, of course, surprised at this singular proceeding at such a time, and every one was curious to know what it meant. They were not long kept in ignorance; for hurriedly rejoicing the party, and dashing the tears from his eyes, Henry exclaimed, in English—

"God bless my noble brother, Christopher! He has this night, alone, and unaided, set your friends at liberty, and conducted them to a place of safety."

"Heavens! what is this I hear?" said the Colonel, in a low, agitated voice.

"Our ears must deceive us!" gasped Edward, not daring to believe what he had heard.

"It cannot be possible!" put in Wilkes.

"It is true," said Miller. "Here's my brother: question him. Come forward, Christopher, and tell us what feats you've performed to-night."

The white Indian slowly advanced to the group, and said in his own peculiar way:

"Posetha no lie—no forked tongue got. Pale-face wife, pale-face dove, pale-face daughter, safe."

"Where? where?" demanded Edward, the Colonel, and Wilkes, in the same breath.

"No tell now—spoil all. Come with Posetha, and him show soon—hi-me-by—sometime."

"Can this be true?" pursued the still doubting Colonel—doubting through fear, yet believing through hope.

"Oh, I could clasp you to my heart for the words you have spoken, Posetha!" said Edward, rapturously. "May the Great Spirit bless you for this, my friend!" and seizing the hand of the other, he pressed it to his heart, and thought of Lucy as a being whom he might yet so clasp in safety and freedom.

Nor were Wilkes and the Colonel behind in testifying their gratitude to the author of their present happiness. Each grasped a hand of the noble fellow, and the eyes of both were dimmed with tears, as they invoked the blessings of Heaven upon his head.

"In this, my friends," said the Colonel, solemnly and feelingly, "do we all behold the hand of a mysterious Providence; for by saving the life of Posetha we have saved our own; our friends have been set at liberty, and to one of our party has been restored a long-lost brother. And more than this, do we not behold the doom of the Indian, when out of the three only one was spared, and that one a white man? Yes, a doom is upon the red-man; and in spite of all his struggles, all his victories, a few more years will see him driven far beyond his present hunting-grounds, and the all-conquering white man will take his place. These forests will then be felled, these fields be turned up by the ploughshare; villages, unlike this behind us, will spring up, and the quiet hum of civilisation will be everywhere heard; and if we live to the appointed age of man, we shall see it. Woe to the Indian, woe! But come, this is no place for moralising. Posetha, let us away. Yet stay. First tell me how it is possible you can have placed the females in safety, in so short a time? Suppose, for instance, an alarm be given—and there is no knowing how soon that may be—may they not be discovered and retaken before we can get to their assistance?"

"Posetha speak no lie, and him say no. Injen cunning, but he no look for him in Haunted Cave."

"Haunted Cave; and where is that, pray tell us?"

"Bi-me-by tell—not now. Come, horses waiting."

"But, surely, you will conduct us to them at once?" queried the Colonel.

"Best let him take his own course," interposed Miller, who feared too much pressing on the subject might irritate his brother, whose sulky disposition, when angered, he well remembered from a boy. "Best let him take

his own course, Colonel, and you may be certain he will act discreetly. If he tells you the women are safe, you may depend upon't they are. The Haunted Cave I think I remember; and there was also a few old Indians in the village I knew; but I saw they didn't recollect me, and so I didn't care to renew the acquaintance—though it might have saved my life at the expense of my liberty. But come! if I was to give advice, I'd say the quicker we're off the better; and so 'spose we set about catching these wags. Have you bridle-ropes, brother?"

"We got all him," answered the other. "We catch loss, not to make noise—pale-face ride him, eh?"

"Yes, you had better catch them yourself, and lead them out here, one at a time; for too many venturing into the enclosure might frighten them."

Posetha at once opened the gate and entered the yard, wherein were confined more than a hundred high-mettled steeds. From one of the pickets near the gateway he took down a dozen halters, which he had previously placed there for the very purpose he was now about to use them, and catching the nearest horse, he threw one over his head, and led him forth. There was a fire in the eye of the proud animal, as he arched his neck, snamped his teeth, and pawed the earth, that seemed to bespeak safety from Indian pursuit, provided the rider could manage him without saddle, and with no other guide than the halter, which was all he would have to depend upon. Handing the leading rein to the Colonel, Posetha went back for another animal; and but a short time elapsed ere each of the party had a beast ready for mounting. Posetha then caught one for himself, and announced that all was ready for the start.

"Had we not better let the rest loose?" said Colonel Danforth.

"For what reason?" asked Miller.

"Why, if an alarm should be given before we are far on the way, would not the savages at once resort here for horses to pursue us? And would they not be more baffled on finding them gone?"

"There's something in that—eh, brother?" returned Miller, appealing to Posetha.

"Me tink much danger let loss loose," replied the guide.

"But I think there is more to let them remain," pursued the Colonel; "and so, men, we will turn them out—that is, if Posetha does not object."

"When chief command, warrior obey," replied Posetha, rather coldly.

"I mean no offence, my friend," said the Colonel; "but what I have suggested I think is best; and so, men, throw wide the gate, and let the fiery animals have their liberty."

His command was obeyed; and a minute later the snorting, whinnying, prancing, and running of the half-tamed beasts, created a noise that bade fair to alarm the town. The Colonel saw his error, but it was now too late for remedy. At once he gave the orders to mount and away; but this was much easier said than done; for the haltered steeds, seeing their companions loose, became impatient to join them in their frolic, and they reared, and plunged, and pulled upon their reins, and for a time were wholly unmanageable.

Suddenly, a shrill whoop came borne upon the still air, making the hearts of our friends sink with fear. This was immediately succeeded by the discharge of a musket, and then by a succession of whoops, in different parts of the village, showing that the alarm had spread.

#### CHAPTER IX.—THE FLIGHT AND PURSUIT.

"GRACIOUS heavens!" cried the Colonel, "mount, mount, and away, or we are lost!" and with desperate exertion, as he spoke, he vaulted upon the back of the rearing, plunging, and half-mad steed, which he had only kept within reach by the halter.

The moment the animal felt a weight upon his back he made a clean spring from the earth, which nearly threw his rider, and finding himself free at last, darted away like a meteor, bearing directly for the village, in spite of the Colonel's efforts to change his course. Already the first two or three hats on the outskirts of the town were passed, with a velocity that left the Colonel no time for other reflection than that he was being borne with lightning speed into the very hands of his enemies, whose yells and screeches of fury made a horrible din in his ears; and his stout heart quailed as it had never done before, when another horseman, riding even faster than himself, brushed against him, and the next moment he found himself clinging to the mane of his charger, without even so much as a halter in his hands, and speeding away in a direction that quickly placed the town, with its pandemoniac orgies, in his rear. Conscious that his horse was guided by the rider alongside of him, it was not until the last hut of the town had been left at least two hundred yards behind, that the bewildered Colonel thought of ascertaining whether he was in the hands of a friend or foe. Then, to his surprise and shame—shame for his own imprudence and bad management—he beheld Posetha, sitting erect on his rushing horse, holding the reins of both halters in his hands, and apparently as calm as if merely riding out for pleasure. With the hot blood mounting to his very temples, at the thought of his own inferiority in such a trying scene, to that of one who had only the barbarous training of savages—he, too, who had commanded a regiment in battle, and won honour and renown for his skill and bravery—the Colonel would have stammered out an apology for his rashness, and expressed his gratitude in the warmest terms for this second preservation of his life, and also his admiration of the bold heroism of his companion, only that his deep emotions choked his utterance, and kept him silent; and, in despair of saying anything, he looked behind to see what had become of his friends. To his great delight, he beheld the dusky figures of one after another following close in the lead of Posetha; and, with a feeling of security, even though he might soon be pursued by a host, he again turned his attention before him to note the chances of escape.

**GRANDFATHER WHITEHEAD'S First Catechism** [NATURAL PHILOSOPHY] is now ready, price 2d. These Catechisms will appear at intervals of about one month, in the following order:—

- |  |  |
|--|--|
| 1. NATURAL PHILOSOPHY—ELEMENTARY PRINCIPLES.     | 9. ANIMAL PHYSIOLOGY & ANATOMY.  |
| 2. NATURAL HISTORY—PRINCIPLES OF CLASSIFICATION. | 10. ZOOLOGY.   |
| 3. MECHANICS.                                    | 11. ASTRONOMY AND PHYSICAL GEOGRAPHY.  |
| 4. CHEMISTRY.                                    | 12. GEOLOGY AND METALLURGY.  |
| 5. ELECTRICITY, OPTICS, & ACOUSTICS.             | 13. THE APPLIED SCIENCES—LOCOMOTION, ARTS, MANUFACTURES, SANITARY IMPROVEMENTS, &c., &c. |
| 6. PNEUMATICS, HYDRAULICS, &c.                   |  |
| 7. VEGETABLE PHYSIOLOGY & BOTANY.                |  |

Each subject will be treated with the utmost care; especial attention being paid to the latest discoveries of facts and principles of Science. The Catechisms will therefore supply, when complete, a work eminently adapted by its cheapness, simplicity, and completeness, to promote the diffusion of Useful Knowledge in Schools, and in Domestic Circles. The volume will be ready at the close of the year, price 2s. 6d., elegantly bound.

London: HOULSTON & STONEMAN, and all Booksellers.

## THE HOME COMPANION:

A WEEKLY MAGAZINE.

## PRACTICAL ILLUSTRATIONS OF POPULAR FALLACIES.

No. IX.—“IT IS ONLY A WHITE LIE.”

“TRUTH,” it is said, “lies at the bottom of a well.” And it is to be feared that the well is so exceedingly deep that scarcely any one has yet reached to the bottom. For we find scarcely any one that does not, more or less, indulge their fancy in matters that have but little relation to truth. We have heard it said, indeed, that the world would be a very dull and stupid world, if everybody confined themselves to strict truth; that all the fine play of the fancy, all the working of the imagination would disappear; that our poets would have had no existence, our dramatists would have been unknown—even Shakspeare himself would have been a dead letter, &c.

“Small model of the barren earth,  
That serves as paste and cover for our bones,”

and would have left no sign by which he might be recognised in the present age. This, however, is not correct reasoning; for it is exactly in proportion to their regard for the everlasting truths of nature and humanity, that they are recognised as true poets; the garb in which they choose to dress their productions may be fiction, but it must contain great and high truths, or it will not survive an instant. Homer and Milton were blind, but not blind guides to truth; their inward spirit was sharp-sighted to discover truth, and place it before the world in undying light. Shakspeare has more of truth in his pages than in many a history which the world deems veracious. And so with all other writers; it is their apprehension of truth, and adherence to its standard, that makes their works valuable; and when they depart from this standard, they sink into mere scribblers, without fame or reputation. We cannot, therefore, find an excuse for a departure from truth by reference to the poets; by the supposition that if we did not indulge ourselves in flights of imagination without regard to truth, everything in this life would be flat, stale, and unprofitable. Again, in the wildest fictions of the poets, where the form has the most extravagant departure from apparent truth, the intention is often to convey a great truth under this disguise; we need not refer to the Divine parables, for these must occur readily to every mind; or to the talking birds and animals of *Æsop* and other fabulists; in all these cases, the main object is to enforce some wholesome truth, and the great characteristic of falsehood—the intention to deceive—is wanting.

In the common intercourse of the world, however, we find ourselves beset on every side by falsities—by false appearances, false statements, false professions, false friends,—every grade and hue of deceit and dishonesty. And we believe it is more from carelessness of truth, than from intentional lying, that there is so much falsehood in the world. This carelessness of truth is too often fostered and encouraged by the excuses which we find for ourselves and make for others in any deviation from the truth, by calling it “a white lie.” We seem to imagine that when a lie has not the blackness of malignity attached to it, that it becomes clothed in a garment of purity, and is not only excusable, but harmless. But no one can habitually violate truth in small matters—in “white lies,” without so acquiring the habit that it will extend to great things also. Dr. Johnson correctly says, “All truth is not of equal importance; but if little violations be allowed, every violation will, in time, be thought little.” So far, indeed, did Dr. Johnson carry his love of truth so strongly did he dislike the common “white lies” which have become almost conventionalities in society, that he would not allow his servant to say he was not at home when he really was. “A servant’s strict regard for truth,” said he, “must be weakened by the practice. A philosopher may know that it is only a form of denial, but few servants are such nice distin-

guishers. If I accustom a servant to tell a lie for me, have I not reason to apprehend that he may tell many lies for himself?” The great moralist was thus particular as to the commonest lie of convenience, which most people hardly class as a lie at all, but merely consider as a polite mode of giving people to understand that you are too much engaged to see company. One of our philosophers of the last century, went so far as to say that there was no harm in anything on earth but in a lie, and that if a man murdered his father, it was nothing but a particular mode of telling a lie, and saying that he was not his father. We fear this century is but little amended from the last in the article of truth-telling; although it is to be hoped there are but few men here that particular mode of telling a lie which Dr. Wollaston speaks of. Some, indeed, deny their fathers without exactly murdering them. A young spark whom we once had some slight acquaintance with, who was ostensibly pursuing his legal studies in London as an attorney’s clerk, and living in rather gay style, used frequently to talk largely of his steward in the country; one day, a grave, respectable-looking old gentleman arrived at his lodgings, whom we were all told was the steward we had heard so much of; this might have passed off, but, unfortunately for the success of the “white lie,” a visitor of one of his companions happened to come from the same town as this veracious youth, and recognised in the steward—his father, a very respectable, well-to-do-in-the-world tanner; whom this sprig of gentility in the shape of a lawyer’s clerk was ashamed to own as his parent. This is one of the “white lies” of vanity, perhaps one of the most fertile sources of a departure from truth. The common excuse for these “white lies” is, that they do nobody any harm. Indeed! When the young lawyer’s clerk found himself covered with ridicule, and generally despised by his associates, for the false shame which led him to deny his father, and the lie that he told to hide the relationship, we think he found that he had done himself some harm. And thus it is ever with these lies without malignity—these “white lies,” they may not do others harm, but they recoil upon the person telling them; and their most serious words obtain no belief. Confidence is shaken between man and man, the very bonds of society are ruptured. For, as Dr. Johnson says, “without truth there must be a dissolution of society. As it is, there is so little truth that we are afraid to trust to our ears; but how should we be, if falsehood were multiplied ten times? Society is held together by communication and information; and I remember this remark of Sir Thomas Browne:—‘Do the devils lie? No, for then hell could not subsist!’”

These lies of vanity are very despicable, although so very common; and some of the practical lies of this kind are as ridiculous as they are despicable. The desire to cut a figure—to make a dash among people who neither know nor care anything about you, leads some silly fools into the most ludicrous extravagance of pretence and livery. We remember a couple of young students, in London, who had their bread to get by their profession, so completely inoculated by the silly vanity of appearing to be great and wealthy men, that they denied themselves many necessities, and all amusements, in order to hire a couple of horses to ride in the park on Sundays; and they were not content to ride there quietly as a couple of gentlemen, but they must, forsooth, have their servant in livery behind them. This, however, was beyond their means, until the ingenuity of their vanity hit upon this plan:—Being about the same size, they got a flaring green and gold suit of livery made that fitted them both; and on alternate weeks one of them enacted the servant, and the other the master; and thus, in grand state, they paraded up and down Rotten Row, on their swarving backs, much to the delectation of their inordinate vanity. We doubt if any one present ever wasted a thought on them; but the snobbish spirit of humbug was strong within them, and they willingly submitted to don the servile garb one week, that the next they might ride in the full consciousness of having a livery following them. At length some of their acquaintances discovered the affair, and from that time for the rest of their lives, they were known by the sobriquet of the “green-antlers,” in allusion to their being livery. In after years we remember seeing the very same green and gold on the back of an errand boy, in the employ of one of the “greenfinches.”

Sometimes, these lies of vanity are productive of very disastrous consequences to those near and dear to the tellers of them. We remember a little tale, by Mrs. Opie, which illustrates in a most painful manner the evils that may arise from these “white lies” of vanity. She describes a wealthy merchant of strict principles and high honesty, who, by a sudden revolution in trade, was entirely ruined. He had lived surrounded by all the luxuries which his wealth entitled him to enjoy; and, in spite of his high character, not without some of the calamities which malevolence too frequently indulges in towards those he envies. In the season of his misfortunes he at once gave up to his creditors all that he possessed—his plate, furniture, carriages, horses—everything was surrendered, and he retired to a small village in Wales to live cheaply on the very small settlement which had been made on his wife. The calamities which his wealth and style of living caused, had set some of his creditors against him; but in the days of his poverty these calumnies gradually died away, and even the creditors who had been most opposed to him, were beginning to relent, and had agreed to sign his certificate, so that he might again enter into business, and accept the offer made him by an old friend to join him in a partnership. This merchant had an only daughter, who had been brought up by a doting grandmother, by whom the seeds of vanity had been fostered in the young girl’s mind. Unfortunately for the poor merchant, it chanced that the daughter was returning home from a visit in the same stage-coach with some of the most suspicious of her father’s creditors, who were coming down to form a judgment for themselves, before they signed the certificate. Like all vain and silly people, the young lady began to give herself great airs, and show herself off as a person of great dignity;—talked of her own maid—her boudoir, her father’s conservatory,

her grandmother's carriage, all the things which in the days of her wealth she had enjoyed, as if she was still in the possession of them. The creditors discovered that she was the daughter of the bankrupt merchant, whose certificate they had been about to sign, in the belief that he had acted honestly; but finding his daughter such a very fine lady, boasting so loudly of the luxuries she enjoyed, and even on being taxed with being the daughter of the bankrupt, maintaining that although her father had been unfortunate, they were very well off now, with such a pretty residence, such a sweet garden, and such a charming hothouse, they thought they had sufficient evidence to prove the bankrupt was nothing other than a swindling scoundrel. All their former suspicions were renewed and confirmed, for it was easier to suppose the bankrupt was still the rascal they had always thought him, than that a young girl should have told so many falsehoods at the mere impulse of vanity. In a very short time the father was made to feel the effects of the "white lies" of the daughter. Instead of having his certificate signed, and a remittance forwarded him from the gentleman who had been about to take him into partnership, to enable him to take his family to town, he was told that all connexion between them was for ever at an end; that the business was given away to a worthy man, but that he stood in the position of a fraudulent bankrupt whose certificate should never now be signed. This communication wound up thus:—"Should you wonder what has occasioned this change in my feelings and proceedings, I am at liberty to inform you, that your daughter travelled in a stage-coach, a few days ago, with your two principal creditors; and, I am desirous to add, that children and fools speak truth." This proverb, we fear is no more true at all times than many of those we have been illustrating. At all events it was not true in that instance; the "white lies" of the daughter had completely ruined the father—ruined his prospects, his character, and his good name. And it was not until after long suffering and sickness on the part of the father, and the deserved humiliation of the daughter, by the forced confessions of her falsehoods, that the evils occasioned by these "white lies" were removed, and the father restored to his good name and his position in society. And the tale winds up with this moral, supposed to be addressed by the repentant daughter in after life to her own children, after telling them her own story as a warning against the evils of lying:—"Not that retributive justice in this world, like that which attended mine, may always follow your falsehoods, or those of others; but because all lying is contrary to the moral law of God; and that the liar, as Scripture tells us, is not only liable to punishment and disgrace here, but will be the object of certain and more awful punishment in the world to come."

Dr. Johnson, in one of the numbers of his *Rambler*, gives a very strong picture of the difficulties attendant on speaking the strict truth. "There are, indeed," he says, "in the present corruptions of mankind, many inducements to forsake truth; the need of palliating our own faults, and the convenience of imposing on the ignorance or credulity of others, so frequently occur; so many immediate evils are to be avoided, and so many present gratifications to be obtained by craft and delusion; that very few of those who are much entangled in life have spirit and constancy sufficient to support them in the steady practice of open veracity. In order that all men may be taught to speak truth, it is necessary that all likewise should learn to hear it; for no species of falsehood is more frequent than flattery, to which the coward is betrayed by fear, the dependant by interest, and the friend by tenderness. Those who are neither servile nor timorous, are yet desirous to bestow pleasure; and while unjust demands of praise continue to be made, there will always be some whom hope, fear, or kindness will dispose to pay them." In the practical affairs of every-day life, we continually find some or other of these inducements pressing upon us, and leading us into the meanness of falsehood, although we ourselves are fully aware of the meanness, condemn it most thoroughly, and are ashamed of it when we reflect. Even Dr. Johnson himself, great lover as he was of truth, is not always free from one of the influences which militate against its use. In a conversation with Goldsmith, recorded by Boswell—in which Goldsmith, as is commonly the case, had the best of the argument, although Boswell can never fancy such a thing possible—Johnson admits the influence of fear as a legitimate excuse, if not exactly for telling a lie, at least for the suppression of truth. The argument arose upon the question whether a foreigner who had written a History of England up to a certain period, should continue it down to the then present times. Goldsmith contended that he ought. Johnson—"No, sir, he would give great offence. He would have to tell of almost all the living great what they do not wish told." Goldsmith—"It may perhaps be necessary for a native to be more cautious; but a foreigner, who comes among us without prejudice, may be considered as holding the place of a judge, and may speak his mind freely." Johnson—"Sir, a foreigner, when he sends a work from the press, ought to be on his guard against catching the error and mistaken enthusiasm of the people among whom he happens to be." Goldsmith—"Sir, he wants only to tell his history, and to tell truth; one an honest, the other a laudable motive." Johnson—"Sir, they are both laudable motives. It is laudable in a man to wish to live by his labours; but he should write so as he may live by them, not so as he may be knocked on the head. I would advise him to be at Calais before he publishes his history of the present age. A foreigner who attaches himself to a political party in this country, is in the worst state that can be imagined: he is looked upon as a mere intermeddler. A native may do it from interest." Boswell—"Or principle." Goldsmith—"There are people who tell a hundred political lies every day, and are not hurt by it. Surely, then, one may tell the truth with safety." Johnson—"Why, sir, in the first place, he who tells a hundred lies has disarmed the force of his lies. But, besides, a man had rather have a hundred lies told of him, than one truth which he does not wish should be told." Goldsmith—"For my part, I'd tell truth and shame

the devil." Johnson—"Yes, sir; but the devil will be angry. I wish to shame the devil as much as you do, but I should choose to be out of the reach of his claws." Goldsmith—"His claws can do you no harm, when you have the shield of Truth."

When a man like Dr. Johnson is restrained from speaking the truth through fear of consequences, we need not be surprised to find that weaker minds go farther, and invent "white lies" to cover any accident that may have befallen, or to curry favour with those whom it is their interest to please. And from this want of moral courage arise the lies of flattery, and the lies of fear, which are so current in society, and are carried to such ridiculous excess. When a poor, shivering boy, who has been sweeping the crossing, humbly asks for a halfpenny, how many are there among us who say—"I have no coppers," when he may almost hear them jingling in our pocket as we pass? The fear of being thought shabby by the poor boy, induces us to utter the "white lie;" and from small things this fear proceeds to greater, until, at length, we become not only thoroughly indifferent to the truth, but enamoured of the lie for the lie's sake, and are almost as proud of our skill as Captain Absolute's Fag in the *Rivals*. "Captain Absolute—"Well, sir, and what did you say?" Fag—"Oh, I lied, sir. I forgot the precise lie; but you may depend on't he got no truth from me. Yet, with submission, for fear of blunders in future, I should be glad to fix what has brought us to Bath, in order that we may lie a little consistently. Sir Anthony's servants were curious, sir, very curious, indeed." Captain Absolute—"You have said nothing to them?" Fag—"Oh, not a word, sir—not a word! Mr. Thomas, indeed, the coachman (whom I take to be the discreetest of whips)—"Captain Absolute—"Sdeath! you rascal! you have not trusted him?" Fag—"Oh, no, sir—no—no—not a syllable, upon my veracity! He was, indeed, a little inquisitive; but I was sly, sir—devilish sly! My master, (said I), honest Thomas, (you know, sir, one says honest to one's inferiors,) is come to Bath to recruit—yes, sir, I said to recruit; and whether for men, money, or constitution, you know, sir, is nothing to him, or to any one else." Captain Absolute—"Well; recruit will do—let it be so." Fag—"Oh, sir, recruit will do surprisingly—indeed, to give the thing an air, I told Thomas that your honour had already enlisted five disbanded chaffmen, seven minority waiters, and thirteen billiard markers. Captain Absolute—"You blockhead!—never say more than is necessary." Fag—"I beg your pardon, sir—I beg pardon—but, with submission, a lie is nothing unless one supports it. Sir, whenever I draw on my invention for a good current lie, I always forge endorsement as well as the bill." Captain Absolute—"Well, take care you don't hurt your credit by offering too much security." We fear neither Captain Absolute, nor his servant, Fag, had ever studied Aristotle, or they would have learned that all a man can gain by uttering falsehood is not to be believed when he shall speak truth. But, common as is the habit of "white lying" to all of us—for, alas! there are but few indeed who are exempt from what Godwin calls the "pigeonian lie"—yet, to be charged with having done it is one of the most heinous affronts that can be offered. Montaigne gives us a reason for our horror of such an odious charge, which should be deeply fixed in our hearts—"If it be well weighed, to say that a man lieth, is as much as to say that he is brave towards God, and a coward towards men. For a lie faces God, and shrinks from man."

## THE FRUIT TREE.

BY MARY BENNETT.

ANNA was beautiful and vain,  
Self admiration was her bane;  
To work or read she had no will,  
She sought no good, she feared no ill;  
Flattery closed her ears to truth,  
And folly marred her early youth;  
Abroad, 'twas all her aim to see  
The dresses of the company;  
A home, the glass was her delight—  
To gaze on eyes so dark and bright,  
And crimson cheeks, and curls that deck,  
With jetty droop, her lustrous neck;  
And so, with self-adoring smiles,  
To praise little artful wiles;  
With silly dreams then turn aside,  
And ransack all her wardrobe's pride.

The trees might bud, the flowers might  
blow,  
The birds of Spring might come and  
go—  
Of nature little did she know—  
But once it chanced, she stood before  
A fruit tree clothed with blossoms o'er,  
Fragrant and gay, and fair of hue;  
Enchanted, Anna stood to view:

'Twas like a bridal Queen of May—  
So white, so pure, so fresh, so gay.  
A few days after, Anna came;  
Surely the tree was not the same!  
The fragrance gone, the fair tints fled,  
And all the beautiful blossoms dead.  
'This is a swift and sad decay,'  
She said, and ponder'd all the day;  
And then she noted how the flowers,  
Resplendent in the garden bowers,  
Faded away, swiftly and sure,  
And nought of summer might endure:  
The green leaves fell that grazed the trees,  
Rough winds displaced the summer breeze,  
The splendid moths soon passed away,  
The butterflies soon ceased to play  
Over the flower-beds joyously:  
Ceased cricket, grasshopper, and bee;  
And sickness came to her, and pain—  
And passed—and left her no more vain.  
She ceased to trust in charms that die  
Fast as the swallow's wings can fly;  
She learned to read, to think, to pray,  
And walk in heavenly Wisdom's way:  
Seeking the beauties that will last  
When youth, and life, and earth, are past!

WOMEN, brought up in ignorance of comfort, of course are careless about the means of providing for it. They are heedless how they marry, and, when married, never think of the duties of their situation. I recollect a young woman, the wife of a labourer in the country, once applying to me respecting some alleged harsh treatment on the part of a shopkeeper, to whom she owed money. On investigating the case, I found that she regularly spent three shillings a week in sweet things, and that she held herself entitled to pass the first year after her marriage in complete idleness; a privilege I discovered, by no means seldom claimed. Of course the habits of the first year would become, in a great measure, the habits of after life, and the indulgence in sweet things would most likely be transferred in time to things less harmless.—*The Original.*

## ONWARD

**NEW PILE-DRIVING MACHINE.**—The first introduction of this machine in London took place lately. The works under the superintendence of Mr. Randel, the engineer, are at the West India Docks, and a pile of 25 feet in length was driven into the ground in the short space of eight minutes, which by the old process would have taken three hours. The engine is capable of making from 60 to 70 strokes a minute.

**ROYAL PANOPTICON OF SCIENCE AND ART.**—The plan of the building, which was designed, and is being carried out by Messrs. Finden & Lewis, comprehends a grand central hall, 97-feet diameter, domed over, for the exhibition of machinery, manufactures, works of art, &c., and for exhibitions of various descriptions. There will be a lecture-room, laboratory, &c. All the buildings are designed in the Saracenic style, after models and details, chiefly from the existing remains of Cairo. The contour of the dome is taken from a daguerreotype of a dome at Cairo. It will be formed of glass and iron, on the ridge and furrow principle. The façade will be formed in cement.—*Builder.*

**COTTAGES FOR THE WORKING CLASSES.**—The style of cottage so well known from the specimen exhibited by Prince Albert in Hyde Park during the Exhibition, has already come into actual use. A row of twelve, built exactly after the "model," has been erected on a plot of ground, near the Shadwell Station of the Blackwall Railway—which every one acquainted with London knows to be an extremely poor and wretched district. Some of the lowest hovels in the metropolis were removed to make way for the new abodes. If the experiment succeeds—that is, if the poor should be found to prefer these new cottages to their old dwellings—several more of the same kind are to be erected in the same street.—*Builder.*

**PROPOSED MIDLAND OBSERVATORY AT NOTTINGHAM.**—An influential meeting has been held at Nottingham, to take into consideration a proposal made by Mr. Lawson, for the erection of a midland observatory at Nottingham. His Grace the Duke of Newcastle presided. Resolutions were adopted to the effect that an observatory in the centre of England, would be calculated to promote the interests of science; that the munificent offer of Mr. Lawson of his valuable collection of astronomical instruments, and a gift of 100 guineas, presented considerable inducements to secure such an institution; and that a provisional subscription should be at once entered into.

**NEW CAR INDICATOR.**—Mr. William Grayson, of Henley, Oxfordshire, watchmaker, has submitted to the Commissioners of Police, at Scotland-yard, one of his new patent distance indicators, for cabs and carriages. The machine itself is about the size of a small chronometer, having a dial numbered in the same way as far as ten, each division or figure on the hour circle representing ten miles, with minute marks to note the number of odd miles, and the complete revolution of the index marking one hundred, the greatest number of miles any cab is likely to travel in one day. The dial is set in the side of the vehicle, on a perpendicular line with the axle-bar, upon which is an eccentric boss made of wood, covered with leather, and acting on an iron arm, bent, and communicating with a ratchet wheel and pinion, which gives motion to the indicator and sets it going.

**THE SUBMARINE TELEGRAPH.**—The Submarine Telegraph Company have completed the laying down of wires, from their office at East Cliff to their future premises in Clarence-place, close to the telegraph office of the South Eastern Railway, so that in future, not more than half a minute will be lost in conveying messages from one office to the other. Eight wires, covered with gutta-percha, and enclosed in a wooden tube lying ten inches below the surface of the ground, have been provided by the company to meet any contingencies that may arise. It is stated that a new additional cable with four wires is in course of manufacture, and nearly completed, for the purpose of being laid down from coast to coast. Should, therefore, any accident occur to the cable at present in use, the regular transmission of communications between England and France will not be interrupted.

**HUSSEY'S PATENT REAPER.**—"That corn may be cut by machinery is now an ascertained fact, and while we are indebted to Mr. Crosskill, of Beverley, for first introducing Hussey's celebrated Champion Reaper into the northern counties, we are glad to find that our Yorkshire farmers are already adopting it, with a spirit which bids fair to bring it into common use next harvest. Mr. Charles Ingle, of Cridding Stubbs, was present when the first Hussey's Reaper, made by Crosskill, was publicly tried last harvest near Driffield, and was so satisfied with its success, that he lately ordered one from Beverley. Mr. Crosskill offered to arrange for his traveller, Mr. T. W. Naylor, (late of Doncaster), to personally attend the first starting of the Reaper, and have a public trial on a field of stubble. The trial took place at Mr. Ingle's farm lately. In some parts of the field the stubble was nearly rotten, and also much trodden down by the crowd of visitors present; but fearless of the bad season and the effect of the late frosts, Mr. Naylor started the Reaper, across ridge and furrow, and fully proved its superior cutting propensities, notwithstanding so many unfavourable circumstances. The trial was witnessed by many of the principal practical farmers in the neighbourhood of Pontefract, who expressed their full approbation of its efficiency, in a certificate to Mr. Naylor; and several enterprising gentlemen, well known in this locality, have given orders to Mr. Crosskill for reaping-machines. Doubtless, many more will adopt this most valuable invention; and the plan of testing one Reaper in every parish, at this season of the year upon stubble or winter tares is deserving of consideration, as it may enable many to decide to cut by the machine before next harvest."—*Doncaster Gazette.*

## STATISTICS.

## WHAT STATISTICS TEACH AS TO EDUCATION.

## A HINT TO WORKMEN.

"WE translate the following judicious remarks from a German contemporary: 'It seems not to be yet quite understood, far less practised, by parents of the humbler classes of society, that by giving instruction to their offspring, they not only place a capital at their disposal, available for their whole lives, but endow them with a *charm*, which will protect them against evil of all sorts. If we classify the wages of the working classes into three categories, say in the proportion of one, two, three, viz., the weekly wages of seven, fifteen, or thirty, and so on, francs (or shillings), the first (least) category is earned by people who can, generally speaking, neither read nor write. It is not, that we intend to say, that a person thus deficient may not be (by way of exception) still very good, intelligent—nay, wise; but it seems that these conventional abilities entail on their owners a certain ability for better managing the conventionalities of present social life, &c. Thus, reading and writing, acquired in early youth, lead to the acquirement of a higher sort of occupation, trade, or otherwise; because there can be no doubt that the proportions of general intellect are the same as those of wages. So, the journeyman or labourer, the bricklayer and stonemason—in fine, the overseer and clerk, have wages in the proportion of one, two, three; while also their mental acquirements are surely bearing the same ratio. By parents enjoining, and in some cases forcing upon their children the thorough acquisition of reading and writing, they exclude them, as it were, from the first (the meanest) category, and place them at least, in the second. It is an avowed statistical fact, as it is surely a curious psychological problem, that amongst 1,000 journeymen and labourers, there is not one who can read and write well. The social remedy in this case is obvious: if parents do not wish their children to belong to (remain in) the meanest category of wages, they must push them out of the meanest category of abilities. The charming influence of reading and writing is yet to be adverted to. If the grand total of all transgressors of the law in Germany, France, and England be taken into account, of 1,000 such, upwards of 400 cannot read; 400 can somewhat read; 100 can somewhat read and write; while there are only 50 who can read and write; and only 50 of the more or less educated classes of society. This, surely, is a very striking and telling proportion, informing parents that instruction, as it is a guarantee for higher wages—viz., a guarantee of a human worthy material life—is also, at the same time, a preventive against the consequences of ignorance—brutality, sensuality, meanness, selfishness, untrustworthiness, dishonesty, &c. But, as man has 'not to live on bread alone,' the arts also claim their share in the beneficent (*Beglückung*) of man; the arts, placed now in most countries of Europe within the reach of the poorest. Persons practising any of the branches of art (either professionally or for amusement) are amongst the rarest cases of law-transgressors; while the statistics of the English penal colonies prove that never yet any musician has been convicted and sent thither. How things ultimately will be managed, when all men will be more or less educated, lies beyond the limits of statistical science, being one of retrospective, not prospective, facts. Still, it every one does his duty now, any after-time—being only the sequel of the present—can also be but a cheering one.'"—*Builder.*

**STATISTICS OF LONDON.**—London stands upon 620 acres. The fixed property in houses located on this small spot is estimated at forty millions sterling; and the value of the moveable property in the city is considered to be worth one hundred millions sterling.

**LEGAL STATISTICS.**—It appears from returns to parliament, that in 1849 there were 23,734 writs issued by the Court of Queen's Bench, 16,083 by the Common Pleas, and 40,043 by the Exchequer. These are stated to be on *merito* process; while in the County Courts in the same year there were 335,191 plaints entered.

**EMIGRATION TO AMERICA.**—The *New York Herald*, in its summary of the year, says,—"The increase of the influx of emigrants to this port, for the last year, is very remarkable. The grand total is 289,601; of which there are from Ireland, 163,256; Germany, 69,883; and England, 28,553. The increase over the emigration for the year 1850 is 76,906, or at the rate of 6,400 per month! The entire emigration to this country, during the year that has now expired, is certainly half a million."

**THE AUSTRIAN EMPIRE.**—The Austrian monarchy covers an extent of 12,104 square miles, containing 35,295,957 souls, inhabiting 713 towns, 2,468 boroughs, and 64,208 villages. The clergy is composed of 65,555 individuals, and the church revenue, without including Hungary, Transylvania, and the military frontier, exceeds 7,000,000 of francs. Austria exceeds all other states in the number of primary schools, in which more than 4,000,000 of pupils are educated at an expense of 4,000,000 of florins.

**TOBACCO.**—Mr. Robert Ellis, surgeon, the principal editor of the official Catalogue of the Exhibition, has the following remarks:—"The total quantity of tobacco retained for home consumption, in 1848, amounted to nearly 17,000,000lbs. North America alone produces annually upwards of 200,000,000lbs. The combustion of this mass of vegetable material would yield about 340,000,000lbs. of carbonic acid gas; so that the yearly produce of carbonic acid gas from tobacco-smoking alone cannot be less than 1,000,000,000lbs.—a large contribution to the annual demand for this gas made upon the atmosphere for the vegetation of the world."

## ENIGMA.

Look up, thou soul, by sin oppress'd  
And let my light compose thy breast!  
I drive the clouds of unbelief away,  
And open the portals to eternal day.  
Religion is not my adopted name,  
I am the base, Religion is the frame.  
When on the bed of death the sufferer lies,  
I am the light that opens his closed eyes.  
And ever blessed are the lamented dead,  
O'er whom my all-sustaining wings were spread.  
Death flies away whenever I draw near,  
Loses his sting, excites no more the tear  
I break the sceptre of Time, and thus defy  
The power of man's most potent enemy  
God looks thence down, and from his heavenly throne,  
Blesseth the work of just where I am known.

## ENIGMAS, CHARADES, REBUSES, &amp;c.

1.  
From a long ago, yet made to-day,  
I supply'd while others sleep,  
What few would ever give away,  
Or any wish to keep.

2.  
Before a circle I appear  
Twice twenty four, and five in rear;  
One fifth of eight subjoin, and then  
You'll quickly find what conquers men.

3.  
Emblem of innocence and youth,  
Too soon I drop and fade;  
Pure and unspotted as the truth,  
Though of two falsehoods made,  
No legs I have; yet go and stand,  
And when I stand I lie.

4.  
We are little airy creatures;  
Each have different forms and features.  
One of us in glass is set,  
Another you will find in jet;  
A third, less bright, is set in tin;  
The fourth, a shining box within;  
And the fifth, if you pursue,  
It will never fly from you.

5.  
*Answer of a Lady to a Gentleman, who  
made Proposals of Marriage to her.*  
One thing, kind sir, of you I crave,  
Which you yourself can never have,  
Nor ever had in time that's past,  
Nor ever can while time doth last;  
Yet if you love me, as you say,  
Pray give it me—I'm sure you may.

6.  
When we our story would begin,  
We first must trace our origin;  
A weary task, then, sure is mine,  
Who trace it from both sides the line;  
And true it is, I owe my birth  
To animals, as well as earth.

My being to such thoughts, once  
A vital heat and nobler glow,  
I've been a free, I've been a ram;  
Insects have made me what I am.  
Though straight, we'd form'd, and never  
sick.

I cannot stand with out a tale,  
Pleasing and useful to one's tale,  
I to another give advice,  
I'm born for a domestic use,  
Yet often witness great abuse,  
I villains serve to aid their flight;  
The good to bring their deeds to light.  
In others, luxury is dreaded;  
But I please most when most light-headed.

7.  
By something form'd, I nothing am;  
Yet everything that you can name.  
In no place have I ever been,  
Yet everywhere I may be seen.  
In all things false, yet always true,  
I'm still the same, but ever new.  
Lately, late's perfect form I wear,  
Can show a nose, eye, tongue, or ear;  
Yet neither smell, see, taste, nor hear.  
Swiftly I move, and enter where  
Not even a chink can let in air.  
Like thought, I'm in a moment gone;  
Nor can I ever be alone.

8.  
All things on earth I imitate,  
Faster than nature can create.  
Sometimes imperial robes I wear,  
Anon, in beggar's rags appear;  
A giant now, and straight an elf,  
I'm every one, but ne'er myself;  
Ne'er sad, I'm now; ne'er glad, rejoice;  
I move my lips, but want a voice.  
I ne'er was born, or e'er can die;  
Then, pry the, tell me what am I?

9.  
If you expect from me my birth,  
I'm near as old as mother earth;  
But 'tis as well, you must allow,  
To say that I am living now.  
And that must every mortal find  
Who dealings has with humankind.

## TRANSFIGURED PLAYING CARDS.

THE NINE OF SPADES—A CHARITY RAZZ.

The greatest rascal owes to me  
Show of respectability.  
I'm often on a lover's lips;  
And save a statesman when he trips.  
All would-be patriots owe to me  
Alone their popularity.  
If any one my feature traces,  
He'll surely find me with two eyes.  
The one is black, the other white;  
This to deceive, that to delight.  
To serve the great is most my pride;  
For then I show a fair outside.  
Butke always finds me at his back;  
But then, indeed, my face is black.  
The poets love me to their heart—  
With them I play a topmost part.  
Assist the orators in diction,  
Yet prove that all they say is fiction.  
And last though all join to abuse me,  
You'll scarce find one ashamed to use me.

10.  
Pretends, when in a changing mood,  
Could take whatever form he would;  
So poets say; but I deny  
He ever chang'd so oft as I.  
There's scarce an object that you've seen  
But I myself at times have been.  
No king, from first to latest hour,  
Could ever boast a greater power;  
For let their strength be what it would,  
By me they did or harm or good.  
First, should I what I've been rehearse,  
I could comprehend the universe.  
I've been a spaniel, been a hero,  
I've been a pod; I've been a Nero;  
I've been a lion, and a dove,  
And sent on embassies of love.  
Armed are ruled by my command;  
And I can make them, too, disband.

No bigger than your finger's end,  
The strongest I to prison send;  
And by authority of me  
The wretch from dungeon is set free.  
Without my aid, this I may boast,  
King Charles his head had never lost.  
Though all is true that I have said,  
I'm very oft a cypher made.

11.  
Never sleeping, still awake;  
Pleasing most, when most I speak,  
The delight of old and young,  
Though I speak without a tongue.  
Nought but one thing can confound me,  
Many voices joining round me,  
Then I fret, and roar, and gabble,  
Like the labourers of Babel.  
Now I am a dog or cow;  
I can bark, or I can low;  
I can blent, or I can sing,  
Like the warblers of the spring.  
Let the love sick bard complain,  
And I mourn the cruel pain;  
Let the happy swain rejoice,  
And I join my helping voice.  
Both are welcome, grief or joy,  
I with either sport and toy.  
Though a female, I am stout;  
Drums and trumpets bring me out;  
Then I clash, and roar, and rattle,  
Join in all the din of battle.  
Jove, with all his loudest thunder,  
When I'm vexed can't keep me under.  
Yet, so tender is my ear,  
That the lowest voice I fear.  
Much I dread the courtier's fate  
When his merits out of date;  
For I hate a silent death;  
And a whisper is my death.

## ANSWERS TO THE PASTIME OF LAST EVENING,

Page 221.

## PICTORIAL CHARADE—HICORY.

## ENIGMAS AND REBUSES.

1. NIGHT-IN-GALL. 2. CAR-CARP-PET (Carpet). 3. A SPOON-BILL.

## 4. THE SCARABÆUS BEETLE.

- Which remains a considerable period under ground in the larvæ and pupæ state, and emerges to the surface, as the perfect insect, in the spring of the year.
- Is continually employed in collecting small masses of animal manure, which it forms into vases, and deposits in the earth, not as fertilizers,
- But as a nidus for its eggs.
- Is much infested with parasitic animalcules, of which it cannot divest itself.
- Now crushed as a disgusting insect.
- But was venerated by the Egyptians, who built the Pyramids.
- Its image is frequently found in unrolling mummies, and is treasured in the cabinets of the curious.

D. BUCKNER.

## OUR CORNER CUPBOARD!

We should use a *flower* as the bee does a flower.

HUMAN existence *lives* upon trifles—what is beauty without soap?

THAT charity is *not* which takes from independence its proper pride, from mendacity its salutary *mask*.

EVERY one is at least in one thing, against his will, *original*—in his manner of sneezing!

THE DOUBLE ADVANTAGE.—Every time you avoid doing wrong, you increase your inclination to do that which is right.

WOMAN'S silence, although it is less frequent, signifies much more than man's.

SINCE Time is *not* a person we can overtake when he is *past*, let us honour him with mirth and cheerfulness of heart while he is passing—*Go, the*.

NOTHING makes one so indifferent to the pin and mosquito thrusts of life, as the consciousness of growing better.

THE saying "that there is more pleasure in giving than receiving," is supposed to apply chiefly to medicine, kicks, and advice.

WISDOM is an *dream* that has no shore; its prospect is not terminated by an horizon; its centre is everywhere, and its circumference nowhere.

FLATTERY is like a flail, which, if not adroitly used, will box your own ears instead of tickling those of the corn.

CHATEAUBRIAND says, "In new colonies, the Spaniards begin by building a church; the French a ball-room; and the English a tavern."

TAKE pleasure in your business, and it will become your recreation. Hope for the best, think for the worst, and bear whatever happens.

LET every one protect himself from a sullen, egotistical spirit, for there can be none worse.

THE triumphs of truth are the most glorious, chiefly because they are the most bloodless of all victories, deriving their highest lustre from the number of saved, not of the slain.

THERE exists in human nature a disposition to murmur at the disappointments and calamities incident to it, rather than to acknowledge with gratitude the blessings by which they are more than counterbalanced.

"MISTER, I say, I don't suppose you don't know of nobody what don't want to hire nobody to do nothin' for sombody nohow, you don't, do you?" "Yes, I guess not."

POURPOUS fools may be compared to alembics, for in their sloveness of speech, and dullness of apprehension, they give you, drop by drop, an extract of the simples they contain.

OF all actions of a man's life, says Selden, his marriage does *least* concern other people; yet of all actions of his life it is most meddled with by other people.

THE Bank of England uses in its accounts no less than 60 folio ledgers, filled up completely every day! 28,000 bank-notes throwing off daily, and all so registered, that the abstraction of a single note is followed by immediate detection.

"Boy, what is your father doing to-day?" "Well, I s'pose he's fadin'. I hern him tell mother, yesterday, to go round to the shops and get trusted all she could—*and* do it right off, too—for he'd got everything ready to fall up to nothing, 'ceptin' that."

"If thy neighbour should sin," old Christoval said,

"Never, never unmerciful be;

For remember it is by the mercy of God,

Thou art not as wicked as he!"

A CLOSE RUB.—"See there!" exclaimed a returned Irish soldier to a gaping crowd, as he exhibited with some pride his tall hat with a bullet-hole in it. "Look at that hole, will you. You see that if it had been a low-crowned hat, I should have been killed outright!"

## A SLIPPERY MORAL.

How often in this troubled world

Of sorrow and of sin,

Short-sighted man will buy his skates

Just as the thaw sets in.

A WISE DISTINCTION.—When the Earl of B— was brought before Lord Loughborough, to be examined upon application for a statute of lunacy against him, the chancellor asked him—"How many legs has a sheep?" "Does your lordship mean," said B—, "a live sheep or a dead one?" "Is it not the same thing?" answered the chancellor. "No, my lord," said Lord B—, "there is much difference; a live sheep has four, a dead one but two—there are but two legs of mutton, the others are shoulders."

WAGTAILS AND WAGSTAFFS.—Naturalists have traced some points of resemblance between these singular birds. First, the flames are not unlike; secondly, they both evince a great partiality for perching for an instant at the water's edge, and then flying off again, without, however, wetting their feathers, or even damping them, as they are naturally aquatic birds; but the most remarkable point of similarity consists in this, that whereas wagtails cannot often be secured with salt, wagstuffs, on the other hand, are as seldom to be caught with chaff.

## OUR MEMORANDUM BOOK!

REWARDS OF FIDELITY.—Never forsake a friend. When enemies gather around—when sickness falls on the heart—when the world is dark and cheerless—is the time to try true friendship. They who turn from the scene of distress betray their hypocrisy, and prove that interest only moves them. If you have a friend who loves you—who has studied your interest and happiness—be sure to sustain him in adversity. Let him feel that his former kindness is appreciated, and that his love was not thrown away. Real fidelity may be rare, but it exists—in the heart. They only deny its worth and power who have never loved a friend, or laboured to make a friend happy.

A MAN'S CHOICE THINGS.—This was addressed by Catwag the wise to his father, Gwynlliw Vllwr:—His house should be free from wet; his farm compact; his land pleasant; his wife gentle; his food wholesome; his drink small; his fire bright; his clothes comfortable; his neighbourhood peaceful; his servant diligent; his maid handy; his son sincere; his daughter accomplished; his friend faithful; his companion without deceit; his horse quiet; his hound swift; his hawk full of avidity; his oxen strong; his cows of one colour; his sheep of kindly breed; his swine long; his household moral; his home orderly; his bard learned; his lord powerful; his king just; his God merciful.

## EXCELLENCIES OF A MANLY CHARACTER.

Truisms delivered by Catwag to Taliesin.

- |   |  |
|---|--|
| 1. To be wise in his disputes.          | 9. To be a hermit in his retreat.              |
| 2. To be a lamb in his home.            | 10. To be a legislator in his country.         |
| 3. To be brave in battle and conflict.  | 11. To be conscientious in his actions.        |
| 4. To be discreet in public.            | 12. To be happy in his life.                   |
| 5. To be a lion in his chair.           | 13. To be diligent in his calling.             |
| 6. To be a technician in his household. | 14. To be just in his dealing.                 |
| 7. To be a council in his nation.       | 15. That whatever he doeth be the will of God. |
| 8. To be an arbitrator in his vicinity. |  |

TRUTH OF LIFE. Life hath something more for its object than the mere heaping together of gold. We live, but it should be to promote the well-being of others—to enrich the mind with knowledge—to lead wavering footsteps to the shrine of wisdom. We live, not for selfishness, but to shield and protect, to cherish virtue, and to stem the impetuous torrent of human degradation; for unity of action, and unceasing honesty and truth; it is by these means, and these alone, that we can arrive at perfection. Teach every man that he has a great duty to perform, and life has some charm for him; it is no longer wearisome, dull, and monotonous, then a brighter world opens before him, replete with loveliness. Great is the pleasure to those whose life is a purpose to spread happiness and truth amongst mankind.

## ENGLISH PROVERBS ON WEATHER.

If red the sun begins his race,  
Expect that rain will fall apace.  
The evening red, and the morning grey,  
Are sure signs of a fine day.  
If woolly fleeces spread the heavenly way,  
No rain, be sure, disturbs the summer day.  
In the waning of the moon,  
A cloudy morn'—fair afternoon.  
When clouds appear like rocks and towers,  
The earth's refreshed by frequent showers.

## OBSERVATION ON THE WEATHER.

Dew.—If the dew lies plentifully on the grass after a fair day, it is a sign of another. If not, and there is no wind, rain must follow. A red evening portends fine weather; but if it spread too far upwards from the horizon in the evening, and especially morning, it foretells wind or rain, or both. When the sky, in rainy weather, is tinged with sea-green, the rain will increase; if with deep blue, it will be showery.

Clouds.—Against much rain, the clouds grow bigger, and increase very fast, especially before thunder. When the clouds are formed like fleeces, but dense in the middle and bright towards the edges, with the sky bright, they are signs of a frost, with hail, snow, or rain. If clouds breed high in air, in thin white trains like locks of wool, they portend wind, and probably rain. When a general cloudiness covers the sky, and small black fragments of clouds fly underneath, they are a sure sign of rain, and probably it will be lasting. Two currents of clouds always portend rain, and, in summer, thunder.

Heavenly Bodies.—A haziness in the air, which fades the sun's light, and makes the orb appear whitish, or ill-defined—or at night, if the moon and stars grow dim and a ring encircles the former, rain will follow. "If the sun's rays appear like Moses' horns—if white at sitting, or shorn of his rays, or goes down into a bank of clouds in the horizon, bad weather is to be expected. If the moon looks pale and dim, we expect rain; if red, wind; and if of her natural colour, with a clear sky, fair weather. If the moon is rainy throughout, it will clear at the change, and, perhaps, the rain return a few days after. If fair throughout, and rain at the change, the fair weather will probably return on the fourth or fifth day.

**EMPLOYMENT GIVEN.**—Ladies and gentlemen may profitably occupy leisure time by acquiring the elegant art of **ORNAMENTS PAPER MACHIE**, in pearl, gold, &c., as practically imparted on an improved system, by which £2 a week can be realized. Premium one guinea. As the number is limited, those desirous of engagements should make early application to Mr. Wright, 20, Tavistock-street, Covent Garden.

**VENTILATING BOOTS AND SHOES** WITHOUT LETTING IN WATER. The only true invention to prevent corns throbbing, and the feet from being tender or swelling. No person would wear any other if they only once tried a pair. To be had of the Patentee, C. MAXWELL, near the Bridge, Kingsland Road, London. The Trade supplied with the inner sole and connecting pieces, at the small charge of 18s. per dozen. Sets all ready for use, so that no maker can make any mistake.

A SINGLE BONNET AT THE WHOLESALE PRICE.

**THE 1,000,000 PATRONISE FREE-STONE'S** NOTED ROYAL BLUE HOUSES,

for BONNETS of the most fashionable kinds,

In all the New Shapes for this Month.

Continues from all parts of London to the Angel, Islington, and the Eastern Counties' Railway, every five minutes. Parcels free of carriage by the Royal Blue Vans, to all parts of the Metropolis. Delivers Morning and Evening.

Copy the address:—The Royal Blue Houses, Islington and Shoreditch. Manufacture, Dunstable. E. W. Freestone, Proprietor.

To the PUBLIC and all BOOKSELLERS.—Just out,

HALF-PENNY PUBLISHED ON GOOD PAPER, WITH FRONTISPIECES, AND OTHER ILLUSTRATIONS.

Forming a Library.

Suited as regards, Price to the Purse, and as regards Portability to the Pocket.

CHARLES LAMB, in one of his admirable essays, told the public that he could read anything which he called a book, but intimated that there were things in that shape which he could not allow to be such. "In this catalogue," says he, "of books which are no books—biblia-a-biblia—I reckon Court Calendars, Directories, Pocket-books, Diagonal bonnets, and lettered on the back, Scientific Treatises, Almanacks, Statutes at large, the works of Hume, Gibbon, Robertson, Beattie, Goethe, Johnson, and generally all those volumes which no gentleman's library should be without." With these exceptions, I can read almost any thing. I bless my stars for a taste so catholic, so unassuming.

Had the essayist lived to the present day, when the printing press sends forth library after library, until their very names are legion, he would have found it necessary to modify his self congratulation, and to chronicle a few additional exceptions. It is a known fact, that more than half of the books now published which escape the tumbler and the buttman are never read at all; for the greater portion of that large section of the community who do read books, are too overworked to have much leisure for reading recreation beyond that bestowed on the Englishman's necessity—the newspaper, and of the little time that remains, it is idle to expect that it should be spent in poring over treatises on popular science, dull translated histories, dreary voyages, and travels, or dry standard authorities—in short, those books which, as Charles Lamb says, "no gentleman's library should be without."

If we are to believe the Chancellor of the Exchequer, who recently described to a gaping audience at the Halifax Mechanics' Institute the contents of one of the railway-book-stalls that engaged his attention, even those great patrons of cheap literature, the railway travellers, are but indifferently catered for—for the Chancellor seems to have stumbled upon a volume of Thucydides and a Treatise on Logarithms, side by side with shilling Novels, of the usual soporific character.

It is true, that Dr. Johnson, on his Tour to the Hebrides, bought a Cocker's Arithmetic to beguile the tedium of the journey, and when Boswell expressed surprise at his choice, the sage silenced him with this ready reply: "Why, sir, if you are to have but one book with you upon a journey, it should be a book of science. When you have read through a book of entertainment, you know it, and it can do no more for you, but a book of science is inexhaustible." In the belief, however, that most people are not Dr. Johnsons, and that they require a somewhat lighter literary fare to suit their mental digestion, it is proposed to publish, at the lowest possible price, a series of **READABLE BOOKS**, the distinguishing features of which will be a certain vivacity of style or subject, suitable alike to the family circle, and the solitary student—to the idler suffering from ennui, and the man weary with work—to the sedentary stayer at home, and the more mercurial traveller on river, road, and rail.

The First Volume, the First Part, and the First Number, will be published on Saturday, February 28th.

HENRY VIZETELLY, Gough Squ

# HOOPER'S FAMILY COUGH

PILLS.—Composed only of the choicest drugs, and from a genuine Medical Prescription, and recommended on high medical authority as the safest and best remedy for Coughs, Colds, Sore Throat, &c., and may be obtained of or through any respectable Chemist from the sole agents, WILLIAM BERTON & CO., 19, Bow Church Yard, London.

# RIMMEL'S TOILET VINEGAR

is now universally preferred to Eau de Cologne, being more tonic and beneficial to the system, pleasant as a perfume, and far more economical. Its numerous, useful, and sanitary properties, render it an indispensable requisite in all families. Price 2s. 6d. and 5s.

Sold by all Perfumery and Chemists, and by E. RIMMEL, 39, Gerrard Street, Soho.

# THE HOME CIRCLE. Edited by

PIERCE EGAN. Vol. V. Just out. A Steel Frontispiece, 55 Engravings, and 432 pages. Tales, poetry, science, geography, histories, accomplishments for ladies, music, knitting, crochet, embroidery, cookery, columns for studious youths, chess problems, intercommunication on all subjects, enigmas, &c. This volume contains the contributions of the various members of families who received the numerous prizes awarded. No home should be without it. Weekly, 1d.; stamped, 3d.; monthly, 6d.; vols. 4s., and 4s. 6d. gilt. Back numbers to be had at the office, 69, St. Martin's Lane, and all booksellers. Liverpool: PEARCE & SON; Edinburgh: OLIVAN & BOND, and MESSRS. Dublin: M'GLASHAN, and J. CURRY & CO.

Just Published, Royal 8vo., price 2s. 6d.

# STANBURY'S PRACTICAL GUIDE

to LITHOGRAPHY and the VARIOUS USES of the MATERIALS SUPPLIED by him, at his MANUFACTORY, No. 20, Great New Street, Gough Square. This little Treatise is a perfect Compendium of all the desiderata connected with this delightful branch of art, and forms a perfect *resumen* to the wanderers in this interesting department of chemical science.

"This little brochure cannot fail to be most acceptable to the admirers of the fine arts."—*The Morning Post*.  
"To the hand for this must be an invaluable instructor."—*Sunday Times*.

Published by HOULSTON & STONEMAN, 65, Paternoster Row; and by G. STANBURY, Manufacturer of every article connected with the Art, at his Repository, No. 20, Great New Street, Gough Square, London.

# EXQUISITE OIL PICTURES.

KNIGHT & FOSTER HAVE BEEN APPOINTED THE AGENTS FOR THE SALE OF BAXTER'S PATENT OIL PICTURES.

This invention has excited the admiration and wonder of all persons of taste by their brilliancy of colour, as well as the extreme softness, delicacy of finish, and effect, which has placed them in the first rank as Gems of Art for the Cabinet, the Album, or Scrap-Book.

SIXPENCE EACH.

View from Richmond Hill. Richmond Bridge. Windsor Forest. View near Harrow-on-the-Hill. Balmoral Castle. Crucifix Abbey. Royal Exchange, London. Flowers—three Bouquets. Flowers—one group. "Shall I succeed"—the Coquette. Winter Scene. Rock Quarry. River Scene. Holland. Adberville. Cedar Idls. Gaudet. Windsor Castle. Flowers—ten Bouquets. Lover's Seat. Hastings. The Dripping Well. Hastings. Ben Nevis. The Tarantula Dance. Indian Settlement. British Guiana. Prince of Wales landing at Osborne. Welsh Drovers. Tintern Abbey. Netley Abbey. Sala Lake, North Wales. View of the River Camel. Brougham Castle. Stolzenfels, on the Rhine. Watermill on the Wye. Lianglong. Warwick Castle. Lake Como. River Tiefs.

ONE SHILLING EACH.

The New Houses of Parliament. Ten Regal Illustrations. Ten Album Illustrations. Chalcers Satoon, India. The Harem. The Greek Dance. Paul and Virginia. The First Impression. St. Ruth's Priory. The Bride.

TWO SHILLINGS EACH.

Her Majesty the Queen, a full-length Portrait. His Royal Highness Prince Albert, ditto. The Landing of Her Majesty and Prince Albert in Ireland. The Holy Family, after Raphael. The Circassian Lady at the Bath. Verona—evening scene. Jenny Lind. Jetty Troils.

THREE SHILLINGS AND SIXPENCE EACH.

The Great Exhibition, Exterior View. The Great Exhibition, Interior View. Flora. Arctic Expedition in search of Sir J. Franklin. Windsor Castle. Osborne House. Isle of Wight. The whole are mounted on card board or drawing-paper, and some have a rich gold border.

FOR PRESENTS.

The Pair of Views of the Exhibition are very suitable, and are by far the most perfect, as well as the most elegant yet published of that wonderful structure; and are fitted in handsome Gutta Percha Frames, Gold and Glass, complete, for 17s., carriage 6s. Two of those at 6d. sent by return of post for Fourteen Stamps.

When the Value of Ten Shillings or above is taken, they will be sent carriage free to every part of Britain.

KNIGHT & FOSTER, Stationers, &c., 5, Eustace, London.

### Editor's Note-Book.

**AN EXAMPLE FOR YOUTH.**—A young man, (says Sir R. Kane,) wanting to sell spectacles in London, petitions the Corporation to allow him to open a little shop, without paying the fees of freedom, and he is refused. He goes to Glasgow, and the Corporation refuse him there. He makes acquaintance with some members of the University, who find him very intelligent, and permit him to open his shop within their walls. He does not sell spectacles and magic lanterns enough to occupy all his time; he occupies himself at intervals in taking sundials and re-making all the machines he can come at. He finds there are books on mechanics written in foreign languages; he borrows a dictionary, and learns those languages, to read those books. The University people wonder at him, and are fond of dropping into his room in the evenings, to tell him what they are doing, and to look at the queer instruments he constructs. A machine in the University collection wants repairing, and he is employed. He makes it a new machine. The steam-engine is constructed; and the giant mind of Watt stands out before the world—the author of the industrial supremacy of this country, the herald of a new force in civilisation. But was Watt educated? Where was he educated? At his own workshop, and in the best manner. Watt learned Latin when he wanted it for his business. He learned French and German; but these things were tools, not ends. He used them to promote his engineering plans, as he used lathes and levers.

**PLATE-GLASS.** Working-Man.—The manufacture of plate-glass first began in Lancashire, in 1773.

**INSTITUTE FOR TEA.** W.—In 1832 a patent was granted to a tea-dealer, "for a new mode of preparing the leaf of a British plant for producing a healthy beverage by infusion." The British plant in question is the hawthorn.

**BANK OF ENGLAND.** Critic.—The Bank of England was established in 1694. It was projected by William Paterson, a Scotchman, and its chief objects were to supply the deficiency of money and the necessities of Government.

**RESTAURANT.** B. H.—This name is derived from the French *restaurant*, (to recruit or fortify), no had meaning in connexion with eating-houses, if prudently taken in its literal sense.

**THOMAS GUY.** Medicus.—This philanthropic individual, the founder of the hospital that bears his name in Southwark, and other charities, was a bookseller of London. He amassed a fortune of nearly half a million, chiefly by the sale of Bibles; and died in 1721.

**WOOD ENGRAVING.** W. V. C.—The first engraving on wood, of which there is any record in Europe, is that of the "Actions of Alexander," by the two Cunios, executed in the year 1285 or 1286. The engravings are eight in number, and in size about nine inches by six.

**EARL OF CHESTERFIELD.** W. S.—This nobleman was celebrated for his polished manners and wit. The *Letters to His Son*, to which our correspondent refers, though reprehensible for selfishness and moral laxity, as a popular code of ethics contain useful precepts for the improvement of the mind, temper, and behaviour.

**INDIA-RUBBER.** C.—This is formed from the juice of two plants growing in the Indies, the *Jahopa Elastica* and the *Rexia Caoutchou*, which the natives by means of moulds form into various shapes. To dry it, they expose it to the fumes of resinous wood, the black smoke of which gives it the dark colour which is generally observed in it.

**SILVER CHURCH BELL AT ROVEN.** C. R. J.—Our correspondent is wrong in supposing that this, or any other silver church bells, contained a large portion of silver. In the case of the bell at Rouen, it was carefully analysed after three sines, and found to consist of a mixture of copper, brass, zinc, and iron. Popular belief has ascribed to it the virtues of silver.

**INCREASE OF GOLD.** Inquirer.—There cannot be a doubt that the influx of this precious metal will sensibly affect the social condition of the masses, but probably not so quickly as "Inquirer" supposes. In 1550, the rich robes of France were discovered, but it was twenty years after before any very striking effect was produced on prices in England.

**BARNSTON STONE.** D. H.—The inquiry of our correspondent is somewhat ambiguous, but we think he alludes to a stone found in the northern parts of Finland, which serves the inhabitants instead of a bar-

meter. This stone, which they call *Ilmakivi*, turns black or blackish grey, when it is going to rain; but on the approach of fine weather, it is covered with white spots. Probably it is a fossil mixed with clay, and consisting of rock-salt, ammoniac, or saltpetre, which, according to the greater, or less degree of dampness of the atmosphere, attracts it or otherwise. In the latter case, the salt appears, which forms the white spots.

**PUBLIC BATHS AND WASH-HOUSES IN THE METROPOLIS.**—The committee for promoting the establishment and prosperity of these institutions have just made their report for 1851. The document states, the committee, in accordance with the resolution under which they were appointed in 1844, are actively promoting the establishment of these institutions in all parts of the country, as well as abroad, by the distribution of plans and practical information relating to their construction and management. An account of the bathing and washing at the establishments in London, which are conducted under, or in accordance with, the Acts 9 and 10 Vic., cap. 74, and 10 and 11 Vic., cap. 61, and a few out of the many similar establishments in the country, shows that for the year ended Christmas, 1851, there were at the Model, Whitechapel, 136,310 bathers, and 43,462 washers; at St. Martin-in-the-Fields, 213,485 bathers, and 50,200 washers; at St. Marylebone, 173,157 bathers, and 24,718 washers; at St. Margaret and St. John, Westminster (opened 12th May), 83,405 bathers, and 13,189 washers; and at Greenwich (opened 2nd September), there were 20,885 bathers, and 682 washers; making a total of 647,242 bathers, who paid £20,111 8s. 6d., and 132,251 washers, who paid £1,498 19s. 2d. This return does not include the bathing and washing at the establishment in George Street, Euston Square, which is not conducted under the Public Baths and Wash-houses Acts. There are also returns given of several establishments in the provinces.—It is with much pleasure we lay this statement before our readers, confident, as we are, that all the social virtues will be promoted by a due attention to cleanliness; and the happiness of the masses cannot but be secured by wise and judicious

SANATORY MEASURES.

**TO MAKE YEAST.**—An intelligent correspondent has forwarded us the following receipt, for the use of persons who are in the habit of making domestic bread, cake, &c.:—Boil one pound of good flour, a quarter of a pound of brown sugar, and a little salt, in two gallons of water for one hour. When milk-warm, bottle it and cork it close. It will be fit for use in twenty-four hours. One pint of the yeast will make eighteen pounds of bread.

**TO FIX AND VARNISH DRAWINGS.** X. X.—To fix pencil or chalk drawings, they should be washed in water in which a small quantity of isinglass has been dissolved. Any colourless glue will be available. Skimmed milk is also used for the same purpose by some, but isinglass is preferable. To varnish the same drawings, after having fixed and thoroughly dried them, pass over them a coat of spa, or colourless varnish; and when perfectly dry, a second. These two will be sufficient.

**STILTON CHEESE.** M. C. F.—The secret of making Stilton cheese was for some time confined to the family of the original inventors, who were under an engagement to sell all they could make to the famous Cooper Thornhill, of Stilton; and being thus to be obtained of him alone, it received the appellation of Stilton cheese, when it ought to have been named *Wichote* cheese, being first made in that small village, on the eastern side of Leicestershire, about thirty miles from Stilton.

**TO BRONZE PLASTER CASTS.** R. C.—A brownish grey bronze may be easily obtained by adding to a solution in water of palm-oil soap, a mixture of sulphate of iron and sulphate of copper in solution. This furnishes a brownish-green precipitate, the colour of which may be modified at pleasure by the addition of a greater or less quantity of one or the other of these salts. The precipitate, after being washed and dried, is re-dissolved in a silicic acid essence, or a mixture of good *varnish* of linseed oil and wax; and with the solution the figures, having been previously heated, are coated; and, drying, they will be found to possess the colours mentioned above.

**CONTEMPORATIONS.** B. C. C.—CROALL (our correspondent is perfectly right in his opinion) "Cromwell's" "does suppose to be written by Alexander Selkirk," mostly convey the sentiment that might be supposed to anticipate the heart of an individual cast on a desert island. ALMA (our correspondent is registered at a printing office, by the district registrars appointed for that purpose.—The postal communication with France is uninterrupted).—T. (will receive attention).—J. C. (the custom alluded to is a worn-out supposition to which no reason can be assigned).—E. L. (declined with thanks).—B. U. S. (common rum alone is required).—WALTER M. (Hume's *History of England* contains some admirable delineations of character. Miss Strickland's *Queen of England*).—T. K. R. (we are unable to comply with the request of our correspondent. Nature is the best master).—J. P. (camphire is probably alluded to. This can easily be procured).—G. A. S. (Bachelor, in its primitive sense, means a man who has not been married; and in all its various senses it seems to include the idea of youth and immaturity, except when it has the word *old* prefixed).—ROSE-LEAF (we are such indifferent adepts in penmanship, that we cannot undertake with a safe conscience to criticise the handwriting of other persons).—M. D. ISAACS (thanks).—J. A. MARKE (almond soap has been tried with success).—J. CRISPIN (many thanks).—SHELEMIAN (thank for the suggestions).—J. TAYLOR (our correspondent will find the information he requires in any *Encyclopaedia* or *Gazetteer*; we have not space for the insertion).—E. T. S. (the expressions mentioned are mere cant phrases without even the recommendation of wit or reason).—H. R. M. (we are unable to answer the inquiry).—B. R. (the origin of the custom probably arose from the practice of giving alms at this particular season).—W. E. L. (thanks). We do not remember reading of the incident alluded to).—H. B. (the terms to which our correspondent refers, probably had their origin in the fact that the first printing-office in our country was established in a chapel).—T. J. S. (thanks).—T. H. (in 1779, Herachell measured a spot in the sun, fifty thousand miles in diameter).—SAXSON (you are decidedly wrong in your conclusions. Particles of blood are considered to be two million times greater than particles of water).—INQUIRER (the royal labyrinth of Egypt has been described by Herodotus. Within a walled enclosure were twelve palaces—not fifteen, as "Inquirer" supposes—each containing three thousand halls, twelve of very great beauty, half above and half under ground).—T. C. C. (London Bridge is by far the most superb bridge in the world).—YOUNG H. (close carriages began to be used by persons of the highest quality in the fourteenth and fifteenth century).—C. H. (Bramante, in 1513, designed and began the erection of St. Peter's at Rome).—STERN (there are three methods of acquiring knowledge: exercising the memory, reading books of utility, and answering, by original exercise, questions upon books).—EXTRA (the whole book trade in Germany centres at Leipzig, and all writing and publications have reference to its Easter Fair, for there and then the whole trade is supplied by an agent).—M. H. F. (poetry and science rarely join in fellowship. Sir Isaac Newton used to say that poetry was ingenious nonsense; but there are some striking exceptions to this opinion).—H. A. (we purposely avoid giving receipts for making fireworks on account of the accidents that too often occur to thoughtless young persons).—EMMA (novel reading is decidedly pernicious, and we strongly recommend the employment of leisure time to be devoted to strengthening the mind with wholesome and useful studies).—HOUSEKEEPER (to clean knives, use mutton fat made hot, and put on a leather or buff board, with emery, not dust, that being too sharp, well rubbed in with an old brush; this will give the knife as good a polish and edge as any razor).—P. PARLEY (the range of buildings situated near to Temple Bar, are thus called, because they were anciently the abode of the Knights Templars).—M. D. C. (the Kensal Green Cemetery was consecrated in November 1832).—VORTEX (the motto of the Royal Humane Society in England is *Latuit scintilla forsan*).—A. A. (all sparks may lurk unseen).—E. F. S. (half farthings were first coined in the reign of Victoria, 1848).—BENJAMIN (to find the golden number or year of the lunar cycle, add one to the date and divide by nineteen, then the quotient is the number of cycles since Christ, and the remainder is the Golden Number).

Printed by WILLIAM KOLBETON, 92, Goswell Street, London; and published for the Proprietor by JOHN BARNETT, 69, Fleet Street, London.

# THE HOME COMPANION:

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 16.—Vol. I.]

SATURDAY, APRIL 17, 1852.

[PRICE ONE PENNY.]

## THE OLD WASHERWOMAN.

(FROM THE GERMAN OF CHAMISSO.)

BREHOLD her busy with her linen,  
Yon ancient dame with silver hair;  
The blakest of the washerwomen,  
Though six and seventy years are there!  
So she has followed, year by year,  
The honest toll at which you find her,  
Filling with diligence the sphere  
Of useful labour God assigned her.

In her young days (for she is human).  
She loved and hoped, and wedded too;  
Well has she known the lot of woman,  
Seen cares and sorrows not a few.  
Her dear sick man she sought to save,  
(Three children faithfully she bore him),  
Nor did she bury in the grave  
Her faith and hope, when earth closed  
O'er him.

The precious charge, now laid upon her,  
With cheerful energy she bore:  
She trained them up in fear and honour,  
Virtue and prudence all her store.  
At length, to seek their livelihood,  
They took her blessing and departed:  
A lone old woman now she stood,  
Yet cheerful, hopeful, and stout-hearted.

She spar'd, and scrap'd, and sav'd each  
penny,  
And spun by night the flax she bought,  
And of fine six-thread yards full many  
At last she to the weaver brought.  
He wove her linen white as snow;  
Her needle and her scissors plying,  
A spotless burial-dress she so  
Prepared against her day of dying.

Her dress—her burial dress—with pleasure  
And sacred pride she lays away:  
It is her first and last—her treasure—  
The fruit of many a toilsome day.  
She puts it on, God's word to hear,  
When Sabbath bells sound holy warning,  
Then lays it up again, to wear  
The night before the eternal morning.

And would that I, when night shall find me,  
Might read in life's last sinking sun,  
That I had wrought the work assigned me,  
As this good dame her task has done;  
That I had learned life's joy to drink  
In such a full and even measure,  
And could upon my grave-cloth think,  
At last, with such a heart-felt pleasure.

## THE LADY OF THE ROCK.

A HISTORICAL TALE OF THE TIME OF CHARLES THE FIRST.

### CHAPTER III.

"With my own power my majesty they wound;  
In the king's name, the king himself's uncrowned;  
So doth the dust destroy the diamond."

CHARLES STUART'S MAJESTY IN MISERY.

ALL London was in a ferment. The excited populace filled every street and alley of the vast city. The report that sentence of death was that day to be passed upon Charles Stuart, rung on every tongue, and the popular feeling ran mainly in favour of his condemnation. All business was suspended; and, from an early hour, crowds were wending their way to Westminster Hall, where the trial was about to be brought to a close.

That specimen of perfect architecture—which modern art is not ashamed to take as a model, but vainly seeks to imitate—had been fitted up with great regard to the smallest details for this most remarkable occasion. This had been done in order to invest the ceremony of the trial with all the pomp and dignity becoming the delegates of a great nation sitting in judgment upon their monarch, and trying him for a breach of the trust committed to his care—the weal and peace of the people. Benches, covered with blue velvet, were arranged at the upper end for the accommodation of the judges. A splendid chair, to correspond with the benches, was placed for the use of the firm and subtle Bradshaw, who had the honour or disgrace, according as it may be deemed, of presiding over the court. He was seated before a table covered with crimson drapery, his fine countenance betokening that decision for which he was remarkable, attired in costly dress, and supported on either hand by his assessors.

The galleries were filled to suffocation with spectators, and the main body of the building was thronged with a vast concourse of people, while a regiment of armed soldiery was in attendance, with pieces loaded and ready for use, in case any tumult should arise. The puritan party, now no longer timid or wavering, took no pains to conceal their sense of coming victory; and even Cromwell, usually so guarded in every outward observance, took his seat without the bar with a look of conscious triumph. A profound stillness prevailed as the judges entered. Fifty-nine only, out of the one hundred and thirty-three, had been able to summon sufficient resolution to be present. With sad and solemn, though severe and determined countenances, these severally seated themselves, apparently filled, almost to a sense of oppression, with the responsibility devolved on them, but seeming not the less resolved to act according to their determination, previously agreed upon. Among these were Lisle and Heath, the latter of whom was, perhaps, the only commissioner whose countenance wanted something of the resolute bearing we have described. They had scarcely taken their seats when the rumbling noise of an approaching vehicle was distinctly heard. The previous silence, if possible, deepened; and for some moments the

multitude, as if moved by one impulse, almost ceased to breathe. Not an air stirred, and scarce a pulse beat, as the regal prisoner entered. He cast a look of blended pride and sorrow upon the judges as he walked up to the bar, surrounded by a guard. But he made no token of acknowledgment or reverence, nor did he remove his velvet cap, as he took the seat prepared for him.

The names of the judges were called over. Bradshaw then arose, and in a silvery and ringing tone, which made his declamation peculiarly impressive, while a shade of deepening pallor was perceptible on his countenance, addressed the prisoner in the following words:—

"Charles Stuart, King of England, it is now the fourth time that you have been arraigned before this tribunal. On each occasion you have persisted in contumacious authority, and denying its validity—breaking in upon its proceedings with frivolous and impertinent interruptions—frequently turning your back upon the judges—nay, sometimes even laughing outright at the awful charges which have been preferred against you. Since its last convention, witnesses have appeared to prove conclusively that you took up arms against the troops commissioned by the parliament. Once again, therefore, you are called upon, in the name of your country and your God, to plead guilty or not guilty of tyranny, treason, and murder."

No change whatever took place in the king's countenance at hearing these words. When they had ceased he slowly rose, his head still covered, and made answer:—

"I acknowledge not the authority of this court. Were I to do so, it were to betray the sacred and inviolable trust confided to me in the care of the liberties of the British people. Your delegation, to be legal, should have come alike from the individual voice of the meanest and most ignorant boor of this realm, as from the high and cultivated hypocrites who have empowered you. Should I ratify such an authority—in the eyes of the law not better founded than that of pirates and murderers—I should indeed be the traitor ye would brand me. Nay, let me rather die a martyr to the constitution. But before ye proceed to pronounce the judgment ye threaten, I demand, by all those rights of inheritance which invest me as a monarch, with a majesty and power second only to the Omnipotent, to be heard before a convention of both Houses of Parliament; and whether or not ye refuse me, I adjure ye, the so called judges of this court, as ye each hope to be arraigned at an unlawful or incompetent bar at the final judgment, to pause and reflect, before ye take upon ye the high-handed responsibility of passing sentence upon your king."

He resumed his seat, and after a few moments' intense quiet, William Heath arose, and suggested that the court would do well to adjourn for a brief season, for the purpose of taking into consideration the request of the prisoner.

The expediency of this suggestion was acceded to, and they withdrew, and remained for some fifteen or twenty minutes in conference.

On their return, after a few moments' consultation with some of the older judges, Lisle among the rest, Bradshaw, taking a parchment from the table, turned to the king with these words:—

"Charles Stuart, you have in your request to be heard before parliament, as well as in other language, addressed by you some moments since to this honourable court, given a fresh denial of its jurisdiction, and an added proof of your contempt. It has already, by such contumacy on your part, been too long delayed, and must now proceed to pass judgment against you. You have been proven a traitor to England, in waging war against her parliament; and in refusing to plead in your own behalf, or endeavouring to invalidate such proof, justice has no alternative but to demand your death. The following warrant has therefore been agreed upon by your judges, who will presently affix their signatures thereunto:—'We, the Commissioners appointed by the Commons to sit in trial on Charles Stuart, King of England, arraigned as a traitor, tyrant, and murderer, having found these charges amply substantiated, do, for the glory of God and the liberties of the British people, hereby adjudge him to death.'"

He ceased; the members of the court had risen during the reading of the warrant, to testify their concurrence, and the fatal document was now circulated among them, to receive their various signatures. It was observed to be written in the handwriting of Cromwell.

Throughout the remarks of Bradshaw, Charles had remained with his eyes fixed upon the ground; but while the warrant was being read, he raised them, and cast them upon Cromwell, who was standing without the bar. Brief as was this glance, it seemed to convey some momentous truth, for Cromwell became at first scarlet, and then pale as death. Instantly, however, he turned away, and began coolly to unfold the plaits of a white cambric handkerchief, and appeared only occupied with that object.

As soon as the warrant had been passed round to receive the signatures, and Bradshaw had resumed his seat, Charles arose, and with more of dignity

than contempt in the act, he turned his back upon the judge—as though his pride would prevent their observing whatever effect their sentence had upon him.

The proceedings closed; and under a strong escort, and amid the shouts of the populace, the noble prisoner was conducted out of the hall. As he proceeded, various outrages were put upon him. With a kingly majesty, superior to insult, he received these indignities as though he deemed them unworthy to excite any emotion within him, save what his sorrowful eye indicated, that of pity for the offenders. Some few, in the midst of the general odium, endeavoured to evince their continued allegiance. But their faint prayer of "God save the king!" was drowned in the swelling cries of "Down with the traitor!" "Vengeance on the tyrant!" "Away with the murderer!"

#### CHAPTER IV.

"Will nothing move him?"—THE TWO FOSCARI.

At a late hour on the following night, two persons were winding their way to the palace of Whitehall. One was an individual of the male sex, in whom might have been seen, even through the gloom, a polished and dignified bearing, which, together with his dress—though of the puritanic order—declared him a gentleman of more than ordinary rank. His companion was a delicate woman, evidently like himself of the most genteel class, but attired in the simplest and plainest walking costume of the times. She leaned on his arm with much appearance of womanly trust, although there was an air of self-confidence in her step, suggesting the idea of one capable of acting alone on occasion of emergency, and a striking yet perfectly feminine dignity presiding over her whole aspect.

"I have counselled your visiting him at this late hour," said the gentleman, "because, as the only hope lies in striking terror into his conscience, the purpose may be best answered in the solitude and silence of a season like this. Conscience is a coward in the daylight, but darkness and night generally give her courage to assert her power."

"True, William," replied Alice Heath, (for she it was, and her companion, as the reader is aware by this time, was her husband,) "true—but, alas! I fear for the success of my visit; the individual of whom we are speaking deceives himself no less than others, and therefore to him she is a coward at all times. Hast thou not read what my poor dead grandfather's old acquaintance has written, about a man's 'making such a sum of his conscience as to believe his own lies!'"

"I have not forgotten the passage, my Alice, and, ever correct in your judgment, you have penetrated rightly into the singular character we are alluding to. I wot it were hard for himself to say how far he has been actuated by pure, and how far by ambitious motives, in the hand he has had in the sentence of the king. Nevertheless, you would believe his conscience to be not altogether dead, had you seen him tremble and grow pale yesterday in the court, during the reading of the warrant, (which, by the way, he had worded and written with his own hands,) when Charles Stuart raised his eyes and looked upon him as if to imply that he knew him for the instigator, and no unselfish one either, of his doom. The emotion he then testified was what led me to hope he may yet be operated upon to prevent the fatal judgment from taking effect. It is true, Charles is a traitor, and I cannot regret that, in being arraigned and tried, an example has been made of him. But having from the first anticipated this result, except for your father, Alice, I would have had no part in the matter, being entirely opposed to the shedding of his blood. All ends which his death can accomplish, have already been answered; and I devoutly pray that the effort your gentle heart is now about to make for the saving of his life, may be blessed in procuring that merciful result."

At this moment they paused before the magnificent structure known as the palace of Whitehall, and applied for admission. Vacated some time since by the king, it was now occupied by his rival in power, the aspiring Cromwell; and although the hour was so late, the vast pile was still illuminated. Having gained speedily access to the main building, the visitors were admitted by a servant in the gorgeous livery of the fallen monarch. Heath requested to be shown to an anteroom, while Alice solicited to be conducted without previous announcement to the presence of her master. After a moment's hesitation on the part of the servant, which, however, was quickly overcome by her persuasive manner, he conducted her through various spacious halls, and up numerous flights of stairs, till pausing suddenly before the door of a chamber, he knocked gently. As they waited for an answer, the accents of prayer were distinctly audible. They were desired to enter; the servant threw open the door, simply announcing a lady. Alice entered, and found herself alone with Cromwell.

The apartment was an anteroom attached to the spacious bed-chamber formerly belonging to the king. It was luxuriously furnished with all the appliances of ease and elegance suitable to a royal withdrawing-room. Tables and chairs of rosewood, richly inlaid with ivory and mother-of-pearl, were arranged in order around the room; magnificent vases of porcelain decorated the mantel-piece; statues from the chisel of Michel Angelo stood in the niches; and pictures in gorgeous frames hung about the walls.

There, near a table, on which burned a single-shaded lamp, standing upright in the attitude of prayer, from which he had just been interrupted, stood the occupant. For an instant, as she lingered near the door, and looked upon his figure, which bore so strongly the impress of power, and felt that on his word hung the fate of him for whom she had come to plead, she already feared for the success of her mission, and would fain almost have retraced her visit. But remembering the accents of prayer she had heard while waiting without, she considered that her purposed appeal was to the

conscience of one whom she had just surprised, as it were, in the presence of his Maker, and took courage to advance.

"May I pray thee to approach and be seated, madam, and unfold the object of this visit?" said Cromwell, in a thick, rapid utterance, the result of his surprise, as he waved his visitor to a chair. "At that distance, and by this light, I can hardly distinguish the features of the lady who so inopportunistically and unceremoniously honours me with her presence."

Immediately advancing, she threw back her hood, and offering him her hand, said, "It is Alice Heath, the daughter of your friend, General Lisle."

Cromwell's rugged countenance expressed the utmost surprise, as he awkwardly strove to assume a courtesy foreign to his manner, and exchange his first ungracious greeting for something of a more cordial welcome.

With exceeding tact, Alice hastened to relieve his embarrassment, by falling back into the chair he had offered, and at once declaring the purpose of her visit.

"General Cromwell," she began, in a voice sweetly distinct, "you stand high in the eyes of man, not only as a patriot, but a strict and conscientious servant of the Most High. As such, you have been the main instrument in procuring the doom hanging in awful expectation over the head of him who once tenanted, in the same splendour that now surrounds yourself, the building in which I find you. Methinks his vacation of these princely premises, and your succession thereunto, render you scarcely capable of being a disinterested advocate for his death, since by it you become successor to all the pomp and power formerly his. Have you asked yourself the question whether no motives of self-aggrandisement have tainted this deed of patriotism, or sullied this act of religion?"

"Your language is unwarrantable and unbecoming, madam," said Cromwell, deadly pale, and trembling violently; "it is written—"

"Excuse me," said Alice, interrupting him; "you think it uncourteous, and even impertinent, that I should intrude upon you with a question such as I but now addressed to you. But, General Cromwell, a human life is at stake, and that the life of no ordinary being, but the descendant of a race of kings. Nay, hear me out, sir, I beg of you. Charles Stuart is about to die an awful and a violent death; your voice has condemned him—your voice can yet save him. If it be your country's weal that you desire, that object has been already sufficiently answered by the example of his trial; or, if it is to further the cause of the Lord of Hosts that you place yourself at the head of Britain in his place, be assured that he who would assert his power by surrounding himself with a pomp like this, is no delegate of One who commissioned Moses to lead His people through the wilderness, a sharer in the common lot, and a houseless wanderer like themselves. Bethink you, therefore, what must be the doom of him who—for the sake of ambition and pride, in order that he might, for the brief space of his life, enjoy luxury and power, under the borrowed name, too, of that God who views the act with horror and detestation—stains his hands with parricidal blood. Yes, General Cromwell, for thy own soul's, if not for mercy's sake, I entreat thee, in whom alone lies the power, to cause Charles Stuart's sentence to be remitted."

As she waxed warm in her enthusiasm, Alice Heath had risen and drawn close to Cromwell, who was still standing, as on her entrance; and in her entreaty, she had even laid her hand on his arm. His colour and pallor had increased every moment while she spoke, and though at first he would have interrupted her, he seemed very greatly at a loss, and little disposed to reply.

After a few moments' hesitation, during which Alice looked in his face with the deepest anxiety, and awaited his answer, he said, "Go to, young woman, you presume to interfere between a judge raised up for the redemption of England, and a traitor king, whom the Lord hath permitted to be condemned to the axe. As my soul liveth, and as He liveth, who will one day make me a ruler in Israel, thou hast more than the vanity of thy sex, in hoping, by thy foolish speech, to move me to lift up my hand against the decree of the Almighty. Truly—"

"Nay, General Cromwell," said Alice, interrupting him, as soon as she perceived he was about to enter into one of his lengthy and pointed harangues, "nay, you evade the matter both with me and with the conscience whose workings I have for the last few moments beheld in the disorder of your frame. Have its pleadings—for to them I look, and not to any eloquence of mine own—been of no avail? Will it please you to do aught for the king?"

"Young lady," replied Cromwell, hursting into tears, which he was occasionally wont to do, "a man like me, who is called to perform great acts in Israel, had need to be immovable to feelings of human charities. Think you not it is painful to our mortal sympathies to be called upon to execute the righteous judgments of Heaven, while we are yet in the body? And think you that when we must remove some prime tyrant, that the instruments of his removal can at all times view their part in his punishment with unshaken nerves? Must they not, even at times, doubt the inspiration under which they have felt and acted? Must they not occasionally question the origin of that strong impulse which appears the inward answer to prayer for direction under heavenly difficulties, and in their disturbed apprehensions, confuse even the responses of truth with the strong delusions of Satan? Would that the Lord would harden my heart even as he hardened that of—"

"Stop, sir," said Alice, again interrupting him ere his softened mood should have passed away, "utter not such a sacrilegious wish. Why are the kindly sympathies which you describe implanted in your bosom, unless it be to prevent your ambition from stifling your humanity? The rather encourage them, and save Charles Stuart. Let your mind dwell upon the many traits of nobleness in his character, which might be mentioned with enthusiasm, ay, with sorrow, too, that they should be thus sacrificed."

"The Most High, young woman, will have no fainters in spirit in His

service—none who turn back from Mount Gilead for fear of the Amalekites. To be brief—it waxes late; to discuss this topic longer is but to distress us both. Charles Stuart must die—the mouth of the Lord hath spoken it.”

As he spoke, he bowed with a determined but respectful reverence, and when he lifted up his head, the expression of his features told Alice that the doom of the king was irrevocably fixed.

“I see there is no hope,” said she, with a deep sigh, as Cromwell spoke these words in a tone of decision which left her no further encouragement, and with a brevity so unusual to him. Nor was his hint to close the interview lost upon her. “No hope!” she repeated, drawing back. “I leave you, then, inexorable man of Iron, and may you not thus plead in vain for mercy at the bar of God.”

So saying, she turned and rejoined her husband, who remained in waiting for her; they returned together to Lisle’s house.

## CHAPTER V.

“I speak to time and to eternity,  
Of which I grow a portion, not to man.  
Ye stones, in which my gore will not sink, but  
Reek up to heaven! ye skies, which will receive it!  
Thou sun! whose abinest on these things; and Thou  
Who kindest and who quenchest suns! Attest  
I am not innocent—but are these guiltless?  
I perish, but not unavenged!  
How his hair streams  
On the wind like foam upon the wave;  
Now—now—he kneels—and now they form a circle  
Round him, and all is hidden; but I see  
The lifted sword in air.—Ah! hark! it falls!”

Two Foscars.

THE thirtieth of January, memorable in history, rose gloomy and dark, as though the heavens would express their sympathy with the tragedy about to be enacted.

Three days had only been allowed the condemned prisoner between his sentence and his execution. This interval, during the day, he had spent chiefly in reading and prayer. On each night he had slept long and soundly, although the noise of the workmen employed in framing his scaffold, and making other preparations for his execution, distinctly reached his ears.

On the morning of the fatal day, he appeared, attired in his customary suit of black, arranged with more than wonted neatness. His collar, edged with deep lace, and set carefully around his neck, was spotless in colour, and accurate in every fold, while his pensive countenance exhibited no evidence of emotion or excitement.

Bishop Juxon assisted him at his devotions, and paid the last melancholy duties to the king. After this, he was permitted to see such of his family as were still in England. These consisted only of his two younger children, the Princess Elizabeth and the Duke of Gloucester.

Notwithstanding the tender years of the young Elizabeth, she seemed fully to appreciate her father’s unhappy situation, and her young heart seemed well nigh bursting.

“Weep not for this, dear child,” said Charles, kissing her tenderly; “he but goeth where thou mayest one day meet him again.”

She threw her arms around his neck and sobbed aloud. He pressed her to his bosom and soothed her gently; but seemed, for the first time since his interview with Alice Heath, on the night previous to his sentence, half unmanned. “It is God, my love, who hath called thy poor parent hence, and we must submit to His will in all things. Bear my love to your mother, and tell her that my last thoughts were with her and our precious children.”

Separating himself from her with a great effort, and then pressing the boy to his heart, he motioned to the attendants to remove them, lest the trial of this interview might, at the last, unnerve his well-sustained resolution and courage.

The muffled bells now announced, with mournful distinctness, that the fatal moment was approaching. Presently, the guard came to lead him out. He was conducted by a private gallery and staircase into the court below, and thence conveyed in a sedan chair to the scaffold, followed by the shouts and cries of the crowd.

About the time that these sounds were dying away from the neighbourhood of Lisle’s house, William Heath hastily entered the library, and taking pen and paper, wrote the following brief letter:—

“My dear Alice,—I cannot but rejoice that, after finding, as we believed, all hope for Charles Stuart at an end—your visit to Cromwell having been unsuccessful—I removed you to a distance, until the tragical scene should, as we thought, be ended. The tumult and noise which fill the city, together with the consciousness of the cause creating it, would have been too much for your nerves, unstrung as they have been of late, by the feeling you have expended for the unhappy king. There is yet, though, I delight to say, and you will delight to hear, a single hope remaining for him, even while the bells now ring for his execution. Lord Fairfax, who though, like myself, friendly to his deposition, still shudders at the thoughts of shedding his blood, will, with his own regiment, make an attempt to rescue him from the scaffold. There is, in fact, scarce any reason to doubt the success of this measure; and this evening, Alice, we will rejoice together that the only cloud to dim the last bright days of our union has been removed, as I shall rejoin you at as early an hour as the distance will permit.

“I write this hastily, and send it by a speedy messenger, in order to relieve, by its agreeable tidings, the sorrowful state of mind in which I left you a few hours since. I am, my own Alice, your most affectionate husband,  
“WILLIAM HEATH.”

The street before Whitehall was the place prepared for the execution. This arrangement had been made, in order to render the triumph of popular justice over royal power more conspicuous, by headdressing the king in sight of his own palace. All the surrounding windows and galleries were filled with spectators, and the vast crowd below were kept back by soldiery encircling the scaffold. Charles mounted it with a steady step, and the same dignified resolution of mind which he had all along so admirably maintained. Uncovering his head, he looked composedly around him and said, in a clear unflinching voice, though only sufficiently loud to be heard by those near him, owing to the buzz of the crowd:—

“People of England, your king dies innocent. He is sentenced for having taken up arms against parliament. Parliament had first enlisted forces against him, and his sole object—as God is his judge, before whom he is so soon to appear—was to preserve, as was his bounden duty, inviolate for himself and his successors, that authority transmitted to him by royal inheritance. Yet, although innocent toward you, and in that view undeserving of death, in the eyes of the Omnipotent his other sins merit his coming doom; in especial, having once suffered an innocent sentence of death to be executed against another, it is but meet that he should now die thus unjustly himself. May God lay not his death in like manner to your charge, and grant that, in allegiance to my son, England’s lawful sovereign at my decease, you may speedily be restored to the ways of peace.”

Lord Fairfax, with his regiment, prepared for the rescue of Charles, was proceeding toward the place of execution by a by-street, at the same time that the king was being conducted thither. “On his way he was passed by Cromwell, who then, for the first time, became aware of his purpose.

Much disturbed in mind at the discovery of a project so likely to thwart his own ambitious views, just ripe for fulfilment, the latter walked on for some moments in deep reflection. Presently quickening his pace, he turned a corner, and stepped, without knocking, into a house near by. His manner was that of a person perfectly at home in the premises; which, indeed, was the case, for James Harrison, the tenant, was one of his subservients, chosen by him in consequence of his austere piety and great influence with his set, of whom it will be recollected that Fairfax was one. Cromwell found him in prayer, notwithstanding all the tumult of the day.

“I have sought thee, Harrison,” he said, “to beseech thee to engage in prayer with Lord Fairfax, who is now on his way to rescue this Saul from the hands of the Philistines. He should first crave the Lord’s will in regard to his errand. Wilt thou not seek him and remind him of this?”

“I will e’en do thy bidding, thou servant of the Most High,” said Harrison, rising and accompanying him to the door. “Where shall I find Fairfax?”

“Thou wilt overtake him by turning speedily to the right,” replied the other, parting from him.

“One of his lengthy supplications at the throne of grace,” said Cromwell to himself, as he walked on, “will detain Fairfax until this son of Belial is destroyed.”

Meanwhile, upon the scaffold, Charles, after delivering his address, was preparing himself for the block with perfect composure.

“There is but one stage more, sire,” said Juxon, with the deepest sympathy of look and manner. “There is but one stage more. Though turbulent, it is a very short one; yet it will carry you a long distance—from earth to heaven.”

“I go,” replied the king, “from a corruptible to an incorruptible crown, where no downfall can transpire.”

So saying, he laid his head upon the block, and the headsman, standing near, in a visor, at one blow struck it from his body. Another man, in a corresponding disguise, catching it, and holding it up, exclaimed, “Behold the head of a traitor!”

At this moment, Lord Fairfax and his regiment came up. His humane purpose, so artfully defeated, becoming known, with the strange perversity of mankind, now that its benefits were too late to reach the king, an instant revulsion in the feelings of the populace took place; and the noise of quarrels—of reproaches and self-accusations rent the air, until the tumult grew terrific.

But the reverberation of no thunder-clap could have reawaked the dis-severed corpse of the dead monarch. Charles Stuart, the accomplished scholar and elegant poet—Charles Stuart, the husband, father, friend—Charles Stuart, the descendant of a long line of sovereigns, and legitimate king of the most potent nation upon earth—was no more; and a human life was blotted from existence! That life, what was it? Singular and mysterious essence—capable of exquisite pleasure, and intense pain—held by such a precarious tenure, yet valued beyond all price—the gift of God, and destroyed by man—a moment passed here, and now gone for ever—tell us, metaphysician, what was it, for we cannot answer the question?

(Continued at Page 247.)

GARDEN ALLOTMENTS FOR WORKING MEN.—The glebe-lands belonging to the vicarage of Ormskirk, situate below the church, and extending from the Green Lane to the Southport Road, are now marked out into garden allotments of half a rood each, statute measure, which the Rev. W. E. Rawstorne, vicar of the parish, purposes letting to deserving working men, at 13s. per annum each, free of all rates and taxes. The following prizes are intended to be given to the tenants yearly:—For the best cultivated allotment, 15s.; second best, 7s.; for the best garden produce, prizes to the amount of £1.

# MR. VANITY'S EXPLOITS, ARISING OUT OF A VALENTINE.

MR. VANITY having been at a ball, takes his coffee, and receives his Valentine in bed.

He is filled with delight, and is satisfied that Miss Julia Spriggs, whom he met at the ball, was the writer. In his excitement he overthrows the breakfast things,

To the infinite amusement of two suspicious looking characters, who, unknown to him, are peeping through the keyhole.

THE VALENTINE WHICH MR. V. RECEIVED.

It being already half past twelve at noon, he naturally concludes that the lady means half-past nine in the evening, so he smokes and reflects.

Getting up, he discovers that he has lost his Valentine, and can find it nowhere.

The Valentine being at length discovered to have stuck to him by the wafer, he commences his toilette.

He sets off for Miss Spriggs', and the two suspicious characters laugh heartily at his departure.

At Miss Spriggs' there happens to be an evening party, and the whole company is astonished at the entrance of MR. VANITY, hitherto a stranger to the house.

He immediately commences most obtrusive attentions to Miss Spriggs, which she is quite at a loss to understand.

And the gentlemen of the company hold a consultation with her, which ends in—

MR. VANITY being bundled into the street, with the loss of his hat, and certain injuries to his head!

## VALENTINE'S DAY.

**SAINT VALENTINE!**—all we know of this personage is, that he was a priest at Rome, where he was martyred about A.D. 270, and had, in consequence, the honour of being assigned a niche in the record of saints, his post being the 14th of February.

The origin of this custom has been sought for in the Lupercalia of the Romans, and with much apparent reason, as will be evident when we come to inquire into the old mode of celebrating Valentine's Day, which, as we shall presently see, had but little in common with the modern habit of sending silly letters by the penny post. In ancient Rome a festival was held about the middle of February, called the *Lupercalia*, in honour of Pan and Juno; whence the latter obtained the epithet of *Februata Februalla*, and *Februlla*. Upon this occasion the names of young women were put, amidst a variety of ceremonies, into a box, from which they were drawn by the men at chance directed; and so rooted had this, like many other customs, become amongst the people, that the pastors of the early Christian church found themselves unable to eradicate it. They, therefore, instead of entering into a fruitless struggle, adopted their usual policy on such occasions, and since they could not remove what they held to be an unsightly nuisance, they endeavoured, as a skillful architect would do, to convert it into an ornament. Thus they substituted other names for those of women, a change that would not seem to have been generally, or for any long time, popular, since we read that at a very remote period the custom prevailed of the young men drawing the names of the girls, and that the practice of adopting mates by chance-lots soon grew reciprocal between the sexes. In fact, Pan and Juno vacated their seats in favour of Saint Valentine, but the Christian bishop could not escape having much of the heathen ritual fastened upon him. We must not, however, imagine that Valentine's Day, any more than Epiphany or Candlemas, was celebrated with one uniform mode of observance; the customs attendant upon it varied considerably according to the place and period. In many parts of England, and more particularly in London, the person of the opposite sex who was first met in a morning, not being an inmate of the house, was taken to be the Valentine, a usage that is noticed by the poet Gay:—

"I early rose just at the break of day  
Before the sun had chased the stars away;  
A field I went, amid the morning dew,  
To milk my kine (for so should housewives do)  
The first I spied, and the first swain we see  
In spite of fortune our true love shall be."

That the lasses went out to seek for their makes, or mates—i. e. Valentines, is also shown in poor Ophelia's broken snatches of a song:—

"Good morrow? 'tis St Valentine's day  
All in the morning betime,  
And I a maid at your window  
To be your Valentine."

Herrick has the following in his *Hesperides*, p. 172:—

"TO HIS VALENTINE, ON ST. VALENTINE'S DAY.

"Oft have I heard both youth and virgins say,  
Birds choose their mates, and couple too, this day:  
But by their flight I never can divine  
When I shall couple with my Valentine."

In Dudley Lord North's *Forest of Varieties*, fol. 1645, p. 61, in a letter to his brother, he says—"A lady of wit and qualitie, who you well knew, would never put herself to the chance of a Valentine, saying that shee would never couple herself but by choyce. The custome and charge of Valentines is not ill left, with many other such costly and idle customes, which by a tacit generall consent wee lay down as obsolete."

We find the following curious species of divination in the *Connoisseur*, as practised on Valentine's day or eve. "Last Friday was Valentine Day, and the night before I got five bay-leaves, and pinned four of them to the four corners of my pillow, and the fifth to the middle; and then, if I dreamt of my sweetheart, Betty said, we should be married before the year was out. But to make it more sure I boiled an egg hard, and took out the yolk, and filled it with salt; and when I went to bed, eat it, shell and all, without speaking or drinking after it. We also wrote our lovers' names upon bits of paper, and rolled them up in clay, and put them into water: and the first that rose up was to be our Valentine. Would you think it? Mr. Blossom was my man. I lay a-bed and shut my eyes all the morning till he came to our house; for I would not have seen another man before him for all the world."

Mr. Pennant, in his *Tour in Scotland*, tells us, that in February young persons draw Valentines, and from thence collect their future fortune in the nuptial state.

Oliver Goldsmith, in his *Vicar of Wakefield*, describing the manners of some rustics, tells us, they sent true love-knots on Valentine morning.

Herrick, in his *Hesperides*, p. 61, speaking of a bride, says—

"She must no more a-maying:  
Or by Rose-buds divine,  
Who'll be her Valentine."

Misson, in his *Travels in England*, says:—"On the eve of the 14th of February, St. Valentine's Day, a time when all living nature inclines to couple, the young folks in England, and Scotland too, by a very ancient custom, celebrate a little festival that tends to the same end. An equal number of maids and bachelors get together, each writes their true or some feigned name upon separate billets, which they roll up, and draw by way of lots, the maids taking the men's billets, and the men the maids'; so that each of the young men lights upon a girl that he calls his Valentine, and each of

the girls upon a young man which she calls her's. By this means each has two Valentines: but the man strikes sister to the Valentine that is fallen to him, than to the Valentine to whom he is fallen. Fortune having thus divided the company into so many couples, the Valentines give balls and treats to their mistresses, wear their billets several days upon their bosoms or sleeves, and this little sport often ends in love. This ceremony is practised differently in different countries, and according to the freedom or severity of Madam Valentine. There is another kind of Valentine, which is the first young man or woman that chance throws in your way in this street or elsewhere on that day."

In *Poor Robin's Almanack* for 1676, that facetious observer of our old customs tells us opposite to St. Valentine's day, in February—

"Now Andrew, Anthony,  
ny, and William,  
For Valentines draw  
Puss, Kate, Jillian."

## A HAT STORY.

ABOUT nineteen years ago, a fine looking old gentleman, from Northern Virginia, entered a store in Nashville, Tennessee. The store was kept by a bluff honest old trader, who knew a great deal more about the quality of the liquor sold at the back end of the counter than he did about the fineness of the fabrics at the other; nevertheless, between the two extremities of that shelf, he contrived to make both ends comfortably meet the necessities of the case. The old Virginian cast his eye around the shelves, and finally remarked—"Well, neighbour, you, I see, hev got hats."

"A slight sprinkle," was the answer; and then followed the query, "Whar are you from?"

"Old Virginia," was the response.

"Right smart old State," replied the Tennessean, "but getting rather too old to keep her har on."

"What do you mean?" inquired the Virginian.

"Well, just what I say, uncle, it can't keep her har on; for instance, now, I should think you hev been a right healthy child of the Old Dominion, but she has shed you at last, and like Samson of old, that's jest the way she is losin' all the best har off her venerable head."

The old Virginian looked around the store, rather bothered with the liberty this Tennessean was taking with his mother State, and finally remarked:—

"I came here to talk about hats, stranger, and r t har."

"Well, well, uncle, don't get wrathy now; I was only venturing a political opinion about population in general, and on that head we won't quarrel; but before we look at the hats, as they are intimately connected with heads, s'pose we take a mito of bald face."

The proposition was agreed to—the liquor was imbibed, and next followed the hats. The merchant tossed down four or five wool hats of various sizes, and invited the old gentleman to select one which would fit him. He looked at them, examined the sizes, said they would do, and requested the storekeeper to hand him down a few more.

"Thar's all the sizes I've got," said he, "but here's a few more, ef you think you'd like 'em better," and so saying, he tossed down three more.

"Them's all right," said the old Virginian, turning them around; and the stout old storekeeper, blowing with exertion, descended from his perch, where he was straddling from shelf to counter. As soon as he reached the floor, the old Virginian remarked that he had not got enough yet.

"Oh, you want 'em for your niggers," says the storekeeper; "well, why didn't you say so when I was up;" and he again proceeded to perch himself up, like a mercurial Colossus. When he had blowed himself into his former position, the old man quietly remarked:—

"Why, stranger, I warn't talking anything about niggers." The shot is, the old man was rather enjoying the extra trouble he had put the Tennessean to.

"Well, what do you want with so many hats?" inquired the latter.

"I want 'em for my sons," said the old man.

The storekeeper began to count those on the counter—"Eight," said he, "a pretty big spread of boys already, I'll swear; but here goes," and he added one and then another, and yet a fourth, and he picked off a fifth, and finally, seeing that the old man stood immovable, earnestly counting the hats, he tossed down three more, and was about to descend himself, when the old man told him to hold on and throw down a few more.

"Oh, come, uncle," said he, "you are joking;" but to please him, he threw down twenty.

"That's jest one too many," said the old man, with much gravity.

"What!—you don't mean to say you have nineteen sons?"

"Yes, I do mean to say so," was the old man's answer.

"And whar, in the name of the State of Tennessee, are they?"

"Well, they are in Tennessee," said the man, "right yer, in this city—up at the hotel."

"Stranger," said the storekeeper, his incredulity making him sputter and stutter as he said it, "if you ken show me your nineteen boys, thar's the hats."

"Hold on, then," said the old man, and off he started. In about ten minutes, down street he came, heading a line of nineteen boys, marching single file, each bearing a good gun, and followed by their venerable mother. They entered the merchant's store, and ranged along the counter; the storekeeper run his eye along the line with astonishment.

"And you say," he inquired, "that these boys are all yours?"

"Yes, I do," was the reply.

"Well, that's abundant proof, any how," said the storekeeper. "Old friend," he added "I ain't got a word to say; just take my hats."

## AUNT PATTY'S SCRAP-BAG.

BY CAROLINE LEE HENTZ.

It was a rainy day, a real, old-fashioned, orthodox rainy day. It rained the first thing in the morning, it rained harder and harder at midday. The afternoon was drawing to a close, and still the rain came down in steady and persevering drops, every drop falling in a decided and obstinate way, as if conscious, though it might be ever so unwelcome, no one had a right to oppose its coming. A rainy day in midsummer is a glorious thing. The grass looks up so green and grateful under the life-giving moisture; the flowers send forth such a delicious aroma; the tall forest-trees bend down their branches so gracefully in salutation to the messengers of heaven. There is beauty, grace, and glory in a midsummer rain, and the spirit of man becomes gay and buoyant under its influence.

Little Estelle stood looking out at the window, with her nose pressed against a pane of glass, wishing it would clear up, it was so pretty to see the sun break out just as he was setting. The prospect abroad was not very inviting. It was a patch of mud and a patch of snow, the dirtiest mixture in nature's olio. A little boy went crawling by, sinking at every step almost to his knees; then a carriage slowly and majestically came plashing along, its wheels buried in mud, the horses labouring and straining, and every now and then shaking the slime indignantly from their fetlocks, and probably thinking none but amphibious animals should be abroad in such weather.

"Oh! it is such an ugly, ugly day!" said Estelle, "I do wish it were over."

"You should not find fault with the weather," replied Emma; "mother says it is wicked, for God sends us what weather seemeth good to him. For my part, I have had a very happy day reading and sewing."

"And I, too," said Bessy; "but I begin to be tired now, and I wish I could see some of those beautiful crimson clouds, tinged with gold, that wait upon sunset."

"Bessy has such a romantic mode of expression," cried Edmund, laughing, and laying down his book; "I think she will make a poet one of these days. Even now, I see upon her lips 'a prophetess's fire.'"

Bessy's blue eyes peeped at her brother through her golden curls, and something in them seemed to say, "that is not such a ridiculous prophecy as you imagine."

"This is a dreadful day for a traveller," said Mrs. Worth, with a sigh, and the children all thought of their father, exposed to the inclemency of the atmosphere, and they echoed their mother's sigh. They all looked very sad, till the entrance of another member of the family turned their thoughts into a new channel. This was no other than Estelle's kitten, which had been perambulating in the mire and rain, till she looked the most forlorn object in the world. Her sides were hollow and dripping, and her tail clung to her back in a most abject manner. There was a simultaneous exclamation at her dishevelled appearance, but Miss Kitty walked on as demurely as if nothing particular had happened to her, and jumping on her little mistress's shoulder, curled her wet tail round her ears, and began to mew and purr, opening and shutting her green eyes between every purr. Much as Estelle loved her favourite, she was not at all pleased at her present proximity, and called out energetically for deliverance. All laughed long and heartily at the muddy streaks on her white neck, and the muddy tracks on her white apron, and she looked as if she had not made up her mind whether to laugh or cry, when a fresh burst of laughter produced a complete reaction, and a sudden shower of tears fell precipitately on Aunt Patty's lap.

"Take care, Estelle," said Edmund, "Aunt Patty has got on her thunder and lightning calico. She does not like to have it rained on."

Aunt Patty had a favourite gown, the ground-work of which was a deep brown, with zig-zag streaks of scarlet darting over it. Estelle called it thunder and lightning, and certainly it was a very appropriate similitude for a child. It always was designated by that name, and Edmund declared that whenever Aunt Patty wore that dress, it was sure to bring a storm. She was now solicited by many voices to bring out one of her scrap-bags for their amusement. And she, never wearied of recalling the bright images of her youthful fancy, or the impressions of later years, produced a gigantic satchel, and undrawing the strings, Estelle's little hand was plunged in, and grasping a piece by chance, smiles played like sunbeams on her tears, when she found it was a relic of old Parson Broomfield's robe. It consisted of broad shaded stripes, of an iron-grey colour, a very sober and ministerial-looking calico.

"Ah!" said Aunt Patty—the chords of memory awakened to music at the sight—"I remember the time when I first saw Parson Broomfield wear that robe. I was a little girl then, and my mother used to send me on errands here and there, in a little carriage, made purposely for me on account of my lameness. A boy used to draw me, in the same way that they do infants, and everybody stopped and said something to the poor lame girl. I was going by the parsonage one warm summer morning, and the parson was sitting reading under a large elm tree, that grew directly in front of his door. He had a bench put all round the trunk, so that weary travellers could stop and rest under its shade. He was a blessed man, Parson Broomfield—of such great piety, that some thought if they could touch the hem of his garment they would have a passport to heaven. I always think of him when I read that beautiful verse in Job:—'The young men saw him, and trembled; the aged arose and stood up.' Well, there he sat, that warm summer morning, in his new striped robe, turned back from his neck, and turned carelessly over one knee, to keep it from sweeping on the grass. He had on black satin lasting pantaloons, and a black velvet waistcoat, that made his shirt collar look as

white as snow. He lifted his eyes when he heard the wheels of my carriage rolling along, and made a sort of motion for me to stop. 'Good morning little Patty,' said he, 'I hope you are very well this beautiful morning.' We always thought it an honour to get a word from his lips, and I felt as if I could walk without a crutch the whole day. He was very kind to little children, though he looked so grand and holy in the pulpit, you would think he was an angel of light, just come down there from the skies."

"Did he preach in that calico frock?" asked Emma, anxious for the dignity of the ministerial office.

"Oh! no, child—all in solemn black, except his white linen bands. He always looked like a saint on Sunday, walking in the church so slow and stately, yet bowing on the right and left, to the old, white-headed men, that waited for him as for the consolation of Israel. Oh! he was a blessed man, and he is in glory now. Here," added she, taking a piece of spotless linen from a white folded paper, "is a remnant of the good man's shroud. I saw him when he was laid out, with his hands folded upon his breast, and his Bible resting above them."

"Don't they have any bibles in heaven?" asked little Estelle, shrinking from contact with the funeral sample.

"No, child; they will read there without books, and see without eyes, and know everything without learning. But they put his bible on his heart, because he loved it so in life, and it seemed to be company for him in the dark coffin and lonely grave."

The children looked serious, and Emma's wistful eyes, lifted towards heaven, seemed to long for that region of glorious intuition, whither the beloved pastor of Aunt Patty's youth was gone. Then the youngest begged her to tell them something more lively, as talking about death, the coffin, and the grave, made them melancholy such a rainy day.

"Here," said Bessy, "is a beautiful pink and white muslin. The figure is a half open rosebud, with a delicate cluster of leaves. Who had a dress like this, Aunt Patty?"

"That was the dress your mother wore the first time she saw your father," answered the chronicle, with a significant smile. Bessy clasped her hands with delight, and they all gathered close, to gaze upon an object associated with such an interesting event.

"Didn't she look sweet?" said Bessy, looking admiringly at her handsome and now blushing mother.

"Yes! her cheeks were the colour of her dress, and that day she had a wreath of roses in her hair; for Emma's father loved flowers, and made her ornament herself with them to please his eye. It was about sunset. It had been very sultry, and the roads were so dusty we could scarcely see after a horse or a carriage passed by. Emma was in the front yard watering some plants, when a gentleman on horseback rode slowly along, as if he tried to make as little dust as possible. He rode by the house at first, then turning back, he came right up to the gate, and, lifting up his hat, bowed down to the saddle. He was a tall, dark-complexioned young man, who sat nobly on his horse, just as if he belonged to it. Emma, your mother that is, set down her watering-pot, and made a sort of courtesy, a little frightened at a stranger coming so close to her, before she knew anything about it. 'May I trouble you for a glass of water?' said he, with another bow. 'I have travelled long, and am oppressed with thirst.' Emma courtesied again, and blushed too, I dare say, and away she went for a glass of water, which she brought him with her own hands. Your grandfather had come to the door by this time, and he said he never saw a man so long drinking a glass of water in his life. As I told you before, it had been a terribly sultry day, and there were large thunder pillars leaning down black in the west—a sure sign there was going to be a heavy shower. Your grandfather came out, and being an hospitable man, he asked the stranger to stop and rest till the rain that was coming was over. He didn't wait to be asked twice, but jumped from his horse and walked in, making a bow at the door, and waiting for your mother to walk in first. Well, sure enough, it did rain in a short time, with thunder, and lightning; and the wind blew as if the house would come down; and the strange gentleman sat down close to Emma, and tried to keep her from being frightened, for she looked as pale as death; and when the lightning flashed bright, she covered up her face with her hands. It kept on thundering and raining till bed-time, when your grandfather offered him a bed, and told him he must stay till morning. Everybody was taken with him, for he talked like a book, and looked as if he knew more than all the books in the world. He told his name, and all about himself—that he was a young lawyer just commencing business in a town near by (the very town we are now living in); that he had been on a journey, and was on his way home, which he had expected to reach that night. He seemed to hate to go away so, the next morning, that your grandfather asked him to come and see him again—and he took him at his word, and came back the very next week. This time he didn't hide from anybody what he came for, for he courted your mother in good earnest, and never left her, or gave her any peace, till she had promised to be his wife, which I believe she was very willing to do, from the first night she saw him."

"Nay, Aunt Patty," said Mrs. Worth, "I must correct you in some of your items; your imagination is a little too vivid."

Edmund went behind his mother's chair, and putting his hands playfully over her ears, begged Aunt Patty to go on, and give her imagination full scope.

"And show us the wedding-dress, and tell us all about it," said Bessy. It is much better to hear of mother's wedding than Parson Broomfield's funeral."

"But that's the way, darling—a funeral and a wedding, a birth and a death, all mixed up, the world over. We must take things as they come, and be thankful for all. Do you see this white sprigged satin, and this bit of white lace? The wedding-dress was made of the satin, and trimmed round

the neck and sleeves with the lace, and the money it cost would have clothed a poor family for a long time. But your grandfather said he had but one daughter, and she should be well fitted out, if it cost him all he had in the world. And, moreover, he had a son-in-law, whom he would not exchange for any other man in the universe. When Emma, your mother that is, was dressed in her bridal finery, with white blossoms in her hair, which hung in ringlets down her rosy cheeks, you might search the country round for a prettier and fairer bride—and your father looked like a prince. Parson Broomfield said they were the handsomest couple he ever married—and, bless his soul, they were the last. He was taken sick a week after the wedding, and never lifted his head afterwards. It is a blessed thing Emma was married when she was, for I wouldn't want to be married by any other minister in the world than Parson Broomfield."

"Where's your husband, Aunt Patty?" said Estelle, suddenly.

Edmund and Bessy laughed outright. Emma only smiled—she feared Aunt Patty's feelings might be wounded.

"I never had any, child," replied she, after taking a large pinch of snuff.

"What's the reason?" persevered Estelle.

"Hush, Estelle," said her mother, "little girls must not ask so many questions."

"I'll tell you the reason," cried Aunt Patty, "for I'm never ashamed to speak the truth. No one ever thought of marrying me, for I was a lame, helpless, and homely girl, without a farthing of money to make folks think me pretty, whether I was or not. I never dreamed of having sweethearts, but was thankful for friends, who were willing to bear with my infirmities, and provide for my comfort. I don't care if they do call me an old maid. I'm satisfied with the place Providence has assigned me, knowing it is a thousand times better than I deserve. The tree that stands alone by the wayside offers shelter and shade to the weary traveller. It was not created in vain, though no blossom nor fruit may hang upon its boughs. It gets its portion of the sunshine and dew, and the little birds come and nestle in its branches."

## THE PIONEER'S DAUGHTER:

### A TALE OF INDIAN CAPTIVITY.

(Continued from Page 233).

THE course taken by the guide lay over an undulating country, partially cleared, and in some places very stony; and the line of flight, if not deviated from, would strike the Miami about half a mile above the village, at a point where the hill, forming the eastern bank of the river, sloped down into the water, and made an easy ford. As they neared this place, a succession of Indian yells, apparently from a party at no great distance, led our friends to believe themselves hotly pursued by mounted savages, who had anticipated their purpose, and, coming directly up the bank of the river from the town, were striving to cut them off, or engage them in a deadly conflict. And their supposition was correct; for a dozen or twenty of the horses left loose by the Colonel's order had been caught, and now bore as many hostile riders, all armed, and ferociously eager to overtake the fugitives. A resistance, under the present circumstances, was not to be thought of by the latter; for, setting aside numbers, they had not a single musket between them—those taken from the guard having been thrown away, as so many incumbrances, at the place of mounting; and, knowing flight alone could save them, they lashed their fiery steeds into a perfect fury, and sped on with fearful velocity.

As Posetha and the Colonel gained the height of the sloping bank, they espied a number of dark, moving objects away to their left; and it scarcely needed the furious yells which came borne to their ears, to inform them that these moving bodies were so many mounted and ferocious enemies. Down the bank they plunged, and the next moment the cold water, splashing in their faces and over their persons, told them that their gallant steeds were struggling across the ford; and plunge, plunge behind them, assured them also that their friends were close in the rear.

A brief and vigorous floundering in the watery element, which occasionally dashes over horse and rider, and the foremost fugitives have gained the opposite bank, up which they urge their panting and smoking beasts. Another, and another, and still another, and another follow; and as the last one touches the dry earth, and disappears into the undergrowth, which here comes down to the water, the loud yells and splashes behind warn him of the close proximity of enemies, and that he has still desperate efforts to make to render his escape possible. Up the acclivity press the van, the centre, and rear, to use military terms; and soon the height is gained, and the foremost find themselves upon a small, level opening, over which they still urge their horses with the speed of fear and desperation. They have scarcely gone fifty yards, and the hindermost of the fugitives is just emerging from the thick copse-fringing the plain, when suddenly, as if they had touched enchanted ground, a horseman breaks through the covert in every quarter, and bears down toward the centre; and a loud clear voice shouts in English—

"Are you friends or foes?"

"Thank God, we are saved!" cried the Colonel, in an ecstacy of joy, which may better be imagined than described; and bidding Posetha check the fiery horses they rode, he again shouted, "We are friends, and American soldiers; but our enemies pursue us, and if you turn to the rear, you will find work to do."

He was answered by a cheer and loud congratulations; and at the same moment the blast of a trumpet went echoing through the surrounding forest and when the Indians burst through the copse into the opening, to the number of between fifteen and twenty, their yells of ferocious delight were suddenly changed to shrieks of terror, dismay, and agony. When, all unexpectedly, they found themselves confronted with a body of horsemen, who, instead of flying from them, greeted them with yells as appalling to their hearts as ever theirs had been to their intended victims, at the same time pouring in upon them a murderous fire, and charging with the whole line. Down went some four or five horses; twice the number of riders fell to rise no more, while of those that turned to fly, only some three or four escaped without injury. Wild were the yells of terror of those who had so late been pursuers, but who were now in turn pursued, as they rushed down the bank of the river, and sought to avoid their foes, who, with yells as far resounding as their own, pressed close upon their heels, and slew without mercy all who were so unfortunate as to be overtaken.

Maddened with the desire for blood and vengeance, and smarting under the disgrace which the defeat of St. Clair had so recently brought upon them, the soldiers, once let loose upon the flying foe, could not be restrained by the trumpet blast of their commander; but giving free rein to their worst passions, as well as to their steeds, they dashed pell-mell across the ford, up the opposite slope, and down along the stream toward the town, vowing to wash out the stain of ignominy that was upon them in the life-blood of their enemies.

But the Indians were prepared to receive them; for a party of mounted savages, who had been following in the rear of those closest in pursuit of our friends, and who had just reached the ford as the affray began on the opposite side, had hurriedly returned to the village, and reported that a large body of whites had killed their friends, and were fast coming down upon the town. Great was the alarm and confusion this intelligence created; and amidst the universal and appalling cry of "The Shamashoes! the Shamashoes!" the women and children were hurried off in one direction, while the warriors, headed by the renowned Black Hoof, formed an ambuscade in another just above the village, at a point where it was most likely the attack would be made.

In this ambuscade the foremost of the daring soldiers ran, and themselves paid for their temerity; but the hot valour of those behind suddenly cooling at this unlooked-for reception, they were wise enough to show the enemies the tails of their horses, and make the heels of the latter save them. Fast as they had ridden toward the town, they now rode as fast away from it; and it was not until the Miami rolled between them and their half-naked foes, that they began to feel their safety regained, and their courage revived.

The loud blast of a trumpet now summoned them around their commander Major Moultrie, who, with most of his officers, and a prudent few, had not been rash enough to follow them; and in the presence of Colonel Danforth and his party, he gave them such a severe reprimand for their disobedience and fool-hardiness, that the most forgetful one among them remembered it to the day of his death.

"And now, Colonel Danforth," said the gallant Major, turning with military deference toward the veteran officer, "with the hope that the Indians and myself together, have succeeded in beating a little hard sense into heads where it so recently was sadly wanting, I tender you my command, as my superior in ability as well as rank."

"I thank you kindly, Major Moultrie," replied the Colonel; "and am happy in saying, that the ability you deprecate in my favour, more than equalizes the trifling distinction our commissions makes; and therefore I shall beg leave to decline your flattering offer, assuring you, at the same time, it will afford me pleasure to join your ranks as a volunteer, at least until my wife and daughter be placed in safety."

"Yes, yes, the poor prisoners! we must set about their release immediately. You say they are confined in a cave near the town?"

"So says Posetha, here; and that he alone succeeded in getting them there some two or three hours since, where, unless accidentally discovered, they will remain in safety."

"I do not know," returned the Major, shaking his head; "no retreat in this quarter can be long safe from the prying eyes of savages. I will just run over my men, and ascertain how many poor fellows are missing; and then the Indian here shall guide us to the rescue; but woo to him if he plays false!"

It may now be proper to explain, how it chanced that our friends had the good fortune to be reinforced by such a body of soldiers. It will be recollected that at the time of the former being taken prisoners, Sergeant Bomb and two scouts made their escape, and, we hardly need add, made the best of their way to Fort Jefferson, which they reached on the following day, in a state of complete exhaustion. Here they found Major Moultrie with a detachment of cavalry, on his way to the scene of St. Clair's recent disaster; and, on informing him what had taken place—how Colonel Danforth, and several other officers, were supposed to be prisoners, he decided at once on going to their rescue. As soon as his men and horses were sufficiently rested, he set off, with one of the garrison to act as a guide—the scouts and Bomb being too much fatigued with their recent exertions to think of returning. Night fell ere half his journey was accomplished; but still he determined to hold on, in the hope that by reaching the Piquet settlement before daylight, he could effect his purpose by a *coup de main*, without his numbers being known. Fortunately for our friends, he reached the opening where we first discovered him, just as the alarm was sounded in the village; and not knowing what it meant, he waited to see. The yells of the pursuing

*Knowing his doom would be death, in its most terrible form, if taken prisoner again, Edward, with not a single hope beyond that of provoking, by his daring, a speedy terminus to his life, still lashed his horse furiously forward, reckless of the blows aimed at his person on all sides, and actually rode down several of his opposers."*

Indians were every moment heard more distinctly as they drew nearer; and a few of the party conjectured that the prisoners had by some means got away, and were making their escape. This the Major could hardly believe possible; but whether true or not, he knew his best plan would be to conceal his men and await the result. He soon heard them crossing the ford below, and rightly conjectured they would pass through the opening. The rest is known to the reader.

After counting his men, the Major said, in a feeling tone—

"Alas! there are six of my soldiers missing, and I fear the worst has befallen them. Oh, that they had heeded my orders! Men," he continued, sternly, addressing the whole company, "you see what a calamity your rashness has brought upon us! Henceforth, you must obey me; the first that disobeys I will bring him before a court-martial. Come, we must be on the move, or morning will break ere our purpose be accomplished."

As the cavalcade was about setting forward, under the guidance of Posetha, Colonel Danforth exclaimed—

"But where is Edward? where is Major Allen?"

"Where was he, sure enough? It was now for the first time discovered, owing to the excitement and confusion which had prevailed, that he was missing; and further anxious inquiry elicited the startling truth, that he had not been seen since his friends crossed the ford. The agony of the Colonel at this revelation was terrible; and fairly wringing his hands, he exclaimed, in a voice tremulous with emotion—

"Oh, my poor boy! my Edward! Alas, he is lost! In the moment of triumph, I am again plunged in despair. Oh God! be merciful, and restore me my friends!" and bowing his head in his hands, he gave vent to his grief in choking sobs.

A search was now instituted on both sides of the ford; but no traces of the missing one were found; and after half an hour spent in this manner, Major Moultrie recalled his men, and declared if the females were to be set at liberty before daylight, there was not a moment to lose. The cavalcade was accordingly put in motion, and moved slowly down the western bank of the river, or that opposite the Indian town, the Colonel riding alongside the Major in gloomy silence. Even the hope of soon recovering his wife and daughter was hardly sufficient to compensate him for the loss of one whom he looked upon as a son, and for whom he felt all the warm affection of a father. He thought, too, what would be poor Lucy's feelings, when she should hear the sad news; and his grief redoubled at the prospect of her sorrow.

When nearly down to the town opposite, Posetha pointed across the river, and said the captives were there. He then requested the Major to keep his forces where they were, and he would go alone and return with the females. At first Moultrie seemed inclined to object to this arrangement; but on being assured by all the late captives that he need have no fears of the fidelity of

Posetha, he gave his assent; and the latter, immediately plunging into the river, which here ran deep, disappeared on his important mission.

Half an hour of anxious, and, to a few, agonizing suspense passed, and then the faithful Posetha made his appearance. But alas! he came alone, to report that the females were gone, and that it was his belief the Indians had discovered their retreat and retaken them.

"Oh God!" groaned the Colonel, "this is too much—too much! My wife, my daughter! my Edward!" and he wept, as brave soldiers sometimes weep.

"By the ashes of my father," cried Moultrie, indignantly, "I will have vengeance on these red blood-hounds, and they shall restore the captives unharmed, or their town shall be a heap of smoking ruins! To horse, men, to horse! and be prepared to do your duty as soldiers!"

#### CHAPTER X.—PERILS OF OUR HERO.

It was with the greatest difficulty that Edward Allen succeeded in mounting his beast at the enclosure; and when he had done so, he found he had no control over him whatever. All his friends were now in advance of him; and, fortunately, the fiery animal took the same course as the rest, otherwise he might have been borne into the heart of the village, in spite of any efforts on his part to ride in a contrary direction.

On dashed the swift-footed animal across the little stream before-mentioned, up a small hill on the opposite side, down into a deep dingle, through a small patch of wood, through a dense copse, over a rough, stony opening; and still Edward maintained an erect position on his back, grasping the long mane tightly in one hand, and the single rein of the halter in the other. So far, all had gone well; and, although the hindmost of the party, he was near enough to the next in advance to occasionally catch a glimpse of rider and horse in the dim light.

Suddenly his courser gave a snort, and springing to the right, threw Edward from his back, who, on letting go his hold from the mane, had the forethought to grasp the halter with both hands; and by this means, although swung to a considerable distance, alighted on his feet without injury. The impatient animal, once clear of his rider, now sought to be free from all encumbrance; and in his efforts to get away, he dragged Edward several yards, through bushes and over stones, which tore his clothes and skin, and bruised him not a little. But with the tenacity of a drowning man to a rope, he clung to the halter rein, and at last had the good fortune, and his beast again approachable; though it was some time after this before he was able to remount him. But when this was finally effected, he found, to his horror, by the yells of the savages, that a party had already got between him and his friends, to follow whom now would be to rush on certain destruction.

What was to be done? Set off in what direction he might, the result was almost certain to be the same—death, or, what was even more to be dreaded, captivity. Oh! it was an agonizing reflection, that just at the moment,

when his heart was bounding with hope and joy at the thought of his liberation—the liberation of her he loved—of the happiness for both there would be in another meeting—that just at such a moment, we say, an overpowering calamity should suddenly come upon him, to plunge him again in the lowest depths of despair. He shuddered at the thought, and grew sick at heart, and beads of cold perspiration, wrung forth by mental anguish, stood upon his pallid features.

"But while there is life there is hope," he reasoned; and again urging his beast forward, he sought not to guide him, but offering up a short prayer for deliverance, consigned himself to the care of an ever-watchful and over-ruling Providence.

The horse, finding himself at liberty to choose his own course, no longer followed the one he had been pursuing, but turning more to the left, bore straight down toward the Miami, and soon gained its bank, at a point about half way between the village and the ford crossed by the friends of Edward.

The party of Indians closest in pursuit of the fugitives, had already passed this place; and their shouts of fury, and demoniac yells, gradually growing less and less distinct, relieved our hero of any apprehension concerning them; but, unfortunately for him, there was still another party coming from the town, whose wild, discordant speeches, together with the loud clatter of horses' hoofs, and the sporting of the animals, put him in mortal fear; for although he could not see them, owing to an intervening ridge, he knew they were close upon him, and that his chances of escape were now reduced to the very smallest number; more especially as his steed, eager to join his companions, instantly wheeled, and plunged forward up the acclivity, thus bearing him directly into the hands of his foes. In vain Edward tried to check him or change his course—he was completely unmanageable, beyond all control—and reckless of what might be the consequences, since he now believed himself irrevocably doomed, he leaped from his back, and was thrown violently upon the rough ground, and rendered almost senseless by the shock. The next moment the riderless steed, still rushing forward, came in fearful collision with the foremost one of the approaching party, and both horses went down as if struck by a cannon ball, crushing in their fall the leg of the Indian leader, who uttered one loud yell of agony, and called upon his friends for help.

Great was the confusion this accident occasioned; and several of the savages instantly stopped their horses, and springing to the ground, ran forward to ascertain what had happened. But as soon as the truth was known, the majority remounted and rode on, so eager were they to overtake the fugitives. Some three or four, however, remained to assist their injured companion; and getting him from under one animal, they carefully placed him on the back of another. Then one of them mounting behind to return with him to the village, rode slowly away in that direction, while the others prepared to continue their course up the river.

All this was witnessed by our hero, who, not more than six paces distant, still remained on the ground exactly as he had fallen, scarcely daring to breathe lest he should be discovered; and he was already congratulating himself upon his fortunate, but very narrow escape, when a loud ejaculation, as if the speaker had suddenly made some new and important discovery, caused a thrill of terror to run through his whole system.

And Edward had good reason to tremble at that ejaculation, although uttered in a tongue unknown to him; for an important discovery had been made, and one which would have transpired much sooner, had the savages been as observing as usual, or less eager to set forward. The presence of the horse ridden by Edward at such a place, did not excite suspicion, for it was well known that all had been let loose, and were running about in every direction; but when, by the merest accident, the truth was disclosed that on this beast was a halter, the idea suddenly flashed across the mind of the savage, that the animal must have had a rider; and whether that man was a white man or a red, was a very important matter. The discovery, in consequence, was instantly made known to his companions by the ejaculation already referred to, and a hurried consultation was the result. Whether the savages really believed the horse had borne a white rider, who was now secreted at no great distance, or whether they acted rather from that long and cautious habit which makes the most apparently trivial things of grave importance, certain it is, that no sooner had they finished their brief colloquy, than all set about beating around in the bushes in every direction.

Scarcely had three minutes elapsed after this search began, ere one of the party approached so close to Edward, that he felt certain exposure must follow; and, resolved to make one more desperate effort for his life, he firmly grasped the hilt of his knife—one of the weapons given him by Posetha, and which he still retained—and springing suddenly to his feet, buried it to the hilt in the breast of the astonished savage, who, in the very act of uttering a cry of surprise, quickly changed it to a shriek of agony, and sunk down at his feet. There was no time to be lost now; and leaping over the prostrate body, Edward made for the nearest horse.

He reached the animal a few feet in advance of the other savages, who, hearing the cry of their companion, at once divining the cause, bounded after him, making the woods ring with their yells of fury. Catching the halter-rein in his hand, Edward vaulted upon the back of the beast, and struck him a smart blow with the end of the rope. With a fearful plunge forward, away rushed the furious quadruped, and in less time than it takes us to tell it, some twenty yards intervened between our hero and his pursuers.

But short space had Edward for congratulation; for the next moment, as it were, the agile savages were themselves mounted and thundering after him, uttering the most terrible war-whoops, and appalling yells. And as if fortune, too, had determined to see how long she could toss him about between life and death, the horse of Edward now shaped his course toward the village; and, in spite of all he could do to turn him aside, the wilful

beast still held on, bearing him with frightful velocity right into the very hands of his enemies, who, afoot and on horse, were swarming about in every direction, like bees when their hive is improperly disturbed. On dashed Edward, lashing his horse—since he could not control him—into ungovernable fury; and on came his blood-thirsty pursuers, still yelling as wildly as ever, but unable to gain upon him a single foot.

"Oh!" thought Edward, as he glanced behind him, "if I could but manage my beast as the savages do theirs, I might even yet escape."

But for some reason he could not do this; and the horse that was ever guided by a mere word, or the shake of the halter-rein, when ridden by an Indian who understood him, and whom he understood, was now too headstrong to obey anything but his own will. In consequence of this, Edward was borne right in among the yelling and howling crew, who had come out of their town, on the northern side, to gather early news concerning the pursuit; and suddenly their discordant and meaningless yells were changed to the universal cry of "The Shemanoes! the Shemanoes!" while more than a hundred warriors sprang forward to intercept him.

Knowing his doom would be death in its most terrible form if taken prisoner again, Edward, with not a single hope beyond that of provoking, by his daring, a speedy terminus to his life, still lashed his horse furiously forward, reckless of the blows aimed at his person on all sides, and actually rode down several of his opposers.

But this triumph over numbers was necessarily of short duration; and the grasping of the halter by a tremendous savage, who instantly raised his hatchet for the purpose of hurling it at the head of our hero, seemed likely to put an end to all further strife. But here again capricious fortune changed in favour of Edward; for the horse, mistaking the intention of the Indian, and thinking the blow meant for him, reared and wheeled so suddenly, as to loose the hold of the warrior just as the tomahawk was sped on its bloody mission, which thereby missed its aim by a bare inch. By this sudden turn of the horse, his head was brought in the direction of the Miami, distant not more than eight or ten rods; and the thought suddenly occurred to Edward of making his last desperate effort for speedy death, or speedy liberation, by forcing the maddened beast to leap the steep cliff which overhung the dark waters rolling slowly and quietly along some fifty feet below. For this purpose he gave him several rapid blows with the halter end, and the next moment the verge of the bank was reached; but the animal recoiled with a snort of terror, and at the same instant a bullet pierced his brain, and he fell dead in his tracks. As he went down, Edward gathered all his remaining strength, placed his hands upon the neck of the sinking beast, and vaulted clean over his head. For a single instant he remained suspended above the cliff; the report of a dozen rifles was heard; a dozen balls went whizzing through the air, as many tomahawk blades were seen faintly flashing in the dim light; and then down, down went our hero, and a single, sullen splash was all that was heard, as the cold, dark waters opened to receive him, and then closed over his head.

Rushing to the brink of the cliff, several of the savages now threw themselves flat upon the earth, and placing their ears over the edge of the precipice, listened for any sound that would indicate human life below. But no such sound was heard; all was as still as the grave, save the solemn roar of the rapids of the little stream that entered the Miami a short distance further down, over which, as we have shown in a previous chapter, our former friends passed in safety, though at the peril of their lives.

Springing to their feet, the Indians uttered loud yells of disappointment at the second loss of one they had counted on so surely as a victim at the stake; and then another short silence followed, during which several prepared to descend to the water, at points both above and below the steep cliff where Edward went down, in order to make sure that he might not escape alive, not one among the bravest caring to try the venturesome leap after him.

But their plan of search was frustrated by an unlooked-for event; for suddenly the yells of alarm and dismay, uttered by their companions, who had gone up the river in pursuit of the fugitives, came borne upon the still air with startling distinctness, causing many a heart, lately so courageous, to quake with fear. Soon they could distinguish the distant clatter of horses' hoofs, and the terrible words, "The Shemanoes! The Shemanoes!" shouted in loud tones of terror, but still made faint by the intervening distance.

But faint or strong, the words themselves were appalling to the savages, who rightly conjectured that a large body of whites were approaching; and the scene of consternation and confusion that ensued baffles description. The escape of the captives was no longer thought of by the Indians, but their own safety now became a matter of the most momentous importance. Amid the wildest cries, in every tone—from that of the pining infant to the cracked voice of the hoary-headed veteran—the women and children, with the moveable household articles, were hurried out of the village on the southern and eastern sides; while the chiefs and braves, grasping their weapons, prepared to make a bold defence on the two opposite extremes.

Nor did the arrival of the party that had sounded the alarm, in any degree lessen the general consternation by the exaggerated report, that the party before them had all been cut off, by running into the terrible ambuscade of more than a thousand whites, who were coming down in all their force to again plunder and destroy their town. Still, with the renowned Black Horse, and other noted chiefs at their head, the savages bravely resolved on holding their village against all odds, or dying like heroes, in the defence of their homes, their wives, and children.

But, as the reader already knows, no such tremendous body of whites was reported, approached the town at all; and the few half-mad soldiers who did get the nearest to it, paid the penalty of their disobedience and rashness with their lives, as recorded in the chapter preceding.

**STORY BOOKS FOR YOUNG PEOPLE. BY AUNT MARY.** No. 1.—"THE COMICAL HISTORY AND TRAGICAL END OF REYNARD THE FOX," illustrated by Engravings of the Stuffed Animals in the Great Exhibition, is now ready. Price 2d.

Aunt Mary submits, with great pleasure, the First of her Story Books for Young People. In the selection of Stories, great care will be taken to secure those which are peculiarly interesting, and calculated to excite a thirst for knowledge, as well as to impart a high Moral tone. The Series will consist of Twelve Story Books, and when completed, they will form a Volume of Tales for Young People, unequalled by any Work of similar price.

THE COMICAL HISTORY AND TRAGICAL END OF REYNARD THE FOX.  
THE ADVENTURES OF ROBINSON CRUSOE.  
FILGRIM'S PROGRESS TO THE CELESTIAL CITY.  
"DON'T TELL."  
ANECDOTES OF ANIMALS.

These Story Books will be published at intervals of One Month; and the Volume will be ready early in December, 1852. Price—Numbers, 2d., Volumes, 2s. 6d.

London: HOULSTON & STONEMAN, and all Booksellers.

## THE HOME COMPANION: A WEEKLY MAGAZINE.

### PRACTICAL ILLUSTRATIONS OF POPULAR FALLACIES.

#### No. X.—"IN FOR A PENNY, IN FOR A POUND!"

We doubt if the ladies are aware how much they have to do with giving currency to this proverb—nay, more, in giving the only form of truth to that which, in all other cases, is a fallacy. It is emphatically a husband's groan. In the first place, he often finds it literally true, that when he has consented to a small expenditure, and has been seduced into one of those regular traps for unwary husbands, a milliner's shop, what with such a love of a riband! such an elegant piece of lace! such a delightful bonnet! such a charming cap! and the thousand-and-one other temptations which no lady can resist, his contemplated penny is soon swelled into a pound, and as he watches the gradual tenebrecation of his purse, the adage is groined out in bitterness of spirit. In the next place, he finds it too often metaphorically true; as thus: Unless wives are greatly belied, there is a gentle tone of oburgation common to them all, which at certain seasons—that have been fully illustrated in the voracious history of Mrs. Caudle—they are accustomed to indulge in. The tone, of course, is always gentle, but the measure of rebuke is not always in proportion to the magnitude of the offence. Accidental circumstances have delayed the unfortunate husband half an hour behind his time; the gentle oburgation is murmured forth in a continuous current that seems to know no ebb, until it is lost in soporiferous inarticulation. Another time he returns under more questionable circumstances; still the murmured oburgation is the same, and ceases only from the same cause; and the good man begins to fancy that there is not much difference between an accidental delay of half-an-hour, and a premeditated escapade of two or three hours that he has been solacing himself with brandy-and-water, and the very next time he falls in the way of temptation, and his hour overtakes him unawares, he coolly reseats himself for a longer period, fancying that, as he is "in for the penny," he may as well make it the "pound," since the penny rings quite as strongly and as long in his ears. Sometimes, indeed, the penny rings so loud that the poor husband is quite cowed with the sound, and sacrifices all his comforts to avoid even the penny, and is not always successful then. We do, however, remember one case in which the husband accidentally stopped the ringing of the penny for ever, and became afterwards a free man! We record it for its very rarity.

Frank Matthews—not the imitable representative of King Henpeck the Hundredth, at the Lyceum, but a respectable tradesman in a small country town—was blessed with one of those amiable wives who are so fond of their husband's company that, if he was invited out to a party, she insisted that he must return at a given hour. She was, perhaps, rather liberal in her allowance, for on those rare occasions of a Christmas party, she allowed him until twelve o'clock. But, punctually at that hour, he must return home. No excuses were admitted—no ignorance of the time could be pleaded—no delays of the supper would satisfy her. There was no such thing as an impossibility to break up the party—home he must come. And so great was his dread of even the "penny," if he were not exact to his hour, that he never had pluck enough to make it "a pound." It happened one dark January night, that he, with some others of his acquaintances, were invited to spend the evening with an old friend, who resided about a mile from the town. "Mind you are at home precisely at twelve," were the last words he heard as he left his house; and the sound haunted him for the remainder of the evening. Four by honours and the odd trick could not drive it out of his head. At the end of every rubber, his watch was in his hand, and anxious were the inquiries that he made about the time of supper. At length, supper arrived, and ere it was well over the watch pointed at half-past eleven.

Not Cinderella when the clock struck at the hall, and she left her slipper behind her, could have fled faster. Only one short half-hour to cross the dreary common that lay between him and his residence in the town. The rain fell in torrents—it was in vain he sought a companion—no one was inclined to leave the hospitable table and shivering fare, to face the cold rain. Alone he started, amidst some jeering at his forced obedience. The rest of the party consoled themselves with the good things around them, laughed at the increasing storm of wind and rain, and congratulated themselves on their comfortable position, as the sharp sleet beat against the windows. Twelve o'clock was past, and one, and two; still there was no diminution of the rain. About half-past two, a kind of melancholy sound was heard in the passage, and the door opening, the rueful face of poor Frank Matthews was seen peering in; he was drenched to the skin, and covered with mud. We have said he had a wild common to cross; immediately outside the gate of the entertainer's grounds this common commenced and extended about half the distance to the town. In the best of times there was no very distinct tract over it, and it was full of hollows and gullies, in which the water lay two or three feet deep. Poor Matthews had not gone far from the gate on his homeward journey, when he found the darkness and the rain had completely bewildered him, and he entirely lost the direction he had intended to keep. For upwards of two mortal hours had he wandered up and down that bleak, exposed common—now plashing through the water, now slipping into one of the gullies, until cold, benumbed, and exhausted, he at length found himself at the place from whence he had started, and recognised, with great joy, the gate to his friend's premises. "For God's sake, give me some brandy," was his first exclamation, as he stood before the company with trembling limbs and chattering teeth. He was soon made as comfortable as dry clothes, a roaring fire, a hospitable host and jovial company could make a man who had, notwithstanding these creature comforts, the strong dread of what he must undergo on his return home. He felt, that for once in his life he was "in for the pound;" and longer and more rueful grew his face with every passing moment. It was not until some time after four, that the weather cleared sufficiently to induce the party to start from their comfortable quarters; dark and dreary was the wintry morning, but by keeping close together, the whole party contrived safely to cross the common with only such mishaps as are not uncommon to parties that have been making a night of it. Poor Matthews at length reached his home, and "the pound" was paid him in full. He never had any very distinct recollection of what passed; he only knew that the torrent of words had something more than a murmuring sound, that it was mixed with hysterical gaspings and sobs: it was in vain that he attempted to edge in the history of his misfortune, that he spoke of drownings in quarry pits, and duckings in gullies; still, the hysterical torrent rushed on more severe and bitter than the pitiless pelting of the storm which he had endured on the wild common. Even his very virtues were turned against him, and it was made an aggravation of his offence, that he who had always been so obedient, should now, on a sudden, have cast off all restraint; and the "hysterical passion" increased, as she recounted the horrible fancies that occurred in her mind when he who was always so punctual did not return. At length the usual causes brought the murmurings of the lady to an end; the sobs decreased, the words fell like the last droppings of the storm, and the last farthing "of the pound" was paid as she sank to sleep. The next morning poor Matthews had an opportunity of telling his own pitiful tale of justification; and when we saw him, he shrugged his shoulders at the thought of all he had gone through in the night—the storm without, and the storm within. But a gleam of satisfaction played over his face as he said, "It was not such an unlucky affair, after all, for my wife has made me promise never again to leave our friend's house before all the rest of the party." It was marvellous how frequent his visits were to the house over the dreary common, and the untold hours of the night at which he returned; and the liberty he had obtained for one house was soon extended to others, until he became known as the last man to propose the breaking up of a party.

To return to our subject: "In for a penny, in for a pound." If this saying has originated in the causes to which we will not further allude, it has extended pretty extensively beyond merely female influence; and another name has been given to it which is not so well adapted to feminine propensities. "In for a penny, in for a pound," if peculiarly fitted to their mercantile transactions, is not altogether misplaced when applied to some of their other actions. There is a gentle persuasiveness about it that suits the female character. The first step, too, is so very simple: "in for a penny!" it is so modest in its demand that they can hardly imagine the second part of the proposition—the "in for a pound"—is so often fraught with fatal consequences. A little innocent flirtation is often with them the representative of "in for a penny;" and this step, once taken, she finds that it does not end with the "penny," but goes on until she is "in for the pound." She has "stopped to folly" when she went "in for the penny;" and when she found, too late, "that men betray," she was "in for the pound." Beware, then, of getting "in for the penny;" and be on your guard against the reckless fallacy that if you are "in for the penny," you may as well be "in for the pound;" there is another old adage, which is a safer guide for the young and the unwary—"Take care of the pence, and the pounds will take care of themselves."

The other name that has been given to the thought represented by our fallacy, is rather coarser in expression—"It is as well to be hanged for a sheep as a lamb." This is a bold, coarse, masculine expression; not so much used as a seductive appeal to the unwary, as in a kind of defiant sneer; wilfully and scornfully setting at naught all laws, human and divine. I have committed a crime; if I am to be punished for it, I may as well commit a greater. A kind of thief's reckoning, who, learned in the mysteries of the Newgate Calendar, knows that in all probability his career will be a short

one; and therefore determinately sets to work to accomplish as much crime as possible within a given period; and imagines that the more heinous the crime the greater the hero. And the world at large seems to think that not only is it "as well to be hanged for a sheep as a lamb," but even better; for it too often shows a sympathy with great crimes which is withheld from those of lesser magnitude—it seems to have a reverence for the great, bold, daring villain, while it holds the dabbler in small villainies as a sort of pitiful sneak. A begging-letter imposter, with his manifold party cheats, is sent to gaol amidst the contempt of all; but a fortunate knave who has invented some large scheme of cheatery by which thousands are ruined while he has filled his pockets, is fêted and courted, sits in the high places of the synagogue, and is almost deified by his snobbish worshippers. But the fallacy of the proverb consists in this; that when a man meditates some deeper plunge into vice or crime, and hardens himself with this adage, he is not certain that he will be hanged for the first offence—he may escape the contemplated punishment for the first offence, if he do not aggravate the crime by persistence in wrong or by accumulating heavier charges against himself. Let us take, for instance, one of the commonest cases in which the adage is used. A party are sitting down enjoying the pleasures of the table; a young man rises to retire, observing that he has already taken too much wine: his companions instantly assail him with this adage—"Sit down, man; take another glass! 'it is as well to be hanged for a sheep as a lamb;' 'in for a penny, in for a pound.'" And the poor youth yields to their solicitations, his judgment becomes shaky, his reason weakened, and before he again rises he has a whole flock of "sheep" to answer for. Now, if he had risen with only "the lamb" upon his conscience, when his judgment was still sufficiently sane to tell him he had already taken too much wine, the probability is that instead of being "hanged for the lamb," instead of being blamed for his excess, he would have been praised for his self-command, a habit of self-control would be created; and, for the future, he would have fewer "lamb" to account for—be seldom "in for the penny." But, when once he has yielded to the "sheep" and "pound" argument, his punishment is certain; his own conscience upbraids him until repetition drowns its voice; his reputation is tainted, and if he persist he falls into the fatal vortex which sweeps so many to destruction.

Again, let us take the case of a tradesman who begins to feel his circumstances embarrassed. He has honest principles, is anxious to do that which is right—to be just and straightforward towards his creditors. He examines his affairs, and finds that he can pay about sixteen shillings in the pound. He consults a friend as to the propriety of at once declaring himself insolvent, and giving up his effects to his creditors. His friend is more worldly-wise than honest. The scruples of the honest tradesman are laughed at—he is pooh-poohed for his simplicity; and is encouraged to go on with a losing trade, in the hope that better days may come; or, at the worst, that it is "as well to be hanged for a sheep as a lamb"—"in for a penny, in for a pound." He acts upon his friend's advice; his principles are shaken; he closes his eyes to the injustice he is guilty of in living entirely on credit, without the means of repaying his creditors. Opinionous to which he had before been a stranger begin to dawn in his mind; the shifts to which he is driven engender fraud; he no longer thinks of giving up all to satisfy his creditors, but how he can contrive to secure the largest possible portion of the property still in his hands, not his own, and convert it to his own use. At length the crash comes; he is a bankrupt—not one of those entitled to the lenient consideration of the court, and the mercy of his creditors, but a fraudulent bankrupt, whose certificate is refused, who is allowed no protection, but is committed to a prison in expiation of his fraud. If, in the first instance, he had obeyed the dictates of an honest conscience; if, when he found he was "in for a penny," he had paid three farthings of it, he would have preserved his good name, would have maintained the respect of his creditors, and have again commenced life, with pity, indeed, for his misfortunes, and with that full degree of credit which honesty secures. But, led away by the reckless improvidence of these false proverbs, he has brought upon himself a deserved punishment; when, if he had been content to lie down with the "lamb," he would have been at peace.

These proverbs are, indeed, the mere offspring of recklessness. Some men are so peculiarly constituted, that this recklessness is interwoven with every part of their nature—not only are their acts reckless, but their very thoughts also. We have known a man brought to ruin, wholly and solely because he would pay his creditors five-and-forty shillings in the pound. This may seem strange; but it is perfectly true. He was a person of large fortune, of elegant tastes, and expensive habits. But, like Mr. Bagshaw in the farce—who would not pay his tailor's bill, although he had the money in his pocket, but chose to spend it in a gold watch for the future Mrs. Bagshaw—so this gentleman would never pay a single debt until compelled to do so by legal process. Not a butcher ever sold him a lamb, but the lawyer's bill made it a sheep; not a baker supplied him with a penny loaf, but the lawyer helped to make it a pound. There was no end to his extravagance in every way. His credit was good, because he was known to possess large property entirely at his own control, not tied up with settlements and entails; and the tradesmen, at length, who supplied his demands, scarcely ever troubled him with sending in a bill, but when the ordinary time for payment arrived, placed it in the hands of a lawyer to recover, when it went hard if the costs did not at the very least equal the debt. He had two passions—extravagance and litigation. He almost seemed to indulge in the one as the means of promoting the other. He was not deficient in generosity. He often made the handsomest, and sometimes the most useful, presents of his own free will, even to those who, at the time, were his creditors; but he would not pay the debts he owed them, though they were his most intimate friends, until he was compelled. His own lawyer was no better served than other people.

When he could no longer do without his money, he knew that the time of his employment was over. He had made as much out of him as could be got; his bill was a goodly sized volume which must be settled; and his action commenced. The last profits were the costs for recovering his own bill! This man had few vicious habits; he neither gamed, drank, or indulged in those other excesses which so often bring ruin upon families. It was sheer extravagance. He never was "in for a penny," but he was certain to be "in for a pound," and as certainly did the lawyers make the one pound two. His property was so large that it took many years to run through it, even in this reckless manner; but, at length, it had dwindled all away, and at this moment, out of all his princely fortune, he has only a miserable pittance of some sixty pounds a year remaining. He carried out the adage to its third form, which is in such vogue with our transatlantic brethren—he "went the whole hog," and has reduced his family to live with him in a sty.

## THE GIPSEY BOY.

BY MARY BENNETT.

WHERE the heath is overspread with its  
Bright summer bloom,  
And the hollows lie hush'd in repose all  
The day,  
The gipsy-boy sits among heather and  
bloom,  
While the doxy beside him doth feed  
as he may.

The tent is at hand, and the fire on the  
sward,  
And the kettle hung over it merrily boils;  
And the gipsy-boy sits, looking out as a  
guard,  
For his tribe are carousing on honest  
folks' spoils.

As he lazily stretches his form on the  
grass,  
He snuffs with enjoyment the scents on  
the breeze;  
And he watches the birds and the insects  
that pass  
Through the slow waving boughs of a  
group of old trees.

As a heathen he revels in Nature's delights,  
With no feeling but sense, no thought of  
a God;  
He sees not the Spirit Divine in the sights  
That send the quick glow through his  
wild gipsy blood.

No hand had e'er pointed his way to the  
truth;  
But hark! there are voices just round by  
that tree;  
Stealthily—warily—listens the youth;  
Strangers are near; and he creeps where  
they be.

They come with no terrors, their looks are  
benign,  
They gaze on the flowers and the lofty  
blue sky,  
They speak with calm tones that sound  
almost divine,  
And he thrills, as he listens, though  
knowing not why:—

"How plain is it seen that in beauty and  
joy  
God delights, and made man in his image  
to share  
The rapture celestial that hath no alloy,  
Which is breathed from creation all day  
and fair.

"O Father beneficent! we must adore thee  
For all the vast stores of delight that  
thou hast given;  
Nature is only the mantle cast o'er thee,  
Thyself we shall see, in the glory of  
heaven."

Thus they talk'd;—then the silence of feel-  
ings devout  
Hung round the poor gipsy-boy there  
like a spell;  
Not a word would he lose, although what  
'twas about,  
His reason, untutored, had fail'd him to  
tell.

His dark rolling eye glistened soft as he  
strangers,  
As if some new feeling caught fire in his  
breast;  
But then he remembered his tribe and  
their dangers,  
And stole back to the duty he understood  
best.

But some of those words he could never  
forget!  
Through long years—in the tent, in the  
field, in the fall—  
As a youth, as a man, as a felon—thou  
flour'd round him like wings  
seem'd never to fail.

And at last a good teacher, who told'd for  
the poor,  
To help and to save, brought him know-  
ledge and light:—  
His wandering feet now would wander no  
more,  
And the end of the gipsy was peaceful  
and bright!

SERPENT-CATCHING NEAR THE GASELI.—Pursued by several men, the  
serpent immediately plunged into the water, out of which it then boldly  
raised its head, and confronted an Arab, who had jumped in after it, armed  
with a *hamsie*. With extraordinary skill and daring the Arab approached  
it, his club uplifted, and struck it over the head, so that the serpent  
fell down stunned and writhing mightily; whereupon another Arab came up  
with a cord. The club-bearer, without further ceremony, gripped the reptile  
by the throat, just below the head, the noose was made fast, and the pair  
of them dragged their prize on shore. There it lay for a moment motionless,  
and we contemplated the terribly beautiful creature, which was more than  
eleven feet long, and half a foot in diameter. But when they began to drag  
it away, by which the skin would of course be completely spoiled, orders  
were given to carry it to camp. A jacket was tied over its head, and three  
men set to work to get it on their shoulders, but the serpent made such  
violent convulsive movements that all three fell to the ground with it, and the  
same thing occurred again when several others had gone to their assistance.  
I accompanied them into camp, drove a big nail into the foremost great beam  
of our hut, and had the monster suspended from it. He hung down quite  
limp, as did also several other snakes, which were still alive, and which our  
servants had suspended inside our hut, intending to skin them the next  
morning, as it was now nearly dark. In the night I felt a most uncomfort-  
able sensation. One of the snakes, which was hung up at the head of my  
bed, had smeared his cold tail over my face. But I sprang to my feet in  
alarm, and thought I had been struck over the skin with a club, when the  
serpent, now in the death agony, gave me a wipe with its tail through the  
door, in front of which our servants were squatted, telling each other  
stories. Soon afterwards we caught another, as thick, but only nine feet  
long, and with a short tail.—*Werner's Campaign in Taka.*

## REVIEW.

THE FAMILY FRIEND. (First Series of Four Volumes.) London: Houlston & Stoneman, Paternoster Row.

The *Family Friend* commenced upon the 1st of January, 1849, and its remarkable history may be thus stated. It started as a monthly publication, price twopence, but, after the first year, it was published upon the first and fifteenth of each month, by the urgent wish of its subscribers. And from January 1849 to December 1851, it circulated of the first four volumes collectively, seventy-five thousand bound copies, at half-a-crown each, in addition to two millions five hundred thousand of the fortnightly numbers. This success is unprecedented; and we are led to inquire—What caused this periodical to have become at once a National favourite? In search of a solution to this query, so interesting to us as speculators in the field of popular literature, we have looked carefully through the pages of *The Friend*, and find that, in addition to an abundance of readable matter in the attractive forms of Tales, Essays, and Poems, it supplies a perfect encyclopedia of Domestic Economy, abounding in Useful Advice and Receipts upon all matters likely to interest the Artist, the Housewife, the Needle-artist, and the Mechanic. And in the fourth volume, the whole of these matters are indexed in one alphabetical arrangement, comprising about three thousand five hundred references to the contents of the first four volumes.

The first volume contains a Perfect System of Marine Botany, and the only one in which English names have been given to all the interesting marine plants found upon our shores. It also contains ample instructions for the Modelling of Waxen Flowers. The second volume includes a complete system of Carving and Cookery; Papers upon the Wild Flowers and Insects peculiar to each month, &c. The third volume has some excellent papers upon Etiquette; and useful Gardening directions, written in a fresh style, by a really practical man. The fourth volume contains complete instructions for Modelling in Leather, which may be practised as a household occupation, supplying neat ornaments at little cost. Each of the volumes contains numerous designs in Fancy Needlework, by Mrs. Warren, and first-rate Problems and Games in Chess, by Herr Harwitz, the celebrated blindfold player.

As an instance of the practical matters which abound in these volumes, we quote a few "Useful Receipts." Most of them appear to be contributed to the *Friend* by persons who have tried them:—

**Cure for Corns.**—Place the feet for half an hour, two or three nights successively, in a pretty strong solution of common soda. The alkali dissolves the hardened cuticle, and the corn falls out spontaneously, leaving a small excavation, which soon fills up. [Certain].—E. J.

**To Promote the Growth of the Hair.**—Mix equal parts of olive oil and spirits of rosemary, add a few drops of oil of nutmeg. If the hair be rubbed every night with this, and the proportion be very gradually increased, it will answer every purpose of increasing the growth of the hair. [I have tried this, and recommended it to others, with the best effect].—E. J.

**To Take Oil and Grease out of Boards, Marble, &c.**—Make a paste with fuller's earth and hot water; cover the spots therewith, let it dry on, and the next day scour it off with soft or yellow soap. Or—Make a paste with soft soap, fuller's earth, and a little pearlash, and use it as above.

**To Remove Ink Stains.**—Procure a two ounce phial, put into it a penny-worth of oxalic acid, and fill it up with warm water; place on the stain a piece of white linen rag; shake the above solution, and then pour a few drops of it on the linen rag stretched on the stain; it should remove it entirely, but very frequently when logwood has been used in manufacturing the ink, a reddish stain still remains; to remove it, procure a solution of the chloride of lime, and apply it in the same manner as directed for the oxalic acid. [I can guarantee this, after many trials].—W. J. G.

**Shampoo the Head.**—I send you, for the benefit of your numerous readers, a simple and effectual remedy for scurf in the head—one which I have used, and know to be good.—Take a pint of water drop a lump of quicklime (fresh), the size of a walnut; let it stand all night, then pour the water off from sediment or deposit, add a quarter-pint of best vinegar, and wash the head with the mixture. It is perfectly harmless; only the roots of the hair need be wetted.—L. L. L.

**Black Silk, Satins, Coloured Woollen Dresses, &c.**—Quarter of a pound of soft soap, quarter of a pound of honey, the white of an egg, and a wine-glassful of gin; mix well together, and the article to be secured with a rather hard brush thoroughly, afterwards wash it in cold water, leave to drain, and iron whilst quite damp.—Mrs. J. D. R. remarks that she believes this receipt has never been made public; she finds it an excellent one, having used it for a length of time, and recommends it to her friends with perfect confidence.

**Excellent Dentifrice.**—I have used the following dentifrice for seven or eight years uninterruptedly, and can confidently recommend it as excellent and economical:—Procure a lump of whiting, and scrape off as much, in fine powder, as will fill a pint pot. Take two ounces of camphor, moisten it with a few drops of brandy or spirits of wine, and rub it into a powder. Mix this with the whiting, and add to it half an ounce of powdered starch. Put the whole into a wide-mouthed bottle, and cork down. A small portion of this may be emptied into a box every few days for use. By keeping it corked down it will be as fragrant at the end of a year as when made. If too strong of the camphor, it will be easy to add a little more whiting.—T. K.

The *Friend* appears to have a large staff of *Friends*, who are continually pouring these household treasures into its pages. And it is obvious that matters thus tested and recommended, must be superior to the theoretical receipts too often collected in the book form, for the mere sake of swelling out a volume.

The subjoined humorous illustration of St. Valentine's Day, is reproduced from the *Family Friend*, to show that while the most vigilant care is exercised to sustain the high moral tone of that work, a sprinkling of innocent amusement is not forgotten, and the reader's attention, while he is searching for useful and instructive information, is enlivened by occasional sallies of cheerful anecdote, carefully selected for family entertainment.

A striking feature in the pages of the *Family Friend* is the "Pastime," comprising Enigmas, Charades, and Games, of an original and interesting character, collected from the contributions of various correspondents, with a view to combine improvement and recreation. While praising the judicious efforts of the conductors of the *Family Friend* in this respect, the editor of the *Bradford Observer* has made the following excellent observations thereupon:—

"When none but really good enigmas and conundrums are proposed or accepted, we are inclined to think them by no means unworthy instruments in the education of the people. They are to the million what the severer studies of mathematics and logic are to the laborious student. To trace hidden resemblances, to explore secret qualities, to detect, as with the glance of an eagle, points of contact and of divergence, to familiarize the mind with the attributes, history, and topography of natural objects, to concentrate the thinking faculty, to distinguish between real coincidences and mere verbal or literal similitudes—to do all this, and much more, is necessary to every citizen who would properly solve the mysteries of the Sphinx; and he who is master of such an art, has intellectual powers of which he need not be ashamed. It is impossible, however, to avoid trembling for the honour of the Enigma, and the fame of the Conundrum. Itinerant wizards and perambulating conjurers have brought this description of mental athleticism into sad disrepute. The most horrible, yea, even barbarous, playing upon words, has been rewarded with honorary distinctions, and more substantial prizes. Individuals have received gold or silver watches for puns so ineffectually wretched, that we really cannot write them down. In some quarters, however, most commendable efforts are being put forth to remedy the abuse complained of. It will serve as an illustration of our meaning if we here announce that the indefatigable conductors of the *Family Friend* intend to offer prizes of one hundred and seventy-five guineas, for the three best solutions of enigmas! This is quite an unprecedented step, and will go far towards elevating the study of enigmas to the rank of a science."

As a proof of the care bestowed upon this department of the *Family Friend*, which has enlisted a large number of assistants, both young and old, we may quote the "Gentlemen's Prize Enigma," inserted in the number of the *Family Friend* for the first of January last, and for the best correct solution of which, five prizes of ten guineas, and ten prizes of five guineas, will be given. This, however, is only one, out of three prize competitions of the *Family Friend*, for the united solutions of which the large amount of One Hundred and Seventy-five Guineas will be awarded.

## DOMESTIC MANNERS &amp; CUSTOMS OF ENGLAND 1851 -- No 2.

SAINT VALENTINE'S DAY.

## GENTLEMEN'S PRIZE ENIGMA.

"I sprang from the Great Profound; and now I range [constant change] The universe—always the same, through Seen or unseen, I everywhere abound. In the meek flower the regal robe is found. And in the robe the flower which decks the ground! [nor tree, Gaze on the barren rock, with neither moss And, to its lifeless mass, a living mortal see: Thus do I dwell in you, and you in me! O my light wings! I bear the massive stone; I drink the gold that decks the kingly throne; [I'm known. In gay south and snow-clad north alike The balance used my wondrous parts to weigh, O woe no form; and yet it will betray The path where I an unknown course may stray]

Liken my form unto a beauteous maid— Her garments round her figure softly flowing: Upon her breast rich gems of beauty laid, And in her heart life's warmth and impulse glowing: Her bright eyes lustre stealing through the veil, [her:— That like a dreamy shadow falleth o'er Her breath the incense of the passing gale, That fills with joy the worshippers before her— And in this picture you may plainly see A poet's true imaginings of me! To man-to-spirit—I am close allied, A meek, submissive, but a jealous bride,—

For none may set my Heaven-born rights aside! My veins a subtle element contain; It dwells in every cell, or pore, or vein,— It breaketh down, and buildeth up again. My whole is wonderful, my parts are wondrous, too; And, though my teachings are for ever true, [make two. I sometimes hold that one and one do not And I have offspring wandering far and wide, Beyond the earth or dwelling in its tide— They scatter blessings o'er the world on every side. One is a painter of such wondrous skill, She can with joy your raptured bosom fill, Or horribly by scenes of terror and of ill. One frowns or smiles with majesty or grace— Is swifter than the fleetest in a race. One holds her mother in her loving arms: Another wins the list'ner by her charms. Another doth with busy fingers bind Trifles in wreaths to gratify the mind. [will, These are my children, call them what you will, Sex or no sex—they are my children still! Pursue me, Reader, in my wondrous ways! Behold me when the sun sheds forth her rays; [shines; Or when the moon in silent splendour Or where the rainbow casts its prism-lime. Within the earth, or on the teeming sod, Seek out my wonders, for they point to God!"

INIGMA

1. Murderer of the innocent  
Arly my nystagmoun  
The stut arm by me as off the  
By the tollst heart has been  
See there the has before the  
bkins i her madden flight, the daded  
And whist her cry of agony y  
Alth oughy usome; ot know I an noar  
When storn a sweet, oer the taming  
Then is the hour of my victory  
For bolder than t. el exit of man must be  
The heart wlo portals never pe to me

When man lies trembl on the bed of death,  
Yelling t. oth as; ritw ths breath  
Mark the feet lines that i s t r looks lefice  
And in th o lines you may my features tr ce

INIGMAS, CHARADIS, RIBUSES &c

1. Pray lady a wron seonin wit deligt  
Say what s i s i l l e yet never out of sight

2. A word there is five syllables contains,  
Take one away no syllable remains

3. A word of one syllable easy and short  
Read backwards and forwards the same  
It expresses the sentiments warm from the  
heart,  
And to beauty lays principal claim

4. Long before Adam one there lived,  
And liveth still as is believed  
Whose name reversed here you'll see;  
Ladies, pray say who this may be

5. Three fourths of a cross and a circle  
complete,  
Two semicircles and a perpendicular meet,  
A triangle standing on two feet,  
Two semicircles and circle complete

6. In a garden was laid  
A beautiful maid,  
As fair as the flow'rs in the morn,  
The first hour of her life  
She was made a wife,  
And she died before she was born

7. When you and I together meet,  
We make up six, in house or street,  
When I and you do meet, once more,  
Alas! poor we, can make but four  
And last, when you from I are gone,  
I make but solitary one.

8. A word of three syllables seek till you find,  
That has in it the twenty four letters cur  
bin d

9. Yonder lives a shoemaker, who works  
with ut leatler  
And strange! employe. all the four el-  
ments together,  
Of fire he makes use, of water, earth, and  
air  
And for every customer makes a double

10. I'm most conspicuous, though I'm bound  
to hide  
I'm still of use, when I'm laid aside  
I aid the viewer, yet obstruct the sight,  
And 'love the day, though set aga nst the  
light  
From Italy I take my name and birth;  
And now my offspring's spread o'er all the  
earth  
Though different forms I take I'm mostly  
seen,  
True to one colour nature's favourite green

11. Begotten and born, and dying with noise,  
The terror of women, and pleasure of boys  
Like the fictions of poets concerning the  
wind,  
I'm chiefly unruly when strongest confin'd.  
For silver and gold I don't trouble my head,  
But all I delight in is pieces of lead,  
Except when I trade with a ship or a town,  
Why then I make pieces of iron go down  
One property more I would have you re-  
mark,  
No lady was ever more fond of a spark!  
Whenever I get one my soul's all on fire,  
I roar out my joy, and in transports expire.

TRANSFIGURED PLAYING CARDS.

THE EIGHT OF SPADES - "OLD MORTALITY"

12. A ruling tyrant of the earth,  
To vilest slaves I owe my birth;  
How is the greatest monarch blest  
When in my gaudy liveried dress!  
No haughty nymph has power to run  
From me, my advent' shun  
Stabbed to the heart, condemn'd to shame,  
My constancy is still the same  
The favorite messenger of Jove  
And I am banish'd consulting strove  
To make me glorious to the light  
Of mortals and the gods delight  
Soon would this illustrious flame expire  
If I refuse to lend them fire

13. Brethren of a wondrous kind  
All of us in one you'll find  
Yet am I as all no two I  
Knows not a tithe of the other  
We in frequent councils are  
And our marks of things declare  
We're to us unknown, I eler  
Sets and takes them in the dark  
He's the register of all  
In our ken, both great and small  
By us forms his laws and rules;  
He's our master, we his tools;  
Yet we can with greatest ease,  
Turn and wind him as we please

One of us alone can sleep,  
Yet the rest no watch will keep;  
But the moment that he closes,  
Every brother else reposes  
If wine's brought, or victuals drest,  
One enjoys them for the rest  
Pierces us all with wounding steel,  
One for all of us will feel  
Though ten thousand cannons roar  
Add to them ten thousand more  
Yet but one of us is found  
Who regards the dreadful sound  
If scents are grateful to the smell,  
That's but one of us can tell

14. I'm double, I'm single, I'm good and  
bad  
As my followers abundantly prove;  
By a trick it is known I am oft to be had,  
But am gain'd with more pleasure by love  
What strange ways may appear, I can give to the  
face  
At one moment both smiles and chagrin  
And the next to mankind I bring shame and  
disgrace,  
Without honour I never am seen

15. Through I, alas! a prisoner be,  
My trade is prisoner to set free,  
No slave I is lord a command o'er  
With more insinuating ways,  
My get us piercing sharp and bright,  
What is the men of wit delight,  
The clergy keep me for their ease,  
And turn a wind me as they please  
A new and wondrous art I show  
Of rasing spirits from below  
In seal some, and some in wide  
I hey se walk round yet never frigh  
A preter chemist none than I,  
Who from materials hard and dry,  
Have thought men to extract with skill  
More precious juice than from a still  
Although I'm often out of case,  
I'm not ashamed to show my face:  
Though at the tables of the great,  
I near the sideboard take my seat;  
Yet the plain squite, when dinner's done,  
Is never pleas'd till I make one  
He kindly bids me near him stand,  
And often takes me by the hand.  
I twice a day a hunting go,  
Nor ever fail to seize my foe;  
And when I have him by the poll,  
I drag him upwards from his sole;  
Though some are of such stubborn kind,  
I'm forc'd to leave a limb behind,  
I hourly wait some fatal end;  
For I can break but scorn to bend

## OUR CORNER CUPBOARD!

"Did you ever see a race, Bobby?" "Yes, I have seen the candles run!"

Misery in God, and misery in man, are relatives; and happy is that person who hath them well married and matched together.

It is not the height to which men are advanced that makes them giddy; it is the looking down with contempt upon those beneath.

Show me the man, who knows what life is, who dreads death; and I'll show thee a prisoner who dreads his liberty.—*Sterne*.

Prudent men lock up their motives, letting familiars have a key to their hearts, as to their garden.—*Shenstone*.

When some one said to Horne Tooke, "The law is open to every one," he replied, "So is the London Tavern."

The last words of a good old man, Mr. Grimshaw, on his death-bed were these:—"Here goes an unprofitable servant!"

"MARR, may I go a fishing?" "Yes, sonney, but don't go near the water; and recollect, if you are drowned, I shall skin you as sure as you are alive!"

VOLTAIRE's definition of a physician is—"An unfortunate gentleman, expected every day to perform a miracle—namely, to reconcile health with intemperance."

A wag says that Barnum has recently enriched his museum with a lock of hair from the head steamboat navigation; also, a blush from the face of the earth, and ten yards from the equinoctial line.

One of our exchanges says—"Goose-eggs as large as hailstones fell recently in a shower at Danbury, Connecticut." It may reasonably be supposed a flock of wild geese was flying over about that time.

When the rich miser Elwes, who left about a million of money to be divided between his two sons, was advised to give them some education, his answer was—"Putting things into people's heads, is taking money out of their pockets."

BAND rivals, who true wit and merit hate,  
Caballing still against it with the great,  
Maliciously aspire to gain renown,  
By standing up, and pulling others down.—*Dryden*.

A CERTAIN Blue Beard of this latitude, overcome by his sensibilities, knelt at the grave of his fourth spouse. "What shall we do with him?" asked a perplexed friend of his. "Let him alone," cried a wagging bystander, "he'll soon revive!"

"MR. JENKINS, as you always come in late, have you any objections to his gentleman occupying your bed until the stage goes out?" "Not in the least. I will be infinitely obliged to you if you will put him there, so that the bed-bugs can have their supper before I come."

An American in London was boasting the other day of the immensity of his country, and mentioned, among other wonders, that he himself had seen a mile long! "Pray what kind of cane was it?" asked the company, incredulously. "A hurrycane," replied Jonathan, at the same time ejecting a very decided streak upon the stove.

AND, oh! 'bove all things else (this truth remember!)  
Let gentle thoughts beget sweet human deeds!  
Good are they who believe, and fast, and pray;  
But best of all is he who th' hungry feeds,  
And from the deadly blast of wild December  
Shelters the orphan lone, the poor man old and grey!

SOME editor says that the destiny of the world often hangs on the smallest blips. A little miff between Charles Bonaparte and his love Letitia might have broken off a marriage which gave birth to Napoleon and the battle of Waterloo. To which the *Chicago Advertiser* says—"Yes, that is the fact. Suppose a 'little miff' had taken place between Adam and Eve!—What then?"

ORIGIN OF THE TERM "ROUNDHEAD."—The puritans, in the time of Charles the First, literally applying the text, "Ye know that it is a shame for men to have long hair," cut theirs short. It is said that the queen once seeing Pym, a celebrated patriot, thus cropped, inquired who that roundheaded man was. From this incident the distinction became general, and the party were called roundheads.

THE gloomiest soul is not all gloom;  
The saddest heart is not all sadness;  
And sweetly o'er the darkest doom  
There shines some lingering ray of gladness.  
Despair is never quite despair;  
Nor life, nor death, the picture closes;  
And round the shadowy brow of care  
Will hope and fancy twine their roses.

COOLNESS.—The following orders, conveying great comfort to the souls of the passengers who heard them, were given by the captain of an American steam-boat, when she was about to engage in a race with another steam-boat:—"Row in that, and tell the engineer to shut down the safety-valves. Give her gas. Gentlemen who haven't crept up to the captain's deck and settled, will please to retire to the ladies' cabin till we pass that point or bust. Fire up! Let her rip!"

## OUR MEMORANDUM BOOK!

THE FIRST OMNIBUS.—The honour of having invented the omnibus is due to M. Baudry, a native of Nantes. The first omnibus that ever ran made its appearance in the streets of that city in the year 1825; and in the short space of time that has since intervened, the manufacture of that most convenient of popular vehicles has extended to all parts of the world. Even in the sandy environs of Cairo, you are whisked to your hotel in an Oriental omnibus.

EQUINE GASTRONOMY.—I mentioned to M. Denault that, in England, omnibus horses are almost invariably fed on a mixture of chopped hay, chopped straw, and corn. He replied he was of opinion that, according to the common principles of gastronomy, horses, like man, prefer a variety of dishes.—"They enjoy their hay; gain strength and sustenance from their corn; et puis apres, monsieur, ils mangent de la paille," shrugging up his shoulders and showing me the palms of both hands. "And after that, sir, they eat straw to amuse themselves; it occupies them; it distracts their attention; it prevents them from fighting."—(Sir F. Head's *Faggot of French Sticks*.)

LET the scholar and divine  
Tell us how to pray aright;  
Let the truths of Gospel shine  
With their precious hallowed light:  
But the prayer a mother taught  
Is to me a matchless one;  
Eloquent and spirit-fraught  
Are the words—"Thy will be done."

WORK, WORK.—I have seen and heard of people who thought it beneath them to work—to employ themselves industriously in some useful labour. Beneath them to work! Why, work is the great motto of life; and he who accomplishes the most by his industry, is the most truly great man. Aye, and is the most distinguished man among his fellows, too. And the man who so far forgets his duty to himself, his fellow-creatures, and his God—who so far forgets the great blessings of life, as to allow his energies to stagnate in activity and uselessness, had better die; for, says the Holy Writ, "He that will work not, neither shall he eat." An idler is a cumberer of the ground; a weariness and curse to himself, as well as to those around him. *Beneath human beings to work!* Look in the artist's studio, the poet's garret, where the genius of immortality stands ready to seal his works with her ineffaceable signet, and then you will only see industry standing by her side. *Beneath human beings to work!* What but work has tilled our fields, clothed our bodies, built our houses, raised our churches, printed our books, cultivated our minds and souls? "Work out your own salvation," says the inspired apostle to the Gentiles.

LUONAPARTE'S COSTLY COUTURE.—The extravagance of the Emperor Napoleon, on state occasions, when attired in the full-dress uniform of a French general, will be seen from the following estimate, drawn from official sources:—

Velvet embroidered suit, full dress uniform .....	£126	0	0
Half-boots, gold embroidery .....	6	0	0
Military hat, finest beaver .....	1	10	0
Diamond button, for hat, weight 277 carats .....	232,000	0	0
Sabre, the blade of best Damascus manufacture ...	10	0	0
Sabre hilt, crocodile, solid gold, weight twenty-seven ounces .....	108	0	0
Diamond, called the Regent, in mouth of the crocodile .....	126,000	0	0
Diamonds, set as eyes in the crocodile .....	1,500	0	0
Epaulets, formed of the finest brilliants .....	30,000	0	0

Total cost..... £397,741 10 0

Thus, on analysing the above, it will appear the clothing, hat, and boots, including the gold embroidery, was only £133 10s., leaving, on the score of ornament, the enormous plus of £397,608.

"A QUAKER friend," says Franklin, "having kindly informed me that I was generally thought proud; that my pride showed itself frequently in conversation; that I was not content with being in the right, when discussing any point, but was overbearing and rather insolent, of which he convinced me by mentioning several instances, I determined to endeavour to cure myself of this vice of folly. I made it a rule to forbear all direct contradiction to the sentiments of others, and all positive assertion of my own. I soon found the advantage of this change in my manners; the conversations I engaged in went on more pleasantly. The modest way in which I proposed my opinions, procured them a readier reception and less contradiction. I had less mortification when I was found to be in the wrong, and I more easily prevailed with others to give up their mistakes, and join with me. And this mode, which I at first put on with some violence to natural inclination, became at length easy and habitual to me. To this habit (after my character of integrity,) I think it principally owing, that I had early so much weight with my fellow-citizens." In reality, there is, perhaps, no one of our natural passions so hard to subdue as pride. Well and truly has it been said of Franklin, "He possessed a perfect mastery over the faculties of his understanding and over his passions. Having this power always at command, and never being turned aside, either by vanity or selfishness, he was enabled to pursue his objects with a directness and constancy that rarely failed to insure success."

## YOUR NATIVITY, WITH A COR-

rect Judgment relating to the various Events of Life—Marriage, with a description of your future Partner, &c. Send the time of birth, male or female, enclosing One Shilling & 6d. Stamp, addressed to J. HULME, care of R. Hutchings, High Street, Dudley.

## KEEP YOUR FEET DRY.—HOW

to secure Dry Feet, and save your shoe-leather.—The Advertiser will on receipt of a dozen Postage Stamps, send free to any address a valuable Recipe to attain the above objects.

Direct (post-paid), ALPHEA, care of Mr. Pearson, Castle Terrace, Nottingham.

## LOAN DEPARTMENT.

For Members to purchase Freehold or Leasehold Property, or for Building; Subscriptions payable to the Society in the shape of Rent, instead of to a Landlord:—

£100 advanced for 5 Years. Monthly Repayments £4 2

£100 " for 10 Years. " " 1 8

£100 " for 13 Years. " " 1 8

Surveyor, for examination of Property, and Expenses of Solicitor, for executing Deed of Mortgage, paid by the Society.

EXAMPLE.—If a man can purchase a house for £300, supposing, before purchase, he pays a yearly rent of £50, he borrows from the Society £300 for ten years, and pays yearly £44 8s., or £14 18s. more than he paid for rent, for which, in ten years, he purchases the house, and has no more rent to pay. Other examples of less payments over a longer period of years can be taken (see Table). For further information, apply to the Secretary, enclosing three postage-stamps. Agents required, to form Branches in all parts of the Country. Commission, Five per Cent.; reasonable compensation allowed for extra services.

## ASTHMA, COUGHS, AND COLDS.

One of Dr. LOCOCK'S PULMONIC WAFERS, allowed to dissolve in the mouth, immediately relieves the most violent Asthma, Cough, or cold, and protects the lungs from all the irritation of fog and frost. They have a pleasant taste. No-placers and public speakers they are invaluable for clearing and strengthening the voice. Price 1s. 1d., 2s. 6d., and 1s. per box. Sold by all Druggists.

Also, Dr. LOCOCK'S FEMALE WAFERS, the best medicine for Females. They have a pleasant taste.

## VENTILATING BOOTS and SHOES

WITHOUT GETTING IN WATER. The only true invention to prevent frost, chilblains, and the like, from being tender of swelling. No person would wear any other if they only once tried a pair. To be had of the Patentee, C. MAXWELL, near the Bridge, Kingsland Road, London. The Trade supplied with the inner sole and connecting pieces, at the small charge of 10s. per dozen, and all ready for use, so that no maker can make any mistake.

## PAINS IN THE BACK, GRAVEL,

Lumbago, Rheumatism, Gout, Indigestion, Nervousness, Debility, &c.

DR. DE ROOS' COMPOUND RENAL PILLS, under their name—Renal (or the kidney) Pills, are now established as a most safe and efficacious remedy for the covered for the above dangerous complaints, discharges of any kind, and diseases of the kidneys and urinary organs, generally, resulting from whatever cause, which, if neglected, frequently end in piles, fistula, stone in the bladder, and a lingering death. For gout, sciatica, rheumatism, tic douloureux, erysipelas, dropsy, serofula, loss of hair and teeth, depression of spirits, blushing, incapacity for study, or business; confusion, giddiness, drowsiness, sleep without refreshment, fear, nervousness, and even insanity itself, when (as is often the case) arising from, or combined with, urinary diseases, they are unequalled. By their salutary action on acidity of the stomach, they correct bile and indigestion, purify and promote the renal secretions, thereby preventing the formation of stone, and establishing for life the healthy functions of all these organs. ONE TRIAL will convince the most prejudiced of their surpassing properties.

May be obtained at 1s. 1d., 2s. 6d., 4s. 6d., and 11s. per box, through all Medicine Vendors in the Kingdom, or, should difficulty occur, they will be sent free, on receipt of the price in postage-stamps, by DR. DE ROOS, 24, Ely Place, Holborn Hill, London, where he may be consulted from 11 till 1, and 5 till 8, (Sunday excepted), unless by previous arrangement.

N.B. A considerable saving effected by purchasing the larger boxes.

## EXQUISITE OIL PICTURES.

Knight & Foster have been appointed THE AGENTS FOR THE SALE OF BAXTER'S PATENT OIL PICTURES.

This invention has excited the admiration and wonder of all persons of taste by their brilliancy of colour, as well as the extreme softness, delicacy of finish, and effect, which has placed them in the first rank as Gems of Art for the Cabinet, the Album, or Scrap-Book.

## SIXPENCE EACH.

View from Richmond Hill. Richmond Bridge. Windsor Forest. View near Harrow-on-the-Hill. Balmora Castle. Cruick Abbey. Royal Exchange, London. Flowers—three Bouquets. Flowers—one group. "Shall I succeed"—the Coquette. Winter Scene. Rock Quarry. River Scene. Holland. Abberville. Cadiz Idria. Godolot. Windsor Castle. Flowers—ten Bouquets. Lover's Seat, Hastings. The Dripping Well, Hastings. Ben Nevis. The Tarentella Dance. Indian Settlement. British Guiana. Prince of Wales landing at Dabona. Welsh Drovers. Tintern Abbey. Netley Abbey. Bala Lake, North Wales. View of the River Camel. Brighthelm Castle. Stolzenfels, on the Rhine. Watermill on the Wye. Llangollen. Warwick Castle. Lake Como. River Tivy.

## ONE SHILLING EACH.

The New Houses of Parliament. Ten Royal Illustrations. Ten Album Illustrations. Chalcis Satoon, India. The Harem. The Greek Dance. Paul and Virginia. The First Impression. St. Ruth's Priory. The Bride.

## TWO SHILLINGS EACH.

Her Majesty the Queen, a full-length Portrait. His Royal Highness Prince Albert, ditto. The Landing of Her Majesty and Prince Albert in Ireland. The Holy Family, after Raphael. The Circassian Lady at the Bath. Verona—evening scene. Jenny Lind. Jody Tredd.

## THREE SHILLINGS AND SIXPENCE EACH.

The Great Exhibition, Exterior View. The Great Exhibition, Interior View. Flora. Arctic Expedition in search of Sir J. Franklin. Windsor Castle. Osborne House. Isle of Wight.—The whole are mounted on card-board or drawing-paper, and some have a rich gold border.

## FOR PRESENTS.

The Fair of Views of the Exhibition are very suitable, and are by far the most perfect, as well as the most elegant yet published of that wonderful structure; and are fitted in handsome Gilt or Parchment Frames, Gold and Glass, complete, for 17s., carriage free. Two of those at 6d. each, return of post for Fourteen Stamps.

When the Value of Ten Shillings or above is taken, they will be sent carriage free to every part of Britain.

Knight & Foster, Stationers, &c., 5, Eastcheap, London.

### Editor's Note-Book.

**WATCH OVER YOUR TEMPER.**—There is much said about the natural disposition and temper of men; and the fact that any one has a temper which is unhappy and unpleasant, is both accounted and apologized for, by saying that his temper is "naturally" unpleasant. It is a comfortable feeling to lay as much blame upon Nature as we can; but the difficulty is, that the

action—to use a law term—will not lie. No one has a temper naturally so good that it does not need attention and cultivation; and no one has a temper so bad, but that, by proper culture, it may become pleasant. You need not be discouraged in your attempts to correct a quick, an irritable, and a bad temper, even though, at first, unsuccessful. Success on this point will certainly follow exertion. It is one mark of a great, as well as a good man, to have a command over the temper. Sir Walter Raleigh was challenged by a hot-headed young man; and, because he coolly refused to fight, the young man proceeded to spit in his face, in public. Sir Walter took his handkerchief, and, calmly wiping his face, merely made this reply:—"Young man, if I could as easily wipe your blood from my conscience as I can this injury from my face, I would this moment take away your life."

**LOSS OF HAIR.** F.—Premature loss of hair is indicative of some derangement of the bodily system, by which the ordinary functions of the skin are in a defective state.

**MOON.** Inquirer.—This term is derived from the Saxon *mona*, the moon. The name originally signified the time of one revolution of the moon, a lunation.

**SILVER MINES.** T. S.—Europe has some silver mines; but the metal has hitherto been found in greatest abundance in South America.

**TEXTILE.** O.—This is an epithet given to whatever is woven or capable of being woven. Textile fabrics signify stuffs of every description, no matter what the materials may be of which they are composed.

**WHISPERING GALLERY IN SAINT PAUL'S.** Young.—The echo alluded to by our correspondent arises from the construction of the gallery being of a parabolic or elliptical form.

**RASOR STRIPS.** S. C. W.—The reddish material with which one side of razor strips are covered, is a preparation called *crocus martis*, an oxide of iron made into a paste with hog's lard or spermaceti ointment; the other side of the strip is covered with fine black-lead and lard.

**FANS.** R.—This is a very ancient apparatus, having been used by the ladies of Egypt and India, as well as those of modern times, for cooling the face by agitating the air. They were originally made of feathers bound together like the tail of a peacock when spread out.

**FOR SORRY EYES.** T. R. C.—Incorporate thoroughly, in a glass mortar or vessel, one part of strong citrine ointment with three parts of spermaceti ointment. Use the mixture night and morning, by placing a piece of the size of a pea in the corner of the eye affected.

**TO Mend CHINA.** W.—Mix together equal parts of fine glue, white of egg, and white lead, and with it anoint the edges of the articles to be mended; press them together, and when hard and dry, scrape off as much as sticks about the joint. The juice of garlic is another good cement, and leaves no mark where it has been used.

**IMPROVISATORI.** E. G.—These are persons who compose and recite verses extemporaneously. Improvisatori are common in Italy and Spain; and although their verses are generally within the range of mediocrity, the readiness with which they are produced never fails to excite astonishment in people of less flexible intellect and colder fancy.

**RIVER OF VINEGAR.** B. S. H.—This river is in South America, near Poyayan, and it is called, in the language of the country, *Rio Vinagre*. It takes its source in a very elevated chain of mountains, and after a subterranean progress of many miles, it reappears, and forms a magnificent cascade upwards of three hundred feet in height. When a person stands beneath this point, he is speedily driven away by a very fine shower of acid water which irritates the eyes.

**BURNING GLASSES.** E. S.—The statement that Archimedes burnt the ships of the Romans at the siege of Syracuse by the aid of burning-glasses, has enlisted many valiant men to prove that the account is neither false nor absurd. Among others, Buffon, the celebrated naturalist, communicated to the Academy of Science at

Paris, in 1747, the results of his experiments with burning-glasses. He set objects on fire at the distance of one hundred and twenty yards, and wrote a dissertation on the subject.

**CORPULENCY.** M. F. J.—With proper regard to diet and abundant exercise in the open air, the unpleasant consequences of an accumulation of fat may be avoided. Dr. Radcliffe recommends that the mouth should be kept shut, and the eyes open; or, in other words, that corpulent persons should eat little food, and that the quantity of sleep should be diminished. These precautions may be followed with discretion, but it may be dangerous to carry them too far.

**INVESTMENTS.** We have frequent applications from correspondents for information respecting the eligibility and security of investments in societies, which, suddenly called into existence, have vegetated without our knowledge. For many obvious reasons we withhold our opinion on such matters; and recommend every person embarking in monetary speculations, to examine for himself the merits and prudence of such undertakings. "A Friend," who describes himself as being in that enviable condition of having "whereof and to spare," inquires how he can dispose of his money to the best advantage. The true value of this medium of exchange consists in the rational application of it. Economy becomes a vice in the miser; whilst, on the other extreme, extravagance becomes a vice in the spendthrift. The golden mean lies between these extremes. By applying available gains for the procurement of rational comforts and enjoyments, and for advancement in moral and intellectual culture, we fulfil the highest destinies of our nature. The true application of wealth is to the obtaining and diffusing the real enjoyments of life. Investment in the funds may secure unflinching interest, but the main question is, how that interest is to be applied to obtain the highest possible degree of happiness. Those who look to wealth only as to a means of sensual enjoyment, sometimes find that there is more than one kind of

GOVERNMENT SECURITY.

**POLYGLOT.** Memphis.—This is derived from three Greek words signifying "books in several languages." The application of the word is restricted to the Bible. The idea of a Polyglot Scriptures seems to have been first conceived in the third century by Origen, who spent many years in forming the Old Testament into such a work.

**FIRE AND WATERPROOF CEMENT.** A. M. C.—To half a pint of milk put an equal quantity of vinegar, in order to curdle it; then separate the curd from the whey, and mix the whey with the whites of four or five eggs, beating the whole together. When it is well mixed, add a little quick-lime through a sieve, until it has acquired the consistency of thick paste. With this cement, broken vessels and cracks of all kinds can be mended. It dries quickly, and resists the action of fire and water.

**ECHOS.** Lena.—One of the most remarkable echos of the character alluded to by our correspondent, is that described by Sir John Herschel, as produced by the suspension bridge across the Menai Straits in Wales. The sound of a blow with a hammer on one of the main piers is returned in succession from each of the cross beams which support the roadway, and from the opposite pier at the distance of 576 feet; and, in addition to this, the sound is many times repeated between the water and the roadway, at the rate of twenty-eight times in five seconds.

**RULES FOR READING.** E. J. J.—Several correspondents have addressed us on this subject; our reply will therefore be of general application, for we quote the words of the celebrated Lavater on this important matter. He says—"Read the best books which wise and sensible persons advise, and study them with reflection and examination;—that is, ask yourselves 'Do I understand what I read? Do I benefit by it? Do I become wiser and better thereby?' Read with the firm determination to make use of all you read; do not, by reading, neglect a more immediate or more important duty; do not read with a view of making a display of your reading; do not

read too much at a time. Reflect on what you have read, and let it be a nourishment of the heart and soul, moderately enjoyed, and well digested."

**RICE-FLOUR CEMENT.**—A correspondent has favoured us with the following receipt:—"An excellent cement may be made from rice-flour, which is at present used for that purpose in China and Japan. It is only necessary to mix the rice-flour intimately with cold water, and gently simmer it over a fire, when it readily forms a delicate and durable cement, not only answering all the purposes of common paste, but admirably adapted for joining together paper, cards, &c., in forming the various beautiful and tasteful ornaments which afford much employment and amusement to the ladies. When made at the expense of plaster of clay, models, busts, &c. relieves, &c. may be formed of it, and the articles, when dry, are susceptible of high polish, and very durable."

**NEEDLEWORK.** L.—Surely our correspondent must be a bachelor of the most hopeless character, when he complains of the time absorbed in this useful occupation by ladies generally. In common with all the female sex, he is too much indebted to this graceful accomplishment, so essential to our comfort, to grudge the labour bestowed upon it by our fair countrywomen, whose good sense leads them to prefer industrious occupation to habits of flirtation and folly. "I have seen many females in England," writes a German prince, "who thought themselves highly accomplished because they could spoil a yard of canvass with some wretched attempt at a portrait or a landscape, or set the teeth of an audience on edge by the miserable execution of a composition of Haydn or Mozart; but have never thought them sufficiently accomplished to become good wives. I have seen others quickly at work with their needles, on plain or fancy needlework, looking like angels of benevolence, as their taper fingers laboured over an embroidered handkerchief for a father or a brother, or on the frucks and gowns for the children of a poor peasant. These are the women for wives, for they are generally housewives."

**COMMUNICATIONS RECEIVED.**—B. (capital, means the representation of property).—W. S. F. (many thanks, but the contribution is declined).—M. S. (we are averse to any political discussion).—E. (the original of Magna Charta is preserved in the British Museum. Originals of Magna Charta (or contemporaneous copies of it) are in various public institutions throughout the country).—L. G. (a foot, or fess, was a grant of land to a vassal, on conditions to the lord, as for military service, &c. This service for land was the feudal system).—MEXON (the Chevalier Bayard was killed in 1524).—QUAKY (there can be no question that the wool of sheep deteriorates as the carcass of the animal is increased).—MEMO (Chinese chronology is founded on their observation of eclipses 4700 years ago).—MECHANIC (the spinning-jenny was invented by Hargrave, in 1776).—W. S. S. (griffins and hyppogriffs are now believed to have been poetical creations of the ancients, though so gravely described by many authors).—STUDENT (the Black Sea is believed formerly to have been united with the Caspian, and also to have extended its bounds to the north and west).—J. JAMES (the idea of our correspondent is not so novel as he supposes. M. Kempeleon, an Hungarian, some years ago, made a speaking machine: it consisted of a reed or glottis, or air chest with valves, bellows for lungs, a mouth, jaws, and nostrils. It pronounced most letters perfectly).—MARY (crickets may be destroyed by putting snuff into the holes and cracks from whence they come).—E. E. H. (to soften the hands, wash them with sand-soap, and rub them afterwards with rose-cream or almond cream).—ELIZA M. (all young persons residing in the country should understand dress-making).—M. H. (ink may be extracted from linen by stretching the part over a cup of boiling water, and rubbing on it with the finger some oxalic acid or salt of lemon. Then wash the place immediately in soap suds, and rinse it in cold water).—ETA (raw onions sliced, and set on plates about a newly painted room, are said to take away the smell of paint).—MARA (tables may be polished with cold-drawn linseed oil, rubbed on for a long time with a soft brush).—O. P. G. (mortmain means such a state of possession as makes it unalienable, whence it is said to lie in a dead hand).—HANDING (the manufacture of porcelain has been carried on in China since 422).—CIVIS (there are ninety-one city companies, twelve of which are the chief, and are styled "the Honourable").

[PRICE ONE PENNY.]

## THE LION AND THE EAGLE.

A FABLE. (FROM THE SPANISH OF YRIARTE.)

As once, perplex'd with cares of state,  
The lion and the eagle sat  
In earnest consultation—  
For like the autocrats of men,  
They held a congress now and then,  
To put down innovation—

Among their topics of complaint,  
Enough to vex a brute or saint,  
The eagle grumbled sadly,  
That—though the bulk of them were bad—  
Of all the subjects that he had,  
The bat behaved most badly.

"This thing," he cried, "this nondescript,  
Whom nature in mistake equip'd,  
A mouse with wings of leather,  
Climbs to my skyey palace oft,  
And passes for a bird aloft,  
Although without a feather.

"But quickly, if a quarrel rise,  
Away the renegade flies,  
And dropping earthward, mutters  
That he's a real quadruped,  
And better born and better bred  
Than any bird that flutters.

"In short, the wretch in turn attacks  
Both bird and beast behind their backs,  
And even dares to slander  
At times our royal selves, alas!  
And says that you are half an ass,  
And I am quite a gander."

"What! half an ass!" the lion cried,  
"My majesty thus vilified!  
The bat—by all that's regal—  
No more shall tread the earth, I swear."  
Nor shall it ever mount in air  
Again," replied the eagle.

And thus from earth and air outlaw'd,  
(For both the monarchs are abroad  
By day in their dominions),  
The bat is forced to shun the light,  
And only dares to ply by night  
His solitary pinions.

So merchant authors—they who range  
Between Parnassus and the 'Change,  
Sole denizens of neither—  
Who seek to play a double game,  
To grub for gold and fly at fame,  
Are seldom bless'd with either."

## THE LADY OF THE ROCK.

A HISTORICAL TALE OF THE TIME OF CHARLES THE FIRST.

### CHAPTER VI.

"Patience and sorrow strove  
Which should express their goodwill."—SHAKESPEARE.

We pass over that brief period in history during which the new form of government established by Cromwell flourished, and the usurper and his successor, under the title of Protector of the Commonwealth, enjoyed a larger share of power than had previously been attached to the regal dignity. It will be remembered, that the deficiency of the latter in those qualities requisite to his responsible position, soon led him formally to resign the Protectorship, and his abdication speedily paved the way for the restoration of Charles II. to the throne of his ancestors. Unfortunately for the chief characters of our tale, one of the first and most natural aims of the new king on his accession, was to seek the conviction and punishment of the court who had so presumptuously, although, in many instances, so conscientiously, passed that sentence against his father, which we have seen reluctantly carried into execution.

Many of these had fled at the first rumour of the Restoration, in anticipation of the worst, so that, on the command of Charles, only twenty-seven persons—judges and accomplices inclusive—could be arrested. These had now been incarcerated three weeks awaiting their trial, which was deferred, from time to time, in the hope that more of the regicides might yet be brought to justice.

Among those thus imprisoned, were Henry Lisle and William Heath, whose fates are interwoven with this narrative.

Leaving this needful preface to what is to follow, let us again visit Lisle's mansion—the same which witnessed the marriage of his daughter. Several years have elapsed since that event; and after the mournful impression caused by the death of the ill-fated king had been obliterated from her mind—for time has the power speedily to heal all wounds not absolutely inflicted upon the affections—till within the last few weeks, the life of Alice Heath had flowed in as smooth a current as any who had beheld her on her wedding-night could, in their most extravagant wishes, have desired. In their untroubled union, her husband had heretofore forestalled the wife's privilege to minister and prove devotion—a privilege which, however, when the needful moment demanded it, no woman better than Alice was formed for exerting. Trouble had not yet darkened the young brow of either; nor pain, nor sorrow, not the first ungratified wish, come nigh their dwelling. Under the same roof with her pious and austere, but still affectionate father, the daughter had been torn from no stronger tie, in linking herself to another by a still nearer and indissoluble bond. There had been nothing to desire, and nothing to regret. The life of herself and husband had been as near a type as may

be of the perfect happiness we picture in heaven; save that with them it was now exchanged for sorrow, more difficult to bear from the bitter contrast.

It is an afternoon in September. Alice, not materially changed since we last saw her—except that the interval has given, if anything, more of interest and character to her features—is in her own room, busily engaged in arranging articles in a travelling-trunk. Her countenance is sad, with a sadness of a more engrossing and heartfelt kind than that which touched her with a mournful shadow, when she grieved for the fate of Charles Stuart—for there is an incalculable difference between the sorrow that is expended between a mere object of human sympathy, and that which is elicited by the distress and danger of those we love. And the sadness of Alice was now connected with those dearer to her than life itself. No tear, however, dimmed her eye, nor shade of despair sat upon her brow. Feeling that the emergency of the occasion called upon her to act not only for herself, but for others, the bravery of true womanly resolution in affliction—resolution which, had she alone been concerned, she might, perhaps, never have evinced, but which, for the sake of others, she had at once summoned to her aid—was distinguishable in her whole deportment, as well as in her every movement.

As she was engaged with great seeming interest in the task we have described—the articles alluded to consisting of the clothing suitable for a female child of tender age—the little creature for whose use it was designed was sitting at her feet, tired of play, and wondering, probably, why she was employed in this unusual manner. Alice frequently paused in her occupation, to cast a look upon the child—not the mere hasty glance with which a mother is wont to satisfy herself that her darling, is for a moment out of mischief or danger—but a long, devouring gaze, as though the refreshing sight were about to be removed for ever from her eyes, and she would fain ere the fatal moment arrived, stamp its image indelibly on her memory. Who shall say what thoughts, what prayers, were then stirring in her bosom?

The little object of this solicitude had scarcely told her fifth year; and the soft ringlets which descended half-way down the shoulders, the delicate bloom, the large, deep blue eyes, and flexible features; made such an ideal of childish beauty as artists love to paint, or sculptors to model.

When Alice had finished her employment she took the little girl in her arms, and pressed her to her heart, with a feeling, as it would seem, almost of agony. The child, though at first alarmed at the unusual vehemence of her caresses, presently, as if prompted by nature, smiled in reply to them. But the artless prattler had no power to rouse her from some purpose on which her thoughts appeared deeply as well as painfully intent. Putting the little creature aside again, she drew near to her writing-desk, and seating herself before it, penned the following letter:—

"MY DEAR FRIEND.—It is now some weeks since the imprisonment of my husband and father, who are still awaiting their trial. The active part which the latter is known to have taken in the punishment of the late unhappy king, precludes all hope of their pardon. But I have matured a plan for their escape, which I am only waiting a fitting moment to put into execution. When this is effected, we will take refuge in your American colonies. I have the promise of influential friends there, to assist in secreting us until it shall be safe to dwell among you publicly—for this country can never again be our home.

"In the mean time, as some friends are about embarking, after a struggle with myself I have concluded to send my little daughter in advance of us, lest she might prove an incumbrance in the way of effecting the escape alluded to, inasmuch as she has already been a great hindrance to detain me at home many hours from the dear prisoners—to both of whom my presence is so needful, especially to my husband, who is extremely ill in his confinement.

"I need not say that I feel all a mother's anxiety in parting with my child. But I have confidence that you, my friend, will faithfully supply my place for as long a time as may be necessary. It has occurred to me that it would be well to let the impression go abroad among you, that my daughter is the young relative whom you were to receive by the same vessel, and of whose recent death you will be apprised. This may shield her in some measure from the misfortunes of her family; and I would be glad, therefore, if you would humour the innocent deception even with all of your household, until such time as we may reclaim her. With a firm reliance on my Heavenly Father, I commit my precious infant to His protection.

"ALICE HEATH."

She had just concluded when a servant appeared at the door. "Some ladies and a gentleman, madam," said he, "have called, and are waiting in the drawing-room. They came in a travelling-carriage, and are equipped as if for a long journey."

"Remove this trunk into the hall," replied Alice, "and then say to the visitors that I will see them presently. They have already come to see me."

my darling," added she, to herself. "I scarce thought that the hour had yet arrived."

As she spoke, she set about attiring the child with great tenderness, seemingly prolonging the act unconsciously to herself.

"Now, the Lord in Heaven keep thee, precious one!" she exclaimed, as at length, the motherly act terminated; and imprinting on her face a kiss of the most ardent affection, though without giving way to the weakness of a single tear, she bade her from the chamber.

We leave the reader to imagine the last parting moments between that mother and her child. She who had framed the separation as an act of duty, was not one to shrink at the last moment, or betray any faintness of spirit. With a noble, heroic heart, she yielded up the young and helpless treasure of her affections to the guardianship of others, and turned to expend her capacities of watchfulness and care upon another object. How well she performed this labour of love, notwithstanding the trial she had just experienced—how far she succeeded in dismissing the recollection of it from her mind sufficiently to enable her to sustain the weight of the responsibilities still devolving upon her, we shall now have an opportunity to determine.

Within another half hour, Alice entered the cell of a prison. It was one of those constructed for malefactors of the deepest caste, being partially under the ground, and partaking of the nature of a dungeon. The mighty stones of the wall were green and damp; and, together with the cold clay floor, were sufficient of themselves to suggest speedy illness, and perhaps death, to the occupant. Its only furniture consisted of a single wooden stool, a pallet of straw, and a rude table.

On the pallet alluded to lay a man in the prime of life, his eyes closed in sleep, and the wan hue of death upon his countenance. One pallid hand, delicate and small as a woman's, rested upon the coarse coverlet, while the other was placed beneath his head, from which streamed forth a profusion of waving hair, now matted and dull, instead of glossy and bright, as it had been in recent days.

When Alice first entered, the sleeper was breathing somewhat disturbedly; but as she approached and bent over him, and raising the hand which lay upon the quilt, pressed it to her lips, his rest suddenly seemed to grow calm, and a faint smile settled upon his mouth.

"Thank God!" whispered she to herself, as she replaced the hand as quietly as she had raised it; "my prayer is heard—the fever has left him, and he is fast recovering."

Seating herself on the wooden stool by his side, she remained watching him with looks of the most devoted interest and affection. In about half an hour he heaved a deep sigh, and, opening his eyes, looked around to the spot where she was sitting.

"You are a guardian angel, dear Alice," said he; "even in my dreams I am conscious of your presence."

"Saying the little time that I must steal from you to bestow upon my poor father, I shall now be ever present with you," answered Alice. "I have placed our little one in safe keeping, and henceforth, while you remain here, I shall have no other care but yourself."

"Methinks I have already been too much your sole care, even to the neglect of your own health. Yet, except that sad look of sympathy, you seem not the worse for the tending me, else I might, indeed, reproach myself for this illness."

"Well might William Heath say she had nursed him with unselfish care, for never had it fallen to the lot of sick man to be tended with such untiring devotion. For weeks she had watched his every movement and look—anticipated his every wish—smoothed his pillow—held the cup to his parched lips—soothed him with gentle and sympathizing words when in pain—cheered him when despondent—and seized only the intervals when he slept to perform her other duties as a mother and a daughter. It is no wonder, therefore, that it appeared to him that she had never been absent from his side.

Gently repelling his insinuation that she had been too regardless of herself, she turned the conversation to a topic which she was conscious would interest and cheer him.

"Continue to make all speed with this recovery, which has thus far progressed so finely," she said, "for the opportunity for your escape from this gloomy place is only waiting until your strength is sufficiently recruited to embrace it."

"That prospect it is alone," replied the invalid, "held up before me so constantly as it has been during my illness, which has had the power to prevent my sinking joyfully into the grave from the miserable bed, rather than recover to die a more vigorous and unnatural death."

"It waits alone for your recovery, dearest," repeated his wife; "and once in the wild woods of America, you will be as unconfined and free as her own mountain air, till the very remembrance of this dungeon will have passed away."

"Sweet comforter," he said, taking her hand and pressing it gratefully, "thou wouldst beguile my thoughts thither, even before my footsteps are able to follow them."

"Thank me for nothing," said Alice; "I am but selfish in all. The rather return thanks to the Lord for all His mercies."

"True, He is the fountain of goodness, and His greatest of all blessings to me, Alice, is bestowed in thyself."

"I fear thou art conversing too much," said Alice, after a moment's pause; "and I would not that a reply should retard this projected escape a single day. Therefore I will give thee a cordial, and thou must endeavour to rest again."

So saying, she administered a soothing potion, and, seating herself by his side, she watched him until he fell into a peaceful slumber. Then, stealing

so noiselessly away from his pallet that her footsteps were inaudible, she gently approached the door, and gazed along a gallery—for it was now dark—until she reached another door. It communicated with a cell similar in all respects to that we have described.

Within this, before a table, sat the figure of a solitary man. He was elderly, but seemed more bent by some recent sorrow than by the actual weight of years; yet his brow was somewhat wrinkled, and his locks in many places much silvered with grey. But his countenance was remarkable, for it evinced a grandeur and dignity of soul even through its trouble. Beside him, upon the table, burned a solitary candle, whose long wick shed a blue and flickering light upon the page of a bible, open before him.

Unlatching the door, Alice paused, for the clear and deep voice of the inmate fell upon her ear: "Behold, happy is the man whom God correcteth; therefore, despise not thou the chastening of the Almighty; for he maketh sore and bindeth up—he woundeth, and his hands make whole. He shall deliver thee in six troubles: yea, in seven there shall no evil touch thee."

Advancing, Alice threw her arms affectionately round the neck of the person we have described, and interrupted the reading, which, even more than her occasional visits, was his chief stay and solace in his imprisonment.

"Thou wilt rejoice with me, my father, that William is recovering. All that is needful now is for him to gather strength sufficient to quit this place. I trust that ere six weeks have elapsed we shall be on our way to America."

"Forget not Him, my child, to whom thy thanks are due for thy husband's prospect of recovery. Remember the Lord is in the midst of His mercies."

"I do, my father, and we will return praises together ere I leave you."

"Saidst thou, Alice," asked the old man, after a short silence, "that before six weeks have passed away, we may be freed from this prison-house?"

"Yes, even so; and I have this day sent my infant in advance of us."

"The Lord hath indeed been gracious to us, my daughter. Let us arise at once, and give thanks to His holy name."

At these words they arose together, after the manner of their sect, and in an earnest, pathetic tone, the voice of the aged puritan ascended to heaven. No palace halls, or brilliant ball-rooms, or garden walks, or trellised bowers, have ever shown so interesting a pair—no festive scenes, gorgeous revels, or glittering orgies, ever rose upon so beautiful an hour as did the captive's cell in that season of prayer.

## CHAPTER VII.

"A lovely child she was, of looks serene,  
And motion which on things indifferent shed  
The grace and gentleness from whence they came."  
SHELLEY.

A strong gap in this narrative places the present action of our story in America. It is needless here to narrate the first settlement of the New England colonies. The landing of the Pilgrim Fathers has been immortalised both in prose and verse, until it has become as familiar to each American as any household word. We will not, therefore, ask the reader's detention at the perusal of a twice-told tale. It is likewise known that that landing was but the herald of a succession of emigrations, and the establishment of numerous colonies. Owing to the talent and liberal education, not less than the enterprise of the early settlers, this wilderness was not long, in spite of repeated obstacles, ere it grew up into flourishing villages and towns, and some of them fairer than had ever graced the stalwart ground of Old England.

We introduce the reader into one of those villages, situated some twenty miles distant from New Haven. It might somewhat surprise him when we say, were it not for the frequent instances of the rapid growth of cities in the western wilds, which we would remind him have sprung up within his own recollection, that the latter place was, even at the period to which we refer, a flourishing and important town. Yet, notwithstanding the superior size and consequence of New Haven, the village of L— was the place in which the governor of the colony chose to reside.

Had the course of our narrative not led us thither, we could have selected no better sample than L— of the truth of what we have asserted regarding the existence of neat and attractive villages in New England at that early day. It was situated on the high road, in a small valley, through which wound down certain rocky falls a clear rivulet that afforded excellent opportunities of fishing to such of the inhabitants as were fond of that recreation. These, however, were few; for then, as now, the people of Connecticut possessed much of the same busy spirit which is one of their distinguishing characteristics. The glassy brook alluded to served yet another purpose during the season when the sportive inhabitants of the watery elements had disappeared. In the winter time, when thickly frozen over, it formed, out of their school hours, the grand resort of the children of the village for the purpose of skating and sliding. There, at those times, on a clear bracing day, such as no other country but New England ever shows in perfection, might always be seen a crowd of these happy beings of both sexes, and of various ages, all collected together, some to partake, and others merely to observe, the amusements mentioned.

Upon a certain day, the neighbourhood of the brook was thronged even to a greater extent than usual, owing to the exceeding brightness of the weather, which had led some of the tenderest mothers to withhold their customary mandate enjoining immediate return from school, lest the beloved object of the command might suffer from playing in the cold. Among those who had thus had their ordinary restrictions removed, was a little girl, whose extreme loveliness must have attracted the attention of any observer. Her features were not merely beautiful, but there was a charm in her countenance

more attractive still—that purity and mildness which our fancy attributes to angels. There was a bewitching grace, moreover, in her attitude, that might have furnished delighted employment to the painter and sculptor, had there been any time or inclination among the colonists to bestow upon the cultivation of the arts.

This child was seemingly about five years old. She was standing, with a number of other little ones of her own age, looking on with great apparent delight—now at the larger boys who were skating dexterously, and describing many a circle and angle, unknown in mathematics, upon the smooth surface of the brook, and then at a number of girls merrily chasing each other upon a slide at one side.

As one of the large boys spoken of passed her, he said, "Come, Jessy, I will give you a ride upon the ice;" and, taking her in his arms, he was soon again gliding rapidly along.

"Take care!" shouted a noble-looking youth, whose glowing complexion and sparkling eye shone with the excitement of the exercise. "Take care, the ice is slightly cracked there, and it will scarcely bear the double weight."

It was too late. Ere the words were well spoken, the ice gave way, and the boy who bore the fair burden sunk beneath the congealed element.

One loud shriek from the mingled voices of the young spectators announced the frightful accident.

With the speed of lightning, the youth who had uttered the words of warning darted forward, and plunging under the ice, disappeared from view.

Great consternation prevailed for some moments. Many of the children gave way to loud cries; others quietly wept; while a few of the older and more considerate ran toward their homes, in order to summon assistance.

In less time than it has taken to represent the state of feeling which prevailed during his absence, Frank Stanley rose to the surface, bearing in his arms the unconscious form of the young creature he had saved. Recovering his position on the ice, he speedily regained the shore, and overcome with his exertion, laid her gently on the ground.

The heart in his bosom was frozen with cold, but a quickening thrill passed through it, boy as he was, as he gazed upon those sweetly composed features. Her hair was dripping, and her long wet tresses lay upon her cheek as quietly as upon that of a dead child.

As his companions came up bearing the other sufferer, Frank Stanley hastily snatched off his own saturated coat, and spread it over her senseless body, ere he again, with recovered strength, raised her in his arms.

The alarmed villagers by this time came flocking to the spot, amongst whom was the governor of the settlement, whose venerable and striking countenance manifested peculiar anxiety.

"My niece is safe, Governor H—," said Frank Stanley, pressing forward, and exposing his fair burden. "She is merely insensible from fright."

"Thank God that she is saved!" exclaimed the Governor, receiving her in his arms. "But whose rash act was it," continued he, looking sternly around among the boys, "that exposed my Jessy to such peril?"

Something like a flush of indignation passed over the countenance of young Stanley, as he replied, "It was an accident, sir, which might have happened in the hands of more experienced persons than ourselves."

"Thou hast been in danger thyself, Frank, hast thou not?" asked the Governor, his stern mood giving way immediately at the sight of the youth's dripping clothes. "And is there no one else more dangerously injured?" inquired he, casting an anxious, scrutinizing glance among the collected group.

"Frederick, here, is wet too; but not otherwise the worse for the accident."

"Let him and Frank, then, immediately return to their homes, and don dry garments; and I must look to my little girl here, that she do not suffer for this."

So saying, the Governor turned and departed, pressing the little lifeless one more closely in his arms.

His disappearance was the signal for the dispersion of the group; the young members of which turned toward their homes, much sobered in spirits from the accident here related.

Following Governor H— to his home, we will leave him for a moment, and pause to describe that rustic dwelling. It was situated at some little distance from the main village, and was of larger size than most of the cottages there. On each side of a graceful portico stretched piazzas, covered in summer with roses and woodbine, while the neat enclosure in front, surrounded by its white paling, bloomed richly with American plants and shrubbery. At this season, however, the roses were dead, and the shrubbery lifeless; and the frozen ground of the well-kept walk rung under the tread of the stout governor, as he flung open the gate and rapidly approached the house.

At the door, awaiting Governor H.'s arrival, with great anxiety depicted on their faces, stood two female figures—the one a genteel matron, somewhat advanced in years, and the other a young lady of less than twenty summers.

"Relieve yourselves of your apprehensions," said the Governor, in a loud voice, as soon as he came within speaking distance—"She had merely fainted from fright, and seems to be even now gradually recovering."

"The Lord be praised!" exclaimed the ladies, advancing to the steps of the portico to meet him.

They entered the house together. In a moment the fainting child was laid upon a couch, and being quickly attired in dry clothing, restoratives were actively applied. The older female chafed her small, chilled palms in her own, while the younger hastened to administer a warm drink to her frozen lips.

After a short time she unlosed her eyes, smiled faintly, and throwing her

dimpled arms around the neck of the young lady who bent over her, burst into tears. "My dear sister," she said faintly, "I dreamed that I had gone to heaven, where I heard sweet music, and saw little children like myself, with golden crowns upon their heads, and beautiful lyres in their hands."

"God has not called thee there yet. He has kindly spared thee to us a little longer," said the young person to whom she spoke, stooping down and kissing her tenderly, while she, in like manner, relieved herself by a flood of tears.

"The Almighty is very merciful," said the matron, wiping her eyes, while something like a moisture hung upon the lashes of the Governor's gleaming orbs, and dimmed their usual keenness.

"I am not ill, uncle, aunt, Lucy, and we need none of us cry," said the child, with the fickleness of an April day, and the elasticity of her years, instantly changing her tears for smiles. "See! I am able to get up," she added, disentangling herself from the embrace of her whom she had called her sister, and sitting upon the side of the couch.

At that moment a shadow without attracted her attention. "There is Mr. Elmore, Lucy!" she exclaimed, with childish glee.

The young lady had barely time to wipe away the traces of her recent emotion, when a tall figure crossed the portico, and entered the room without ceremony. The new comer was a young man in the bloom of youth. As he entered he lifted his hat, and a quantity of fair brown hair fell partially over a commanding forehead.

The governor and his wife advanced and greeted him cordially, while the blush that mantled on the cheek of Lucy Ellet, as she half rose and extended her hand to him, told that a sentiment warmer than mere friendship existed between them.

"Where is the young heroine of this accident, which, I hear, had a wail-nigh proved fatal?" asked the stranger, after he had exchanged congratulations with the rest.

The little Jessy, who had at first shrunk away with the bashfulness of childhood, here timidly advanced. The stranger smiled, stroked her soft ringlets, kissed her fair brow, and she nestled herself in his breast.

The whole party drawing near the fire, an interesting specimen was now exhibited of those social and endearing habits of the early settlers, peculiar to their intercourse.

The simple room and furniture were eloquent of the poverty of home. Not decorated by any appendages of mere show, whatever could contribute to sterling comfort was exhibited in every nook and corner of the good-sized apartment. The broad, inviting couch on which the rescued child had lain, was placed opposite the chimney. Two great arm-chairs, covered with chintz, and garnished with rockers—the seats belonging to the heads of the family—filled a space on either side of the hearth, within which burned a huge turf fire, that threw its kindly warmth to the remotest walls. Coiled on a thick rug before the fire lay a large Angola cat. A mastiff dog had so far overcome his natural antipathy to her race, as to keep her company on the other side; while the loud breathings of both evinced the depth of their slumbers.

While the party were agreeably engaged in conversation, they were suddenly interrupted by a loud knock at the door.

"Who can that be?" said the Governor. "Will you ask who knocks, Mr. Elmore?"

The latter rose and unlatched the door, when two figures crossed the threshold.

"Pray pardon us," said one of the new comers, in a courteous voice, "but having business of importance with the Governor, we have ventured to intrude"—and he lifted his hat with something of foreign urbanity.

The speaker was not handsome, but there was a certain elegance in his air, and intelligence in his countenance, that were agreeable. He was clad in a velvet travelling-dress, and possessed an address greatly superior to any of the villagers; at the same time that his height was calculated to inspire that admiration which the appearance of great strength in his sex always inspires.

His companion was totally different in all outward respects.

"Walk in, gentlemen, and approach the fire," said Governor H., rising, and eyeing the strangers with a keen and rather dissatisfied glance.

In drawing near, the younger gallant cast an unexpressed look of admiration upon Lucy Ellet, that caused her to bend down her sparkling eyes, which had previously been fixed on himself and his companion, with an arch expression of penetrating curiosity.

(Continued at Page 273.)

A LETTER TO ROYALTY.—The following is a literal copy of a letter sent by Adam Bryden, a farmer, residing at Howick, to George IV. There was some delay in the delivery, but it reached the royal hand:—"Dear Sir,—I went thirty miles yesterday on foot to pay your taxes; and, after all, the bodies would not take them, saying that I was too late, and that now they must be recovered by regular course of law. I thought if you were like me, money would never come wrong to you, although it were a few days too late; so I enclose you £27 in notes and half-guineas, which is the amount of what they charge me for the last half-year, and fourpence-halfpenny over: you must send me a receipt when the coach comes back, else they will not believe that I have paid you. Direct to the care of Mr. Andrew Wilson, Wharfedale, in Howick. I remain, dear Sir, your very humble servant, Adam Bryden. August 6, 1825.—P.S. This way of taxing farmers will never do; you will see the upshot. To His Majesty, George Rex, London."

## SAND.

BY RICHARD MANSON.

WHAT is sand? We fancy we hear many a visitor at our watering-places exclaiming—"Why, it's a nasty, brown-looking stuff, that blows into your ears, eyes, nose, and mouth; insinuates itself into your pockets and food; and contrives to make you, in one way or the other, extremely uncomfortable!"

Now, let us examine and see what sand really is; and, if we can, derive some information from it. The sand of the sea-shore consists of small particles of the well-known mineral quartz, necessarily mixed with bits of shells, wood, &c.

Quartz occurs crystallised in the form of rock-crystal, which is a compound of the two elements, silicon and oxygen—called silica; hence quartz or rock-crystal, silica, and sand, are synonymous; and thus we find, that every atom of the numberless grains of sand on our shores, is composed of one atom of silicon and three of oxygen. Such is the chemistry of sand.

But whence does all the sand come?

Along our coasts, the shore is in many places composed of sandstone rocks, on which the sea beats; and the rock, being disintegrated and worn down, is carried into the sea in the form of sand; and this simple process forms the manufactory of the immense quantities of sand which line our coasts.

On the coast of one county alone—Cheshire—it is stated that the sea has encroached no less than half a mile on the sandstone cliffs within the last century; and the grotesque rocks, known to the Liverpoolians as the "Red Noses," afford, in their hollow caves and tunnelled sides, good evidence of the power of the ocean wave.

On the coast, sand is presented to us under two well-known aspects—as sand-hills or sea-beach. Now, a sand-hill is nothing more than sand out of reach of the ocean, and under the influence of wind and heat. The heat of the sun rapidly vapourises the water which holds the grains of sand together, and leaves it ready for the action of the wind; which, accordingly, blows about the loose sand from place to place, first forming it into hillocks, and then excavating it into hollows—sometimes blowing it back to the sea, at others causing it to encroach inland.

The changes effected by wind-blown sands are sometimes very considerable; farms, houses, fields, and even churches have been covered by its accumulated heaps. Sir Charles Lyell mentions a district in the north of Cornwall, once cultivated and inhabited, where "the drifted sands now form hills, several hundred feet above the level of the sea." In Ireland, again, on the coast of Sligo, a sand inundation has destroyed seven hundred acres of once fertile land, and overwhelmed a whole village; and the writer well remembers a spot on the Lancashire coast, near Farnby, where nought but sand was to be seen, being pointed out to him as the site of a once well-cultivated and prosperous farm.

A sand shore, again, is sand within reach of the ocean; the constant flow of which binds together the unsettled particles, and, when the tide retreats, forms a beautifully smooth walk, as firm as any made by the hand of man.

Who has not walked with delight on such a promenade, with the healthy breeze to invigorate him, and the ever varying scene around to amuse him? or, if he be a student of nature, with the beautiful corallines, the curious shells, or the active bird, to instruct him? Nor is this all; the attentive and well-trained eye often sees in some of, perhaps, the most despised objects of creation, a key to open the lock of some scientific mystery. The mark left by a wave on the sandy beach may appear too trivial for notice; it is left by the travelling waters, it will be obliterated, perhaps, ere to-morrow; and yet, in its fugacious markings can be traced a connexion between the sands we walk upon and those sands—now sandstones—which once formed the shores of ancient seas, long ere the creation of man. On many a sandstone block, fresh from the quarry, have we seen ripple-marks as distinct and as well-defined as those to be seen every day on our shores. Hard as is the sandstone rock, yet it was once a sandy shore, on which the surges of an antehominal ocean beat, and where antehominal creatures trod as we now tread, left their footprints as we leave ours; and though, in the generality of cases, these have been obliterated, yet some have remained; and we can speculate—nay, more than speculate—on the form, size, and structure of gigantic reptiles, which, but for their fossilized footprints, would have been almost unknown to us.

We have frequently seen and examined these strange relics of still stranger monsters. Fancy the impress of a large man's hand, somewhat uncouth in detail, with the thumb much turned out, and you have a good idea of a fossil footprint of a labyrinthodon, as found in German and English new red sandstone quarries. Imagine a frog as big as a rhinoceros, with a head like an alligator, slowly moving over the sandy shore, and leaving the impress of its hand-like feet on the beach, and you have before you one of the inhabitants of our world, thousands upon thousands of years before man, or any existing animals were created.

But we have said enough. Knowledge can be extracted from a stone; science from a leaf; instruction from a ripple-mark; and, "from the barren sands of the sea-shore, enjoyment of the purest character,"—enjoyment arising from being able to apply one page of Nature's great volume to elucidate another, and to be able to read from both when combined, that great lesson of humility—that lesson of practical insight into the wisdom of God's works, that teaches us to reverence, love, and adore the great Ruler of all, as the source of all good, and as the fount whence we derive our greatest blessings.

## LIVING LIKE A LADY.

MR. HAMILTON BURGESS was a man of limited means, but having married a beautiful and amiable woman, he resolved to spare no expense in surrounding her with comforts, and in supporting her, as she said, "like a lady."

"My dear Amry," said Mrs. Burgess to her indulgent husband, about a year after their marriage—"My dear Ammy," (this was the name she called him by at home,) "you are too kind to me, altogether. You are unwilling that I should work, or do anything towards our support, when I actually think that a little exertion on my part would not only serve to lighten your expenses, but be quite as good for my health and spirits as the occupations to which my time is now devoted."

"Oh, you industrious little bee!" exclaimed Mr. Burgess; "you have great notions of making yourself useful, I declare! But, Lizzy, I shall never consent to your propositions. I did not marry you to make you my slave. When you gave me this dear hand, I resolved that it should never be soiled and made rough by labour—and it never shall, so long as I am able to attend to my business."

Mrs. Burgess would not have done anything to displease her husband for the world, and she accordingly allowed him to have his way without offering further remonstrance.

But Hamilton's business was dull, and it required the greatest exertion on his part, and the severest application, to raise sufficient money to meet the daily expenses of his family.

"My affairs will be in a better state next year," he said to himself, "and I must manage to struggle through this dull season some way or other. I will venture to run in debt a little, I think; for any way is preferable to reducing our household expenditure, which is by no means extravagant. At all events, Lizzy must not know what my circumstances are, for she would insist upon a change in our style of living, and revive the subject of doing something towards our support."

Mr. Burgess then ventured to run in debt a little. He did not attempt to reduce the expenses of his housekeeping; he never gave his wife a hint respecting the true state of his business matters, but insisted upon her accepting, as usual, a liberal allowance of funds to meet her private expenses.

Lizzie seemed quite happy in her ignorance of her husband's circumstances; never spoke again of assisting to support the establishment, but seemed to devote herself to the pursuit of quiet pleasures, and to procuring Hamilton's happiness. But Mr. Burgess' circumstances, instead of improving, grew continually worse. His venture of "running in debt a little," resulted in running in debt a great deal. Thus the second year of his married life passed, and the dark shadows of disappointed hope, and the traces of corroding care, began to change the aspect of his brow.

One day a friend said to Hamilton—

"I am surprised at your conduct! Here you are, making a slave of yourself, while your wife is playing the lady. She is not to blame; it is you. She would gladly do something for her own support, if you would permit her; and it would be better for her and for you. Remember the admirable lines—

"Satan finds some mischief still  
For idle hands to do!"

"What do you mean?" demanded Hamilton, reddening.

"I mean that, generally speaking, young wives of an ardent temperament, when left to themselves, with nothing but their pleasures to occupy their minds, are apt to forget their husbands, and find enjoyment in such society as he might not altogether approve."

"Sir, you do not know my wife," exclaimed Hamilton. "She, thank Heaven! is not one of those."

"I hope not," was the quiet reply.

Although Hamilton Burgess had not a jealous nature, and would never have entertained unjust suspicions of his wife, these words of his friend set him to thinking. He remembered that Lizzie was always happy, however he might be oppressed with cares; and now he wondered how it was that she could be so unmindful of everything except pleasure, while he was so constantly harassed. The consistent Mr. Hamilton Burgess undoubtedly forgot that he had taken the utmost pains to conceal his circumstances from his wife.

It was in this state of mind that Mr. Burgess one day left his business and went home unexpectedly. It was at an hour when Lizzie least thought of seeing him, and on this occasion she appeared considerably embarrassed; nor did Mr. Burgess fail to observe that she was very tardy in making her appearance in the sitting-room.

On another occasion, Mr. Burgess returned home under similar circumstances, and going directly to his wife's room, found, to his astonishment, that he could not gain admittance. After some delay, however, during which Hamilton heard footsteps hurrying to and fro within, and whispering, Mrs. Burgess opened the door, and blushing very red, attempted to apologise for not admitting him before.

"Who was with you?" demanded Hamilton.

"With me?" cried Lizzie, much confused.

"Yes, madam. I heard whispering, and I am sure somebody just passed through that side door."

"Oh, that was nobody but Margaret!" exclaimed Mrs. Burgess hastily.

Hamilton could ill conceal his vexation, but he did not intimate to his wife that he suspected her of equivocation, nor did she see fit to attempt a full explanation of the matter.

Nothing was said of this incident afterwards; but for many weeks it occupied Hamilton's mind. All this time he was harassed with cares of

business, and his brow became more darkly shadowed in gloom, and his perplexities thickened. At last the crisis came! Mr. Burgess saw the utter impossibility of longer continuing his almost profitless trade, under heavy expenses which not only absorbed his small capital, but actually plunged him into debt. But one honest course was left for him to pursue, and he resolved to close up his affairs, and sell off what stock he had to pay his debts.

It was at this time that Mr. Burgess saw in its true light the error of which he had been guilty, in opposing his wife's desire to economise, and devote a portion of her time to useful occupation.

"Had I allowed her to lighten our expenses in this way," thought he, "I might not have been driven to such extremities. And what has been the result of my folly? Why, I have kept her ignorant of our poverty until the very last, and now the sudden intelligence that we are beggars will well nigh kill her!"

Satisfied of the danger, if not the impossibility, of keeping the secret longer from his wife, Mr. Burgess went home one day, resolved to break the intelligence to her without hesitation. Entering the house with his latch-key, he went directly to Lizzie's room, which he entered unceremoniously. To his surprise, he found on the table a gentleman's cap, of that peculiar fashion which he had seen worn by the dandies about town. Anxious for an explanation, he looked around for his wife; but Lizzie was not in the room. Then hearing voices in another part of the house, he left the room by a different door from that by which he had entered, and hastened to the parlour, where he expected to find Mrs. Burgess in company with the owner of that cap. To his surprise, he found the parlour vacant, and meeting Margaret in a moment after, he impatiently demanded to know where his wife was.

"She is in her room, sir," said the domestic.

Without saying a word, Hamilton again hastened to Lizzie's room, where he found her reading a magazine with affected indifference!

"Madam," cried he, angrily, "what does this mean? Here I have been chasing you all over the house, without being able to catch you. What company have you just dismissed?"

"What company?" asked Lizzie.

"Yes, madam, what company?"

"Do not speak so angrily, dear Ammy. Why are you so impatient?"

"Because I wish to know what gentleman has been favouring you with such a confidential visit!"

Hamilton remembered other occasions when, on his coming home unexpectedly, his wife had shown signs of embarrassment; and, added to this, her present equivocation rendered him violently jealous. She appeared to shrink from him in fear, and became alternately red and pale, as she answered—

"There has been no gentleman here to see me."

"No one?"

"No one, dear Ammy!"

Mr. Burgess was on the point of demanding to know who was the owner of the cap which he had seen on his wife's table, and which had now mysteriously disappeared; but emotion checked him, and he paced the floor in silence.

"This is too much!" he muttered at length, in the bitterness of his heart. "I could endure poverty, without uttering a complaint for myself; I could endure anything but this!"

"Why, Ammy, what is the matter?" cried Mrs. Burgess, in alarm.

"Nothing; only we are beggars!" answered Hamilton, abruptly.

"Have you been unfortunate?" calmly asked his wife, affectionately taking his arm.

"Yes; the most unfortunate of men! I am ruined—we are beggars—but—"

"Dear Ammy, you must not let this cast you down. Business failures frequently happen, but they ought never to destroy domestic happiness. Come, how bad off are we? Are we really beggars?"

"My creditors will take everything," answered Hamilton, gloomily.

"They will not take us from each other," said Lizzie.

Mr. Burgess looked at his young wife with a bitter smile.

"Are you such a deceiver?" he muttered through his teeth. "Can you talk thus when you have just dismissed a lover?"

"Sir!" cried Mrs. Burgess, a glow of indignation lighting her fair face.

"What do you mean?"

"Don't deny what I say!" replied Hamilton. "You were having an interview with a gentleman when I came in."

Lizzie trembled with indignation.

"I saw his cap on the table!"

Lizzie laughed outright. "Come here!" she said, leading her husband away.

Hamilton followed her, and she went to a bureau, unlocked a deep drawer, and opening it, called her husband's attention to its contents.

It was half full of caps!

Hamilton looked at Lizzie in perplexity. Lizzie looked at Hamilton, and smiled.

"I suppose that you will now declare that there are twenty gentlemen in the house," said Mrs. Burgess.

"Lizzie!" cried her husband, clasping her hands, "I am already ashamed of my suspicions. I ask your forgiveness. But explain this matter to me; I am dying in perplexity."

"Well," replied Lizzie, archly, "I made those caps."

"You?"

"Certainly; that is, I and Margaret. I kept my work a secret from you, because you were opposed to my exerting myself, and although you have come near surprising me more than once, I have carried on my treasonable designs pretty successfully until to-day."

"But, dear Lizzie, how could you?"

"I can answer that question. I saw pretty clearly into your business affairs, and knew that we could not live in this style long. So I thought I would disobey you. My cousin George, the hat manufacturer, seconded my designs, and privately sent me caps to make, nearly a year ago."

Hamilton opened his eyes in astonishment.

"Surprising, isn't it? But this is not all. You insisted on my keeping Margaret, when I might as well have done the housework myself; I thought I would make her useful, and made her help me with the caps. Besides, you were not satisfied if I neglected to use all the spending money you allowed me, and I pretended to use that, just to please you. Now, before you could me for my disobedience, witness the results of my industry and economy."

Lizzie opened her desk, and displayed to Hamilton's bewildered sight a pile of gold which filled him with greater astonishment than anything else.

"Of course," continued Lizzie, without allowing him to speak, "this little sum wouldn't make anybody rich, but I hope it will convince you that a wife's economy and industry are not to be despised."

"Lizzie! dear Lizzie!"

"Oh! this is nothing—only a sample of what I can do. Come, now, acknowledge your error, and say that I may have my own way in future."

Hamilton replied by clasping his wife in his arms.

"There, say nothing more about it," she continued. "Don't think of your misfortunes, but remember that we can be happy even if we both have to work hard. Poverty cannot crush us; and I hope I have already convinced you that work will not make me lose attraction in your sight."

The young husband's heart overflowed with gratitude and joy.

"How have I misunderstood you, dear Lizzie!" he exclaimed. "You are worth more to me than southern riches; and now that I know poverty cannot crush you, my mind is at ease. Lizzie, I am so happy!"

"And I may have my way?"

"Yes, always."

"Remember this!" cried Mrs. Burgess, archly. With a lighter heart than he had felt for many months before, Hamilton went about the settlement of his business affairs, while Lizzie devoted herself to perfecting a new system of housekeeping.

When Mr. Burgess came home at night, he was surprised at the wonderful change which had taken place during his absence.

"Don't you," said his wife, regarding him with a smile; "you said I might have my own way."

"True—but what have you done?"

"I have been making arrangements to let half the house to Mr. Smith's family, who will move in next week. They are pleasant people, and as we have twice as much room as we actually needed, I thought it best to take them. Then, again, we didn't need so much furniture, and if you like, you can sell Mr. Smith some of what we have, at a fair price."

Mr. Burgess neither frowned, nor looked displeased, nor did he ever afterwards oppose his wife's designs. He soon found his expenses so reduced, that with the fruits of his wife's industry added to his own, they were able to live quite comfortably and happily; and, although he soon became engaged in more profitable business, he never again urged her to indulge in the folly of "living like a lady."

## THE EVILS OF WAR.

BY MRS. SIGOURNEY.

"From whence come wars and fightings?"—JAMES IV. 1.

You will perhaps say, they have been from the beginning. The history of every nation tells of the shedding of blood. In the Bible and other sacred records of man, we read of "wars and fightings," ever since he was placed upon the earth.

Yet there have been always some to lament that the creatures whom God has made should thus destroy each other. They have felt that human life was short enough, without its being made still shorter by violence. Among the most warlike nations, there have been wise and reflecting minds, who felt that war was an evil, and deplored it as a judgment.

Rome was one of the most warlike nations of the ancient world. Yet three of her best emperors gave their testimony against war, and were most reluctant to engage in it. Adrian truly loved peace, and endeavoured to promote it. He saw that war was a foe to those arts and sciences which cause nations to prosper. Titus Antoninus Pius tried to live in peace with every one. He did all in his power to prevent war, and said he would "rather save the life of one citizen, than destroy a thousand enemies." Marcus Aurelius considered war both as a disgrace and a calamity. When he was forced into it, his heart revolted.

Yet these were heathen emperors. They had never received the gospel, which breathes "peace and good-will to man." The law of Moses did not forbid war: "An eye for an eye, and a tooth for a tooth," was the maxim of the Jewish people. But the law of Jesus Christ is a law of peace. "I say unto you, that you resist not evil," were the words not only of his lips, but of his example. His command to his disciples was, "See that ye love one another."

The spirit of war, therefore, was not condemned by the Jewish law, or by the ethics of the heathen. But it is contrary to the spirit of the gospel.

Have you ever seriously considered the evil and sorrow of war? how it destroys the lives of multitudes, and makes bitter mourning in families and

nations? You are sorry when you see a friend suffering pain, or a lame man with a broken bone, or even a child with a cut finger. But after a battle, what gashes and gaping wounds are seen, while the ground is red with the flowing blood, and the dying in their agony are trampled under the feet of horses, or covered with heaps of dead bodies!

Think, too, of the poverty and distress that come upon many families, who have lost the friend whose labour provided them with bread; upon the mourning of grey-headed parents from whose feeble limbs the prop is taken away; upon the anguish of wives for their slaughtered husbands; and the weeping of children, because their dear fathers must return to them no more.

All these evils, and many which there is not room to mention, come from a single battle! But in one war, there are often many battles. Towns are sometimes burned, and the aged and helpless destroyed. The mother and her innocent babes perish in the flames of their own beloved homes!

It is very sad to think of the cruelty and bad passions which war produces. Men, who have no cause to dislike each other, meet as deadly foes. They raise weapons of destruction, and exult to hear the groans of death. Rulers who make war, should remember the suffering and sin which it occasions, and how much more noble it is to save life than to destroy it.

Howard visited the prisons of Europe, and relieved the miseries of those who had no helper, and died with their blessings on his head. Buonaparte caused multitudes to be slain; and multitudes to mourn; and died like a chained lion upon a desolate island. Is not the fame of Howard better than that of Buonaparte?

The religious sect of Friends, or Quakers, as they are frequently called, never go to war. The beautiful state of Pennsylvania was originally settled by them. William Penn, its founder, would not permit any discord with the Indians, its original inhabitants. He obtained the land of them by fair purchase, and set the example of treating them with justice and courtesy.

In most of the other colonies there had been fearful wars with the savages. In ambush and massacre, the blood of the new-comers had been shed; and they had retaliated on the sons of the forest with terrible vengeance. Older States looked upon this proffer of peace as a dangerous experiment. They said, "These Quakers have put their heads under the tomahawk." But, on the contrary, no drop of their blood was ever shed by the Indians in Pennsylvania. They gathered around William Penn with reverence and love. Rude warriors as they were, they admired his peaceful spirit. He explained his views to them with cordiality, and they listened to his words.

"We will not fight with you," he said, "nor shed your blood. If a quarrel arise, six of our people, and six of your own, shall meet together and judge what is right, and settle the matter accordingly."

Subdued by his spirit of kindness and truth, they promised to live in peace with him and his posterity "so long as the sun and moon shall endure."

On his departure for England, among the friends who gathered around the ship to bid him farewell, were groups of Indians with mournful brows, the women holding up their little ones, that they might have one more sight of the great and good man, whom they called their father. Was not this more acceptable to heaven than the din of strife, and the false glory of the conqueror?

So earnest was William Penn to convince his fellow-men that it was both their duty and privilege to live in peace, that he travelled into foreign countries for that purpose, using his eloquence and knowledge of various languages with considerable success. Peter the Great, when studying the arts of civilisation in England, was much interested by visits from this teacher of peace, who conversed fluently with him in German. The young czar listened with great attention and courtesy, while he unfolded his system. He then earnestly requested that it might be expressed for him in a few words, and William Penn wrote—

"Men must be holy, or they cannot be happy—they should be few in words, peaceable in life, suffer wrongs, love enemies, and deny themselves; without which, faith is false—worship, formality, and religion hypocrisy."

The future emperor of the Russians, though not a convert to the doctrine of the Quakers, regarded it with so much respect, that he repeatedly attended their meetings, evincing deep and interested attention. To his mind, the theory of peace seemed beautiful, yet he considered it impossible that wars could be prevented. He did not believe that contending nations could be made to settle their differences without an appeal to arms, or that their anger might be soothed by the mediation of a friendly people, as a good man makes peace between offended neighbours. It did not occur to him that a Christian ruler might meditate with the soothing policy of the patriarch Abraham to his wrathful kinsman—

"Let there be no strife, I pray thee, between me and thee, or between my herdsmen and thy herdsmen, for we be brethren."

**POPULAR EDUCATION.**—The general desire for education and the general diffusion of it, is working, and partially has worked, a great change in the habits of the mass of the people. And though it has been our lot to witness some of the inconveniences necessarily arising from a transition state, where gross ignorance has been superseded by a somewhat too rapid communication of instruction, dazzling the mind, perhaps, rather than enlightening it, yet every day removes something of this evil. Presumption and self-sufficiency are corrected down by the acquirement of useful knowledge, and men's minds become less arrogant in proportion as they become better informed. There cannot be a doubt, therefore, but that any evils which may have arisen from opening the flood-gates of education, if I may so say, will quickly flow away, and that a clear and copious stream will succeed, fertilising the heretofore barren intellect with its wholesome and perennial waters.—*Bishop Butler's Charge.*

## VALUE OF GOOD WIVES.

We are not about to write a homily on the duty of our wives; our sex have more frequently done this than pointed out the duty of husbands—duties which, we fear, are fully as often neglected as those of the wife. We commenced this article to remind men that they have no friend so entirely true to their interest as the wife. It is, therefore, more safe at all times, to advise and counsel with our best friend, in preference to those who are less interested in our welfare. A distinguished man once said that he never prospered in any enterprise where he had acted against the advice of his wife. Misfortunes, or the result of bad speculations, always beat on him most heavily. Her interests are inseparably identified with his own. The ready perception and timid caution of woman, make her, especially to the impulsive and adventurous, peculiarly qualified to check the rash and impetuous act. Many a man whose fortunes are broken, would have been in a happy and prosperous condition, had he listened to the better counsels of the now afflicted partner of his troubles. A true-hearted wife is also our best friend in adversity, even when imprudence, incapacity, or even folly, or perhaps our vices, have brought it upon us. Instead of reproaching him, she clings to and encourages him; her words of comfort and good cheer revive his hopes and his courage, and he is often able to retrieve his fortunes. At worst, with such a friend, he holds up his head, and grapples manfully the difficulties of his lot. His position in society may be more or less reversed; and those who flattered and looked up to him, may now pass him by coldly. A heartless world leaves him to his fate, or he may even be sneered at and frowned upon by those whom he once considered too mean and unworthy to be admitted to his society. However cold and heartless these, he is sure he has one dear friend; one bosom, one heart is true to him; that friend is the wife. After the toils of the day, after perhaps being buffeted off by those who were his sunshine friends, how reviving to his sinking spirits to mingle his soul with the dear one who has clung to him in weal and woe. What a cordial are her words of comfort, when all without is dark. In this hour of darkness, surely, she is to him God's messenger of mercy. While the true-hearted wife is all this and more to her husband, do we do well in all important matters not to consult so interested and faithful a friend? We repeat what we before said—the wife is our own safest and best adviser. The family is a little state; let those at the head of this little state mature all their plans by mutual, kindly, and wise counsels, and there will be fewer wrecks of the hopes of individuals and of families. Husbands, you will lose nothing, but gain much, by trusting more to that dearest and best of all earthly friends, the person whom you have selected from all the world to be your life-long companion. Sir Walter Scott, and the great Irish orator, Daniel O'Connell, at a late period of their lives, ascribed their success in the world principally to their wives. Were the truth known, theirs is the history of thousands.

## THE PIONEER'S DAUGHTER:

### A TALE OF INDIAN CAPTIVITY.

(Continued from Page 340.)

#### CHAPTER XI.—THE STRANGE MEETING.

ALTHOUGH the living target at which a dozen muskets were discharged, and as many hatchets thrown, Edward providentially escaped them all—though more than one of them rent his clothes—and he went down his long leap, feet foremost, uninjured, and suddenly found himself buried far below the placid surface of the dark-rolling Miami. Being an excellent swimmer, and having great presence of mind, he soon rose to the air, and kept perfectly quiet, floating along on the slow-moving current, well knowing that any sound indicating an attempt to escape, would be heard by his enemies above, and bring down a hundred of them, all fierce and eager for his capture; while he had a faint hope, if they heard nothing, they would believe he had perished, and give over all thoughts of search. He heard their yells of disappointment at his loss, and his heart began to beat quick again with renewed hope. There was still a chance of escape where a few minutes before he had looked for none; and from himself his thoughts now reverted to his friends; and his anxiety for their safety gradually increased, as he recalled the numbers that had gone in pursuit of them, till it amounted to a degree so intense as to be really painful. And even should they escape, how was he to join them again? and how were Lucy and her companions to be found and delivered from the haunted cave, as Posetha termed it, but of the whereabouts of which he had no knowledge? And to return without Lucy amounted to nothing in his view; for it was to rescue her he had perilled his life; and not to succeed, was to render that life valueless.

"Ah!" he sighed, mentally, as all these thoughts rapidly floated through his brain, "since I can accomplish nothing, may I not as well die where I am, and put an end to this feverish, unquiet existence, so full of vexations, disappointment, and heart-rending woe?"

But though Edward reasoned thus with himself, nature gave no sanction to the false logic; but still urged him to live on, and hope on, by causing a cold shudder to pass through his frame at the very thought of approaching the confines of that great and mysterious Beyond, by his own act, and with all his senses in full and active play; and when, in floating down the stream, he heard the cries of the Indians suddenly changed to those of terror and

disarm—as some great calamity had befallen them, and at the same moment felt his hand touch the trunk of a drift-tree, one end of which was embedded in the sands of the shore—it must be confessed he grasped it with a firmness, and listened with an eagerness, that ill-befitted one who, tired of life, was about to throw off his mortal coil and pass the drear portals of eternity.

The fact is, the feelings of our hero, by the uniting of these two events, experienced a wonderful change; and he was not as eager to live as at any moment of his eventful existence. Chilled to the very bone with his rather long immersion in the water, considering the season of the year, and in consequence hardly able to use his limbs, he now made vigorous efforts to reach the shore, by dragging himself along the trunk of the prostrate tree. He at length succeeded; but, on touching land, found it almost impossible for him to stand; and when the thought flashed across his mind, that his only chance of avoiding his enemies would be by swimming the river, his heart sunk, and for a time hope again gave way to despair. But the excitement still continuing among the Indians, the idea occurred to him that he might take advantage of it, and, by keeping along the high bank, soon reach an easy ford. But then, again, it was possible that what he had taken to be an alarm was only a universal wail for the loss of some distinguished warrior or chief, whom his friends, the fugitives, had slain in a close engagement; and if such proved to be the case, was it not likely his trail would be discovered when the morning should break, and that, weak and faint, he would fall an easy prey to his bloodthirsty foe, from whom he could never hope to make a third escape?

But notwithstanding all objections to the course he intended to pursue, one thing was certain, that to remain where he was would not better his condition; and so he set off up the stream, keeping along the edge of the water. A few steps brought him to the base of the cliff from which he had made his leap; but finding it too precipitous to admit of a foot-hold, he was forced to return. He now attempted to go down the stream; but some twenty yards below where he first emerged from the water, he again found his progress checked, and this time by the rapids already more than once referred to. The bank here was steep, but not precipitous, down which the water dashed with foam and fury, and with a much heavier body than usual, owing to the recent rains; for the streamlet was very fluctuating, and in some seasons of the year exhibited a dry bed.

To think of crossing this at the point where Edward now was, was wholly out of the question; for no foot, however sure, could stand a single instant in such a current; to ascend the steep bank to where a crossing could be made, was, for our hero, a proceeding even more rash and dangerous, as he would thus be certain to expose himself to his enemies; and to remain inactive, with the hope of freedom before him, was, in his view, little short of madness. Thus hemmed in as he was on every side, there was no alternative; and his only means of escape was to bethink himself once more to the water, and either swim around the rapids and come out below them, or across the river to the shore he was so anxious to reach.

For several reasons Edward decided on the latter course, and again consigning himself to the care of that watchful Providence which had so far befriended him in his moments of greatest peril, he dropped quietly into the river at the foot of the rapids, and was quickly borne out upon its bosom some eight or ten yards, until the rushing force of the smaller stream was lost in the stillness of the greater. Then nerving himself for the tedious task, Edward struck boldly out for the opposite shore; but what was his surprise, when he had gone some ten or twelve yards further, to see a bold cliff rising high above him, and almost at the same moment feel his hands touch land! As he crawled out upon the narrow beach dividing the base of the steep cliff from the water, his first impression was that his head had, somehow become turned in swimming, and that he had actually swam back to the bank whence he started; but a little reflection and observation put him right in this particular, and he then came to the rightful conclusion, that he had touched upon a small island. This proved a source of much gratification to him, as it would form a resting-point on his short voyage, and enable him to gain the western bank with greater safety and ease. But, that he might be ready to set forth again, ere too chilled and benumbed by the cold, he began to move along the bank in search of the point projecting farthest westward, so as to save as much swimming as possible.

He had not gone many steps, keeping close under the cliff, when his foot striking a stone, caused him to stumble toward the rack. He threw out his hands to prevent his head from striking, but to his surprise they touched nothing, and the next moment he found himself prostrated within a deep and narrow fissure. Feeling carefully around in the dark as he attempted to rise, that he might make no fatal mistake—as, for all he knew to the contrary, there might be a yawning chasm on one side or the other—his hand encountered something smooth and soft, in what appeared to be a small recess to the right; and judge of his surprise and delight, on examining it with the sense of touch, to find it a regularly constructed canoe of the largest class!

"Surely," thought Edward, as he drew it forth from its hiding-place, "surely Providence favours me in all my adversity; and to God will I give thanks for this unlooked-for means of deliverance!"

He knelt upon the stony ground, and although his lips did not move, and no sound was heard, yet his heart went up to the great Giver of mercies an acceptable prayer of fervent thanks.

As Edward finished his silent orison, there came to his ear a low, faint, almost inaudible sound, like the sound of a distant human voice, or far-off running water. He listened, and still the faint murmur continued; and under the impression that he would be forced to the latter cause, he was about to turn away for the purpose of embarking in his canoe, when the sound ceased, and while he was still listening, began again.

"Surely," thought he, "if it were water, as I supposed, there would be no cessation. No! it must be made by a human tongue—ay, more than one, for it varies, and is not monotonous. Ha! it stops again, and is now again renewed."

A sudden idea now flashed through the brain of Edward, and springing to his feet, he mentally exclaimed, "Oh! if only my surmises prove correct!" and he disappeared into the dark opening of the rocks.

Slowly and cautiously he threaded his way along the narrow, winding, zig-zag passage, and at length arrived at its farther terminus, or where it entered the cavern. For the last few yards, a faint, soft, lurid light shone into the dark passage, and enabled him to pick his way with greater ease; and as he turned the last sharp angle, the bright light of a blazing fire flashed full in his face, and revealed to him ten female figures seated around it, and among the rest, the very being of his heart's devotion. Fixing his eyes upon her, for a few moments Edward stood and gazed, as one who beholds a something more than earthly, while his heart beat wildly, and he feared to move, lest a single motion should disrupt the enchanting vision, and prove the images before him to be but the airy creations of a floating phantasmagoria of the mind. "But," he reasoned, "it is impossible that the senses of seeing and hearing should both be so deceived at the same time; for loud wallings at their hard fate, from many of the females, smote upon his ear; and the words, 'Oh, my poor father!—and—Edward!' uttered in guiltless innocence, and with strong feeling of anguish, by the being he loved, broke the spell which a fleet light had thrown around him; and unable to be a quiet and unobserved spectator any longer, he bounded forward, exclaiming—

"Edward, at least, is free, and God has sent him to your deliverance!"

All started to their feet at this unexpected apparition, and screams of joy resounded through the cave.

As for Lucy, she was unable to speak; and as Edward, singling her out, rushed forward, caught her in his arms, and wildly pressed her to his beating heart, inexpressible happiness made her senses reel, and she fainted in his embrace.

Great was the scene of confusion and excitement which followed, and a thousand questions were asked that never had an answer, or at least that were not answered then. Among others, Mrs. Danforth and Mrs. Wilkes were urgent to know what had become of their respective partners; and the first words of Lucy, as she revived, were—

"Oh! Edward, it is like a dream to behold you here." Then hurriedly looking around, "But my father—my dear, dear father! I do not see him—where is he?—what has befallen him?—is he free?—is he safe? Oh! speak, Edward, speak!"

"Alas!" sighed Edward, pressing his lips reverently and affectionately upon the noble brow of the lovely questioner, and gazing fondly but sadly upon the liquid orbs upturned to him: "Alas! my dearest Lucy, I cannot answer. You see me here alone by accident, after passing through a hundred perils, where hope became extinct, and life seemed forfeited; and he hurriedly related what had transpired.

During his recital, Lucy clung to him with a nervous grasp; and her lustrous, dark eyes looked into his—sometimes in anguish, sometimes in terror—while her lips, half apart, made her seem as if every word he uttered was about to draw forth some exclamation of pity, surprise, pain, sorrow, or fear.

But she spoke but once, and that when he described his wonderful escape over the cliff. Then she closed her eyes, a cold shudder passed through her delicate frame, and she cried—

"Oh! how fearful! how terrible!" and she clung to him still more nervously, as if she fancied he was even then making the awful descent.

As Edward told his tale, the scene was one worthy the pencil of a great artist. Ereft in the centre he stood, with the gentle Lucy half-reclining in his arms and on his breast, gazing up intently in his countenance, with the expression we have described on her own sweet features; while, completely surrounding them, were grouped the nine other females—every eye fixed upon the speaker, every face as pale as death, and varying with the feelings which the thrilling narrative of our hero excited—over which the fire burning near, threw a lurid, flickering light, penetrating far into the gloomy recesses of the cavern, and throwing strange, fantastic, dancing shadows upon the ground, upon the walls, and upon the ceiling.

"Come," said Edward, as soon as he had finished, "we have no time to spare. For all I know, the savages may be even now on the search for us. Daylight may put a hundred upon our trail, and morning must be near. Come! there is a boat without, and I can take a part of you away at once, and then return for the others."

"We came here in three boats, lashed together side by side," said Mrs. Mervale, who now took it upon herself, as before, to act as leader to the females; "and it is hardly probable, since our guide left any, that he took away more than one. Did you make any search for another, Major Allen?"

"I did not, but will now do so, and doubt not we shall find your surmises correct. Come, let us all hasten to the mouth of this cavern, and, if possible, take our departure before we are discovered. Heaven grant there may be another boat!" and taking Lucy's arm, and breathing in her ear a few words of love and hope, Edward led the way through the narrow, tortuous passage to the open air.

A brief search proved the correctness of Mrs. Mervale's conjectures, and another large canoe was found and drawn from its hiding-place. Both being placed in the water, and the females seated in them, another unexpected difficulty now arose. There was no paddle; for Pesseth had taken away with him the only one wherewith he had guided and propelled the

"As Edward told his tale, the scene was one worthy the pencil of a great artist. Erect in the centre he stood, with the gentle Lury half reclining in his arms and on his breast, gazing up intently in his countenance, with the expression we have described on her own sweet features; while, completely surrounding them, were grouped the nine other females."

boats hither. This threw a heavy damper on the spirits that had already begun to feel comparatively buoyant; but as there was nothing to be done but to make the best of their circumstances, the boats were pushed from the shore, and allowed to float down the current, with no other guide and propelling power than the hands of the respective parties.

Fortunately, the bend of the river was such as to drift them towards the western shore; but the stream ran so slow, that the best part of an hour was consumed ere the canoes touched land—which they finally did at the first projecting point in the river above the fall, where Edward and Carnele had crossed only the night previous, on their way to the Indian town. What strange events had happened since then!—events of such vast importance, that none who had participated in them would ever forget them to the latest day of their existence; and as Edward reflected on them, he shuddered, and wondered if the next twenty-four hours would be as full of perils to himself and her he loved.

The Indian town, late the theatre of such wild excitement, alarm, and confusion, was now as quiet as if no human being were in it; and in this stillness, under the circumstances, was something terribly ominous, like the oppressive calm which precedes the awful tempest.

But though Edward trembled for the safety of the beings so singularly placed under his charge, he made not his fears known, but whispered words of comfort and hope in their ears. As the canoes touched the shore, he bade his companions not to speak nor move, while he went in search of something wherewith to guide and steady the boats over the fall in the river below.

But scarcely had he advanced a dozen paces on land, when the heavy tramping of a large body of horse caused him to hurriedly retrace his steps, and, drawing the canoes behind a dense cluster of bushes, he whispered, "Be still as death, or all is lost! Our foes are upon us; God send us deliverance!"

And every listener in her heart prayed "Amen!"

#### CHAPTER XII.—CONCLUSION.

In breathless suspense the whole party awaited the coming of those whom they believed to be foes, and every tramp of the approaching steeds made their hearts quake with fear. On, on they came, nearer and more near, and still no word was spoken, no loud Indian yell uttered. At last they came fully abreast of where the females were concealed, in the canoes, behind the tangled brushwood that fringed the water's edge; and then it was that each of the latter nervously grasped her nearest companion, and, trembling with terror, compressed her lips, and held her breath. On went the horsemen, with a thundering tread, beating down the bushes, crushing the leaves, and snapping the dry sticks in their path; and as the last one passed the line

which left the frightened females above him on the river, there was an unspeakable and heartfelt rejoicing in the hearts of the former, such as a rapid change from death to life, as it were, can only give.

Suddenly, the most powerful emotions of joy which the human system is capable of supporting in a state of consciousness and sanity, were awakened in the breast of each of our friends, by the following colloquy in English, between a superior and an inferior.

"Are we not near the ford you told us about, Carnele?"

"Yes, Major; it's right down here, just a little bit furdur. I know it well; for me and Major Allen—poor fellow! God bless him!—crossed it last night, on our way to this infernal red-nigger town, which we're going to agin; but I hope now to hev a little better luck nor we had that time."

Edward waited to hear no more; but bounding through the bushes, too excited to be prudent, he fairly shouted:—

"Ho! friends, ho! this way! this way!—here are those that need your aid!"

"Ha! it is my own lost Edward that speaks!" cried a well known voice—a voice that made more than one of the poor fugitives' hearts beat wildly—and the next moment a single horseman rushed out from the main body, and drawing rein close by the side of Edward, leaped from his steed and embraced him.

"Colonel Danforth, my more than friend—my father!" sobbed the latter, "you are safe!"

"Yes, my poor boy, safe—safe for the present—and by God's blessing so are you, although I had long since given you up as lost to me for ever. But my wife? my daughter?"

"Here! here!" fairly shrieked two female voices.

Instantly the Colonel sprang away from Edward; there was a great rustle among the bushes, and then, with loud cries, a husband and wife, a father and daughter, fell upon each other's neck, and bedewed the ground with tears of such joyful anguish as neither had ever shed before. For a long time no words were spoken, and only choking sobs could be heard, as each pressed the other to his or her heart in a fond embrace.

Meantime, Lieutenant Wilkes had found the dear partner of his bosom; and a scene similar to that in which Colonel Danforth, his wife, and Lucy were the actors, was taking place but a few feet distant; while the other females, who had no friends to congratulate them on their providential escape, stood by, shedding tears of sympathy and grief; and the soldiers, with the gallant Moultrie at their head, drew around in silence, and with an inward joy that made many an eye, even among them, unwontedly dim with the dew of the heart.

At length words began to take place of sobs and sighs; a hundred rapid questions were asked on both sides, and hurried explanations were being made, when the warning voice of the Major put a check to all.

"My friends," he said, "I'm sorry to intrude my cold remarks upon you at such a time; but I fear you overlook the close proximity of the Indians, and that a surprise might even now prove fatal to our safety."

"Right! right!" cried Colonel Danforth, with an energetic start, "and I thank you, Major Moultrie, for reminding us of our danger and duty. We have all too sadly experienced the results of carelessness, to neglect all due precautions now. Come, come, one and all, let us be on the move, and trust that the kind Providence which has so wonderfully preserved us through trials and perils, and brought us once more safely together, will yet permit us to say, what we now leave unsaid in a place where no lurking savages may interrupt us with the war-cries of death."

Moultrie now ordered several of his men to dismount, and with a grace and gallantry becoming a well-versed officer, tendered the ladies their places, which the latter were not slow to accept with many thanks. They were placed in double file, with the Colonel and Lieutenant next to their respective partners on the right, and Edward close by the side of Lucy on the left. The cavalry then formed a hollow square, covering them on every side; and the remainder, who had no horses, were thrown out as scouts, among whom were Posetha, Miller, Wade, and Carnele. The gallant Major then took his station at the head of the van, and the order was given to march. Again the heavy tramp of more than a hundred steeds was heard; but save this, nothing broke the oppressive stillness. Thought, with all, was active, but no one gave it utterance.

When morning broke, our friends had the satisfaction of knowing, that not less than six or eight miles lay between them and the Indian town, and that so far there had been discovered no indications of a pursuit. With a feeling of security, their spirits began to regain their wonted buoyancy; but feeling themselves still in danger, they feared to let hope have too great an ascendancy, and, therefore, remained grave and watchful, thinking much and saying little.

Coming to a commanding position, just above a little run, the Major ordered a halt, giving as a reason, that unless the poor beasts that bore them had rest and food, they would be unable to accomplish the fatiguing journey to Fort Jefferson. Accordingly all dismounted, fires were kindled, a strong guard set around the camp, and the horses were fed on water thickened with meal, which each one carried in sacks strapped behind the saddle. The soldiers also had a good supply of dried venison, which was cheerfully divided among the guests, and this, with corn-meal and water mixed in their canteens, made a very hearty and healthy, if not palatable, repast.

After a quiet rest of about three hours, the march was resumed in the same order as before; and ere the sun sunk behind the western hills, the whole party ascended an eminence, and, with indescribable feelings of delight, beheld below them, some quarter of a mile distant, the heavy log-roof and wooden stockade of Fort Jefferson.

"Halt!" cried the Major. "Attention the battalion. We will give them a military salute. Make ready—fire!" and the last word was drowned in a roar of musketry.

Instantly from forty to fifty heads appeared above the ramparts of the fortress; and then suddenly a bright flash was seen, a volume of smoke rushed forth, and the loud boom of a heavy piece of ordnance went echoing through the deep forest, startling many a wild beast from his lair. This was followed by another, and then by a round of small arms; and then the gate was thrown open, and the shrill notes of the martial fife, and the sharp rolling accompaniment of the kettle-drum, gave the returned captives and their escort a military welcome.

As Major Moultrie and his command passed within the palisades, they found the garrison drawn up into two lines to receive them; and as soon as military formalities could be dispensed with, the whole party received the warmest congratulations on their safe return. A dozen rushed forward to grasp the hands of Colonel Danforth and Major Allen, and among these were Sergeant Bomb, and the two scouts who had brought the intelligence to Major Moultrie of their captivity. While the Colonel was busy in answering the many eager inquiries put to him, a hand was laid familiarly on his shoulder, and on turning round, he beheld the veritable Dr. McAllister, standing quietly by his side.

"Umph!" said the eccentric disciple of the anatomical art—"I am proud to see you, Colonel Danforth—hope you're well, sir—thought you past my aid—did, 'pon honour! Wife and daughter back, I see. Umph! you are very fortunate, Colonel—ah! very."

"Why, how is it I find you here, my worthy doctor," returned the Colonel, good-humouredly. "Really, now, from the last specimen I had of your bravery, I thought you would be the last man to venture into the Indian country again."

"Ah! Colonel, you underrate my scientific feelings. Science, sir, with me, is a passion, to which eating is nothing. I could go without my breakfast, at any time, to amputate a leg; and as the gallant Moultrie here—may he die under surgical care!"

"Heaven forefend!" laughed the Major, who, standing near, overheard the remark—"Heaven forefend, doctor, if you are to have anything to do in the matter!"

"As the Major here," pursued the doctor, unmindful of the interruption, "was about visiting the ground of St. Clair's recent exploits, I thought I would accompany him, in the hope of finding a subject."

"Why, then, did you not follow him to Piqua, where you would have been sure of a victim?" quizzed the Colonel.

"Umph! the truth is, Colonel, I had a patient here, sir—Sergeant Bomb, sir."

"The truth is," interrupted Moultrie, ironically, "the renowned Doctor McAllister, great as are his scientific acquirements, has a heart in him about the size of a humming-bird's eye, and he fears to risk such a delicate morsel

near the jaws of such noted cannibals as the Shawnees. The worthy doctor is prodigiously brave, but excessively prudent; and would rather amputate a limb any time, than lose his head."

"Indeed I would," rejoined the doctor; "and it would give me great pleasure to exhibit my scientific attainments on the persons of either of your gentlemen. Umph! as you say, Major Moultrie, I am brave."

"There, there," said the Major, waving his hand with an air of authority—"that will do, doctor—that will do. As you have done nothing the last twenty-four hours but mope about a well-garrisoned fortress, we, who have been through the most trying perils, are not disposed to make you the hero of the day. You will retire to your quarters, and when wanted you will be sent for."

The doctor slunk away, not a little crest-fallen at this public reproof; and many a titter he heard as he passed the soldiers, showing in what small estimation they held a man of science, when unaccompanied with the virtue of manly courage.

At Fort Jefferson the rescued prisoners and soldiers remained over night, and on the following day the former set out for Cincinnati, accompanied by a strong escort, kindly furnished them by Major Moultrie, who, with the rest of his command, set off for St. Clair's battle-field. The parting between the old scouts and Colonel Danforth's party was a very affecting one, and it is not too much to say that tears were shed on both sides. As for Posetha, not content with shaking his hand warmly, and invoking Heaven's blessings on his head for his noble conduct in rescuing them from a hopeless captivity, the females, one and all, even to Lucy, embraced him with a degree of affection he had never seen shown him before. The simple-minded white savage for a time stood this test of feeling with a stoicism that showed how severe was the school in which he had been so long trained; but at last nature triumphed over artificial restraint, and large tears coursed their way down his cheeks. For a while he seemed to give way to feelings which, in his view, were unmanly; and then, suddenly drawing himself up with assumed hauteur and coldness, he hastily passed his hands across his eyes and stalked away, to give vent to his newly awakened emotions where no human eye could behold him.

We may as well remark here, as we shall not touch upon the subject again, that Posetha never afterwards returned to the Indians, but continued with his brother, true to his own race. A short time afterwards, he and Harry became two of that little but intrepid band of scouts and Indian spies, who, under the renowned General Wayne, made themselves so famous for their exploits; and so signal were the services they rendered the American army, that their names and feats of daring have been handed down in traditions.

As for Carnele and the others, we have no authentic information of what became of them; but an old hunter, a great many years afterward, was found dead, sitting over what had once been an underground fire; and, from the description given of his person, we are led to believe that the gallant scout perished with old age, while engaged in his favourite pursuits.

Notwithstanding Sergeant Bomb's protestation that he would never go against the Indians again, he continued in the army, in the same company with Lieutenant Wilkes; and both officers gallantly fought through the Indian war, under old "Mad Anthony," (as General Wayne was popularly termed,) to the treaty of peace, in 1795.

As for Colonel Danforth, although strongly inclined to take command of another regiment, his family prevailed upon him to relinquish the glories and dangers of the field in favour of the comforts and happiness of domestic life. And whenever Edward dared to breathe a word of war, his mouth was instantly closed by a soft, white hand; and while two bright eyes looked coquetishly into his, two pouting lips would sweetly murmur, "Now could you be so cruel as to desert the wife that fondly loves you?" and then, pressing the fair speaker affectionately to his heart, Edward would always conclude by saying "No," most emphatically; and the decision would ever be sealed with the mutual kiss of unchangeable affection.

Almost sixty years have passed away since the date of our story, and great are the changes which time has wrought in that portion of the West where the events transpired, of which we have given a faithful chronicle. Cities, towns, and villages now occupy the place of the Indian's hunting-grounds, and savages and wild beasts roam there no more. What few red-men still survive, have their homes far toward the setting sun; but the greater portion of them have joined their fathers in the Spirit-land. The invincible pale-face has conquered, for his star is in the ascendant; and it will doubtless be many centuries ere it reaches the zenith of its glory, and begins to decline. Ere then, reader, you and I, what mortal there is of us, shall be long resolved back to the elements from which we were formed. Happily so; for woe to them that see the fall of this mighty nation. Their doom will be that of the red-man—utter annihilation.

Colonel Danforth and his wife have long since paid the debt of nature, but Edward and Lucy still survive. For many years they were residents of Cincinnati, but finally removed to a beautiful location farther west, which now bears the appropriate appellation of Allenville—being laid out, and at one time owned, by the hero of our story. In this village is an elegant mansion, and in this mansion reside a venerable couple, surrounded by their children and grand-children. Should you, as a stranger, claim hospitality there, you will be received with a cordial welcome that would at once assure you of being among friends; and ten to one you would not be allowed to depart till you had heard, from the lips of a white-haired, noble-looking old man, the story of his remarkable adventures in attempting to rescue from Indian captivity a certain beautiful young lady, whom, with a pleasant smile, and mysterious shake of the head, without once hinting she is now his wife, he ever denominates the "Pioneer's Daughter."

**STORY BOOKS FOR YOUNG PEOPLE.** BY AUNT MARY. No. I.—"THE COMICAL HISTORY AND TRAGICAL END OF REYNARD THE FOX," Illustrated by Engravings of the Stuffed Animals in the Great Exhibition, is now ready. Price 2d.

*Aunt Mary submits, with great pleasure, the First of her Story Books for Young People. In the selection of Stories, great care will be taken to secure those which are peculiarly interesting, and calculated to excite a thirst for knowledge, as well as to impart a high Moral tone. The Series will consist of Twelve Story Books, and when completed, they will form a Volume of Tales for Young People, unequalled by any Work of similar price.*

THE COMICAL HISTORY AND TRAGICAL END OF REYNARD THE FOX.

THE ADVENTURES OF ROBINSON CRUSOE.

PILGRIM'S PROGRESS TO THE CELESTIAL CITY

"DON'T TELL."

ANECDOTES OF ANIMALS.

These Story Books will be published at intervals of One Month; and the Volume will be ready early in December, 1852. Price—Numbers, 2d., Volumes, 2s. 6d.

London: HOULSTON & STONEMAN, and all Booksellers.

### PRACTICAL ILLUSTRATIONS OF POPULAR FALLACIES.

#### No. XI.—"AN INNOCENT FLIRTATION."

A FEW weeks ago, we inserted a short tale, showing some of the evils that may arise from what is so commonly and generally called "a little innocent flirtation." In that case, it was the gentleman who was the sufferer. When his fair one had indulged her "innocent flirtation" sufficiently long, she broke off from him, and gave her hand to another. The former lover wanders round the church to witness the ceremony, plays many mad pranks, and rambles about the country for some time as a lunatic, until, at length, he recovers his wits, and settles down as a pious clergyman. We have no great sympathy for him—at least, no further than what one extends to a very weak brother. Alfred Tennyson, however, tells us a sad story of a high born coquette, whose delight it was to break a man's heart for pastime, and, in one instance, at least, succeeded:—

"Lady Clara Vere de Vere,

You put strange memories in my head;  
Not since your branching times have blown,  
Since I beheld young Lawrence dead,  
Oh, your sweet eyes, your low replies—  
A great enchantress you may be;  
But there was that across his throat,  
Which you had hardly cared to see."

Madness and suicide are not very agreeable terminations to these indulgences in a little "innocent flirtation," and, it is to be hoped, are not very common ones. Men's heads may sometimes be weak and easily turned, but in general their hearts are tough, and not readily broken by fickle fair ones; and occasionally it will be found that they can engage with a flirt on equal terms, with equal heartiness, and come out of the contest unscathed themselves, while their fair opponent, if not damaged in heart, has suffered considerably in the opinion of the world.

It has sometimes been said, that the sole aim and object of woman's life is marriage. If this be true, we doubt very much if the way to attain that end be through innocent flirtations.

"If love can sigh  
For one alone,  
Well pleas'd am I  
To be that one."

"But should I see  
Love giv'n to rove  
To two or three,  
Then—good by, love."

And this feeling, so pithily expressed by the poet, is very common in human nature—certainly so in masculine nature, whatever it may be in feminine. Men do not approve of these very light wanderers, who go wavering about from hand to hand—hearts, indeed, have little to do with the affair—and they are apt to select for the companion of their life, those who have given the fewest indications of this wandering spirit. Dean Swift tells us that "the reason why so few marriages are happy is, that young ladies spend their time in making nets, not cages;" and these "innocent flirtations" are the materials of which the nets are made—weak and flimsy, and broken through on the slightest struggle.

"Young Clee, bent on catching loves,  
Such nets had learned to frame,  
That none, in all our woods and groves,  
E'er caught so much small game.  
But gentle Sue, less giv'n to roam,  
While Clee's nets were taking  
Such lots of loves, sat still at home,  
One little love-cage making."

"Much Clee laugh'd at Susan's task;  
But mark how things went on—  
These light caught loves, ere you could  
ask  
Their name and age, were gone!

"So weak, poor Clee's nets were wove,  
That, though she charmed into them  
New game each hour, the youngest love  
Was able to break through them."

"Meanwhile young Sue, whose cage was wrought  
Of bare too strong to sever,  
One love, with golden pincurs, caught,  
And caged him there for ever,  
Instructing, thereby, all coquettes,  
What was their looks and ages,  
That, though 'tis pleasant weaving nets,  
'Tis wiser to make cages."

Let us see how a young lady, who was eminent for her skill in making nets, fared with her "innocent flirtations." Lucy Chalmers was a gay, young, and pretty girl, with a considerable fortune, living in the midst of the best society, and surrounded with every luxury. She was engaged to be married to a spirited young naval officer, of good standing in his profession, of good family and expectations, sufficiently good-looking to satisfy the most fastidious, and of a temper and disposition with which few could find fault. Henry Meredith was one whom any young lady might be proud to have in her net, and if she were wise, would try to construe her cage so strong that he would never escape. But Lucy Chalmers, although professing the truest attachment to her young sailor, was not satisfied without seeing others in her net as well. The first quarrel of the lovers was occasioned by one of her "innocent flirtations;" she had cast her nets around a son of Mars, as well as round a son of Neptune, and played off the red-coat against the blue with great assiduity, until the blue turned green with jealousy, and was on the point of slipping his cable. The red-coat, however, was removed from the district just in time to prevent an open rupture; and then the lady reverted to her older love with renewed vigour, parried his reproaches for some time by protestations of unceasing love for him; and then assumed the air of one injured by his suspicions, frowned upon him, accused him of seeking to break off their engagement, charged him with flirting with others, and heaped up such a load of improbable accusations that he knew not where to turn. And when he professed forgiveness for the past, she rated him soundly, told him he had never believed her faithful, or he could never have forgiven her; that if she had thought him guilty of such faithlessness as that of which he accused her, she would never have pardoned him; he who could pardon such faults could only have a mean spirit, and would be certain to commit them himself; and she poured out such a torrent of eloquent indignation that he was obliged to give way, ask pardon for the very offences that had been committed against himself, and humble himself before the indignant asserter of woman's rights. Soon after the termination of this quarrel the young officer was compelled to go to sea; and many were the vows of eternal constancy on his part; and loud and strong were the protestations of undying love on the part of the lady. He had not long been gone, when a young lawyer arrived in the neighbourhood over whom she cast her nets; he was a sighing swain, who wrote "such pretty verses" that her passion for him assumed a very sentimental mode; the young sailor was forgotten, although she still continued to correspond with him; and we know not how far she might have gone with the lawyer, had not a young Oxonian, brilliant in waistcoats, the brother of her intimate friend and confidant, arrived for the long vacation. The nets thrown over the lawyer were withdrawn, and cast over the Oxonian. Another "innocent flirtation" was commenced; the pair became inseparable. Every shady nook and dell in the district was witness to their murmured vows; and many a rustic swain and village lass observed them in their haunts, and rustic tongues were not silent as to what was observed. The "innocent flirtation" had produced some rumours that deprived it of the "innocent," and the youth's father compelled them to give up their intercourse. These rumours reached her sailor's ears, who again remonstrated, and again were his remonstrances treated with scorn and ridicule. He must be wild or mad to be jealous of a boy, the relative of her dearest friend; but she forgave him his suspicions and his jealousy—they proved he had some sparks of love for her. She only tried to mould the boy—give him some air and style; but he was merely awkward and bookish; she could make nothing of him, and had not seen him for ages. But while she was thus writing to her absent lover, her nets were round another—a gay young man of fashion, come to shoot and sport; but finding more attractive game in our poor Lucy's eyes, fell readily into her net, and suffered its meshes to entwine him just as tight as she pleased. For weeks and months they met as lovers only meet; the world around her supposed that her sailor love was cast off, and that she had succeeded in winning the gay man of fashion; but the time for his departure for other scenes arrived, and he broke through her nets without the slightest difficulty. He went away unscathed and heart whole; but she, in trying to conquer, had been vanquished herself. Her disappointment at finding her nets so easily broken, and, it is to be hoped, some slight feelings of compunction for her conduct, laid her upon a sick bed. Again the sailor heard of her proceedings and her illness; again did he remonstrate. This time she could not deny the charge, and so she tried to cover it over with a lie. She told her lover that she had always disliked the gay man of fashion; that he had been forced upon her by her father, who insisted on her receiving his addresses; that she had done so for a time, but at length had given him his dismissal; and her illness was the consequence of the sufferings she had undergone in being compelled to endure his attentions. Unfortunately for her, the lie was soon discovered. Her "innocent flirtations" had sapped the roots of his love; her moral baseness entirely eradicated all remains of it. He was ordered on a distant voyage before he could reply to her last—indeed, before he was aware of her untruth. Absence accounted to her for his silence. Notwithstanding her former failures, the nets were again cast; and this time the false fire burned within her with a fury no reason could restrain. Her new lover was not one of your sighing swains, but a bold, ardent, and passionate man, as little given to constancy as the lady herself: she became furiously jealous of him; fainting in a public room at seeing him attentive to another; gave way to every impulse of her mind; declared her love before all who were assembled; and exposed herself so thoroughly, that he himself left her at once, without remark or apology. Still she wrote fond letters to her absent sailor, and wondered at receiving no reply. Scarcely was she recovered from her last attack, before another temptation fell in her way. A young and handsome curate seemed a fitting object for a lady's net: it was speedily cast; and for a time bound him securely. The curate deserted his holy books and pastoral cares, for long summer rambles and moonlight walks.

Again was the sailor forgotten—nay, all her former loves were forgotten also; she lived but in the present: the soft and gentle promises of the soft and gentle curate were all in all to her. But the proceedings of the young lady had been so notorious, that a father's watchful eye was now always upon her; she had been so unscrupulous and incorrect, that a father might well be excused the fear that her principles were not strong enough to restrain her. He had no great respect for the ambitious curate, who in some other matters was not thought to have maintained the proper dignity of a churchman; besides he was poor as well as base; and he contrived to have the curate removed to another curacy in a distant diocese. And again the lady found her nets were broken through. Still she heard not from her sailor. And now she began to be alarmed at his silence; but, at length the news arrived that his ship was ordered home. Hope again sprang up in her breast; he had not written because he was coming home: it was not because he was offended. She had good hope that she had cleared away the suspicions that had arisen in his mind from her "innocent flirtations" with the lawyer, the Oxonian, and the man of fashion. She had also good hope that he had not heard of her subsequent "flirtations," when uncontrolled passion led to the public avowal of her love for an unworthy object, or when she turned the brains of the poor curate; but still a fear hung over her lest some kind and intimate friend should have enlightened him on these matters; and, with providential forethought, she set about preparing her defence, if she should be so charged. She was well aware that it was no use to deny the facts in either instance—they were too public; but what could she say to explain the furious love she manifested for the one, or the sentimental fondness she had displayed for the other; nothing but woman's wit could help her here, nothing could sustain her but the belief that her skill and cunning might be of more avail than her forfeited truth. One hope she had: she knew that Henry Meredith was a man of sense, and she was aware

"That men of sense in love,  
Dupes more complete than fools and blockheads prove:  
For all the knowledge, lent them as a guide,  
Goes off entirely to the lady's side.  
Whereas the blockhead rather sees the more,  
And gains perception that he lack'd before,  
His honest passion blinds the man of sense,  
While want of feeling is the fool's defence."

She had some hopes, then, of being able to dupe her lover once more. She could tell him she was fever'd—she was mad—she was not accountable for her actions, under the pressure of disease—anything that could excuse her for her wickedness and folly. And as for the curate, she could take high religious grounds; when the world accused her of flirting, she was only endeavouring to gain religious instruction; to settle some doubts that had arisen in her mind; to place her religious faith on a sure foundation. And while she thus planned her defence at the expense of truth and honesty, strong hopes rose in her mind that she should be able to bring him to her feet, and bind him faster than ever in her nets. But while she was preparing her defence, and anticipating the security of her conquest—now, indeed, more than ever necessary to her, from the failure of all her "innocent flirtations"—she was thrown at once into the very depths of despair. The Portsmouth paper was brought in, and there was an account of the arrival of her lover's ship; and amongst the passengers she brought was Captain Henry Meredith, promoted for his gallant conduct in the Indian seas, with his bride, the daughter of Admiral Gardiner, whom he had married at the Cape. The next morning brought her a letter that ought to have been received many months before: it had been wandering round the world, transferred from ship to ship, and at length reached its destination. It told her that her falsehood respecting her father having forced the man of fashion on her was known; that neither that, nor her faithlessness, could be forgiven; that he set her free from all engagements, as he himself must be held free, for he could never wed a heartless coquette. The blow was struck: all her nets had been broken, and for the remainder of her life she settled down into a sour old maid, for ever railing at the fickleness of man.

"Oh! Cupid's bow  
Is not to blame,  
For half the woe  
Which bears his name;  
Another child  
Assumes his form—  
He's just as wild,  
And just as warm.  
He copies each  
Seductive wile—  
His gentle speech,  
His winning smile;  
With subtle flame  
He tips his darts,  
And takes his aim  
At female hearts.  
His wings we view  
As amply plumed,  
His blindness, too,  
Is well assumed,  
That nymph is wise  
Who cautious moves—  
Flirtation's eyes  
Oft mimic Love's."

"When first he glides  
To woman's feet,  
Flirtation hides  
His worst deceit.  
His eyes are shut,  
His wings conceal'd,  
And nothing but  
His smiles reveal'd.  
The nymph awhile  
But half approves,  
Yet thinks the snail  
Is really Love's.  
She feels for one  
Who never feels;  
Whose heart is stone  
While hearts he steals;  
And when he wins,  
Ah, fickle swain!  
He soon begins  
The game again.  
And, while he sighs,  
Her sadness proves,  
Flirtation's eyes  
Have mimick'd Love's."

Ah! dear ladies, beware the mimicry of love. In man, it is never innocent; and in you, it is always dangerous—much more dangerous to yourselves than to those on whom you cast your nets. Besides, what pleasure can profit can there be in making an impression on every trifler's fancy—we cannot say heart, for they have none—or in listening to every flatterer's pious? Wherever there is flattery, there is a fool in the case. If the flatterer is discovered, it falls to his share; if he be not, to her's whom he deludes. We have no very great respect for those who stoop to every prize. A picture is often so drawn

that its eyes are fixed on those of every one who looks at it; the lady whose eyes, like the picture, are turned to all, is as heartless as the picture.

"Some looks there are so holy,  
They seem but given, they seem but given,  
As shining banners solely  
To light to heaven, to light to heaven;  
While some—Oh! ne'er believe them—  
With tempting ray, with tempting ray,  
Would lead us (God forgive them!)  
The other way, the other way."

"Innocent flirtations," we fear, often lead "the other way." They seem, indeed, but too commonly a return to the old Egyptian mode of worship, when divine honours were paid to asses. There is a great mistake in supposing that the influence of women is extended in this way; every "innocent flirtation" that is indulged in has a tendency to deteriorate the feminine character. Lord Byron, no mean judge of female character, no inexperienced hand in female wiles, thus writes of these innocent flirtations:—

"Your cold coquette, who can't say 'No,'  
And won't say 'Yes,' and keeps you on-and-offing  
On a lee shore, till it begins to blow—  
Then sees your heart week'd, with an inward scolding.  
This works a world of sentimental woe,  
And sends new Wretches yearly to their coffin;  
But yet, is merely innocent flirtation—  
Not quite adultery, but adultery."

Sentimental Wretches are not quite so common as they have been, but cold coquettes, we fear, will have a longer reign—the longer, because of the "adulteration" which every "innocent flirtation" effects on the female mind. If the suicidal Wretches were very common, we should have had the analytical coroner, Mr. Wakley, examining into these "adulterations," as he has done into the pepper, coffee, and other abominations. But men are flirtation-proof, now-a-days; they pretty well understand the value of a coquette, and, instead of cutting their throats, "cut their sticks."

## THE FATHERLAND.

WHERE is the true man's fatherland?  
Is it where he by chance is born?  
Doth not the yearning spirit scorn  
In such scant borders to be spanned?  
Oh, yes! his fatherland must be—  
As the blue heaven, wide and free!

Is it alone where freedom is,  
Where God is God and man is man?  
Doth he not claim a broader span  
For the soul's love of home than this?  
Oh, yes! his fatherland must be—  
As the blue heaven, wide and free!

Where'er a human heart doth wear  
Joy's myrtle-wreath or sorrow's gyve,  
Where'er a human spirit strives  
After a life more true and fair,  
There is the true man's birth-place grand,  
His is a world-wide fatherland!

Where'er a single slave doth pine,  
Where'er one man may help another—  
Thank God for such a birthright, brother—  
That spot of earth is thine and mine!  
There is the true man's birth-place grand,  
His is a world-wide fatherland!

## DON'T BET.

AMASA MAY was cured of betting! How? Keep quiet, and I'll tell you. Not a thousand miles from Jamaica Plain lived Lem Seaver, Bob Emmons, and Amasa May. Lem was fond of shooting—could shoot well, and was rather proud of it. It happened on a bright October day that he had been hunting the cover on the Newton side of the pond, and came out by the old barn where Bob Emmons was at work. After a little talk, Lem left his gun and fixings standing outside, and went into the barn to look at the cattle, and finally passed through to get a draft of cider at the house. While he was gone, Bob, who was always at the bottom of all the mischief done in the vicinity, dropped an extra charge of shot into each barrel of the gun, and stood by waiting for fun. Presently Amasa came up the road with a new hat on; the half-formed plan that floated in the brain of Bob was instantly completed and put into action, as follows:—

Hailing Amasa—"Come, quick," says he, "let's have some fun with Lem. We'll draw out his shot, and bet he can't hit your hat."

"Capital good idea!" replied Amasa. "Lem thinks he can shoot; we'll open his eyes! hey!"

Bob carefully drew out all the shot he had just put in, and put the gun back where he found it. Just then Lem came back.

"Hallo, Lem!" says Amasa, "what are you totting that gun about for?"

"Oh, it's a way I have," replied Lem; "sometimes I get a chance to shoot, and then I almost always hit."

"Bet you can't hit my hat—six rods," exclaimed Amasa—"bet an oyster supper for the boys to-night!"

"Done," says Lem, "set it up!"

Amasa put his hat on a post, and measured the six rods, almost bursting with suppressed laughter at the imaginary idea of Lem's looks when he should find that he couldn't hit a hat at six rods; Bob, also chuckling at the prospect of the success of his plan. And Lem, pleased with the idea of winning the bet. He brought the gun up to his face to fire.

"Double your bet, and give it both barrels," says Amasa.

"Aye! aye!" replied Lem; and he let drive, right and left.

Before the smoke rolled away, Amasa jumped forward, with a shout and a laugh, to show Lem that he couldn't hit a hat in broad daylight. But where was it? Bits of fur, here and there, and a miserable dilapidated wreath of a hat, that looked as if all the woodcocks in Norfolk county had shot their bills through it, was the sight to greet his eyes. The sudden and instantaneous change of his countenance told Bob who had lost the wager.

And that was the way Amasa was cured of betting.—*American Paper.*

## ONWARD!

**A NEW PATENT MATERIAL.**—The Earl of Dundonald has obtained a patent for "improvements" in sewers, drains, &c., and for making columns and vases. The substance patented is bitumen of various kinds, according to circumstances. The pipes are to be cast with one side flat. The patentee proposes to use it for concrete, also for foundations under water.

**IMPROVEMENT OF DWELLINGS.**—A society called The Windsor Royal Society for Encouraging and Providing better Domestic Accommodation for the Industrial Classes, has been set on foot at a meeting held lately in the Town Hall, Windsor. The society is to have a capital of £6,000 in 600 shares of £10 each, and will be under the patronage of her Majesty and Prince Albert. The Prince intends, as he cannot participate in any profits, to purchase shares to the amount of £200 and present them to the society.

**SUPPLEMENTAL CHARTER TO QUEEN'S COLLEGE, BIRMINGHAM.**—The Birmingham papers announce that the Royal assent has been given to the supplemental charter to Queen's College, in that town. The new provisions enable the College to grant diplomas and confer the rank of Civil Engineers; and they improve the composition of the Council by adding to it certain members from some of the organised local bodies, such as the Architectural Society and the Law Society. This new midland institution is taking many of the forms proper to the age in which it grows.

**PROPOSED GREAT EXHIBITION IN NEW YORK.**—The committee on the petition asking that Edward Riddle may be permitted to erect on Madison-square, New York, a building of iron and glass, 600 feet long and 200 wide, for an industrial exhibition of all nations, have reported favourably to the City board of aldermen, and a resolution, granting him the sole occupation of the square for two years, has been passed. The occupiers of the land are to enclose it with an iron fence, to cost not less than 6,000 dollars, and they all agree that the admission price to the enclosure shall at no time exceed fifty cents.

**"STEAM SUPERSEDED."**—The Swedish Chargé d'Affaires in North America, says the *Edinburgh Post*, has officially announced to his government that Captain Ericsson, the distinguished Swedish engineer, has at last succeeded in solving the problem of the calorific engine. He has already constructed two, the one of 100 horse power, and the other of 10. The large one is charged with air in 1 minute and 45 seconds, consumes scarcely any fuel, is proof against any possibility of accident, and requires only one man to attend it. The air is drawn in and expelled again deprived of its warmth, which remains in the "regenerator." The next time Captain Ericsson visits England, he intends doing so in a calorific steamer.

**THE PORTABLE GAS KITCHEN.**—This novel little invention is included amongst a number of other applications of gas heat, in the patent of Mr. Hoggitt, of 10, Lisle-street, Leicester-square, where it may be seen in daily operation. The radiant heat of the gas being taken from above, and the joints, poultry, chops, &c., placed below the burner, all contact with the vapour is avoided, whilst the ascending heat is used for frying, baking, boiling, &c. A single burner is quite sufficient for all these purposes, and this, at an expense of less than three farthings per hour. The viands thus prepared are effectively done in much less time than ordinary. The apparatus may likewise be converted into a stove for warming. It is certainly altogether an ingenious, complete, economical, and it may be added, a most cleanly affair, and not the least singular circumstance to us is, that such manifest advantages as those of cooking by the radiant heat of gas from above, should have been so long overlooked.

**ELECTRO-TELEGRAPHIC PROGRESS.**—In a month or two there will be an unbroken range of telegraphic communication from London to the Land's End. The wires have been completed on the Great Western Railway, from Paddington to Slough, and are being carried to the palace at Windsor. In another week they will be finished up to Reading, and some hundreds of men are now employed in running them on between Reading, Bristol, and Exeter, where they will unite with those already in existence between Exeter and Plymouth. In St. George's Hospital an electric telegraph has been laid down, for the purpose of communication between the medical officers, students, and attendants. It is also intended to establish the telegraph in connexion with this line over the whole of South Wales. Measures, it is said, are in progress, for establishing the submarine telegraphic cable, between Dublin and Holyhead. Mr. Jacob Brett has had an interview, it is reported, with the Lord-Lieutenant on the subject. The Glasgow Exchange Directors offered the Electric Telegraph Company 400l. per annum (or 300l. with accommodation for the Company in the Exchange-buildings, equal in value to 100l.) for intelligence, on condition that similar news should not be supplied to any other public subscription-room in Glasgow at less than 300l. per annum. The Telegraph Company were ready to accept of the sum of 400l. for their news, but they declined to accede to the other part of the arrangement. The directors next made an offer of 200l. per annum for the news, saving the Company unfettered as to others. This offer was also declined. Matters, however, were subsequently arranged, and the electric news will now be supplied to the Exchange. The *Boston Chronotype* has the following allusion to Morse and his telegraph:—

"The steady call of lightning (say the Fates),  
Is own'd in the United States:  
'Twas Franklin's hand that caught the horse:  
'Twas harnessed by Professor Morse."

## POETICAL QUOTATIONS.

## ABSENTEES.

We yet retain  
Some small pretence; we justly boast  
At least superior jockeyship, and claim  
The honours of the turf as all our own.  
Go, then, well worthy of the praise ye seek,  
And show the shame ye might conceal at home  
In foreign eyes!—be groons, and win the plate,  
Where once your nobler fathers won a crown.—*Comper's Task*.

## ABSTINENCE.

His life is parallel'd  
E'en with the stroke and line of his great justice;  
He doth with holy abstinence subdue  
That in himself, which he spurs on his pow'r  
To qualify in others.—*Shakspeare's Measure for Measure*.

Yet in abstinence in things we must profess,  
Which nature fraud'd for need, not for excess.  
*Brown's Pastorals*.

## ACCIDENT.

If we consider accident,  
And how repugnant unto sense  
It pays desert with bad event,  
We shall disparage Providence.

*Sir William Dawncourt's Cruel Brother.*

As the unthought-on accident is guilty  
Of what we wildly do, so we profess  
Ourselves to be the slaves of chance, and flies  
Of every wind that blows.—*Shakspeare's Winter's Tale*.

## ACCLAMATIONS.

It is a note  
Of upstart greatness to observe and watch  
For those poor trifles, which the noble mind  
Neglects and scorns.—*Johnson's Sardanapalus*.  
His speech was answered with a general noise  
Of acclamation; doubtless signs of joys  
Which soldiers uttered as they forward went,  
The sure forerunner of a fair event.—*Sir John Beaumont*.

## ACCOMPLISHMENTS.

She is of the best blood, yet betters it  
With all the graces of an excellent spirit:  
Mild as the infant rose, and innocent  
As when Heav'n lent her to us. Her mind as well  
As face, is yet a paradise untainted  
With blemishes, or the spreading weeds of vice.  
*Robert Baron's Mirza*.  
Accomplishments were native to her mind,  
Like precious pearls within a clasping shell,  
And winning grace her every act refined,  
Like sunshine shedding beauty where it fell.—*Mrs. Hale*.

## ACCUSATION.

Give me good proofs of what you have alleged:  
'Tis not enough to say—in such a bush  
There lies a thief—in such a cave a beast;  
But you must show him to me ere I shoot,  
Else I may kill one of my straggling sheep:  
I'm fond of no man's person but his virtue.  
*Crown's First Part of Henry VI*.  
None have accused thee; 'tis thy conscience cries,  
The witness in the soul that never dies;  
Its accusation, like the moaning wind  
Of wintry midnight, moves thy startled mind.  
Oh! may it melt thy hardened heart, and bring  
From out thy frozen soul the life of spring.—*Mrs. Hale*.

## ACTION.

Away, then; work with boldness and with speed,  
On greatest actions greatest dangers feed.  
*Marlowe's Lust of Dominion*.  
For good and well must in our actions meet;  
Wicked is not much worse than indiscreet.—*Dr. Donne*.  
Good actions crown themselves with lasting bays;  
Who deserves well needs not another's praise.  
*Heath's Clarestella*.  
Of every noble action, the intent  
Is to give worth reward—vice punishment.  
*Beaumont and Fletcher's Captain*.

### ENIGMA.

Without me the world had never been  
Other than forest wild, or ocean green.  
I map the earth with lines all fair to see,  
Remove the mountain, and transplant the tree.  
Egypt's vast pyramids of me were born,  
Without me Greece were of her temples shorn.  
By me the palace rear'd which shelters kings;  
By me the cot wherein the loving maiden sings.  
By me the ship is steer'd across the sea,  
By me the battle fought triumphantly.  
By me the seed is sown, the harvest glean'd,  
And stubborn soil from barrenness redeem'd.  
With hands, without, my functions are fulfill'd,  
Wherever web is spun, or land is till'd.

Bird, and beast, fish, reptile, all devote  
Themselves to me, in town or clime remote.  
What am I, then? Surely, I'm known to you;  
Your friend—oldest, and best, and ever true.

### MENTAL RECREATIONS.

1.

To tell the Number a Person has fixed upon, without asking him any Questions.

The person having chosen any number in his mind from 1 to 15, bid him add 1 to it, and triple the amount. Then—

1. If it be an even number, let him take the half of it, and triple that half, but if it be an odd number, he must add 1 to it, and then halve it, and triple that half.

2. In like manner let him take the half of this number, if it be even, or the half of the next greater, if it be odd, and triple that half.

3. Again, bid him take the half of this last number if even, or of the next greater if odd, and the half of that half in the same way; and by observing at what steps he is obliged to add 1 in the halving, the following table will show the number thought on:—

1—0—0	4—8
2—0—0	13—5
3—0—0	3—11
1—2—0	2—10
1—3—0	8—0
1—2—3	6—14
2—3—0	1—9
0—0—0	15—7

Thus, if he be obliged to add 1 only at the first step or halving, either 4 or 8 was the number thought on; if there were a necessity to add 1, both at the first and second steps, either 2 or 10 was the number thought on, &c.

And, which of the two numbers is the true one may always be known from the last step of the operation; for if 1 must be added before the last half can

### TRANSFIGURED PLAYING CARDS.

THE SEVEN OF SPADES.—"A CAVALIER MANNER."

be taken, the number is in the second column, or otherwise in the first, as will appear from the following examples:—

Suppose the number chosen to be	9
To which if we add	1
The sum is	10
Then the triple of that number is	30
1. The half of which is	15
The triple of 15 is	45
2. And the half of that is	23
The triple of 23 is	69
3. The half of that is	35
And the half of that is	18*

From which it appears that it was necessary to add 1 both at the second and third steps or halvings; and therefore, by the table, the number thought on is either 1 or 9.

And as the last number was obliged to be augmented by 1 before the half could be taken, it follows also, by the above rule, that the number must be in the second column; and, consequently, it is 9. Again—

Suppose the number thought on be	6
To which if we add	1
The sum is	7
Then the triple of that number is	21
1. The half of which is	11
The triple of 11 is	33
2. And the half of that is	17
The triple of 17 is	51
3. The half of that is	26
And the half of that half is	13

From which it appears that it was necessary to add 1 at all the steps or halvings; 1, 2, 3, therefore, by the table, the number thought on is either 6 or 14.

And as the last number required no augmentation before its half could be taken, it follows also, by the above rule, that the number must be in the first column; and, consequently, it is six.

## OUR CORNER CUPBOARD!

The California play-bills have the following:—"The galleries are reserved for respectable colored individuals, at half-a-dollar."

We see, daily, a great portion of the human race living in the world, thinking only of gratifying passion and vanity; their souls so laden with the weight of earth, that they cannot raise them to any spiritual object.

Mr. Addison once bet that he could make the worst pun that ever was made, and immediately went up to a man carrying a hare in his hand, and said to him, "Is that your hair or a wig?"

THE ALBANY KNICKERBOCKER says—"The weather has been 'all hot.' We saw a woman do her ironing with no other fuel than the sunshine. When we came away she hung her kettle out of the window to get tea ready."

To jump from a railroad train while going thirty miles an hour, is bad for the hat. Some folks say it is bad for the head also, but that is not so - for people with heads are never such fools as to undertake the feat.

UNFORGIVING COWARDS.—Forgiveness is the most refined and generous point of virtue that human nature can attain to. Cowards have done good and kind actions; but a coward never forgave; it is not in his nature.

ONE of the worst things to fatten on is envy. In our opinion, it is as difficult for a grudging man to raise a double chin, as it is for a bankrupt to raise a loan. Plumpness comes not from roast beef, but from a good heart and a cheerful disposition.

BUONAPARTE'S house, at Longwood, St. Helena, is now a barn—the room he died in is a stable—and where the Imperial corpse lay in state, may be found a machine for grinding corn. Buonaparte often remarked, that, "from the sublime to the ridiculous there was but a step."

DR. HUTCHINGS, who collected above £3,000 for repairing a church in Derby, was so indefatigable, that once, when "the waits" fiddled at his door for a Christmas-box, he invited them to enter his house, treated them to ale, and over-persuaded them to subscribe a guinea.

PEOPLE seek for what they call wit, on all subjects and in all places; not considering that nature loves truth so well, that it hardly ever admits of flourishing. Conceit is to nature what paint is to beauty; it is not only needless, but impairs what it would improve.—Pope.

As there are but few notoriously wicked men, in comparison with a shoal of fools and fops, so it is harder to make a man wise, than to make him honest; for the will is only to be reclaimed in one, but the understanding is to be informed in the other.—Dryden.

A FELLOW applied to an optician in Fleet Street for a pair of spectacles, and after having tried several, said he could not read with them. "Could you ever read?" inquired the optician. "No," said the fellow; "if I could, you think me so great an ass as to wish to wear glasses!"

A GENTLEMAN, while attending an examination of a school, where every question was answered with the greatest promptness, put some questions to the pupils which were not exactly the same as found in the book. After numerous ready answers to their teacher on the subject of geography, he asked one of the pupils where Turkey was. She answered, rather hesitatingly, "In the yard, with the other poultry."

A LITTLE boy, nine or ten years of age, was called as a witness at a late trial at Cambridge. After the oath was administered, the chief-justice, with a view of ascertaining whether the boy was sensible of the nature and importance of an oath, addressed him:—"Little boy, do you know what you have been doing?" "Yes, sir," the boy replied, "I have been keeping pigs for Mr. Bannard."

SENSIBLE LADIES.—The young ladies of Drameriscotte, in the State of Maine, have recently formed themselves into a society for mutual improvement and protection. Among the resolutions adopted at a regular meeting, we find the following:—"That we will receive the attentions of no 'so-styled' young gentlemen, who has not learned some business or engaged in some steady employment for a livelihood. For it is apprehended that after the bird is caught, it may starve in the cage. That we will promise marriage to no young man who is in the habit of tippling, for we are assured his wife will come to want, and his children will go barefoot."

"FRENCH SPOKEN HERE."—It is said that a country tradesman took back with him, on his return from an Exhibition trip, a card, bearing the words "Ici on parle Française," which he duly displayed in his shop window, after the fashion of his metropolitan brethren. A wag, having wagered on the success of his movement, entered the shop one day, and requested that he might be permitted to inspect the "Ici on parle Française," when the good man blandly informed him, that "for the great demand for them in London he had not been able to get a parcel down, but expected some fine ones in a few days."

INDEPENDENT VOTING.—"Make way for a hinddependent voter," said a man at a recent election in New Orleans. "Why, my good man," said the clerk, "it's not an hour since you deposited your vote at this very poll." "I know it, I know it," says the independent voter, "but that 'ere was the dimmoeratic ticket; this 'ere is the whig." "But if you strive to vote twice I shall have you arrested." "You will, will you?" shouted the son of the sovereign people; "then I says if I'm denied the right of voting for the whigs, after gain' the whole ticket for the dimmoerates, there aint no universal suffrage, that's all. It's a darned one-sided business, take it all round."—New Orleans Delta.

## OUR MEMORANDUM BOOK!

DON'T BE IN A HURRY!—No, reader, don't be in a hurry! A fortune was never made in a hurry; reputation was never gained in a hurry; a battle was never won in a hurry! They were all accomplished by going to work systematically, but coolly. Work diligently, but don't get excited. True, some men have rashly blundered into wealth and notoriety, but they have also blundered out of them as unceremoniously. We would not have a man pass through the world at a snail's pace,—that would be incompatible with this lightning age; but we would see him "make haste slowly," be his pursuit what it may. Fire at game on the wing, or without taking deliberate aim, and, ten chances to one, you miss it. Some men are always in a hurry, and never accomplish anything. They never pass time to attend to political, social, or religious duties. They pass through the world in a hurry, and die—and are forgotten in a hurry.

AGREEABLE MANNERS.—The true art of being agreeable, is to appear well pleased with all the company, and rather to seem well entertained with them, than to bring entertainment to them. A man thus disposed, perhaps, may have not much learning, nor any wit; but if he has common sense, and something friendly in his behaviour, it conciliates men's minds more than the brightest parts without this disposition; and when a man of such a turn comes to old age, he is almost sure to be treated with respect. It is true, indeed, that we should not dissemble and flatter in company; but a man may be very agreeable, strictly consistent with truth and sincerity, by a prudent silence, where he cannot concur, and a pleasing assent where he can. Now and then, you meet with a person so exactly formed to please, that he will gain upon every one that hears or beholds him; this disposition is not merely the gift of nature, but frequently the effect of much knowledge of the world, and a command over the passions.—Spectator.

A TIGER FRIGHTENED BY A MOUSE.—Captain Basil Hall, in his *Fragment of Voyages and Travels*, gives the following anecdote of a tiger kept at the British Residency at Calcutta:—"But what annoyed him far more than our poking him up with a stick, or tantalising him with skins of beef or legs of mutton, was introducing a mouse into his cage. No fine lady ever exhibited more terror at the sight of a spider, than this magnificent royal tiger betrayed on seeing a mouse. Our mischievous plan was to tie the little animal by a string to the end of a long pole, and thrust it close to the tiger's nose. The moment he saw it, he leaped to the opposite side; and when the mouse was made to run near him, he jammed himself into a corner, and stood trembling and roaring in such an ecstasy of fear that we were always obliged to desist, in pity to the poor brute. Sometimes we insisted on his passing over the spot where the unconscious little mouse ran backwards and forwards. For a long time, however, we could not get him to move; till at length, I believe by the help of a quib, we obliged him to start; but, instead of pacing leisurely across his den, or of making a *déroué* to avoid the object of his alarm, he generally took a kind of flying leap, so high as nearly to bring his back in contact with the roof of his cage."

## THE TRUE OBJECT OF WEALTH.

WHAT is success to the merchant? We can readily say what it is not.

1. It is not merely to accumulate a fixed sum, as the ultimatum of his wishes.
2. It is not to gain the control of the market.
3. It is not to hold the rod of power over banking and other corporations, and a host of clerks, sub-clerks, and other subordinates.
4. It is not to lay up immense wealth to leave to thankless heirs.
5. It is not to ride—like Whittington, Lord Mayor of London—in a magnificent coach, with servants in livery, before and behind.
6. It is not to live in a noble mansion, furnished according to the expensive taste of the most fashionable upholsterer.
7. It is not to hoard gold to gloat over with insane idolatry, as a thing too good to use.
8. It is not to accumulate and to hold on to a vast amount of property with selfish enjoyment, with an iron grasp which death alone can relax, and then to bequeath it to benevolent and religious purposes.
9. It is not to become a slave to carking care, at the expense of body and mind, heart and soul—wearing out the body, starving the mind, palsyng the heart, and ruining the soul.

1. Mercantile success does, to be sure, involve the fact of gaining money—hundreds or thousands of pounds.
2. It is a glorious instrument of power, when used to promote the welfare of dependent hundreds of beings.
3. Success secures the approbation of the world; for, as the wise man says, "men will praise thee when thou doest well for thyself."
4. Success enables the merchant to possess all the means and appliances for his own comfort and that of his family.
5. It gives him the opportunity to gratify his taste,—whether it be for books, pictures, statues, or houses—flowers, music, gardening, farming; and happy is it for him, if he possess taste to be gratified.
6. Success accures to him the blessedness of giving—the sweet indulgence of alleviating human suffering.
7. It furnishes him with the means of encouraging and promoting art, science, literature, morality, and religion.
8. It secures rest from turmoil and anxiety at the close of life, and leisure to look forward into eternity.

**YOUR NATIVITY, WITH A COR-**  
rect Judgment relating to the various Events  
of Life—Marriage, with a Description of your Future Pros-  
perity. Send the Name of Birth, state male or female, and  
enclose One Shilling & a Stamp, addressed to J. HAZEL, Esq.,  
care of Mr. Hatchings, High Street, Dudley.

**VENTILATING BOOTS AND SHOES.**  
This new and valuable discovery gives instant ease and  
comfort to the wearer, prevents corns from throbbing, the  
feet from swelling or being tender, and keeps them perfectly  
dry. The inventor solicits one trial, feeling assured that,  
having once experienced the comfort which they give, no per-  
son will wear any other. The Trade supplied with the luner  
sole and connecting piece (which contain the invention),  
at the small charge of 18s. per dozen sets, all ready for use,  
so that no maker can make any mistake. Between three  
and four hundred persons have proved their value.  
To be had of the Patente, C. MANDELL, near the Bridge,  
Kingsland Road, London.

**THE HOME CIRCLE.** Edited by  
PERCE EGAN. Vol. V. Just out. A Steel Frontis-  
piece, 33 engravings, and 482 pages. Tales, poetry, sci-  
ences, geography, histories, accomplishments for ladies  
music, knitting, droschet, embroidery, cookery, columns for  
studious youths, chess problems, intercommunication on  
all subjects, enigmas, &c. This volume contains the con-  
tributions of the various members of families who received  
the numerous prizes awarded. No home should be without  
it. Weekly, 1d.; stamped, 2d.; monthly, 6d.; vols. 4s.,  
and 4s. 6d. gilt. Back numbers to be had at the office, 60,  
St. Martin's Lane, and all booksellers. Liverpool, T. HILL  
& SON; Edinburgh, OLIVER & BOND, and MAXWELL;  
Dublin: M'GLASSAN, and J. CURRY & Co.

**HAPPINESS CAN BE RESTORED**  
to all members of families, rich and poor, where  
quarrels and strife continue to prevail, many of which  
arise from wrong notions in marriage. Persons desirous  
of having their family disputes reconciled without any  
expense or trouble, should consult Mr. Henry Edwards,  
19, King's Cross, London, who to many has proved a  
desirable friend, having effected reconciliations for them  
after years of estrangement. Communications considered  
confidential in all cases. Address by letter only (enclosing  
13 postage stamps), and an answer will be sent by return  
of post.

**NORTH'S MONTHLY MAGAZINE,**  
for February, Price 2d., contains THE VAGABOND  
CRUSADE, new illustrated, social, and humorous novel, by  
W. NORTH, author of "Anti-Comingby," "The Imposter,"  
"The City of the Jugglers," "Lamarine's Poems" (trans-  
lated), "Tales and Essays in Chamber's Edinburgh  
Journal," &c. &c. Chapters 1, 2, and 3, have appeared, in  
addition to more than twenty other entirely original tales  
and articles of the most varied character. Perpetual mo-  
tion, with diagrams, fully described and explained. The  
third edition of No. 1. is in the press. Office, 63, Snow  
Hill. Sold by PIPER BROTHERS, & Co., 23, Paternoster  
Row, and by all booksellers in Europe and America.

A SINGLE BONNET AT THE WHOLESALE PRICE.

**THE 1,000,000 PATRONISE**  
FREESTONE'S ROYAL BLUE HOUSES,  
FOR BONNETS  
OF THE MOST FASHIONABLE KINDS.  
Omnibuses from all parts of London to the Angel, Is-  
lington, and the Eastern Counties' Railway, every five  
minutes. Parcels free of carriage by the Royal Blue Vans,  
to all parts of the Metropolis, Morning and Evening.  
Copy the address:—The Royal Blue Houses, Islington  
and Shoreditch. Manufactory, Dunstable.  
E. W. FREESTONE, Proprietor.

**PAINS IN THE BACK, GRAVEL,**  
Lumbago, Rheumatism, Gout, Indigestion, Nervous-  
ness, Debility, &c.  
**DR. DE ROOS' COMPOUND RENAL PILLS,** as  
their name—Renal (or the kidneys) indicates, are now  
established as a most safe and efficacious remedy ever dis-  
covered for the above dangerous complaints, discharges of  
any kind, and diseases of the kidneys and urinary organs  
generally, resulting from whatever cause, which, if neg-  
lected, frequently end in palsy, fistula, stone in the bladder,  
and a lingering death. For gout, sciatica, rheumatism,  
tuberculosis, erysipelas, dropsy, scrofula, loss of hair and  
teeth, depression of spirits, blushing, incapacity for society,  
study, or business; confusion, giddiness, drowsiness, sleep  
without refreshment, fear, nervousness, and even insanity  
itself, when (as is often the case) arising from, or combined  
with, urinary diseases, they are unequalled. By their  
salutary action on acidity of the stomach, they correct bile  
and indigestion, purify and promote the renal secretions,  
thereby preventing the formation of stone, and establishing  
for life the healthy functions of all these organs. ONE  
TRIAL will convince the most prejudiced of their sur-  
prising properties.  
May be obtained at 2s. 6d., 3s. 6d., 4s. 6d., and 11s.  
per box, through all Medicine Vendors in the Kingdom;  
or, should difficulty occur, they will be sent free, on receipt  
of the price in postage-stamps, by DR. DE ROOS, 35,  
Jury Place, Holborn Hill, London, where he may be con-  
sulted from 11 till 1, and 4 till 8, (Sunday excepted), unless  
by post in correspondence.  
N.B. A considerable saving effected by purchasing the  
larger boxes.

**HOOPER'S FAMILY COUGH**  
PILLS.—Composed only of the choicest drugs, and  
from a genuine Medical Prescription, are recommended  
on high medical authority as the safest and best remedy  
for Coughs, Colds, Sore Throat, &c.; and may be obtained  
of or through any respectable chemist, or the sole agents,  
WILLIAM BERTON & Co., 10, Bow Church Yard, London.

O love-ly Peace, with plenty crown'd,  
**NOVELLO'S MUSICAL PRESENTS.**  
—Octavo Editions of HANDEL'S Israel in Egypt,  
6s. 6d.; Messiah, 6s. 6d.; Solomon, 7s. 6d.; Judas Maca-  
bueus, 6s. 6d.; Jephtha, 6s. 6d.; Joshua, 5s. 6d.; Solomon,  
in progress. HAYDN'S Creation, 5s. MANDELLSON'S  
St. Paul, 6s. 6d.; Lobgossang, and As the Hart Pants, 5s. 6d.  
Three Masses by Mozart, Haydn, and Beethoven, 5s. 6d.—  
DUNSTON SACRED MUSIC WAREHOUSE, 60, DEAN STREET,  
Soho, and 24, FOLTRY.  
Catalogues, postage-free, six penny stamps.

**THE NATIONAL ILLUSTRATED**  
LIBRARY. In Monthly Volumes, containing 320  
PAGES and 60 ENGRAVINGS. Price 2s. 6d. crown 8vo,  
handsomely bound in cloth, top edge gilt.

Works already Published.  
1 to 4.

**BOSWELL'S LIFE OF DR. JOHNSON.**  
Complete in Four Volumes. With Numerous Portraits,  
Views, and Characteristic Designs, Engraved from  
Authentic sources.  
\* \* Handsomely bound, 4 vols. in two, calf half-extra,  
marbled edges, 12s.

**THE BOOK OF ENGLISH SONGS.**  
From the Sixteenth to the Nineteenth Century. With  
Fifty Engravings from Original Designs.

**THE MORMONS, OR LATTER-DAY**  
SAINTS. An account of the Rise and Progress of this  
New Religion Sect. Illustrated with Forty Engravings  
from Original Sources.

**THE ORBS OF HEAVEN; OR, THE**  
Planetary and Stellar Worlds. A Popular Exposition of  
the Great Discoveries and Theories of Modern Astronomy.  
Illustrated with Nebulae, Portraits, Views, Diagrams, &c.

**PICTURES OF TRAVELS IN THE**  
SOUTH OF FRANCE. From the French of Alexander  
Dumas. With Fifty spirited Engravings on Wood. Un-  
abridged Edition.

**HUC'S TRAVELS IN TARTARY,**  
THIBET, AND CHINA. In 1844, 5, & 6. Volume I.  
Translated by W. HAMILT. With Numerous Daguerre-  
typed Illustrations, and a Map of the Countries, clearly  
illustrating the route of MM. Huc and Gabet.

**A WOMAN'S JOURNEY ROUND THE**  
WORLD. From the German of Madame Pfeiffer. In one  
Volume. UNABRIDGED EDITION. With full-sized Page  
Engravings, Printed in two parts.

**MEMOIRS OF EXTRAORDINARY**  
POPULAR DELUSIONS. By Charles Mackay, LL.D.  
Illustrated from Scarce Prints and other authentic sources.

**HUC'S TRAVELS IN TARTARY,**  
THIBET, AND CHINA, in 1844, 5, & 6. Volume II.  
UNABRIDGED EDITION.

**NINEVEH: THE FORGOTTEN CITY OF**  
THE EAST. A Narrative of the Discoveries of Mr.  
Layard and M. Botta, at Nimroud and Khorsabad. By  
Joseph Bonomi. Numerous Engravings, from the Assyrian  
Remains, &c.

**BOSWELL'S JOURNAL OF A TOUR**  
TO THE HEBRIDES. Companion Vol. to "Boswell's  
Life of Johnson." By Robert Carruthers, Esq., of  
Inverness.

**NARRATIVE OF A RESIDENCE AT**  
THE CAPITAL OF THE KINGDOM OF SIAM.  
With a description of the Manners and Customs of the  
Modern Siamese. By Fred. Arthur Neale. Formerly in the  
Siamese service, author of "Eight Years in Syria." &c.

**THE OTTOMAN EMPIRE UNDER**  
ABDUL MEDJID. By D. Urquhart, Esq., M.P.

**THE BOOK OF SCOTTISH SONGS,**  
ANCIENT AND MODERN. 8s. 6d. &c.

**LARES AND PENATES, ON, CILICIA**  
AND ITS GOVERNORS. An Historical Account of  
that Province from the Earliest Times to the Present Day.  
By William B. Barker, M.A. &c. Edited by W. F.  
Atkinson, F.R.G.S., F.G.S., &c.

Office of the NATIONAL ILLUSTRATED LIBRARY,  
337, Strand, London. And sold by all Booksellers.

**EMPLOYMENT GIVEN.**—Ladies and  
gentlemen who are desirous of securing employment in the  
quitting the elegant and fashionable  
**MACHINE**, in Paris, and so on, as practically improved to  
an improved system, by which a week can be made  
Framing and gilding. As the number is limited, those  
desirous of engagements should make early application to  
Mr. Wright, 24, Tottenham Court Road, London.

**LADIES' BONNETS** of the most  
fashionable style.  
The richest and best material, at most prices.  
Mourning Bonnets, Patent Caps, 2s. 6d. to 10s. 6d.  
Dunstable, 1s. to 10s. 6d. Fancy Bonnets, 2s. 6d. to 10s. 6d.  
**SEWELL & WALKER**  
Manufacturers, 217, Tottenham Court Road.

**RIMMEL'S TOILET VINEGAR** is  
now universally preferred to Eau de Cologne, being  
more tonic and beneficial as a lotion, pleasant as a per-  
fume, and far more economical. Its numerous, useful,  
and salutary properties, render it an indispensable requisite  
in all families. Price 2s. 6d. and 4s.  
Sold by all Perfumers and Chemists, and by E. RIMMEL,  
59, Gerrard Street, Soho.

**PUBLIC ANNOUNCEMENT.**  
**AN ELEGANT AND ENTIRELY**  
New STOCK OF WATCHES, for 1852, by EDWARD  
GRAFTON, of 51, Fleet-street, embracing all the im-  
provements resulting from the Great Exhibition, at prices

guaranteed. Established Manufactory, 51, Fleet-street.

On February 24th,  
**READABLE BOOKS.**  
In Volumes, containing 260 pages ..... One Shilling.  
In Monthly Parts, of 160 pages ..... Sixpence.  
In Weekly Numbers, of 32 pages ..... One Penny.  
HANDSOMELY PRINTED ON GOOD PAPER, WITH FINEST  
PICTURES, AND OTHER ILLUSTRATIONS.

Forming a Library,  
Suited as regards Price to the Purse, and as regards  
Portability to the Pocket.

**CHARLES LAMB**, in one of his admirable essays, told  
the public that he could read anything which he called a  
book, but intimated that there were things in that shape  
which he could not allow to be such. "In this catalogue,"  
says he, "of books which are no books—bills of lading—  
1 reckon Court Calendars, Directories, Pocket-books,  
Draught-boards bound and lettered on the back, Scientific  
Treatises, Almanacks, Statutes at large, the works of  
Hume, Gibbon, Robertson, Boissier, Soame Jenyns, and  
generally all those volumes which no gentleman's library  
should be without." With these exceptions, I can read  
almost anything. I bless my stars for a taste so catholic,  
so unexceeding.

Had the essayist lived to the present day, when the  
printing-press sends forth library after library, until their  
very names are legion, he would have found it necessary  
to modify his self-congratulation, and to chronicle a few  
additional exceptions. It is a known fact, that more than  
half of the books now published which escape the trunk-  
maker and the butterman are never read at all; for the  
greater portion of that large section of the community who  
do read books, are too overworked to have much leisure  
for reading recreation beyond that bestowed on the  
Englishman's necessity—his newspaper; and of the little  
time that remains, it is idle to expect that it should be spent  
in poring over treatises on popular sciences, still less on  
histories, dreary voyages and travels, or dry standard au-  
thors—in short, those books which, as Charles Lamb says,  
"no gentleman's library should be without."

If we are to believe the Chancellor of the Exchequer,  
who recently described to a gaping audience at the Halifax  
Mechanics' Institute the contents of one of the railway-  
book-stalls that engaged his attention, even those great  
patrons of cheap literature, the railway travellers, are but  
indifferently catered for—for the Chancellor seems to have  
stumbled upon a volume of Thucydides and a Treatise on  
Logarithms, side by side with shilling Novels, of the usual  
soporific character.

It is true, that Dr. Johnson, on his Tour to the Hebrides,  
bought a "Cocker's Arithmetic" to beguile the tedium of the  
journey, and when Boswell expressed surprise at his  
choice, the sage silenced him with the ready reply: "Why,  
sir, if you are to have but one book with you upon a  
journey, it should be a book of science. When you have  
read through a book of entertainment, you know it, and it  
can do no more for you, but a book of science is inex-  
haustible." In the belief, however, that most people are  
not Dr. Johnsons, and that they require a somewhat lighter  
literary fare to suit their mental digestion, it is proposed  
to publish, at the lowest possible price, a series of  
**READABLE BOOKS**, the distinguishing features of  
which will be a certain vivacity of style or subject, suitable  
alike to the family circle, and the solitary student—to the  
idler suffering from ennui, and the man weary with work,  
to the sedentary stayer at home, and the more respectable  
traveller on river, road, and rail.

The First Volume, the First Part, and the First Number,  
will be published on Saturday, February 25th.  
HENRY VISELLE, Gough Square, Fleet Street.

## Editor's Note-Book.

**RESPECT DUE TO WIVES.**—Do not jest with your wife upon a subject in which there is danger of wounding her feelings. Remember that she treasures every word you utter. Do not speak of some virtue in another man's wife to remind your own of a fault. Do not reproach your wife with personal defects, for if she has any sensibility, you inflict a wound difficult to heal. Do not treat your wife with inattention in company; it touches her pride, and she will not respect you more or love you better for it. Do not upbraid your wife in the presence of a third person; the sense of your disregard for her feelings will prevent her from acknowledging her fault. Do not entertain your wife with praising the beauty and accomplishments of other women. If you would have a pleasant home and cheerful wife, pass your evenings under your own roof. Do not be stern and silent in your own house, and remarkable for sociability elsewhere.

**FOLK-SCIENCE.** X. X.—This is an epithet denoting or comprehending many arts.

**WINDOW.** Curiosity.—There seems to be little doubt that the original meaning of this word was, like the Welsh term *wynt dor*, a passage for the wind. In fact, it is still provincially denominated *window* in Lancashire.

**TO MAKE EAU DE COLOGNE.** Martha E.—Take half an ounce of oil of sweet marjoram, half an ounce of oil of thyme, half an ounce of essence of violets, half an ounce of essence of carnations, six drops of oil of cinnamon. Mix all these articles together in a clean bottle, shake it well, and cork tightly. It improves by keeping.

**SILK-WORMS.** Y.—The silk-worm originated in the southern part of the Chinese empire, where written documents are said to exist, proving that those insects were raised there 2700 years before the Christian era. From thence they passed into Persia, India, and various parts of Asia, and subsequently to the Isle of Cos. In the sixth century, they appear to have arrived at Constantinople, where the Emperor Justinian made them an object of utility, and they were successively cultivated in Greece, Asia, Spain, Italy, and France.

**SODA-WATER.** Thomas H.—The so-called soda-water usually sold in London, contains but little or any soda, being nothing more than common water mechanically saturated with fixed air, which on being disengaged and rarefied in the stomach, so distends the organ as to interrupt or diminish the action of the digestive powers. When prepared in the best manner, soda-water contains a small quantity of carbonate of soda, which has a tendency to correct acidity in the stomach.

**FUEL.** C. L.—The most ancient fuel was undoubtedly wood. It appears that most countries before they were peopled, were, in a great part, covered with forests, as we see in America at present. In ancient times, wood was universally used in England for fuel, as it is still on a great part of the continent of Europe. The destruction of our forests by various causes, began to be felt as a serious evil about three centuries ago, when, fortunately, the introduction of coal more than compensated for their loss.

**CHESS.** Old Father Chaucer, so wise in other respects, must surely have forgotten himself, when he wrote—

"How of late this other night,  
Upon my bed I sat upright,  
And bade one reach me a booke,  
A romance, and it was to be  
To rede, and drive the night away;  
For methought it better play,  
Than either at chess or tables,  
And in this booke were written fables."

Why what book of idle stories could offer so many interesting materials of thought, as a well-fought battle of chess, where every inch of ground is contested with untiring valour, and the victor achieves, after a hard struggle, a bloodless triumph? But in answer to several inquiries of our correspondents respecting this noble game—the delight of our ancestors for centuries past—we would refer them to the chess games and problems, edited by the celebrated Herr Harwitz, and published in the *Family Friend*, a fortnightly magazine. As an instance of the extraordinary talent of this gentleman, we may quote an account of his blindfold playing in Manchester, abstracted from the *Manchester Guardian*.—The match came off in the new library-room of the Athenæum. Mr. Charles A. Du Val presided, and before commencing, announced the mode of play. Herr Harwitz sat on a platform at one end of the long room, with a small

table before him, at such a distance that he could not possibly see the boards. At the end of the room were the two boards for his four opponents. Board No. 1 being close to the chairman's right, and Board No. 2 to his left. Mr. Duval said that Mr. Harwitz would move first in each game, and would himself announce his moves, first on Board No. 1, and next (immediately afterwards), on Board No. 2. He (the chairman) would, in like manner, announce the moves of Herr Harwitz's opponents. About forty gentlemen were present, most of whom repeated the moves on chess-boards before them. The strictest silence was enjoined, and the scene was a singular one. Forty gentlemen chiefly engaged in moving pieces from time to time on the boards before them, trying alternatives, and studying every move with the most intense interest; while far removed from noise and boards, at Herr Harwitz, who is of small stature, his head resting on his hand, smoking a cigar, his eyes shut, or looking on vacancy; in which, instead of Macbeth's air-drawn dagger, he saw distinctly—but "with his mind's eye, Horatio"—two imaginary chess-boards, with their 128 squares, 16 pieces, and 16 pawns, and all the peculiarities which every move produced in the relative positions of himself, and his four adversaries. It will be seen from what we have stated, that both games were played simultaneously, and the "spectators of the fight" usually had two boards before them, on which to copy the moves. On Board No. 1, at the 22nd move, Herr Harwitz announced "Checkmate in four moves," and almost immediately afterwards asked, "May I retract this move? I can do it in three moves." His opponents at once admitted that he could, and resigned at 10.10 p.m., the game having occupied two hours and a quarter. Herr Harwitz's victory on this Board was rewarded with a hearty round of plaudits. The game on Board No. 2 was protracted till a quarter to one on Sunday morning, and the Manchester players ultimately succeeded in making it a drawn game. The result was deemed a success for Herr Harwitz, and he was again loudly applauded at the close of the

"CHESS TOURNAMENT."

**FRENCH POLISH FOR ROOTS AND SHORS.** W. B.—Mix together two pints of the best vinegar and one pint of soft-water; stir into it a quarter of a pound of glue, broken up, half a pound of logwood chips, a quarter of an ounce of finely powdered indigo, a quarter of an ounce of the best soft soap, and a quarter of an ounce of singlass. Put the mixture over the fire, and let it boil for ten minutes, or more. Then strain the liquid, and bottle and cork it. When cold, it is fit for use. The polish should be applied with a clean sponge.

**ROSARY OF HENRY VIII.** B. G.—We believe that this curious relic is in the possession of the Duke of Devonshire. Upon the four sides of each bead are four circles, within which are carved groups; each taken from a different chapter of the Bible. Nothing can surpass the exquisite beauty of the workmanship of this rosary. Every figure is perfect, in consequence of the extreme minuteness of their size; and the whole is from the design of that great master, Holbein, who has painted Henry in these identical beads.

**NERVES.** W. W.—Among the general mass of nerves, there exist a certain number, each distinct in the office it performs, and each adapted to a curious and beautiful apparatus. These are the nerves connected with the organs of the senses, consisting of sight, hearing, smelling, taste, and touch. Each of these nerves produces on the brain a peculiar sensation, obtained through the medium of the mechanical apparatus to which it is attached. But neither of the nerves of the senses can perform the duty of any other of them.

**TINCTURE FOR THE TEETH.** M.—Take of Florentine iris root eight ounces, bruised eleven ounces, ambergris one scruple. Bruise the root, and put the whole ingredients into a glass bottle, with a quart of rectified spirits of wine. Cork close, and agitate it once a day for a fortnight, keeping it in a warm place. About a tea-spoonful is sufficient at a time; in this a soft tooth-brush should be dipped, and then worked into a lather,

in the teeth and gums. It cleanses the teeth, strengthens the gums, and sweetens the breath. Apply the tincture to the mouth, and before retiring to rest.

**OPTICAL RAT-TRAP.** M. C. N.—The invention alluded to by our correspondent was by Mr. Stevens, an American. In this trap, a mirror is so arranged that the rat which looks at the bait, shall see his own image reflected in such a position as will lead him to believe that a second rat is trying to get before him in seizing the bait; and when the first rat has been caught, his image will be reflected by a mirror, so that the next rat who shall look at the bait shall see two rats apparently striving to seize it, thus deceiving him upon the turning-table, which yields to his weight, and precipitates him into the body of the trap.

**TO EXTRACT GREASE-SPOTS FROM BOOKS OR PAPER.** M. B.—Gently warm the greased or spotted part of the book or paper, and then press upon it pieces of blotting-paper, one after another, so as to absorb as much of the grease as possible. Have ready some fine clear essential oil of turpentine heated almost to a boiling state, warm the greased leaf a little, and then, with a soft, clean brush, wet with the heated turpentine both sides of the spotted part. By repeating this application, the grease will be extracted. Lastly, with another brush, dipped in rectified spirits of wine, go over the place, and the grease will no longer appear, neither will the paper be discoloured.

**COMMUNICATIONS RECEIVED.**—R. Bowden (our correspondent has chosen too melancholy a subject for his muse).—L. Z. (we do not pretend to offer medical advice).—ROMER (apply to a bookseller).—J. O. (declined with thanks).—J. HUSTON (the verses are good, but not suited to our pages). Poetry, like every other branch of literature, should have some purpose. Lines, expressive of mere personal feeling, can have no interest for the multitude).—CONSTANTINUS MAXIMUS (apply to a hairdresser; the information required does not come within our province).—H. B. A. (order from any bookseller "Directions for Making a Will").—FREDERICKA (apply to a music publisher).—J. CHIEF (our correspondent must be mistaken. India-rubber has not, we believe, been applied to the purpose he mentions).—W. ARKINS (the subject is of too painful and recent occurrence to please our readers).—G. B. C. C. (we do not know the person referred to by our correspondent).—EXQUIRER (Gog and Magog are the names of two warriors mentioned in Scripture).—MARIA (to take out wax, hold a very hot iron over, but not on, the spot until the wax melts. Then scrape it off. Lay a sheet of clean blotting-paper over the place, and press it with a cooler iron, until the wax has disappeared).—C. M. W. (almond soap is recommended).—R. P. (we shall be glad to receive the papers).—MIAMI (thanks).—CONSTANTINUS SUBSCRIBER (an act of courtesy is always good manners).—A. MOULT (the rules alluded to have been established by custom).—G. KEESTON (declined with thanks).—E. OVENUS (we hope our fair correspondent will reflect before committing such rash resolutions to print).—M. S. (*crescendo* is an Italian word, signifying increase of the volume of sound from soft to loud).—MEXA (singlass glue may be made by dissolving beaten singlass in water by boiling, and having strained it through a coarse linen cloth, evaporating it again to such a consistence, that, being cold, the glue will be perfectly hard and dry).—MASON (corns may be avoided by wearing easy shoes; frequently bathing the feet in lukewarm water, with a little salt or potash dissolved in it).—P. (Grease may be extracted from leather by applying the white of an egg, and then drying it in the sun).—F. M. S. (should send his address).—M. COLAM (the arrangements will depend upon the agreement made at the time of apprenticeship).—A BOOKSELLER (many thanks for the suggestions so kindly offered to our notice).—J. F. H. (an excellent work on Chess has lately been published by Mr. Rohn, in his Standard Series).—A. G. E. (thanks).—T. H. COLLINS (thanks).—B. H. (we cannot entertain the proposition for obvious reasons).—EXTRA (the Mutiny of the Bounty occurred on the 28th of April, 1789).—MASTERS (many thanks, but the suggestion offered will not suit our pages).—INGENIOSA (Pythagoras was the inventor of the Multiplication Table).—M. (The popular stories of the great value of Queen Anne's farthings are fabulous, although some few of particular dates have been purchased by mistaken persons at high prices).

# HOME COMPANION.

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 18.—Vol. I.]

SATURDAY, MAY 1, 1852.

[PRICE ONE PENNY.]

## THE PLEASURES OF READING.

Sour follow pleasure in the chase  
Others in building towers;  
I show in the smile of beauty's face  
And those in tinted flowers  
But give to me a pleasant book,  
That a fit for mental food,  
I seek earthly joys I'll calmly brook  
For undisturbed reading

I envy not the man of wealth,  
The titled or the rover  
Who wields the vital lamp of health  
And this I they live in clover  
I come in some sequestered grove  
From vanity receding  
With one inspiring volume—  
I'll slace find in reading

The classic page of these all vie  
Or with of ancient story  
With turret honey all my life  
And raise my soul to glory  
I tell the gains of Rome and Greece—  
And every age success in  
Prize most than any Golden fleece  
The sweet delight of reading

Like bee I range the fragrant  
Its nectared sweets I'll gather  
And find a balm for all my ills  
A recipe for sorrow

The worthies of the olden time  
Heroes and sages bleeding  
I'mbalm'd in the page sublimed  
Rueful in while reading

Poet and traveller and sage  
Deep prophet saint and divil  
With richer pictures fill the page  
Than fill the vale of Clwyd  
I glance my thoughts from that to this  
No other pasture needing  
Books are the pastures of the bl  
When truth is sought in reading

The soul by reading grows more  
Though tinge of melancholy  
May cast a shadow on the mind  
Is not the shade of folly  
In glances of the future  
Which I find in gleams  
And when I lay the volume down  
Prize myself my reading

I tell the gains of Rome and Greece—  
And every age success in  
Prize most than any Golden fleece  
The sweet delight of reading  
I tell the gains of Rome and Greece—  
And every age success in  
Prize most than any Golden fleece  
The sweet delight of reading

## THE LADY OF THE ROCK.

A HISTORICAL TALE OF THE LIFE OF CHARLES THE FIRST.

It was not surprising that the attention of the stranger had been attracted by the appearance of this young lady for, like the little Jessy, she was endowed with a more than ordinary share of personal attractions. Yet it must be admitted that the styles of their beauty were of an exactly opposite cast. One of those singular freaks of nature which sometimes creates children of the same parents in the most dissimilar mould, seemed to have operated in their case to produce two sisters as unlike in every particular relating to outward appearance as possible.

While the young countenance of Jessy was of the tenderest and softest Madonnen cast, her sister's face was precisely the opposite. Lucy's complexion, indeed, was of the darkest hue ever seen in maidens of English birth, yet mingled withal by so rich a shade of colour, that for many it might have possessed a greater charm than the fairness of a blonde. Her countenance was of a lively and expressive character, in which spirit and wit seemed to predominate, and the quick black eye, with its beautifully pencilled brow seemed to preface the arch remark to which the rosy and half-smiling lip appeared ready to give utterance.

"We have ridden far," said the younger stranger, breaking the silence which ensued when they had taken seats, and turning his eye again on Lucy as though he hoped to elicit a reply to his remark.

He was not disappointed. "May I ask," said she, "what distance you have come?"

"We left Massachusetts a couple of days ago," he replied, "and have been at hard riding ever since."

"You spoke of business, gentlemen," remarked the Governor, rather impatiently; "will you be so good as to proceed with the object of your visit?"

"I address Governor H, I presume, sir?" said the ill-looking stranger, speaking for the first time.

He signified assent.

"Our business is official and private," continued the speaker, in a voice harsh and unpleasant, looking around uneasily at the spectators.

"All affairs with me are conducted in the presence of my family," said the Governor, dryly.

"It is imperative, sir, that we see you alone," urged the other, in a dictatorial tone.

"Will you look whether there is a good fire in your little sanctum," said her uncle to Lucy, giving her at the same time a significant glance, and having referred in his remark to a small room adjoining, where Lucy not unfrequently resided, surrounded by numbers of the village children—with

whom she was a general favourite—to dress their dolls, cover their dolls, and perform other similar acts. Here, too, she retired for the purpose of reading, writing, and other occasions of privacy. More than all, it was the spot sacred to an hour's conversation with Mr. Elmore, apart from the rest of the family, during his visits.

The little Jessy anticipated Lucy just as she was rising, and opened the door leading to the room spoken of.

"The fire burns brightly, uncle," said the child.

"Will you walk in here with me, gentlemen?" said the Governor.

The two strangers rose and Governor H held the door until they had preceded him into the room. Going in last, he threw another expressive glance at Lucy, and followed them, leaving the door ajar.

Lucy, with the quickness of her character, read in her uncle's look that he wished her to overhear the conversation about to take place between himself and his visitors. Moving her chair, therefore, near the half-open door, while her lover was engaged in speaking with her aunt, and playing at the same time with the soft curls of the fair Jessy, who was leaning on his knee, she applied herself to listen.

"Your names first, gentlemen, you have not yet introduced yourselves," said her uncle's voice.

Mr. Dale, replied the pleasing tones of the young stranger who had spoken on their first entrance, "and Mr. Brooks."

"Be seated then, Messrs. Dale and Brooks," observed the Governor, and have the kindness to proceed in unfolding the nature of your errand."

"I am the bearer of these documents for you," said the harsh voice of him who had been introduced as Mr. Brooks.

Lucy here heard the rattling of paper as though the Governor were unfolding a letter. He proceeded to read aloud.—

"The bearers, James Brooks and Thomas Dale, having been empowered by his Majesty in the enclosed warrant, to seize the persons of the escaped regicides, Lisle and Heath, you are hereby desired, not only to permit said Brooks and Dale to make thorough search throughout your colony, but likewise to furnish them with every facility for that purpose; it being currently believed that the said regicides are secreted in New Haven."

*By Order of the Governor of the Massachusetts Colony.*

There was now a rattling as if occasioned by the unfolding of paper. The Governor continued—

"Whereas, Henry Lisle and William Heath, of the city of London, having been confined under charge of treason and rebellion, have made their escape, and whereas it is believed they have fled to our possessions in America, we do hereby authorize and appoint our true and loyal subjects, James Brooks and Thomas Dale, to make diligent search throughout all the New England colonies for the said traitors or rebels. Moreover, we do hereby command our subjects the governors and deputy governors of said colonies, to aid and abet, by all possible means, their capture and imprisonment, and we do hereby denounce as rebels any who may secret or harbour said Lisle and Heath, in the accomplishing of this our royal mandate."

Lucy heard her uncle clear his throat after he had ceased reading, and there was a moment's pause.

"It will be impossible," said he, at length, "Messrs. Brooks and Dale, for me to act officially in this matter, until I have convened the magistrates of the colony."

"I see no necessity for anything of the kind," said Mr. Brooks, in an irritated tone.

"Nevertheless, there exists a very great necessity," answered the Governor, decidedly, "so much so that, as I have said, it will be utterly out of the question for me to proceed independently in relation to the affair."

How soon then, can this convocation be summoned?"

"Not, certainly, before twenty-four hours from this time," replied the Governor, or perhaps a day later. You are aware that the meeting will have to take place in New Haven, which is twenty miles distant."

"We might easily proceed there at once, and reach the place in time to call a convention, and settle the affair to-night," urged Mr. Brooks.

"I am a slow man, and cannot bring myself to be in a hurry. One might make no possible difference, and to-morrow I will call a meeting of the magistrates."

Lucy here arose, and approached a door leading to the outer piazza. Her lover's eye followed her graceful figure with a feeling of pride as she crossed the room. She turned at the door, and seeking his eye as she closed it, gave him a signal to follow her.

In some surprise, he instantly obeyed.

"Henry," she said earnestly, and in a low voice, as if fearing that some one might chance to be near; "Henry, I have overheard what has passed between my uncle and his visitors. The latter are persons commissioned by

King Charles to apprehend the escaped prisoners who have taken refuge in New Haven. They wish to obtain authority for their arrest and re-imprisonment, as well as for making a stricter search throughout the colony, and will probably obtain this to-morrow. What do you think can be done in this emergency?"

"I scarce know what to say, dear Lucy," said he, as he took her hand involuntarily, and seemed to be reflecting deeply on her words.

"Could not you," resumed Lucy, "return at once to New Haven, and apprise the exiles of their danger?"

"Excellent! I will set out at once."

"I have thought of a plan of security for them likewise," continued Lucy, and she drew nearer, and whispered a word in his ear.

"Admirable girl!" exclaimed her lover, delightedly. "Why, Lucy, I believe you are inspired by the Almighty for the exigencies of this moment. But I must depart without delay."

"Yes," said Lucy, "there is not a moment to be lost; and I will contrive to detain the officers until you are too far on your way for them to overtake you, in case they should design proceeding to New Haven to-night."

He pressed her hand affectionately to his lips, and was gone.

Lucy returned into the room she had left, just at the moment that her uncle and the strangers re-entered.

"Your visitors, uncle, will probably remain and take some refreshment," said she, as she perceived they were about to depart, and giving him at the same time an arch look to second her invitation. "Tea will be ready in a short time, gentlemen," she added, fixing her eyes on the younger stranger with such a coquettish urgency as to make her appeal irresistible.

"Take seats, gentlemen," said the Governor, in a more cordial tone than he had yet assumed.

"I thank you," said Mr. Brooks, "but we will——"

"We will remain," interrupted Mr. Dale, giving a wink to his companion, and turning toward the fire.

Mr. Brooks had no alternative but to follow his example; and the Governor and his wife held him in conversation, while Lucy exerted all her powers of entertainment for the benefit of Mr. Dale. The little Jessy, more wearied than usual in consequence of her late adventure, fell asleep upon the couch, and did not awake until tea was over, and the visitors had departed.

True to his promise, early on the following morning Governor H. set out for New Haven, and convened the magistrates of the colony. After a short consultation, the determination was arrived at, that the exiled regicides not having violated any of the laws by which the community was governed, were not subject to arrest under their order. But to that part of the mandate authorising a search to be made, and prohibiting secretion of the offenders, they paid loyal respect, and the sanctity of every house was resigned and exposed to the inquisition of the officers. Their search, however, was unsuccessful, and they set out the next morning on their return to Massachusetts.

## CHAPTER VIII.

"Which sloping hills around enclose,  
Where many a beech and brown oak grows,  
Beneath whose dark and branching bowers  
Its tide a far-famed river pours,  
By Nature's beauties taught to please,  
Sweet Tusculum of rural ease."—WATSON.

The gentle breath of spring-time was now stirring in L——. The trees had begun to blossom, the flowers to bud, and the tender grass to spring up beneath the tread. Birds were returning from exile, and fishes were re-peopleing the village rivulet. Nature, in short, was assuming her most attractive and becoming dress—that attire which many a worshipper has celebrated in songs, such as not the gaudiest birth night garb of any other queen has ever elicited. After these, it is not we who dare venture to become her laureate on the occasion referred to, when she outshone herself in that gentle season, in the balminess of her breath and the brightness of her sky, as well as in all those other particulars which are dependent upon these. Those who have lived the longest may recall every return of spring within their recollection, and select the fairest of the fair, but it will still refuse comparison with the spring of which we speak.

The pretty English custom of children celebrating the first of May, by an excursion into the country, had been preserved among the colonists. On that day, from every village and town a flock of these happy beings, dressed with uncommon attention, and provided with baskets, might be seen merrily departing on one of those pic-nic rambles. Every excursion of this kind was not merely an event in the future, but an epoch in the past. The recollection of each successive May-day, treasured up throughout the following year, never became so swallowed up in that which came after it, that it did not preserve in its own associations and incidents a separate place in the memory.

But an occurrence transpired on the May-day of which we are about to speak, for the little villagers of L—— calculated to fix it indelibly on their remembrance. The morning rose serene and clear as if a pleasure excursion had been intended. A large party of children set out from their homes on the day alluded to. This was composed, with very few exceptions and additions, of the same group which had been collected the previous winter about the frozen brook, on the day of the accident to the niece of the Governor.

The utmost harmony and good conduct prevailed among the youthful corps, which was directed by the sage and skilful Lucy Ellet, who, in order to preserve order on all festive occasions, lent the young people her decorous example, and the experience of her superior years. The young processions made a beautiful appearance as it wound along the verdant banks of the village rivulet, and was lost among the neighbouring hills.

The spot selected as the place of rendezvous was an unbragous wood in a green valley, surrounded by various rocky hills of considerable height, rising in some places one above another with great regularity, the highest apparently touching the horizon, and the progressive ascent seeming like a ladder of approach to the sky. The cavities and breaches of these hills were numerous, serving as excellent retreats for the children in their game of hide-and-seek, as well as for the retirement of separate groups apart from each other. This pleasant vicinity had, therefore, for years been the stated resort on May-day occasions; even in winter it was a sheltered and sequestered spot; but when arrayed in the verdure of spring, the earth, bringing forth all her wild flowers, the shrubs spreading their wealth of blossoms around it, and the thick branches interweaving their leaves to intercept the sun, it was a peculiarly appropriate place for the purpose in question. The situation had been first discovered, and its aptitude for the purpose which it served pointed out, by Lucy Ellet, ever interested, since she had emerged from her own childhood, in considering the happiness and pleasure of the little community.

On the day in question, it was therefore remarked as somewhat strange, that that young lady strove to exert her influence in prevailing on the party to turn another way, expending much eloquence in extolling the superior advantages of a spot of ground situated in an opposite direction. The former prejudice in favour of the other prevailed, and the assemblage repaired thither as usual. The morning was occupied in crowning and doing honour to the lovely little Jessy Ellet, who had been unanimously chosen, according to a custom prevalent, the Queen of the May. At noon, dinner was served upon the grass from the contents of the various baskets, and the afternoon passed in the customary sports.

It had been noticed by such of the children as were old enough to be in any wise observant, that Lucy Ellet, so far from busying herself as usual to devise rambles among the hills, and promote diversity of amusement, would have used her persuasions to detain the young people the whole day in the grove. Her amiable disposition, however, prevented her from employing positive authority in restraining their footsteps, and she had been obliged, however regretfully, to behold them wander abroad at their pleasure.

When the members of the scattered assemblage were re-collecting around her, late in the afternoon, previous to their return home, she anxiously scanned their several countenances as they appeared, as if to detect whether any individual had made an unusual or curious discovery. She seemed satisfied, at length, that this was not the case; and evinced extreme satisfaction when, a little before sunset, the party set out on their return to L——.

They had not proceeded far, however, ere it was discovered that the young May-queen was missing from the party. In great alarm, they retraced their steps, expecting to find her taken asleep under the trees where they had dined. But on arriving at the spot, she was nowhere to be seen. Her name was next loudly called, but there was no reply. Apprehension now seized every member of the young party, who dispersed in various directions in search of the lost child.

Frank Stanley, the youth who, it will be remembered, had once been her preserver from a watery grave, evinced especial uneasiness at her singular absence, and was, perhaps, her sister excepted, whose anxiety amounted almost to frenzy, the most active in his endeavours to discover her. Separating himself entirely from the rest, he climbed among the rocky hills, and searched in every nook and cavity, at the same time shouting her name until his voice was drowned in the surrounding echoes.

At length he had given up his search in despair, and was in the act of descending, when he heard a soft call from behind him. He turned, and on a higher hill than any of the young villagers had ever been known to climb, stretched out upon its side in calmness sleeping, lay the fair object of his search. On the rock above her, round which the dew of evening had gathered the thickest, he beheld standing, apparently to keep watch upon the child's slumbers, a full-grown female figure. He had scarcely time to note this, ere she had vanished from his view so suddenly and mysteriously, that he could hardly distinguish whether he had been subjected to a mere illusion of the senses, or whether he had actually seen the figure we have described. Yet he could not otherwise account for the voice he had heard, except by ascribing it to the same form, for the child was evidently in too deep a sleep to have uttered any sound. Doubtful what to believe in regard to this phantom-image, and in that perplexed state natural to one not willing to believe that his sight had deceived him, ere he yielded himself up to the joy of recovering Jessy Ellet, whom he loved with the depth and sentiment of more mature age, he hastily climbed to the spot where it had appeared. There was no trace, however, of the vision to be seen. It had melted again into that air from which it had seemed embodied. Immediately descending again, he lifted the slumbering child, whom he had found at last, and imprinting a kiss upon her face, proceeded to bear her down the hill.

On reaching the valley, he found the rest of the party collected in the grove, after an unsuccessful search, in great anxiety awaiting his return.

## CHAPTER IX.

"Night wanes—the vapours round the mountain curl  
Melt into morn, and light awakes the world.  
Mau has another day to swell the past,  
And lead him near to little but his last."—BYRON'S LARA.

THE adventure of young Stanley, recorded in the last chapter, made a strong impression on his mind. The more he reflected on what he had beheld, the more he became convinced that it was no mere conjuration of his fancy. Nothing, in his feelings at the moment, absorbed as they were with thoughts of the little truant he had been seeking, could have suggested to his imagi-

noticed the image which stood before him. That it was an embodiment of some kind he scarcely thought, though he could not believe either that it was human, when he remembered the sudden and mysterious manner of its disappearance.

Frank Stanley was by nature neither timorous nor credulous; but he would have been an actual prodigy, if, living in New England in the end of the seventeenth century, he had possessed a philosophy which did not exist there until much later. Those, therefore, who will recall to mind the superstitious feelings at that time prevalent among the early settlers, will not be surprised that our youthful hero should have closed his reflections with the conviction that he had beheld a supernatural visitant.

This idea became agony to the sensitive mind of the boy, whose heart had outstripped, in a great measure, his years, and was fixed with sentiments of strong attachment upon the little girl.

Thoughts of the kind described had disturbed Stanley's mind during the whole night succeeding his adventure, and caused him the first sleepless pillow he had ever known. He rose earlier than usual the next day. Feeling languid from want of his customary rest, he walked out to recover his freshness in the morning air. Even to those who, like Stanley, have spent a sleepless and anxious night, the breeze of the dawn brings strength and quickening both of mind and body. He bent his steps involuntarily toward the place of the previous day's innocent revel.

When Stanley had reached the borders of the grove in which the party had dined, he cast his eyes upward on the hills where he had climbed in search of Jessy Ellet. Curiously suggested to him to ascend again to the spot where he had beheld the strange apparition. He proceeded, therefore, to remount the hills, in hopes that he might again behold the shadowy spirit. When he arrived beneath the well-remembered rock, he raised his eyes, more in the expectation of being disappointed in the object of his search, than with any actual idea of meeting a return of his former vision.

It was consequently with the astonishment of one utterly unprepared, that he beheld, standing upon the rocky elevation, the same figure which had filled his waking dreams throughout the night. The sudden sight took from him, for the instant, both speech and motion. Internal and indefinite feelings restrained the youth from accosting her as he had thought to have done. These are easily explained, on the supposition that his mortal frame shrunk at the last moment from an encounter with a being of a different nature.

As the boy gazed, spell-bound, he observed that this being was not alone. Ere long, however, he became aware that near her, in the middle of the rock, where the footing was more secure, stood another form. Fixing his bewildered gaze steadily upon this second object, in order to scan it as carefully as he had done the other, he became convinced that it was a familiar figure. For a moment his memory failed him, and he could not recall that round and coquettish form, with its garb of rich pink, nor that face, with its sparkling eyes of jet, and its raven braids. His doubt, however, lasted but for an instant. It was Lucy Ellet whom he beheld! She perceived his proximity before her companion; for, turning to the phantom form, she pointed to him just as he himself was about to speak. Ere his words were uttered, the misty figure had vanished from her side, and she remained upon the rock alone.

Awe-struck, the youth turned to depart. "Both the sisters, then," thought he, "are in league with this spirit-messenger of darkness. Alas! each so fair in their different styles, so idolized in the village, one of whom, too, I have treasured up the childish image in my heart, and mixed it with all my young dreams of the future!" He perceived, moreover, that such an association as he had witnessed with the emissaries of evil, might not only be a soil upon the virtue of Lucy and Jessy Ellet, but a lasting disgrace to their names, should the knowledge of it come to the ears of the pious community. Congratulating himself that he alone was privy to the unhappy circumstance, he was wending his way down the declivity, when his meditations were interrupted by the gay voice of Lucy Ellet behind him.

"Out on your vaunted politeness, Master Frank, to trudge down hill in front of a lady, and never turn to offer her your arm."

"Excuse me, Miss Lucy," replied Stanley, stopping, and much embarrassed, "methought you would not desire to be troubled with my company."

"I honour your delicacy, Frank," resumed Lucy, taking his arm, as they walked on. "You saw me but now in circumstances which you rightly judge I intended to be secret, and would not mortify me by forcing me to meet you just at the moment of my detection."

After an instant's pause, she continued. "I will let you into the secret, Frank, for there may one day be need to employ your services; and I am sure I may rely on your judgment and discretion not to divulge what I shall unfold. Your occasional assistance is the only return I demand for my confidence. You stranger lady is —"

"Hold, Miss Ellet; I cannot consent to obtain any knowledge of your secret under the condition that I am to become a party in the sinful affair. I will not unite in league with any daughter of the clouds, or spirit of darkness."

"Then you deem her whom you saw beside me on the rock one of those visionary beings you mention?" asked Lucy, looking at him steadily to learn if he was in earnest, and an arch smile curling on her mouth, and sparkling in her eyes, when she perceived he had spoken seriously.

"What else can I think of one who hath scarce the weight of a feather, is transparent as a cloud, and dissolves in a moment into air?"

Lucy Ellet here laughed outright. But instantly checking herself, and looking grave, she spoke in a mysterious tone. "I have, indeed, a strange association in your story, Lucy, of the mist. And you positively decline to introduce it to me?"

"I do not think then, wouldst thou seek to destroy others as well as

thyself, Miss Ellet. Is it through thine influence that thy sister has made acquaintance with the evil spirit?"

"Oh, thou fearest for her, dost thou?" said Lucy, mischievously, seizing the opportunity of turning the conversation. "Thou wouldst have her free herself from sin in order that she may be doing when thou art a man, eh, Frank? Nay, you need not blush, though you see I read your heart."

Stanley's thoughts were now completely diverted from the first topic of conversation; and talking on in different subjects, Lucy Ellet and himself entered the village.

(Continued on Page 200.)

## WORDS TO WORKMEN.

No sensible person of the working (or any other) classes will envy the higher ranks the enjoyment of luxuries—champagne and the like; things which the best men of all ages have been without, many by even premeditation, and are aware of the deleterious effects of stimulants, &c. Neither can we begrudge the higher ranks their exemption from toil and labour—an exemption only gratuitous and exceptional, for who eats his bread more in the sweat of his brow than the wealthy or noble sportsman?—the traveller for science or art's sake in distant climes?—the over-worked and sipping statesman and financier? Or shall we envy them their spacious dwellings, knowing that Goethe (though not poor) mostly lived in one room, in which there was no sofa, and reposed in a small iron-framed bedstead? Or shall we envy them the slakeness and tidiness of their occupation, which they often perform without "wetting their feet?" This preference also will, on closer examination, be found illusory, considering, for instance, the disreputable occupation of medical men, work so ominous, both physically and morally, that we will not dwell on it any further.

What working men may really envy the higher ranks for is, then, the quiet and orderly way in which they (mostly!) perform their work; the quiet and comfort, in fine, they enjoy after that work is done. Both, we say, are at the command of the working men of the present time, if they chose to think, to reflect, and to act judiciously and prudently—essential attributes, after all, of humanity; and any one, in fact, who does not possess them, places himself forcibly out of that pale he still wills or means to reach. First, then, every person ought really to possess that qualification (profession) he eventually professes to be capable of. Do you wish to obtain the reward (wages) of skilled men? Be such, and then the world will belong to the courageous. We do not speak of that dogged courage of the battle-field, but that energy of life and exertion to which, after all, we repeat, the world belongs. If you possess the external rewards of the higher ranks of society; take them at once—by acquiring the internal stamina and impulses. Act judiciously, prudently, and with skill, and you will surely be raised, because it is a curious observation, that men (mostly) soon cease to do that work they perfectly and eminently are able to perform, and rise to that which is above it. Of course, this has its limits, the centripetal force controls the expansive one, and wisely ordained it is.

But let us reflect on the quiet and comfort the higher classes enjoy in their leisure hours at home; and so can the thinking human-like workman. It is not the range of rooms we may occupy which makes man happy, but the comfort of that one or two he actually uses and dwells in. That regularity, tidiness, systematicity which a sensible man displays in his work, he mostly transfers and conveys home. Clever men of all ranks have done wonders also in this respect. When the chemist Scheele had become famous all over the world, and visitors were anxious to see his laboratory, where he had made such great discoveries, he led them to a few shelves and cupboards of his room, a few furnaces placed outside the windows, when and wherewith all these grand things had been accomplished—all orderly, all tending and arranged for one purpose and end. The dwellings of the industrious classes have, of late, become matter of states' attention in most parts of Europe. If working men will have respect for their places of abode, they will not hire any human-unworthy habitation. Surely architects and landlords will soon become aware and alive to that; and so also may be the internal arrangement of their dwellings—"the luxury of order, cleanliness, tidiness," &c. To conclude, the man who will prosper in life, must make himself capable of being prosperous.—Builder.

DOCTOR OF DIVINITY.—When the University of St. Andrews said her honours, a certain minister, who deemed that his ministrations would be more acceptable and more useful if he possessed what the Germans called the "doctor's hat," put fifteen pounds in his purse, and went to St. Andrews to purchase for himself a degree. His man-servant accompanied him, and was present when his master was formally admitted to his long-desired honour. On his return "the Doctor" sent for his servant, and addressed him as follows:—"Noo, Saunders, ye'll ay be sure to ca' me the Doctor; and gin nobody speers at ye about me, ye'll ay be sure to say the Doctor's in the study, or the Doctor's engaged, or the Doctor will see you in a crack!" "That a' depends," was the reply, "whether ye ca' me the Doctor tho." The Reverend Doctor started. "Ay, its just so," continued the other, "for when I fand that it cost sae little, I o'en got a diploma myself. Sae, ye'll jast be good enough to say, 'Doctor, put on some coal!' or, 'Doctor, bring the whisky and hot water;' and gin onybody speers about me, ye'll be sure to say, 'the Doctor's in the stable,' or 'the Doctor's in the garden,' or 'the Doctor's digging potatoes,' as it may be."—The nature of the ceremony is admirable. We commend it to those who love to receive and confer titles.

## THE PLAGUE OF BEGGARS.\*

SAY we not well, "the plague of beggars?" "Good lady," "Kind gentleman," whether on foot, on horseback, or in carriage—say we not well, "the plague of beggars?" What greater nuisance can be conceived than to have one's footsteps tracked, one's path beset, one's door besieged, by these ubiquitous masqueraders! We take a solitary walk, occupied by our own thoughts. At every crossing an impudent urchin trails a dirty broom before us, and would fain levy upon us a tax, which we resist, on the ground that the sweeping of streets and crossings ought not to be the work of beggars, but of honest labourers, fairly paid for work fairly done. In the short intervals we must encounter the whining interruption of the sturdy Irishman who is always starving, or of that wretched girl, who takes God's name in vain more times a-day than the most profane of profane swearers. Before our walk is half finished we have run the gauntlet of almost every form of pretended distress, and borne, as best we may, the fretting interruptions of every variety of ragged and dirty falsehood. We enter a pastry-cook's for a modest luncheon of biskuit or bun, a whole family of ragged vagabonds are watching every mouthful we eat; firm in our resolve not to encourage these things, but forced to witness with mingled sorrow and anger the misplaced liberality of men, unjust to labour, who have not like ourselves learned the true philosophy of mendicancy. We order out our carriage and go a-shopping. The footman cannot dismount before there is a beggar at the door, with a lying story of distress, or some false pretence of work for sale. Or, we are at home writing in our study; in comes a woman with a petition, and a man, who pretends to be a distressed member of one's own profession; and no sooner are these despatched with an accustomed negative, than that accursed hurdy-gurdy, imported for the express purpose of driving literary men mad, puts our teeth on edge, our amiable temper out of tune, and all our best and brightest thoughts to flight. This is a sad state of things; but there is no help for it. We are a beggar-loving and beggar-making people; and we must bear our just punishment. But we will not submit to our fate without a murmur and a protest. Perchance it may be our good fortune to gain a few converts to what we consider to be true humanity—an absolute repudiation of beggars; perhaps we may contribute something to the growth of that wholesome feeling which points to the encouragement of honest industry as the first duty of a good citizen, and indiscriminate alms-giving as a folly and a crime.

In this strong protest against mendicancy, we shall accomplish more than we anticipate if we obtain a few converts. We know that we are about to teach doctrines unpalatable to easy, good-natured, thoughtless people; and, unfortunately, that large class who suffer most by beggars (the honest labouring people of this country) are not to be reached by any arguments of ours. But the truth will ere long descend to them, after it shall have been received and acted on by the more educated and thoughtful classes. Here and there we perceive cheering indications of the dawning of a better era. Not long since we were gratified to see in the subscription list of a public charity the encouraging entry—"Rescued from the beggars!" It was the sum of half a sovereign saved from the gin-palace, to be expended in the hospital. We hope to see this good example extensively followed. A mere fraction of the money squandered in our streets in creating and sustaining a squalid army of mendicants, would suffice to support all the hospitals and dispensaries in the metropolis. What the sum thus wasted may be, we know not; but it is confidently estimated at one million two hundred thousand a year. Judging by the number of beggars, it cannot but be very considerable; and if the accounts we have of the jolly life these wretches lead, the costly food they contrive to purchase, and the money some few of them are known to save be true, it is not a few hundreds of thousands that will support them in their guilty effluence and filthy luxury. Those who know them best can bear witness, that they deny themselves nothing but that which too many of our well-paid labouring population forego without a murmur, while they squander their earnings on spirituous liquors and costly food—we mean tidy apparel, and the means of decency and cleanliness. Unhappily, the main difference between the two classes is, that the beggar has as good an excuse for rags as the actor has for his stage-dress—it is in harmony with the character he assumes; while the labouring man has no defence and no explanation to offer but a brutal and depraved taste. We are truly sorry that, in taking up the holy cause of labour against idleness, we are forced to admit, that in some of their habits the beggar and the labourer bear too close a resemblance to each other. Perhaps, if the matter were closely scrutinised, we should be found as guilty of encouraging the bad habits of the labourer, as we are of creating and fostering his idle and worthless competitor. The same blind ignorance which has substituted for the utmost encouragement of labour the treacherous practice of indiscriminate alms-giving, has distracted public attention from that great reform which would supply the labouring population with the means of decency and comfort, to endless discussions about the possible improvement of that plausible piece of palliative legislation—the English Poor-law, and that marvellous production of the wisdom of our ancestors, the principle (?) of local self-government.

At the present moment, when so much is being said about the burdens of compulsory taxation, we confess that it appears to us well worth while to look to this large voluntary tax levied in our streets, with a view to its curtailment. A few hundred thousands saved here would employ many a labourer, and not

starve a single beggar. There would be no great harm done if for every two visits to the gin-palace a honest man made but one, and were forced to substitute a "blooker" of meat, with its cheap accompaniment of bread and vegetables (a common meal with the honest workman), for poultry and ramp-steaks.

We have spoken of a philosophy of mendicancy—for sloth has its philosophy as well as labour—and begging is as amenable to theory as the production and distribution of wealth. The principle which governs and explains it is the universally operating principle of supply and demand. Superficial observers measure the poverty of a nation by the number of its beggars; and hasty travellers are eloquent on the unequal distribution of wealth, on the strength of the number of miserable objects they encounter in the streets. This is a great and dangerous fallacy, and must be corrected. Let us look a little beneath the surface, and scan the matter closely.

The first principle which we would enunciate is this:—Mendicancy, as a general rule, is not the effect, but the cause of poverty; and the poverty which it occasions is not felt by the beggars themselves, but among the industrious classes, who are robbed of employment by this unprincipled competition. We will explain ourselves by an extreme case. It is our habit in the middle of the day, wherever we may happen to be, to invest a penny in a biscuit or cake, to stay the cravings of hunger; and it has often occurred to us as we have consumed this product of industry—with a ragged professional or two bowing and curtsying at the door—whether we ought not rather to have forgone this modest meal in favour of the squalid objects outside. But whenever this impulse of good-nature has come across us, we have repelled it as a suggestion of the "father of lies," and the patron of beggars. We have called common sense and right feeling to our aid, and these have whispered conclusive arguments for that which, without such support, might have seemed an act of unprincipled self-indulgence. "Remember," they have seemed to say, "by what you are now doing you are supporting labour—the labour of the farmer, the miller, the planter, the sugar-refiner, the ship-owner, the merchant, sundry wholesale dealers, and the pastry-cook. That biscuit or cake is an embodiment, in minute quantities and proportions, of the labour of all these honest citizens. Those creatures at the door have repudiated labour, and have embraced—deliberately embraced—the trade of which idleness and falsehood are the staples. Eat, then, in peace, and with a quiet conscience. Eat, though a whole army of beggars were besieging the doors and windows. Better even to lay the foundation of a fit of indigestion, than to do the unchristian deed of supporting those who fly in the face of the solemn declaration of Scripture, which makes labour the condition of subsistence." "But, perhaps," good-nature is ready to suggest, "these creatures are in want?" Perhaps, indeed! But we need not pursue any further our imaginary colloquy. The result is, that our slender repast finished, we thread the little crowd of beggars with a quiet conscience, and a firm persuasion that we have rescued, for the nonce, a small coin of the realm from the pollution of the gin-palace. The same sort of reasoning applies to other cases. However harsh or unkind our refusal may appear to the individual, it is founded on a principle which it would be hard to gainsay, that it is our duty to help the honest labourer in preference to the dishonest idler. We are bound to discourage the profession of the mendicant to the utmost; for does it not stand to reason that money, in each several stage of its circulation, can only contribute to the support of one person? What is gained by the beggar is lost by the labourer; and though we cannot trace it through every stage of its circulation, we may be assured that there are those at the lowest round of the ladder of labour and trade who are reduced to want by its misapplication. It is a well-known fact that a larger proportion of the beggar's income is spent in the gin-palace, and in extravagant indulgence, than that of the labouring class in general; so that the money now given to beggars, if allowed to take what may be called its natural and proper course, would support a great number of persons in greater decency and comfort. It is in this way that mendicancy becomes the cause of poverty.

The next principle we would affirm is this:—Mendicancy is a compound consequence of meanness and good-nature; and not, as some would have it, a result and index of poverty. By good-nature, it is necessary to premise, we do not mean kindness, but that weakness of character which cannot stand the shock of a petition; that greatest of all misfortunes which displays itself in the inability to utter the important monosyllable No!

But England, though not cursed with the meanness of Ireland, is by no means free from that twin cause of mendicancy, good-nature. John Bull is remarkable for a profuse, reckless, and ostentatious expenditure. He is never satisfied unless he is spoiling people with douceurs, Christmas-boxes, and alms. The most express prohibition cannot keep him from his old practices, as the railway officials well know. Nay, he is so wedded to the vulgar habit, that he often pays the most inadequate wages, apparently for the express purpose of parading his presents of soup and ovals, warm blankets and flannel petticoats, and prizes of money and necessities, to labourers grown old in the service of hard taskmasters. Thus it happens that England's good nature and Ireland's meanness conspire to people this industrious and wealthy country with a swarm of beggars. The one creates, and the other contributes largely to supply the demand.

This brings us back to the leading principle of the philosophy of mendicancy. We affirm that the number of beggars in a country has little or nothing to do with its wealth or poverty, but with the demand which the habits of the nation create. A people that is habitually thoughtless and profuse, dropping pence into hands held out in the streets, and rewarding the most trifling services—always best repaid by courteous thanks—with vulgar coin, creates a demand for beggars which cannot fail of being supplied. So great is this demand in England, that our own domestic supply, with the cheerful and ready aid of Scotland and Ireland, are altogether unequal to the

\* This Essay was originally published in Fraser's Magazine for April 1848. It is reprinted with the permission of the proprietor of that Journal, and with the corrections of its author, in the hope of advancing the benevolent object with which it was written.

changelings of the market. We are obliged to send to Savoy, Bavaria, India, and even to China, for recruits. In spite of our hygienic fanatics about a redundant population, we do not hesitate to adopt a course of action which inevitably brings thousands and tens of thousands of worthless vagabonds into direct competition with our own honest and industrious labourers. Such another folly on so large a scale the whole world cannot parallel. No other nation, past or present, has shown so eager a desire to people its territory with the genus beggar.

For our own parts, we are firm believers in the economic doctrine of supply and demand, and we are confident of the justice of its application to this particular commodity. A nation which indulges in profuse and careless habits of expenditure, is as sure of a population of sycophants and beggars as a household of servants, a merchant of clerks, a shopkeeper of apprentices, an army of soldiers, or a legislature of senators. You may enact the most stringent laws, and spur the police into restless activity, but if the people create the demand, the supply will follow, and the beggar will defy all your precautions as the slave dealer does the blockade of the African coast. So well is the English character understood by those who live by its defects, that the beggar follows us even in our travels. We ourselves—we who should be ashamed of such a weakness now—had once an opportunity of verifying this statement in France. It happened that on two occasions, at the interval of about eighteen months, we travelled from Paris to Boulogne, and stopped for a few minutes at a village on the road of which we have now forgotten the name. An Englishwoman, in an agony of supplication, and with her cheeks wet with tears, rushed to the window of the diligence, and inquired whether there was any Englishman inside. We owned the soft impeachment, when with an earnestness of manner which would have done honour to an accomplished actress she stated that her husband, a week before had broken his leg, and was now lying dangerously ill in the village. Of course it was impossible to verify her statement, but we confess to our shame that we received it without hesitation and dropped into her hand a five-franc piece. At the same town eighteen months afterwards the same woman with the self same story appeared at the window with the old inquiry. We threw ourselves forward with a sudden impulse of surprise the trickstress recognised us and fled in confusion. If this woman was alive in 1848 we only hope that our dear neighbours under the wim impulse of their new doctrine of fraternity gave to this competitor with native idleness and fraud the same practical illustration of the meaning of the word which they exhibited to the railroad labourers and factory operatives when they expelled them from their dwellings at the point of the bayonet without allowing them to take their property or receive their arrears of wages.

We give this case, not merely as an illustration of our doctrine of supply and demand but as a proof of the artistic talent which mendicancy presumes into its service. In its rudest form this talent embodies itself in the picturesque arrangement of filthy rags, the display, in cold weather, of the bared shoulder or naked foot, and in some instances by a studied nakedness of attire. Its higher flights are the broken arm or leg, the eye struck with blindness, the epileptic fit. These are the practical implications of that rotund of leet. At home it is the beggar lying in posture the decayed professional man, the victim of the victim of shipwreck or fire. Or if we create a demand for it by home visitations of the poor it is still found equal to the occasion. The drunken wife of a policeman becomes a pious widow in distress, a perfect mistress of the cant phrases of any form of religious belief, and a miracle of pious resignation.

We have saved the trouble of illustrating the principles we have put forward by examples for scarcely a day passes that the police reports do not contain some instance of successful fraud, supplying the demand of which we have spoken, and if any good natured reader feel disposed to doubt the truth of the principle which we profess—that mendicancy is not the effect of poverty but simply the consequence of a demand created by thoughtless habits of expenditure—we beseech him or her to make diligent inquiries of those who have taken pains to examine carefully into the cases of street, house, and home legions, whether the cases of actual distress (if any such they have found) bear such a proportion to the instances of barefaced fraud as would justify any reasonable Christian man in bestowing money for their relief.

We know that there are many men and women, of very tender consciences and very susceptible feelings who believe it to be their duty to bestow alms upon miserable objects in the street, on the mere chance, slender as they admit it to be, that those objects may be in danger of starvation. We respect these feelings, but we have no sympathy with them. In the worst possible case, the chance of its being a deserving object, or a real object of charity, is too slender to justify the bestowing of alms, and surely, with a poor law framed to meet all cases of real distress, we are guilty of no cruelty when we refer the beggar to that national provision. In the absence of a poor law, however, we ourselves should still deny relief to every form of mendicancy with a quiet conscience, because we sincerely believe that real distress never wears this shape, but is to be found shrinking from the light of day in the misery to which we have condemned it by spending, in the creation of beggars and paupers, that money which, properly employed, is a part of the nation's labour fund.

But, while we denounce all giving to beggars as a folly and a crime, let us not be so far misunderstood as to be supposed to dissuade from alms giving. So far from undervaluing or discountenancing that Christian duty and privilege, we would enforce it with all the arguments of which we are master. But, in the name of common sense, let it be an alms giving worthy of reasonable beings—an alms giving which insists upon a thorough knowledge of its object, and which cannot act as a premium for the production, on a large scale, of the semblance of that which it aims at relieving. Let it insist upon guarantees—such as the personal knowledge, by some party

known to ourselves, of all the alleged circumstances, or the equally satisfactory safeguard of a state of things not admitting of being assumed or imputed—such as sickness duly tested within the walls of a hospital or dispensary, or, again, in the case of the able-bodied, work actually performed for money given.

If any reader, convinced by our arguments, determines to turn a deaf ear to mendicancy in all its forms, but shrinks from the thought of appropriating to self-indulgence the sums hitherto bestowed in what appeared to be charity, we would hold forth the example of the subscriber to a hospital already referred to, who reckoned up the small sums that had been before considered in this way, and presented them to the charity as "rescued from the beggars." Or, if he would prefer some preventive form of charity to this safety of all palliatives, let him aid the good work of building houses for the labouring class, in lieu of the staves in which they are now condemned to live, or become a subscriber to the ragged-schools, or promote, in some way or other, the great physical preventive—wholesome dwellings, or the great moral preventive—good schools. But as he is a Christian, taking his principles of action from the Word of God, but his modes of action from actual experience of things as they are, let him eschew all forms of indiscriminate alms giving; let him lend his help to clear the streets of beggars, and to drive into the workhouse all who will not labour, or are in any way disqualified from earning a living. If, contrary to our expectation, the burden of the poor-law should thus become intolerable, then let him listen to what we shall have hereafter to say upon that ingenious contrivance for creating paupers, and lend his help for the approaching destruction of that last remnant of Anglo-Saxon serfdom.

At present however, let us suppose the poor-law system to continue, and the workhouse to be ready to receive all whom our improved habits shall have thrown for the first time into distress. Is there, under these circumstances, good reason for believing that the poor-rates would be increased? We think not, and that for several reasons, some of which we will briefly specify.

In the first place, the mendicant population is one which lives recklessly from hand to mouth, very rarely saving money, and inhabiting, from choice rather than necessity, the worst parts of the worst districts of our towns. What honest men and women spend in more decent shelter and clothing, they squander in spirituous liquors, and other luxuries. Inhabiting, as they do, such fever factories as Church Lane St. Giles', and living there in squalor and overcrowding they are unusually liable to disease, and in their sickness have no resort but the workhouse. So that, in this way, they are as it is a heavy burden on the poor laws. In the second place, it is confidently asserted by well-informed persons that the average receipts of mendicant families are very much higher than those of a large proportion of the labouring class, so that the money now bestowed upon beggars would suffice to lodge, feed, clothe, and contribute to the rescue from the workhouse a greater number of industrious citizens. In the third place, it is notorious that beggars and thieves are in many cases, convertible terms. No one can be surprised that it should be so, for the man, woman, or child, whose life is a lie is not likely to observe the eighth commandment. Depend upon it that the poor law beggar is unconsciously the friend of thieves. The same vice which would strike at the root of mendicancy would render property more secure for the classes dangerous, which form the staple of mobs in times of public excitement, and practice every form of petty depredation in times of quiet, are the legitimate offspring of indiscriminate alms giving.

But we are prepared for the objection that, after all, no great harm is done by dropping pence into the streets, or otherwise contributing to the support of beggars, and that we have at least the satisfaction of thinking that we may have saved a human being or two from starvation. Upon both these points we are ready to join issue. We believe that in a thousand ways the possible harm is done by giving to beggars. The single coin we slip into the outstretched hand may be a mere trifle, but the aggregate expenditure in this way is a gigantic evil. Moreover, the real character of our alms is altered by the money value involved in it. The widow's mite given to a beggar instead of being dropped into God's treasury, or devoted to some use which God could approve, would have been a crime equally with the larger offerings of the scribe and the pharisee. The principle is the same whatever the amount, and the crime consists in supporting idleness in its unprincipled competition with industry.

Then as to the chance of preventing starvation in one out of several cases of indiscriminate alms giving. Here, too, we join issue with the good natured patron of beggars. We are utterly incredulous as to the alleged danger of starvation in England. We do not mean to deny that, in the course of a year of difficulty, a score or so of persons in England die of starvation; but we confidently affirm that, so far from their being of the beggar class, they belong more generally to that industrious part of the community truly deserving of commiseration, whom our patronage of beggars, our unjust system of poor-laws, our habit of contracting debts, and our general bad management of our pecuniary resources, individual and national, have brought to ruin. Examine into the cases reported on the authority of coroners' juries as deaths from starvation, and you will find that, in the majority of instances, they have occurred in the persons of respectable members of society, overtaken by misfortune, averse to apply for relief to the workhouse, to the support of which, as rate-payers, they have for years contributed out of their hard earnings, and thrown out of employment, may be, by that very diversion of money from the hands of industry into the pockets of beggars and paupers of which we are complaining. Many of these belong to that struggling class of petty tradesmen dealing in the wholesome necessities of life, who have to pay for the support of paupers with the one hand, while the money which should flow into their empty coffers through the

unbroken channel of honest industry, is diverted by the friends of mendicancy to the support of the internal splendours of the gin-palace, or the subtle temptations of the public-house. This diversion of the wasted alms of the friends of beggars from the necessities of life to the health, life, and soul-destroying luxuries of the public-house, is legibly written on that squalid haunt of beggars to which public attention has already been more than once directed—"Church Lane, St. Giles." The public-house there stands forward a striking contrast to the miserable chandler's shop at the corner, showing how decided the preference of the beggar for the showy luxuries over the modest necessities of life. But admitting, for the sake of argument, that out of the score or so of cases of starvation occurring in the year in England, a small fraction, or even the entire number, were beggars from whom the public had withheld their accustomed alms; even then we should have, in justice, to set off against these deaths the far more awful fatalities to which the abuse of spirituous liquors leads, added to the complicated evils occasioned by withdrawing such large sums of money from industry to idleness. In one word, from a review of the whole subject of mendicancy in all its bearings, we are convinced that every act of indiscriminate alms-giving is an injustice to labour, an outrage on common sense, and a crime.

We will now venture to suggest the remedies for this crying evil, and essay to point out the means by which this diseased member of society may be separated from the body politic, whose health it undermines, and whose vigour it saps.

1. Let every man and woman who has hitherto patronised beggars, withhold all assistance from the whole race, whenever and wherever they encounter them, under whatsoever form or pretence, whether selling trifling articles of manufacture in the streets, or from door to door, or standing with broom in hand at the crossings of our thoroughfares. Let them turn a deaf ear to every tale, refuse to read every petition, and adhere rigidly to the rule of requiring *personal knowledge* in all cases of individual charity.

2. Let a liberal estimate be made of the money heretofore squandered, and let it be devoted to some work of true charity, preventive or palliative, giving the preference to the former in the shape of wholesome houses for the poor, and schools for the training of their children; or, if the latter be preferred, selecting charities which admit of least abuse, such as hospitals.

3. Let the parochial authorities be urged to substitute for the street-sweeper, nine-tenths beggar and one-tenth labourer as he is, honest workmen, fairly paid for keeping entire streets clean instead of crossings merely, and selecting for that duty such of the existing sweepers as may be willing to exchange their present ambiguous employments for the new and more honourable occupations.

4. Let every traveller make it a point of conscience to observe the regulations of the railroads with regard to *douceurs*, and do all in his power to encourage the hotel-keepers to substitute fixed charges for attendance, for the present degrading system of discretionary payments.

5. Let the government be urged to protect honest industry against dishonest idleness, by flogging every man or boy convicted of begging, and every male parent whose child of tender years is found in the streets so employed; and let the police be instructed to bring before the magistrate every person of either sex found giving money in the street, that the same fine which is now levied on the drunkard may be imposed upon the silly people who indulge in this unwholesome luxury.

If our last suggestion be deemed unpalatable or difficult to bring into practical operation, then we would fall back on the first four items of advice, and conjure all really charitable persons, all who hate idleness and love industry, all who prefer the butcher, the baker, the grocer, the tailor, the shoemaker, the poor seamstress and laundress, to the keeper of the gin-palace and public-house, all who are ashamed of streets deformed by walking rags, and impatient of lives of idleness and tales of falsehood, to do what in them lies to restore to honest industry the funds of which it has been so cruelly deprived, and to drive into the workhouse all whom the pressure of want cannot reclaim from these disgraceful courses. When they have done this, when industry again enjoys those rights of which individual thoughtlessness has deprived it, we shall have something to say on that more systematic plunder of the industrious classes which passes by the name of Poor-laws, and some suggestions to offer as to the proper substitutes for that gigantic system of national folly and injustice which embodies itself in workhouses. In the mean time, let all good citizens employ themselves to stay the **PLAQUE OF BEGGARS**.

A MAN who has been brought up among books, and is able to talk of nothing else, is a very indifferent companion, and what we call a pedant. But we should enlarge the title, and give it to every one that does not know how to think out of his profession and particular way of life. What is a greater pedant than a mere man of the town? Bar him in the play-houses, a catalogue of the reigning beauties, and you strike him dumb. The military pedant always talks in a camp, and in storming towns, making ledgers, and fighting battles from one end of the year to the other. Everything he speaks smells of gunpowder; if you take away his artillery from him, he has not a word to say for himself. The law pedant is perpetually putting cases, repeating the transactions of Westminster Hall, wrangling with you upon the most indifferent circumstances of life, and not to be convinced of the distance of a place or of the most trivial point in conversation, but by dint of argument. The state pedant is kept up in news, and lost in politics. If you mention any of the sovereigns of Europe, he talks very nobly; but if you go out of the Gazette, you drop him. In short, a mere courtier, a mere soldier, a mere scholar, a mere anything, is an insipid, pedantic character, and equally ridiculous. — *Spectator*.

## THE GOLD SOVEREIGN.

OR, HONESTY IS THE BEST POLICY.—A STORY FOR YOUNG.

THE story of the gold sovereign, related to me by Judge N—, a gentleman of wealth and influence, in the western world, is well worth repeating—not for artificial interest, which it does not contain, but for the admirable lesson it conveys to young persons commencing life.

I regret that I am unable to reproduce the spirit and humour with which the inimitable judge graced his simple story, but I will do my best to remember his own words.

"When I was only eight years old," said Judge N—, "my father and my mother being poor, with half a dozen children better than myself, to take care of, I was given to a farmer, in the town of F—, who designed making a ploughboy of me, and keeping me in his service until I was of age.

"Well, I had not a very gay time in Deacon Webb's service; for although he was an honest deacon, and a tolerably kind man in his family, he believed in making boys work, and understood how to avoid spoiling them by indulgence.

"So I had plenty of work to do, and an abundant lack of indulgences to enjoy. It was consequently a great treat for me to get the enormous sum of one or two pennies into my possession, by any sort of good fortune—a circumstance of such rare occurrence, that at the aged eleven I had learned to regard money as a blessing bestowed by Providence only on a favoured few.

"Well, I had lived with Deacon Webb three years, before I knew the colour of any coin except vile copper. By an accident, I learned the colour of gold. That is the story I am going to tell you.

"One Saturday night, Mr. Webb sent me to the village store, on some errand; and on returning home, just at about dusk, my attention was attracted by a little brown package, lying on the road side.

"I picked it up to examine its contents, without the least suspicion of the treasure within. Indeed, it was so light, and the volume of brown paper appeared so large, that I undoubtedly suspected I was the victim of an April fool, although it was the month of June. I tore open the folds of the paper, however; and disconcerting nothing, I was on the point of throwing it into the ditch, when something dropped out of it, and fell with a ringing sound upon a stone.

"I looked at it in astonishment. It was yellow, round, glittering—too bright and too small for a penny. I felt it—I squeezed it in my fingers—I spelled out the inscriptions—then something whispered me that it was a gold coin of incalculable value, and that if I did not wish to lose it, I had better pocket it as soon as possible.

"Trembling with excitement, I put the coin in my pocket. But it would not stay there. Every two minutes, I had to take it out and look at it. But, when I met anybody, I was careful to put it out of sight. Somehow, I felt a guilty dread of finding an owner to the coin. Provided I found none, I thought it was honestly mine, by right of discovery; and I comforted myself with the sophistry, that it was not my business to go about the streets, crying, 'Who's lost?'

"I went home with the gold in my pocket. I would not have had the deacon's folks know what I had found, for the world. I was sorely troubled with the fear of losing my vast and incalculable treasure! This was not all. It seemed to me that my face betrayed my secret. I could not look at anybody with an honest eye.

"These troubles kept me awake half the night; and projects for securing my treasure, by a safe investment, the other half. On the following morning, I was feverish and nervous. When Deacon Webb, at the breakfast-table said—

"William!"

"I started and trembled, thinking the next words would be—

"Where is that piece of gold you have found, and wickedly concealed to keep it from the rightful owner?"

"But he only said—

"I want you to go to Mr. Baldwin's this morning, and ask him if he can come and work for me to-day and to-morrow."

"I felt immensely relieved! I left the house, and got out of sight as soon as possible. Then, once more I took the coin out of my pocket, and feasted on its beauty. Yet I was unhappy. Consciousness of wrong troubled me, and I almost wished I had not found the sovereign. Would I not be called a thief, if discovered? I asked myself. Was it not as wrong to conceal what I had found, as to take the same amount originally from the owner's pocket? Was not he defrauded the same?

"But then I said to myself—

"Why, if I don't know who the loser is, how can I give him his money? It is only because I am afraid Deacon Webb will take it away from me, that I conceal it; that's all. I would not steal gold; and, if the loser should ask me for it, I would give it to him. I apologised thus to myself all the way to Mr. Baldwin's house. But, after all it wouldn't do. The gold was like a heavy stone, bound to my heart. It was a sort of unhappy charm, which gave an evil spirit power to torment me. And I could not help thinking that I was not half so well pleased with my immense riches, as I had been with a rusty copper, which I had found some weeks before. Nobody claimed the penny, although I kept my good fortune so secret, and I had been happy as a king—or, as a king is commonly supposed to be."

"Mr. Baldwin was not at home; and I returned to the deacon's house. I saw Mr. Wardley's horse standing at the gate, and I was terribly frightened. Mr. Wardley was a constable; and I thought he had come to take me to jail."

So I hid in the garden until he went away. By that time, reason began to prevail over cowardice, and I made my appearance at the house. The deacon looked angrily at me.

"Now, thought I, feeling faint, he's going to accuse me of finding the gold. But he only scolded me for being so long about my errand. I never received a reprimand so willingly. His severe words sounded sweet—I had expected something so much more terrible.

"I worked all day with the gold in my pocket. I wonder Deacon Webb did not suspect something. I stopped, so often, to see if the gold was really there—for much as the possession of it troubled me, the fear of losing it troubled me scarcely less. I was miserably wretched a hundred times I had not found the gold. I felt that it would be a relief to lay it down on the road-side; again I wrapped it in brown paper, lest as I had found it, I wondered if ill-got wealth made everybody so miserable.

"At night I was sent again to Mr. Baldwin's, and having found him, obtained his promise to work at Deacon Webb's on the following day.

"It was dark when I went home, and I was afraid of robbers. I never felt so cowardly in my life. It seemed to me that anybody could rob me with a clear conscience, because my treasure was not mine. I got home, and went trembling to bed.

"Mr. Baldwin came early to breakfast with me. I should tell you something about him. He was an honest, poor man, who supported a large family by hard work. Everybody liked him, he was so industrious and faithful; and beside making good wages for his labour, he often got presents of meat and flour from those who employed him.

"Well, at the breakfast-table, after Deacon Webb had asked the blessing, and given Baldwin a piece of pork, so that he might eat and get to work as soon as possible, something was said about the 'news.'

"I suppose you have heard about my misfortune," said Mr. Baldwin.

"Your misfortune?"

"Yes!"

"Why, what has happened to you?" asked the deacon.

"I thought everybody had heard of it," replied Baldwin. "You see, the other night, when Mr. Woody paid me, he gave me a gold piece."

"I started, and felt the blood forsake my cheeks. All eyes were fixed upon Baldwin, however, so my trouble was not observed.

"A sovereign," said Baldwin. "The first one I ever had in my life; and it seemed to me that if I should put it in my pocket, like a mere common coin, I should lose it. So, like a goose, I wrapped it in a piece of paper, and stowed it in my coat pocket, where I thought it was safe. I never did a more foolish thing. I must have lost the coin, in taking out my handkerchief; and the paper would prevent its making any noise as it fell. I discovered my loss when I got home, and went back to look for it; but somebody must have picked it up."

"Who could be so dishonest as to keep it?" asked the deacon.

"I felt like sinking through the floor.

"I don't know," replied the poor man, shaking his head sadly. "He's welcome to it, whoever he is; and I hope his conscience won't trouble him more than the money is worth; though God knows I want my honest earnings."

"This was too much for me. The allusion to my conscience brought the gold out of my pocket. I resolved to make a clean breast of it, and be honest, in spite of poverty and shame. So I held the gold in my trembling hand, and said—

"Is this yours, Mr. Baldwin?"

"My voice was so faint that he did not hear me. So I repeated my question in a more courageous tone. All eyes were turned upon me in astonishment; and the deacon demanded where and when I had found the gold.

"I burst into tears, and confessed everything. I expected the deacon would whip me to death. But he patted my head, and said more kindly than was his wont—

"Don't cry about it, William. You are an honest boy, although you were near falling into temptation. Always be honest, my son; and if you do not grow rich, you will be happy, with a clear conscience."

"But I cried still—for joy! I laughed, too—the deacon had so touched my heart. Of what a load was I relieved! I felt then that honesty was the best policy.

"As for Baldwin, he declared that I should have half the money, for finding it; but I wished to keep clear of the troublesome stuff, for a time, and I did—I would not touch his offer; and I never regretted it, boy as I was.

"Well, I was the deacon's favourite after this. He was very kind to me, and trusted me in everything. I was careful not to deceive him; I preserved the strictest candour and good faith; and that has made me what I am. When he died, he left me a considerable sum, with which I came here, and bought new lands, which are now worth a great many sovereigns. But this has nothing to do with my story. That is told; and all I have to add is, I have never regretted clearing my conscience of poor Job Baldwin's sovereigns."

**ARTIFICIAL TEETH.**—Since the introduction of artificial teeth, which has enabled many to continue the mastication of solid food to a period of life at which they otherwise must have swallowed it whole, longevity is on the increase. Whether the dentist is really to claim this fact as the triumph of his art, or whether it is due to a generally improved system of hygiene, we will not discuss; but as mastication is so absolutely necessary, even to the strong and healthy, we may fairly suppose that some years are added to the lives of those who are thus enabled to save distress to the other digestive organs, when by age they have naturally lost some of their power.

## LOVE'S TRIALS; OR, MISTAKEN EVIDENCE.

## CHAPTER I.

THREE of my readers who were acquainted with the town of C— some forty years since, will be able to call to mind the Old Market, together with the broken brick pavement, the small wooden buildings, and the coppers which then distinguished that portion of the town.

They will probably also remember a very little street running parallel with the said market, and within sight and sound thereof, down towards the river.

The necessity for this passage, so narrow that it would only allow a single cart to traverse it, and so near to wider thoroughfares running in the same direction, has ever been a doubtful matter; and the reasons for allowing it are lost with the good folks who planned this once so important portion of the town, and who have long since passed away.

At one corner of this lane, there once stood a low wooden building, of a dark brown colour; it had four windows on — street, and two doors, all of them near the ground, the former covered with dust and cobwebs, which had been collecting there for more than twenty years, nothing but the rains of heaven having washed them for at least that period. Around the doors could always be seen two or three weather-beaten boxes, upon one of which reposed something in the shape of a paint cask; between the windows lay a row of tar barrels, some whole and some partly emptied; while contiguous to them and resting against the front of the building, was an enormous anchor, with one fluke partly buried in the ground, affording a conspicuous lounge, on which some half-score of idlers could, in a hot summer's afternoon, enjoy their fill of laughter and sunshine.

On entering the building, the eye immediately wandered over a confused mass of articles that lay hither and thither—coils of rope, bunched black shining chains, barrels somewhat resembling those at the door, kegs of various sizes, pulleys, large iron rings, spades, tin canisters, and sea-lanterns; some of these were to be seen, and some a stranger might stumble over, for it was never very light. But they are not to be mentioned as samples of what lay back, stowed away in the recesses of this long building. All that a ship might need, from a ball of tow-yarn to a best bowen-anchor, could there be had.

On the left hand of the entrance stood a partition, with two sliding lights, and a glass door opening into the sanctum of the wealthy ship chandlery, Messrs. G. & A. Hunt.

These gentlemen were brothers; they had begun the world together poor, and had tugged their way through the briars and thorns of business well on towards the top of the hill, enjoying a fine run of trade, with a shop full of goods, and no notes out, and with no account in any bank.

The elder had married, early in life, a lady who knew well, and almost too well, how to use her earnings. Children were not added to their stock of earthly good things, so that their property accumulated to their hearts' content.

The younger brother, although much the most comely of the two, had contented himself as a bachelor, and, as an exception against the conventional state, was much the most liberal—the elder Mr. Hunt being looked upon, and I fear with some reason, as rather a close man. You would not have thought so, however, as you entered his office, and saw him sitting in his arm-chair before the little grate fire; his full round face would turn up to you so pleasantly, and he would bid you such a hearty good morning, you might have taken him for a personification of benevolence. But let him know that you wanted a little aid, no matter how trifling, for poor Christians, or poor heathens, or any cause whatever, and a mighty change was at once visible. The spectacles would be taken down from the forehead, and put in their proper place before the eyes, the smile would fly away like a flash, the poker would be used very briskly in stirring up the fire, and there would be suddenly so many orders issued to the clerk, and so many things to be put up, and such hints about people being prudent, and about charity at home, that very likely you would wish that you had said nothing about the matter, and watch for an opening to make a decent retreat.

At the time when my story commences some little changes were in agitation, more especially to suit the wishes of the younger Mr. Hunt, who was somewhat anxious, now that they had acquired an independence, to be relieved from the drudgery of business. His desire was, that a young man who had been with them some years, a nephew, and bearing their name, should be taken in as a partner, and that a clerk of suitable abilities be procured to take the place of him who was to be elevated.

The elder Mr. Hunt disliked changes of any kind, and especially such as would involve expense, but being strongly attached to his brother, and finding that his heart was set upon the matter, he had finally yielded, and Rudolph Hunt, for that was the name of the young man, was duly published as a partner of the concern; he had also so far agreed to the second requisition, that an advertisement appeared in the *Gazette*, informing the public that the firm of G. & A. Hunt wanted a person competent to take charge of a set of books, and willing to make himself generally useful in any department of their business.

Many applications immediately followed this announcement, for the town was just then suffering under one of those terrible revulsions in trade which occasionally falls upon the business community, and throws a gloom over every mercantile interest; when merchants stand listlessly at their desks, or lounge in their office chairs, thinking over bad speculations, and awaiting heavy payments ahead. Sad, indeed, at such a time, is the fate of those who are dismissed because there is no work for them to do behind the counter or at

"The appearance of the young man did, indeed, warrant the idea which the elder Mr. Hunt had received—that he was a delicate kind of a person," for his countenance was pale, except a slight flush which suffused it on the moment of entering; and there was a softness to his complexion, bordering upon effeminacy, but which was happily relieved by his raven hair and keen black eye."

the desk, are obliged to look for new situations in the only employment to which they have been trained, and by which they can earn their bread. No wonder, then, that a crowd of applicants should at once have been aroused, when an opportunity was thus made known for an engagement with a firm long established, and beyond the chances and changes of trade.

But there seemed to be some objection, especially in the mind of the elder partner, to all who had hitherto applied, until it appeared a very doubtful case whether any addition would, after all, be made to the numerical force of the establishment.

A few days, however, after the advertisement appeared, a young man called, whose gentlemanly address and apparent ability to fill the situation, so satisfied the younger brother and the junior partner, that, as the elder Mr. Hunt was absent, they had, upon their own responsibility, requested him to call again at nine o'clock the next morning.

The next morning had arrived, and it wanted but a few minutes to the appointed hour. The two brothers were seated, each in an arm-chair, before the little grate fire.

There was a similarity in the features of the two, for both had full, round faces, and small, twinkling eyes; but to an acute observer, the expressions were very unlike. In the younger could clearly be seen the open, manly, generous spirit, combining with a shrewd and somewhat waggish propensity. In the other, care and close calculation were plainly legible.

"Well, brother, what shall we conclude about this young man? it is almost nine o'clock," and the younger Mr. Hunt, as he said this, laid down the morning paper upon his knee, and looked inquiringly at his brother, with an arch smile trembling at the corners of his mouth.

"I don't know, I'm sure, what to do about it; there are not any of the young men now a days that seem to be good for anything; they think more of their watch chains and fine coats than they do of work."

As Mr. Gerardus, or as he was sometimes called, Mr. Georgie Hunt said this, he pulled down his spectacles and took up the poker, striking with rather a jerky air some stray cinders that had fallen too far upon the hearth.

Showing pretty well for whom this hint was intended, the younger Mr. Hunt turned a smiling eye over towards the desk where the junior partner was busy with his books; Rudolph did love watch chains and fine coats; he smiled in answer to the look of his uncle, and kept on with his work.

"I'm afraid it is too true, what you say, brother; but we can't make them old men. The world has changed since our young days. Watches don't cost so much as they once did, nor coats either. But what we can't cure we must put up with."

"Yes, I suppose so"—with a heavy sigh.

"We want a young man; you and I are getting along in life; we don't care to work as we once did, and nephew can't be out-door man and in-door clerk too—is not that clear, brother?"

"Why, I suppose it must be so; but I should judge from what you say of the youngster, that he is a delicate kind of a person, not fit to work."

"Oh! by no means, brother; you mistake, you mistake; you don't understand. He is, to be sure, very gentlemanly in his manners. You don't object to that?"

"Oh, no!"

"I said that he appeared like one who had been well brought up—educated."

"Well, well, well; just as you and Rudolph like. If we must have him, we must; that's all."

"Not at all; no must about it, brother. I want you to be satisfied, especially as he is to be in your family. But here he comes."

The appearance of the young man did, indeed, warrant the idea which the elder Mr. Hunt had received—"that he was a delicate kind of a person," for his countenance was pale, except a slight flush, which suffused it on the moment of entering; and there was a softness to his complexion, bordering upon effeminacy, but which was happily relieved by his raven hair and keen black eye.

He was evidently under strong excitement; for when the elder Mr. Hunt questioned him, in his scrutinizing way, as to his knowledge of business, and his ability to keep accounts, and his willingness to do whatever he was called upon to do about the warehouse, he answered promptly and to the point; but there was a tremor in his voice, and his countenance assumed a more pallid hue; it was evident that the situation was one of great moment to him.

Mr. Georgie Hunt was allowed to do all the questioning, and he clearly manifested more complacency towards the applicant than for any other that had appeared before him; he was either pleased with his answers, or affected by the expressions of sadness which was a marked feature of his countenance.

"Well, so far, so good—and now to whom did you say that you referred?"

The young man hesitated; he did not appear to understand the question. "My brother means—to whom do you refer as to your—as to your habits of business?—as to your character and so on?—with whom have you lived? Being strangers to one another, you know that some such thing is usual."

"Oh, certainly, sir; certainly—you are correct. But I shall have a difficulty here that I did not anticipate. I have been in my father's office for the last three years, and my father, even if you thought proper to receive his testimonial, is too unwilling to give it."

Again the colour mantled his cheek, and the tremor of his voice was more manifest.

A sudden change, too, had come over the mind of the elder Mr. Hunt, for he turned towards the fire, and again commenced operations with the poker.

The younger brother observing this, and well knowing what the sign meant, gave up at once all hope that any engagement would be entered into just then. He felt, however, very unwilling thus to part with the young man. He was more interested in him than at the first interview—there was a manifest

and frankness in his whole demeanour, which, limited with his modest and pleasant manners; won each moment upon the really tender feelings of the younger Mr. Hunt.

Rudolph was also an interested listener; and, when he saw the signs of non-committalism on the part of his senior uncle, beckoned the former to his desk.

"Right, right, well—well, perhaps we'd better—And then, turning towards the young man—

"My nephew suggested that perhaps you had better leave your address, and we may send you word in a few days."

"Certainly, sir," and stepping to the desk, with great rapidity and neatness, he wrote his own name and that of his father, with the number and street where he resided.

"Had you not better, Mr. Edwards," said Rudolph, as he looked at the paper which the young man handed to him, "put down the number of your father's office, or place of business?"

"My father, sir, has no office at present; he gave it up nearly two months since, and for that reason I am seeking a situation; he resided at No. —, George Street.

## CHAPTER II.

It was a stormy night in the city; fitful gusts of wind roared through the narrow streets, and the heavy rain poured down in torrents. The poor crumpled together in their wretched tenements, huddled together like sheep within their pens; and the rich laughed gaily in their lighted halls, or rolled in their sumptuous carriages to the ball-room, the theatre, or the splendid party.

Death waits not for storm or sunshine. Within a dwelling in one of the upper streets, respectable in appearance, and furnished with such conveniences as distinguish the habitations of those who rank among the higher classes of society, a man of middle age lay on his last bed, momentarily awaiting the final summons. All that the most skilful medical attendance—all that love, warm as the glow that fires an angel's bosom, could do, had been done; by day and night for many long weeks, had ministering spirits, such as a devoted wife and loving children are, done all within their power to ward off the blow. But there he lay, his raven hair smoothed off from his noble brow, his dark eyes lighted with unnatural brightness, and contrasting strongly with the pallid hue which marked him as an expectant of the dread messenger.

Beside him stood a youth of eighteen, fresh with health, but with every feature softened into a look of tenderest love.

"Would that I could die for thee, oh my father," was plainly written on his fine countenance; his hand was within that of the dying man, and the bright eye of the father was fixed upon him, as though thoughts, too many and too overpowering, were agonizing to let their fullness out.

"My dear boy, it is almost over!" The tones were soft and trembling, and, as they fell upon the ear of the youth, the tears dropped freely; but he answered not.

"It has been a weary course—a toil for nothing, James—but you know it all; I have tried hard to resist the torrent that has been pressing against me."

"Dear father, let these thoughts of the past go. You have done your best." A hectic flush tinged the cheek of the sufferer, as though the soft tones of that boy had started the life-blood anew.

"Yes, James, you are right, I have done with the past now. But the future!—not mine. I have no fears for myself; I am going to rest; but those dear ones—your mother—your sisters—and yourself! I leave you nothing—not even one friend to aid you."

The drops were gathering on his marble brow, and releasing his hand from his father's grasp, the youth gently wiped them away.

"Dear father, try to think that God will be with us, as he has ever been."

"Yes, yes, yes,—God—my Father—Oh, yes—I will trust!"

The wind roared by, and the heavy rain poured its floods against the closed windows. Again the youth pressed his father's hand.

"But I can do no more. I leave you, my dear boy, my last, my best blessing. You have comforted my dark hours. You have denied yourself all youthful enjoyments for my sake—you have been a most devoted son. God bless you—God be your —"

The strong yearnings of the parent could not find vent in words. The effort already made was too much for his exhausted frame, and his short and troubled breathing warned the youth that its work was nearly ended.

Around that bed, in mute and helpless agony, were soon clustered the dear ones of his heart. His eye rested a moment with eloquent intensity on each of his children, bidding the long farewell; and then on her who had been his first and only love, the partner of his life's journey and treasurer of his warm affections, he fixed his last, long look, until its brightness faded away beneath the film of death.

It is broad daylight. The sun is shining brightly, and the busy throng jostle each other in the crowded street, as they are hurrying on their life's errand.

In the same chamber lies a corpse, prepared with becoming care for its long resting-place. Beside the pale tenement of clay stands the same youth. His hands are folded, and his eyes fixed mournfully on those cold, stiff features. Past scenes of his young life are flitting through his mind in quick succession. He remembers that parent when the sun shone brightly over him, and he remembers, too, when dark clouds gathered thick and poured their storms upon him, how his own young heart had agonised in

sympathy for the sorrow which that parent had endured, until his whole power of his mind was enlisted in the single effort of soothing his distressed feelings.

That troubled heart is now at rest. No words of consolation meet its needs; no faithful faithfulness; no eye of watchful love. The sacred Lord is severed, and the impenetrable veil has dropped its heavy folds around that pale, cold corpse.

But those years which fall so silently and so unheeded, and yet within that crowded mart, how many souls are daily passing the stand beside a father's corpse. Death walks his round among the rich and poor, and lays his icy hand alike on the weary sufferer, and the pampered devotee of pleasure.

Death heeds not ties of love, nor frantic widows' tears, nor the wail of helpless orphans; but round and round he reads his solemn way. No place, no time, no circumstance of being turns his step aside. The palace gate unlocks at his approach, and amid its splendid trappings on he strides, and lays his victim on a gilded couch. And into the low, lonely hut of destitution, amid crumbling ruins, and where pale want sits brooding, he steals along, and the poor sufferer, on his bed of straw, quivers and is still.

It was no common tale, I said, which should reveal the secrets of that youthful heart. True filial love is a passion not so generally possessed as many think. In the hour of childhood, and before cold and foreign influences have affected the free and pure play of the heart, we all know with what assurance of protection, with what confidence in his wisdom, justice, power, and love, the little one looks up to him whom he calls father. But as the wayward passions increase in strength, as they often meet the stern and just rebuke, feelings of restraint and fear arise, and throw their icy shill upon that holy tie. And oft the world comes in—that heartless creation, which knows no sacredness in love, and sees no beauty in the homely bonds of life—that selfish, heartless, poisoning world; throws its deadly shadow on the fresh, young heart; and while the outward show is still preserved, because dependence binds him within the circle of parental power, a coldness steals in the heart's first yearnings, all that was heaven-born is sacrificed, and confidence, all that threw around the sacred person and sacred name of father a halo more than earthly, has departed.

But this youth had never known one cold or selfish thought, connected with that fond parent, over whose lifeless body his tears are falling; and reproaches agonise his heart as he gazes upon those marble features; his young life has been one devoted day of truest filial love, and now he weeps, that he can do no more.

John Edwards succeeded his father in the possession of an estate in a distant county. The property had been handed down from father to son for some generations, but each succeeding inheritor found a new accumulation of debt, with an additional number of acres to be classed as old field, and of little value. They had, however, clung to the spot—encumbered as it was, partly because the revenue from it was still great, and enabled the possessor to live in respectable style, and partly because of some feelings, which were common to all, and among the best we have—a fondness for the spot which has been the home of our ancestors, and which is entwined in our memories with our happy childhood years. There was, perhaps, not one of all who had called this home, whose attachment to it was so strong, and whose appreciation of its natural beauties and its ancestral charms was more true and quickening; and yet there was not one less fitted to cope with the difficulties with which it was trammelled. For fifteen years he struggled with them, until, disgusted with the protracted trial, he yielded to circumstances; he could not control, sold the estate, and with the remnant of his fortune removed to the town of C—, and commenced a mercantile life. But he was not fitted, either by nature or training, for the new station in which he had placed himself. He was not a money-making man. He could not so bind the fine feelings of his sensitive mind, as to get them interested in making a bargain. Neither could he sympathise with the multitude in their scramble for the treasures of the earth; his mind shrunk away from the bustling throng, and kept close communion with itself; dark thoughts often troubled it; dark clouds were continually about him; bright rays seldom cheered his path, and when they did, it was but an April sunshine with its following shadow.

Within the domestic circle his spirit delighted to repose; to his lovely wife, his charming daughters, and his devoted son, he was all that they could ask. Around them were entwined all the sympathies of his soul, and on their pure love he rested; and could he but have retired with them to some calm retreat, free from distracting care, life would have been to him a summer's journey.

But thus it could not be; he was in the deep waters, and must struggle on, although in vain. It would be no pleasant task, either to my readers or myself, to picture out to them the dark scene of a declining fortune, or to open to their view the trying, soul-sickening experience of him who is called to witness the rapid strides of coming poverty. A few years he battled with the foe; his spirit broke beneath the stern encounter, and he sank to his long rest.

(Continued in No. 19.)

**CHINESE ETIQUETTE.**—When a Chinese emperor dies, the intelligence is announced by despatches to the several provinces, written with blue ink in mourning colour. All persons of rank are required to take the same black ornaments from their caps, with the ball or button of rank; all subjects of China, without exception, are called upon to forbear from shaving their heads for one hundred days, within which period none may marry, play on musical instruments, or perform any sacrifice.

**GRANDFATHER WHITEHEAD'S FIRST CATECHISM**  
[NATURAL PHILOSOPHY] is now ready, price 2d. These Catechisms will appear at intervals of about one month, in the following order:—

- |  |  |
|--|--|
| 1. NATURAL PHILOSOPHY—ELEMENTARY PRINCIPLES.     | 8. ANIMAL PHYSIOLOGY & ANATOMY.  |
| 2. NATURAL HISTORY—PRINCIPLES OF CLASSIFICATION. | 9. ZOOLOGY.  |
| 3. MECHANICS.                                    | 10. ASTRONOMY AND PHYSICAL GEOGRAPHY.  |
| 4. CHEMISTRY.                                    | 11. GEOLOGY AND METALLURGY.  |
| 5. ELECTRICITY, OPTICS, & ACOUSTICS.             | 12. THE APPLIED SCIENCES—LOCOMOTION, ARTS, MANUFACTURES, SANITARY IMPROVEMENTS, &c., &c. |
| 6. PNEUMATICS, HYDRAULICS, &c.                   |  |
| 7. VEGETABLE PHYSIOLOGY & BOTANY.                |  |

Each subject will be treated with the utmost care; especial attention being paid to the latest discoveries of facts and principles of Science. The Catechisms will therefore supply, when complete, a work eminently adapted by its cheapness, simplicity, and completeness, to promote the diffusion of Useful Knowledge in Schools, and in Domestic Circles. The Volume will be ready at the close of the year, price 2s. 6d., elegantly bound.

London: HOULSTON & STONEMAN, and all Booksellers.

## THE HOME COMPANION: A WEEKLY MAGAZINE.

### PRACTICAL ILLUSTRATIONS OF POPULAR FALLACIES.

No. XII.—“A BIRD IN THE HAND IS WORTH TWO IN THE BUSH.”

THIS saying, like many others we have illustrated, is true only in part; or rather, accepting it in its general form as true, as giving the advantage to certainty over uncertainty, to the present over the future, we apply it often to cases where it is no longer true, but becomes the mere excuse for improvidence. In its literal form, we can well understand that with a cockney sportsman, or even with one of those country gentlemen who shoot for the day, a “bird in the hand is worth two in the bush.” A poor Spitalfields weaver, too, may be excused if he take a delight in having a “bird in the hand” to gratify him in his hours of labour with its song; we forgive the imprisonment, for the sake of the care and affection with which the poor prisoner is treated, for the kindness which strives to tame its wild wing down to the limits of a dingy room; and by providing for all its wants, and guarding it from every harm, endeavours to compensate for the loss of freedom. And when kindness has made it familiar, and it picks the crumbs from its keeper's hand, or perched upon his shoulders as he works, rewards him with its song—

“When, after many moody thoughts,  
At last, by notes of household harmony,  
They quite forget their loss of liberty.”

we can well fancy that the poor weaver is prouder and fonder of the “bird in the hand” than of all the florid songsters who flit about from spray to spray, and whose only feelings towards the tyrant man are fear and distrust. But to the true lover of nature, whose days are not confined to the smoky atmosphere of cities, nor spent in one unvaried round of monotonous labour, the free warbling of the wild bird, as it carols upwards to the sky, and its free motions as it wings its airy flight, are far more interesting than any caged and imprisoned song. Those who really love the “birds in the bush,” and treat them with the same consideration as the “birds in the hand,” will find their fear and distrust of man vanish, and the free denizens of the air will respond as freely to the call of their benefactor as the longest dweller in a cage. On the south coast of Cornwall, not far from Falmouth, there is a lovely little valley, called Tregedna, well worthy a visit from any tourist for its own beauty, and still more worthy of a visit, not only from every naturalist, but from every lover of nature, to witness what kindness and humanity have done for the wild birds that dwell in that happy valley. We hardly think we are taking too great a liberty in naming Mr. Joshua Fox, the proprietor of that lovely spot, and speaking of the care he has bestowed on the “birds in the bush,” and the manner in which they reward him for his care. Here no truant school-boy is ever suffered to roam, curiously prying at the nests of birds; here no gun is ever heard—no snares or birdlime ever ensnare them; but man is become known to every feathered inhabitant as their friend and benefactor. And here, amid the delicious shrubberies—where many a rare plant, that in other parts of England is only to be found in hot-houses and conservatories, flourishes out of doors and unprotected in this genial climate, where roses in multitudes seem ever in bloom—the “birds in the bush” are numerous, and as familiar with man as the Spitalfields weaver's pet. Strangers, if they are wandering alone in those grounds, will not perceive much difference from the birds of other districts; they have not learned to regard all men as their friends. But if the owner be present with them, the birds know they have nothing to fear. No sooner is his well-known step heard on the gravel, or his signal whistle sounded through the groves, than from all quarters they may be seen flocking in, alighting on his head and shoulders, picking the crumbs out of his mouth, regaling him with their

songs and antics, and at a word from him, displaying the same familiarity towards the stranger present, repeating upon them without the slightest timidity or fear, without the slightest shadow of misdoubt. He has inspired them with the full confidence that in his presence no harm can befall them; and these “birds in the bush” are ready for the time to become “birds in the hand,” knowing that their liberty is safe, and that they are only taken in hand to be caressed and fed. We confess, that in this instance these “birds in the bush” would be of more value to us than the most accomplished goldfinch that was ever trained to draw water from a well, or all the little learned canaries who fire cannons and feign themselves dead. Their natural songs in their own happy groves are sweeter than the finest Italian bravura that piping bullfinch was ever taught; their joyous gambols in the free air more attractive than any balancing and posture-making to which “birds in the hand” have been drilled.

But what has all this talk about birds to do with the proverb? and how does this prove the proverb to be fallacious? When we speak of the fallacy contained in a proverb, we refer to the use that is made of a certain form of words, that may be literally true in themselves, but are, nevertheless, totally false in their application; and on thousands of occasions it will be found that, although “a bird in the hand” may be “worth two in the bush,” yet the very persons who are urging this proverb on you, as a reason why you should do this or that thing, so urge it for the very purpose of entrapping you into something that is contrary to your interest; or, at least, so far contrary to your interest, that for some minute present advantage you are induced to give up some large prospective benefit. It is the text from which wealth preaches to necessity; and poor necessity is often compelled to admit, with bitterness of heart, that to him a trifling present advantage is of more value than a larger one in prospect. But when necessity and improvidence go hand in hand, then, indeed, the proverb is brought to bear in full force, and the most outrageous sacrifices of distant advantages are made for the sake of present convenience. When Milton sold the *Paradise Lost* for five pounds—when, in a later age, Goldsmith got sixty pounds for the *Vicar of Wakefield*, to enable him to pay his landlady—we may suppose that to them “a bird in the hand was worth two in the bush”; but the improvidence of the bargain gave the fortunate purchasers many more than “two” birds for their profits. It has been too often, indeed, the fate of literary talent to be compelled to set more value on the “bird in the hand” than on those which were still “in the bush”: to have waited for their full advantage would have been to starve. It is true that Goldsmith was a wonderful mixture of talent and improvidence, with an excess of both—that in his necessity he had no sooner received the loan of a guinea, than he expended a portion of it in a bottle of Madeira; but if one in a greater state of necessity had come in his way, he would have given him the guinea, and gone without the Madeira. The immediate pleasure was to him the “bird in the hand,” and the pleasure of relieving a fellow-creature was greater than any other kind of gratification. Poor Goldsmith! with all thy faults and errors, thy vanity and simplicity, there was a kind, feeling heart within, that more than atoned for them all. To him neither “birds in the hand” nor “birds in the bush” were of any value of themselves—bright faces and cheerful songs were the delight of his life. If the “bird in the hand” brought them, well and good; if not, he hoped for them from the “bird in the bush.”

The great fallacy of this proverb is shown in the improvident bargains into which men are frequently led through a reliance on it. It is the fruitful parent of bonds and bills, promissory notes, and post obits; it takes up its abode at the sign of the three golden balls, and finds a home in the usurer's den. It is the constant companion of the young spendthrift, and excites false hope: “those who seek to become suddenly rich, without the aid of patient labour. How many a man is there whose after life has been embittered by grasping at “the bird in the hand,” and neglecting those “in the bush.” Let us take, for instance, a young collegian, whose parents probably have been exercising a rigid economy to enable him to receive the advantages of a good education. He enters the walls of his *alma mater* with an allowance sufficient, and but barely sufficient, to maintain his position. Tradesmen bring upon him, press their goods upon him, tempt him to purchase beyond his present means. They are thinking upon the “two birds in the bush”; he finds the proffered credit only too easy a way of having “a bird in the hand”; he is delighted with its brilliant plumage—whether its feathers represent fashionable coats, gorgeous waistcoats, or well-cut trousers. Sometimes the “bird in hand” assumes the shape of a horse, which gallops cheerily after the hounds; sometimes it is clothed in the sober brown of a cigar, and vanishes in smoke; and then it shows itself again in perfumery, and mingles with the fumes of the cigar: anon, it comes in jewellery and trinkets—be-chained, be-ringed, be-studded; and sometimes, literally, in the shape of birds—when turkey, grouse, and woodcock swell the tavern bill; sometimes, mantling in purple, it assumes the name of port wine, or, decked in amber, passes for sherry; but has, in reality, as little affinity to wine as that which Dr. Johnson maintained was drunk by the people of Scotland before the union—only with precisely the contrary effect. Boswell says: “We had wine before the union.” Johnson: “No, sir; you had some weak stuff, the refuse of France, which would not make you drunk.” But Boswell stands up stoutly for the drunkenness of his fellow-countrymen, and assures the great doctor that “there was a great deal of drunkenness.” Johnson: “No, sir; there were people who died of dropsies, which they contracted in trying to get drunk.” Unfortunately for the collegians, the “bird in hand”—there, when it assumes the name of wine, is a potent fiery mixture, which never knew the wine-presses of France, and has only a slight intercourse with the grapes of Spain, but is peculiarly adapted to turn young brains in the shortest amount of time; and they go on swallowing the pernicious fluid under the delusion that they are acquiring a fine taste.

in wine. In all these shapes and forms in which the "bird in the hand" appears, presenting the advantage of the bird in the hand to make it seem worth more than "two in the bush." But when the day of reckoning arrives, the fallacy is as plain as the villainy of Don John was to the consequential Dugberry. "The burglary as ever was committed." The "bird in the hand" has withered away to a dry skeleton; like the apple on the Dead Sea shore, dust and ashes are all that remain. Sorrow and repentance are its followers—sorrow for time mispent, which, but for the "bird in hand," might have been usefully employed; repentance, which comes too late, that ever he should have been fooled into the belief that "a bird in the hand was worth two in the bush." For now "the birds in the bush" are made to pay for all the follies that the "bird in the hand" had caused to be committed. Whatever be his calling in after life, the debts incurred for the "bird in hand" stand like a spectre in his way, paralysing all his future efforts. Suppose him appointed to a curacy, with the miserable stipend our church appropriates to its working-clergy—a stipend, at the best of times, so small that it is wonderful how they manage to maintain the appearance of gentlemen. And from this stipend—his "bird in the bush"—must be deducted a certain portion to pay for the departed "bird in the hand." For years we see him dragging on a miserable existence, obliged to deny himself comforts—nay, necessities; and if it should happen that, at a future time, some small patrimonial property should fall to his share, it is often swallowed up in payment of these debts which, by one arrangement or another, by lawyers' bills and usurious charges, have been going on increasing, until, perhaps, it has taken more than ten of the "birds in the bush" to pay for the one "bird in hand," even taking it at the mere money value. But if we take into the account all the deprivations he has sustained, all the wretchedness and inconvenience he has suffered, all the duties he has been prevented from fulfilling—the crushed affections, the wearied spirit, the bruised heart with which he has dragged on his burdened life—then we shall well understand how dearly he has paid for the immediate pleasure derived from the "bird in hand." Many are the clergymen who have been hampered for life by the embarrassments caused by listening to this seductive phrase; some, even when they have come into a handsome property, have not been able to clear off these incumbrances in their life-time, but have left them, or, rather, the consequences of them, as a burden to their children, who suffer for the "bird" that was never in their own hand.

Let us now take another form in which the fallacy of the saying is palpable, and where knavery uses it to cheat simplicity. A young man has great expectations. An uncle has died and left a will that gives, or is intended to give, considerable property to this young man, after the decease of the uncle's widow, but has made only a slight provision for him during her life-time. Old women, on whom young heirs are dependent, are proverbially long lived, and this one seems peculiarly tough. The "birds in the bush" are very tempting, but they are out of his reach. It is not long before a money-lending lawyer whispers in his ear that "a bird in the hand is worth two in the bush." Advances are made to him from time to time; the facility of obtaining these leads to increased expenditure on his part; his wants multiply as the means of gratifying them are multiplied; larger and more frequent advances are required. He is in the toils. The "bird in the hand" is the decoy duck which is to bring the "birds in the bush" into the snares of the crafty fowler. Then begins the long train of securities, with the accompaniment of long lawyers' bills—commission, insurances of life, and interest, soon amount to double the capital advanced—there is no usury in the case, the lawyer is much too clever for that—but by one means or another, a handsome profit is derived from every transaction, which stands in the place of usury. Personal securities of every kind are carried to the utmost limit that the ingenuity of the lawyer can stretch them. A new device is then started: an irregularity is discovered in the uncle's will, a portion of the property is supposed to be of right the nephew's at the present moment; counsel are fe'd, their opinions taken, and a good cause of litigation shown. The whole machinery of the law is put in force; the poor old woman, who had lived too long, is vexed and tormented with ejections, with bills and answers, denunciations and rejoinders, trials and hearings—and the law courts decide the question one way, and the equity courts another—and nobody takes anything by the motion but the lawyers. The "bird in the hand" has flown away; the "birds in the bush" are more distant than ever. The nephew has gained nothing but the anger of the aunt—her savings are destined now to flow into another channel—every means are used by her to make the freehold less valuable to him when he shall come into possession. The nephew is plunged into the deepest distress—his own little income is mortgaged to the lawyer—his present embarrassments are overwhelming—his future prospects dark and gloomy. Again the lawyer steps in with his "bird in the hand," offers to release him from his debts, to set him up as a free man, and give him a couple of thousand pounds in hand, upon receiving a conveyance of his reversionary interest in his uncle's property. The bait is tempting, the conveyance signed, the two thousand pounds paid over with rather a swinging deduction for the lawyer's bill on the transaction, and the "birds in the bush" are become the property of the lawyer when he can catch them. The business was scarcely concluded, ere the aunt, as if to do the most spiteful thing she could to her nephew, died: she had lived long enough to drive him to sell his patrimony for a mess of pottage; and died exactly in time for him, while starving in his garret, to see the lawyer enjoying those very "birds in the bush," which he had sold for the "bird in the hand."

One more point of view in which to place the mischief arising from this saying, and we have done. Of all the evils that beset the nation in a public sense, one of the most fearful is the frightful corruption which the "bird in

other things are sacrificed to it. Of what avail is it to talk to the burgesses of St. Albans, of political principles, or prospective benefits to themselves, or to the country at large? They have always some busy Edwards to whom, in their ear, "a bird in the hand is worth two in the bush"—always some active knave to lead them into "Sovereign alley." The "bird in the hand" comes in the shape of five pounds, and for this petty bribe, country independence, and truth are sacrificed, and with these, for ever lost, the opportunity of securing another golden goose. The burgesses of St. Albans have "cooked their goose"—have eaten their "bird in the hand," and now look with wistful eyes at the "birds in the bush," which they have lost. If once this principle is admitted as the guide of the elector's conscience, it can only be overmastered by supplying him with some stronger inducement, that gratifies his cupidity. "What are you going to give me?" said the knavish butler of a rich and silly gentleman, residing in the neighbourhood of a borough town, and for which he had a vote. "Nothing," was the agent's reply. "Then I shall vote on the other side; I know I can get twenty pounds there." The agent knew his man—knew that it would be useless to talk to him of principle or honour, or political feeling, so he appealed to his cupidity in another form. "Stop," said he, "you know your master is on our side." "Yes, yes; but I shall vote where I can get most money." "Well," said the agent, "which would be most to your advantage—to take twenty pounds from the other side, and lose your situation, or vote on our side, live on with your master, and cheat him as you do now?" He paused a moment in deep consideration. "There is some truth in what you say," was his reply; "I shall vote on your side." The "birds in the bush" seemed so much more valuable than "the bird in the hand," that for once they carried the day.

## THE JEALOUS CHILD.

BY MARY BENNETT.

"WHEN our trees were budding, mother,  
When I had no little brother,  
You loved me, and only me—  
Sang me songs so pleasantly,  
In your arms I often lay;  
You would dance with me and play,  
When I had no little brother.

"Now, you love him more than me,  
Sing to him so pleasantly.  
Hush him in your arms all night,  
Dress him fair at morning light;  
Pick pretty flowers to twine about him,  
Say—'We could not live without him!'  
But I want no little brother."

Starts the quick, resentful tear,  
Brooding, sullen thoughts appear,  
Clouding o'er the open brow  
"Hark! my child—I'll read you how

Jealous Cain, in ancient time,  
Envied—hated—fell to crime—  
Heart and knee your little brother!

"He crows and leaps to see you sigh,  
He loves to meet your smiling eye,  
Will you not give him love for love?  
Will you unkind and thankless prove  
To God, who gave, your life to cheer  
A playmate and companion, dear,  
A friend for future years—your brother!

"I love you both, and you will find  
Him precious, if you're good and kind.  
A gift to bless you, when I'm gone—  
When you might else be left alone—  
Then guide him gently in those ways  
Where truth and knowledge shed  
rays,  
And be a true and noble brother."

## A COURT SCENE IN ARKANSAS.

JUDGE Q—, who is a man possessed of the usual quantum of judicial dignity, and never suffers it to be run over without a word of explanation from the offender, was administering justice in the town of —. The court was proceeding rapidly in the despatch of the public business with an unusual degree of quietude, except the steady peals of the full-toned and eloquent voice of Colonel W—, the zealous state's attorney, when, all at once, out in the street, hard by the court-house, a loud voice was heard making a horrid use of the queen's English, and threatening great abuse of the human form divine, in this wise:—

"Jist hit me if you dare with that stick, and I wish I may be chewed up if I don't knock the death groans out of your ribs!"

This attracted the judge's attention, and caused the speaker to halt.

"Mr. Sheriff, bring that belligerent into court," said the judge.

The sheriff obeyed, and brought in by the sleeve a liberal specimen of nature's works in the shape of a man about six feet four inches in his shoes, not a bad face, but indicative of an inordinate passion for fat beef and "bust-head."

"Is that the man raising that disturbance out doors?" said the judge.

"Well, I 'spose I is, if you call speaking in yearnest raising a fuss," replied the offender.

The judge commenced one of his moral lectures, for which he is so remarkable, strongly animadverting upon the great criminality of swearing, fighting, &c. &c., when the offender, with great earnestness spread over his countenance, something like a mixture of a laugh and a cry, interrupted him, and said—

"Stop, judge, and let me tell you the rale circumstance of it. I warn't the digressor. He, drawed on me a stick full two feet over, and made circumlocutory motions about my head, and I jist congealed myself on my dignity, and suspended myself on my rights—that's all."

This speech broke the thread of the judge's remarks, and for several minutes, with his under lip between his teeth, he turned over the leaves of his docket. "At length he said—

"Let the gentleman retire for this time."

As the hero of this sketch passed out of the door, he was heard to say—

ONWARD!

**STEAM-ENGINE IMPROVEMENTS.**—Mr. J. Hick, of Bolton-le-Moors, has just patented some improvements in steam-boilers or generators, which consist in the arrangement of two boilers, and to end, with an intermediate space or gas-chamber, two of the sides of which are formed by the ends of the two boilers, while the other sides are constructed or lined with brick or some other slow conductor of heat. Mr. Hick claims the arrangement of two or more steam-boilers or generators with a gas-chamber formed or lined, and situated as described, for effecting a more perfect combustion of the products of the fuel.—*Builder*.

**STEAM BETWEEN AFRICA AND EUROPE.**—The contract for the monthly mail line of steam-packets to and from England and the western coast of Africa, has been taken up by Mr. Macgregor Laird. The contract is for nine years, at an average annual cost of £21,000. The vessels are to be iron-built and screw-propelled, of about 700 tons. The length of the whole voyage out and home is about nine thousand miles, the time to be occupied between fifty and sixty days. They will touch at Madeira, Teneriffe, Goree, the Gambia river, Sierra Leone, Liberia, Cape Coast Castle, Lago, Calabar, Fernando Po, and five or six other intermediate points on the African coast. When this line of steamers is firmly established, we expect that the influence of regular commercial intercourse between Africa and Europe will do more than all efforts hitherto for the suppression of the slave-trade, and the civilisation of the country.—*Literary Gazette*.

**ACCOMMODATION FOR THE WORKING CLASSES.**—Prince Albert's Society for Providing Better Domestic Accommodation for the Working Classes of Windsor, has been fairly launched in the shape of a Joint-stock Building Company, and has been provisionally registered. The amount of donations already received is very considerable, including £50 from Lieutenant-General Murray, £50 from the Right Hon. H. Labouchere, M.P., £25 from Major-General Reid, M.P., a handsome sum from the Dean and Canons of St. George's Chapel, and the same from the Provost and Fellows of Eton College. By a resolution of the provisional committee, it has been decided that the donations are to be applied towards paying the expenses of incorporation, and the balance to go towards a fund for erecting public baths and wash-houses. The interest payable on the share capital is to be limited to five per cent., and the surplus carried to the baths and wash-house fund.

**THE STEREOSCOPE AND THE DAGUERRETYPE.**—The late Great Exhibition has brought into public notice one of the most surprising of modern scientific discoveries. As far back as 1838, Professor Wheatstone announced a remarkable discovery in binocular vision, (sight with two eyes); which had the effect of deceiving the senses so completely, (that mere drawings, seen under peculiar circumstances, were converted into solid and projecting bodies. Since then the ingenious discovery has been modified and much improved by Sir David Brewster. This, however, had not the effect of bringing the wonders of the discovery prominently before public notice; and it was not until it had received the publicity of the Exhibition, and the assistance of a talented photographer in adapting his art to the discovery, that the nature and value of the Stereoscope became at all understood, at least beyond the circle of a few scientific societies. No language can convey an adequate idea of the wonderful discovery. It may be observed, however, that the Stereoscope somewhat resembles, in appearance, a double opera-glass. Two pictures of a person or group of persons taken at slightly different angles, (so as to correspond as near as possible with the different angles of the eyes), are required to produce the illusion of solidity. The two upper glasses of the Stereoscope, which we place to the eyes, form a sort of squint; and it is well known that under such circumstances two objects are seen as three, by the same rule that one is seen as two. So with the Stereoscope; the two pictures of the one object are converted into three; only one, however, is seen, and that (by the reflected images of the two falling at the same time upon either eye) as a perfect solid projecting body, or series of distinct bodies, according to the subjects introduced in the picture. Imagine a family group of five or six persons so represented, each one, to the sight, is separated from the other with the perfect roundness and fulness of nature. Length, breadth, thickness, and distance from each other are each distinctly visible; and if the group be taken from the middle of the room, so is it found through the Stereoscope, each figure standing alone, forward and detached from the wall or ground-work of the picture. The space behind is clearly seen, and if one of the persons represented be holding forward a book or other article, it is not seen flat as in a picture, but round and forward as in a model, so that the eye can easily mark the distance of the body from the book, and vice versa. To produce this astonishing illusion through the Stereoscope, it is necessary that the utmost accuracy and delicacy of touch should be observed in the two pictures to be viewed. They must be taken also at the exact angles, so that their reflected images may fall on either eye, consequently daguerreotype pictures are peculiarly adapted for the instrument. Daguerreotype pictures are necessarily exact in every respect; being a work of nature it cannot possibly err; and hence it is, that the astonishing discoveries of Wheatstone and Brewster remained in comparative abeyance until M. Claudet came forward and applied his beautiful productions to the instrument. Let any family, at the present time sit for Stereoscopic Daguerreotype pictures in a group or singly, (for the discovery is now being extensively applied to portraiture); and their great great grandsons' children may as easily see them in youth, life, expression, and almost movement, as their own immediate circle of acquaintances.

POETICAL QUOTATIONS.

ACTIVITY.

Celerity is never more admired  
Than by the negligent.—*Shakespeare's Anthony and Cleopatra*.  
If it were done, when 'tis done, then 'twere well  
It were done quickly.—*Shakespeare's Macbeth*.

Wise men ne'er sit and wait their turn,  
But cheerily seek how to redress their harm.  
*Shakespeare's Henry VI.*

Our remedies oft in ourselves do lie,  
Which we ascribe to heaven: the fixed sky  
Gives us free scope; only doth backward pull  
Our slow designs, when we ourselves are dull.  
*Shakespeare's All's Well*.

Let's take the instant by the forward top;  
For we are old, and on our quick'at decrees,  
The inaudible and noiseless foot of time  
Steals, ere we can effect them.—*Shakespeare's All's Well*.  
Due entrance he disdain'd, and in contempt,  
At one slight bound high overleap'd all bound  
Of hill or highest wall, and sheer within  
Lights on his feet.—*Milton's Paradise Lost*.

How slow the time  
To the warm soul, that, in the very instant  
It forms, would execute a great design!—*Thomson*.

The keen spirit  
Seizes the prompt occasion—makes the thought  
Start into instant action, and at once  
Plans and performs, resolves and executes!  
*Hannah More's Daniel*.

My days, though few, have passed below  
In much of joy, though more of woe;  
Yet still, in hours of love or strife,  
I've 'scap'd the weariness of life.—*Byron's Giaour*.

Lives of great men all remind us  
We can make our lives sublime,  
And, departing, leave behind us  
Footsteps on the sands of time.—*Longfellow*.

Let us then be up and doing,  
With a heart for any fate;  
Still achieving, still pursuing,  
Learn to labour and to wait.—*Longfellow*.  
Run if you like, but try to keep your breath;  
Work like a man, but don't be work'd to death.—*O. W. Holmes*.

ADVERSITY.

By adversity are wrought  
The greatest works of admiration,  
And all the fair examples of renown,  
Out of distress and misery are grown.  
*Daniel, on the Earl of Southampton*.

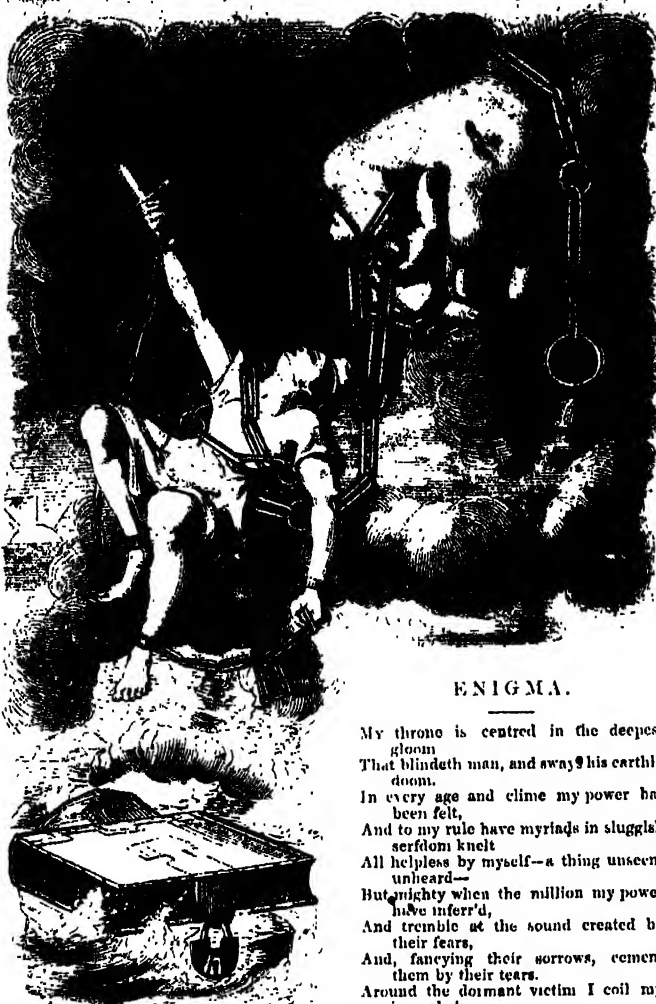

Perfumes, the more they're chaf'd, the more they render  
Their pleasant scents; and so affliction  
Expresseth virtue fully whether true  
Or else adulterate.—*John Webster*.

Like a ball that bounds  
According to the force with which 'twas thrown,  
So in affliction's violence, he that's wise,  
The more he's cast down, will the higher rise.  
*Nab's Microcosmos*.

Though affliction, at the first, doth vex  
Most virtuous natures, from the sense that 'tis  
Unjustly laid; yet, when the amazement which  
That new pain brings is worn away, they then  
Embrace oppression straight, with such  
Obedient cheerfulness, as if it came  
From heaven, not man.—*Sir William Davenant's Fair Favourite*.

Sweet are the uses of adversity,  
Which, like the toad, ugly and venomous,  
Wears yet a precious jewel in his head;  
And this our life, exempt from public haunt,  
Finds tongues in trees, books in the running brooks,  
Sermons in stones, and good in everything.  
*Shakespeare's As You Like It*.

Such a house broke  
So noble a master fallen! all gone! and not  
One friend to take his fortune by the urn,  
And go along with him.—*Shakespeare's Timon*.

ENIGMA.

My throne is centred in the deepest gloom  
That blindeth man, and away his earthly doom.  
In every age and clime my power has been felt,  
And to my rule have myriads in sluggish servitude knelt  
All helpless by myself—a thing unseen,  
unheard—  
But mighty when the million my power have inferred,  
And tremble at the sound created by their fears,  
And, fancying their sorrows, cement them by their tears.  
Around the dormant victim I coil my iron chain,

Until he wakes to struggle against his wrong and pain;  
But, all securely bound, I break his flashing blade,  
And bind him by the fetters by his own labour made  
I look the book, and seal the stores of knowledge from the mind,  
And flatter on the misery and blindness of mankind

ENIGMAS.

1.  
THERE was a man of Adam's race,  
Who had a certain dwelling-place,  
'Twas so complete and covered o'er—  
No man since dwelt there or before—  
Neither of wood or stone was made,  
Nor in the fabric brick was laid.  
'Twas so contrived and put together,  
As him to screen from wind and weather  
'Twas not in heav'n, or earth, or hell—  
Then tell me where this man did dwell.

2.  
A word that's oft used and entail'd on mankind,  
Not one e'er escapes it, the rich, lame, or blind;  
It will quench a high fever, and put out a flame,  
To warriors and poets will give their due fame;  
'Tis odd, yet 'tis even, and yet it is neither,  
Exposed to all winds, and in all kinds of weather.

3.  
Read Exodus, you'll plainly see,  
What wonders have been wrought by me;  
When to a holy mortal's hand,  
More power I had than sorcerer's wand.  
Kitty Goldsmen well knew my worth,  
As in his writings he set forth.  
To moderns, too, my use is known,  
Much good I've done to them, they'll own.  
When I'm applied to, I never fail,  
My language is ever the same.  
And when I'm asked, I clear the wall,  
And show all that's in the hall.  
I'm not a man, nor yet a woman,  
I'm not a thing, nor yet a woman,  
I'm not a man, nor yet a woman,  
I'm not a thing, nor yet a woman.

4.  
Kitty, a fair but frozen maid,  
Kindled a flame I yet deplore,  
The hoodwink'd boy I call to aid—  
Though of his near approach afraid—  
So fatal to my suit before.  
At length, propitious to my pray'r,  
The little urchin willing came  
From earth, I saw him mount in air,  
And soon he cured, with dextrous care,  
The bitter relics of my flame  
Say, by what title, or what name,  
I shall this busy youth address:  
Cupid and he are not the same,  
Though both can raise or quench a flame;  
I'm sure 'twill please you if you guess.

5.  
Dress'd in the gayest form I oft appear,  
To please the fancy of the blooming fair,  
Whom I to church, the ball, and play attend,  
Their lovely eyes from folly to defend  
Gay youths oft wish that they like me could slip  
The balmy nectar of a fair one's lip;  
But I, still watchful of my lovely charge,  
Prevent her eyes from roving out at large.  
Surely such services, at least, might claim  
That from oblivion they should snatch my name.  
Alas! a different fate attends their slave!  
When worn with age, though still with honour brave,  
I'm cast neglected by, perhaps in scorn,  
To the hot flames my tender limbs are borne.  
Can cruel acts like these become the fair,  
To those who guard them with a mother's care?

TRANSFIGURED PLAYING CARDS.

THE FIVE OF CLUBS.—"A PAS-DE-DEUX."

6.  
Ye riddling bards, explore my name,  
And to the ladies show it;  
For they by me acquire much fame,  
And therefore ought, to know it.  
My form's round, oval, long, or square—  
As different are my prices;  
And I am always near the fair,  
When first the charmer rises.  
To church and playhouse I attend,  
In a snug place secure;  
When beaux or belles I there befriended,  
I'm found in miniature  
Me, the old maid who wants a spouse,  
Oft views with great regard.  
I'm found in almost every house,  
And often broke, though hard.

7.  
Ye who have genius! tell my name—  
Twin-born into the world I came;  
I generally am found in pairs,  
Which male as well as female bears:  
If single, without fault in it I lure,  
My name denominates a creature.  
I, first of all, defend my parents  
From noisy mob and their adherents.  
But when I boldly fight and wound,  
I'm destitute of voice and sound.  
Oh, as my parents I survive,  
I wondrous use from them derive;  
I then am plainly heard from far,  
Loud as an instrument of war,  
Oft am I plac'd in public station  
Of general negotiation.  
With me all letters circulate  
In city, country, church, or state.  
To my persuasions numbers yield,  
And at my summons take the field;  
When, cherched by me, they best sustain  
The toil and danger of the plain.  
This done, I silent service give,  
And troops fatigu'd, through me revive;  
When I refreshment kind impart,  
And with long draughts regale the heart.  
When sinking Phoebus yields to night,  
And stars dimly but feeble light—  
Then I twinkling a borrow'd ray,  
And kindle darkness into day.  
Sometimes I cover the foundation  
Of all the learning in the nation.  
Now, to conclude, fair ladies, ye  
Contribute towards producing me.

8.  
There is a certain natural substance,  
Neither animal, vegetable, nor mineral,  
Exists upon the surface of the earth,  
Two feet to six; it is neither male nor female,  
But between both. It is mentioned in the Old Testament,  
Strongly recommended in the New.

9.  
Let it be known, I beseech celestial powers,  
Though oft I fix my residence on earth,  
In Paradise I once was known to dwell,  
Ere the first pair by disobedience fell.  
But when the horrors of their guilt I knew,  
From the sad spot precipitate I flew:  
Once by a virtuous prince I was possess'd,  
And he'd the sovereign of his breast.  
But now, alas! at courts I'm seldom seen,  
My direct foes usurp that sinful ground.  
Like Noah's dove, I range the world's vast space,  
Alike perplex'd to find a resting-place.  
My sex is feminine, or poets feign,  
I wear a placid and engaging mien.  
I'm gentle, mild, benevolent, sincere,  
And where I dwell diffusive of peace.  
All vice I hate, and malice I despise,  
And ne'er am found but with the good and wise.  
Take one hint more, that may my name disclose—  
I heighten joys, and soften human woes.

10.  
Fair ladies must own  
That to them I am known,  
Though some of them don't always know me;  
'Tis an easy mistake  
For the misses to make,  
Who, perforce, know me not when they find me.  
But for you, grown-up folks,  
'Tis a truth and no joke,  
And a shame you neglect such a good friend,  
I'm part of your creed—  
Nay, your prayers indeed—  
And the Scripture is nothing without me.  
So useful though thought,  
Yet up oft set at naught,  
'Tis no wonder I'm laid on the shelf,  
But in searching take care,  
For you mayn't be aware,  
That my help is just double myself.

[The whole answered in No. 10.]

**ANCIENT AND MODERN ART.** W. S. L.—Our intelligent correspondent has sent some excellent remarks on the comparative magnitude of works of art in former ages and at present. Space will only permit us to extract one quotation, which proves the colossal industry of the age we live in. "A comparison of the London and Birmingham Railway, with one of the largest works of the ancients, the Great Pyramid of Egypt, shows the pre-eminence of modern labour. Thus the work expended on the Great Pyramid was equivalent to lifting 15, 33 million cubic feet of stone one foot high; and required 20,000 men (or, according to Herodotus, 100,000) twenty years to execute it; whereas the labour expended in the construction of the Birmingham Railway, is equivalent to 25,000 million cubic feet of stone raised one foot, and has been executed by about 20,000 men in four and a half years."

**THE EVILS OF VAGRANCY.** At page 376, in the present number of the *Home Companion*, will be found an admirable essay on that hydra-headed grievance the "Pique of Beggars," a subject fraught with the most important consequences, and which we cannot too strongly impress upon the minds of our readers. From remote records of history, various measures have been adopted to restrain vagrancy. In the fourteenth and two following centuries, severe enactments were made, but without producing any permanent effect; and in later times, the attention of the legislature has been directed in many ways to suppress the growing vice, which haunts our daily paths in every painful and distressing form. It is a matter of astonishment to most persons, that while we have so many societies and charitable institutions, the object of which is the abolition of mendicancy, such great numbers of the begging fraternity are still left to prey upon the purses of the public. But the truth is, that the multitude generally are credulous, and more generous than thoughtful. While they aid with one hand to build up the means of defence against begging imposition, they secretly encourage with the other the vagrant, in his idle habits and notorious occupation. Much real misery no doubt exists in our crowded thoroughfares, but the knowledge of this sad fact should stimulate our employ of judicious remedies for the prevention of begging, by assisting those who, through trials and difficulties, are industriously

Castilian spring at a draught—accompany their poetic incubations with a desire to be paid for their exertions. To this latter class of contributors we would relate the following anecdote, which will prove that in all ages a proper reward has been exacted in this respect:—An avowed plagiarist, in the form of prose, composed with pleasing metaphors, was addressed to the Editor, who would pay for it on condition that the author would not write. If such an avowed plagiarist was paid for in this way, we suspect the authors would be no inconsiderable gainers; but the public would soon be overwhelmed with *Assy books*. A poet, however, who knew the Caliph's custom, composed a few verses in his praise, and had them engraved on a stone of immense weight. With this he loaded a camel, and made his appearance before the Caliph, but the latter changed his system of self-defence on this occasion, and would only pay for the value of the stone.

**COMMUNICATIONS RECEIVED.**—W. GARRISON (the Dahlias was discovered in Mexico, by Humboldt, in 1789).—M. J. (an Odometer is a way measurer, an instrument or machine by which the steps of a person who walks, or the revolutions made by the wheels of a carriage can be counted).—MERTON (hackney coaches are said to have originated in France, about the year 1680).—H. L. S. (thanks).—NEMO (the manuscript sent is not suited to our pages).—WILLIAM JAM (who purposely abstain from giving any advice on emigration. It is a subject of too much importance to be treated in a few words. Our correspondent will appreciate these prudential motives).—JUVENILE (Writings on the *Improvement of the Mind*, is a work that cannot be too often consulted. Todd's *Student's Guide* will also be found extremely useful).—MARIA M. (many absurd notions prevail respecting eunuchs. An easy, unaffected behaviour, and obliging disposition should be cultivated).—MIRA (the commencement of the British Museum was the purchase, in 1753, of the collection of Sir Hans Sloane).—LOXOMACHOS (soubriquet is a French word, meaning a nickname).—J. I. G. (why bookellers call them elves the trade has been explained by their having much commercial intercourse with each other, and thus acquiring a habit of turning themselves, in contradistinction to the public).—ARCHIBALD (the first circulating library established in London was in 1740, undertaken by a bookseller named Wright).—A. Z. (the tomb of Shakspeare in the church of Stratford church, was the work of Gerard Johnson, a celebrated sculptor).—CLIO (deduced, with thanks).—H. (this paper is too long for insertion).—C. E. I. (synod is a meeting or assembly of ecclesiastics to consult on matters of religion).—GROKOLAKA (the poems of L. E. L. or Miss Landon, although of a melancholy character, may be read with much profit. The earliest compositions of this lady were *Poetical Sketches*, which appeared in the *Literary Gazette*).—J. ROBERTSON (will find his suggestions adopted).—W. PANDER (accepted with thanks).—T. (thanks).—H. A. J. P. (will find his wishes gratified).—C. W. (we greatly disapprove of flogging in schools. There are many other ways of correcting children with much better effect. We may probably enlarge upon this subject when space permits).—W. LYLES (the subject is too melancholy).—ROBIN HOOD (the best way to cure sickness from smoking, is to abandon the use of tobacco).—THOMAS K. (the smallest measures are the hair's breadth, of which fifty eight are an inch).—G. (we had no copper coins until 1610).—WILLIE (hammering renders metals more dense, and heating in fire restores them).—CHARLES (Galileo, the founder of mechanical philosophy, was born at Pisa, in 1564).—W. WORKER (many thanks, but the papers are declined).—CURIOUS (the Pyramids of Egypt have been opened, but without particular discovery).—YOUNG (the tides are connected with the moon, since they follow the moon's southing. In time, however, they may be specially obstructed and delayed. Twice in every rotation the sea rises and falls from four or ten, to forty or sixty feet).—JULIA M. (the odorous matter of flowers is inflammable, and arises from an essential oil).—D. (Hoffman has said that it should be a universal medicine in nature, it is water, for by its assistance all disorders are alleviated and cured, and the body preserved sound. Our correspondent must have been greatly misinformed, when he gravely alludes to the ill effects of water on the system).

## Editor's Note-Book.

**BE AN EARLY RISER.**—Few ever lived to a great age, and fewer still ever became distinguished, who were not in the habit of early rising. You rise late, and of course, get about your business at a late hour, and everything goes wrong all day. Franklin says, "that he who rises late, may trot all day, and not have overtaken his business at night." Dean Swift says, "that he never knew any man more to greatness and eminence who lay in bed of a morning." Bulfinch gives us the history of his writing in a few words. "In my youth, I was very fond of sleep; it robbed me of a great deal of my time; but my poor Joseph (his servant) was of great service in enabling me to overcome it. I promised to give Joseph a crown every time that he would make me get up at six. Next morning he did not fail to wake me and to torment me, but he only received abuse. The next day after, he did the same with no better success; and I was obliged to confess, at noon, that I had lost my time. I told him that he did not know how to manage his business; he ought to think of my promise, and not mind my threats. The day following he employed force; I begged for indulgence—I hid him beyond—I stormed—but Joseph persisted. I was therefore obliged to comply; and he was rewarded every day for the abuse which he suffered at the moment when I awoke, by thanks, accompanied with a crown which he received about an hour after. Yes, I am indebted to poor Joseph for ten or a dozen of the volumes of my works."

**TO STAIN OAK A MAHOGANY COLOUR.** R. R.—Boil together Walnut-wood and Roman alum.

**ESPOSITO ENO-VINO.** Herbert.—This is an Italian word, signifying half painted, as it is a particular manner of engraving in imitation of Indian ink.

**STATIONERY.** Query.—This term given to all the materials employed in the art of writing, is derived from the business of book-sellers having been anciently carried on in stalls or stations.

**RESERVING OF BIRDS, &c.** J. Y.—A small wooden basin, containing tallow, placed in each case, has been found to be more effectual than either camphor or Russia leather.

**LOCKS.** G. W. C.—The most ancient lock, of whose form and construction there is any certain knowledge, is the Egyptian, which has been in use upwards of four thousand years.

**TO GLAZE OR VARNISH DRAWINGS.** Sunson.—One ounce of Canada balsam, two ounces of oil of turpentine, well dissolved. The drawing should be previously washed over with a solution of saffron.

**TO GILD STEEL.** Japan.—Immerse the steel in a solution of nitro-muriate of gold, which will leave a coat of gold upon the steel, which must be immersed in water the moment it is gilt. The adhesion and appearance of the gold are considerably improved by the use of the burnisher.

**MUSICAL NOTES.** Juliana.—The first six are said to have been invented by Gaius Aretin, a Benedictine monk of Arezzo, A.D. 1025. The notes at present used were perfected in 1338. Counterpoint was brought to perfection by Palestrina, about 1515. The Italian style of composition was introduced into England about 1610.

**DISGUISE.** Jane R.—Among relations and intimate friends, visits of more ceremony are unnecessary. It is, however, needful to call at suitable times, and to visit staying too long if your friend is engaged. The courtesy of society must always be maintained, even in the domestic circle, or among the nearest friends.

**WOOD STAINING.** Thomas F.—A decoction of walnut or hognoy bark, with a small quantity of alum in it, to give permanency to the colour, will make an excellent dye-wood of a white colour receives, from the application of this liquid, a beautiful yellow tinge, which is not liable to fade. It is particularly adapted for furniture made of maple.

**TO MAKE RED STAINING-WAX.** M. J.—Take of shell-lac, well powdered, two parts; of resin and vermilion, powdered, each one part; mix them well together, and melt them over a gentle fire, and when the ingredients seem thoroughly incorporated, work the wax into sticks. Here shell-lac cannot be procured, seed-lac may be substituted for it.

SCRIBING A LIVING.

**JOHN BULL.** W. C. H.—The origin of this term is thus explained in Mrs. Markham's *History of England*. She says, "I am told this name came to be traced beyond Queen Anne's time, when an ingenious satire, entitled the *History of John Bull*, was written by the celebrated Dr. Arbuthnot, the friend of Swift. The object of this satire was to throw ridicule on the politics of the Spanish succession. John Bull is the Englishman, the frog is the Dutchman, and Charles II. of Spain, and Louis XIV., are called Land Stout and Louis Baboon."

**FLEXIBLE IVORY.** S. M. H.—A process for rendering ivory flexible has been practised at Paris. It was found that when bones are subjected to the action of hydrochloric acid, the phosphate of lime, which forms one of their component parts, is extracted, and thus bones retain their original form, and acquire great flexibility. After giving the pieces of ivory the required form and polish, they are steeped in acid, partially diluted with water, and become supple, flexible, elastic, and of a slightly yellowish colour. In the course of drying, the ivory becomes hard and inflexible again; but its flexibility can be at once restored by wetting it, either by surrounding it with a piece of wet linen, or by placing sponge in the cavities of the pieces.

**POETRY BY WEIGHT.**—The increasing number of our poetical contributors renders it impossible to comply with the oft-repeated request to notice the receipt of their compositions. The majority of these poems relate to matters of individual interest merely, which will explain the reason why they are rejected. Other, betray marks of great carelessness, with a vein of too poetic feeling, which proves that better might be attempted. A few timid plagiarists to Parnassus, modestly request us to aid their halting feet; and others—bold-hearted rhymesters, who appear ready to swallow the

## THE HERITAGE

The rich man's son inherits lands,  
And piles of brick, and stone, and gold;  
And he inherits soft white hands  
And tender flesh that fears the cold.  
Nor darest to wear a garment old  
A heritage, it seems to me,  
One scarce would wish to hold in fee.

The rich man's son inherits acres  
The bunk may break the factory burn  
A breath may burst his bubble shares  
And soft white hands could hardly earn  
A living that would serve his turn  
A heritage it seems to me,  
One scarce would wish to hold in fee.

The rich man's son inherits warts  
His stomach craves for dainty fare  
With sated heart he hears the jangle  
Of toiling hands with brown arms bare  
And wearies in his easy chair  
A heritage it seems to me,  
One scarce would wish to hold in fee.

What doth the poor man's son inherit?  
Stout muscles and a sinewy cart  
A handy frame a hardier spirit  
King of two hands he does his part  
In every useful toil and art  
A heritage it seems to me,  
A king might wish to hold in fee.

What doth the poor man's son inherit?  
Wishes o'erjoyed with humble thing  
A rank adjudged by toil won merit  
Content that from employment springs

A heart that in his labour sings;  
A heritage it seems to me  
A king might wish to hold in fee

What doth the poor man's son inherit?  
A patience learned of being poor  
Courage if sorrow come to bear it  
A folk-wisdom feeling that is sure  
I think the outcast leaves his door  
A heritage it seems to me  
A king might wish to hold in fee.

O rich man's son there is a toil  
That with all others level stands  
I argue fairly hath never a ill  
But only sits in soft white hands —  
Oh! the test or p from thy land  
A heritage it seems to me  
Well worth a life to hold in fee.

O poor man's son scorn not thy state  
Thou art a worse wear than an ill  
I argue being rich is a great  
I argue the toil to shun  
And makes rest fragrant and benign  
A heritage it seems to me  
Worth a life to hold in fee.

Both levels are six feet high  
Are equal in the earth at last  
Both children of the same great God  
Prove title to your fellowship vast  
By record of a well-aided past  
A heritage it seems to me  
Well worth a life to hold in fee.

## THE LADY OF THE ROCK

A HISTORICAL TALE OF THE TIME OF CHARLES THE FIRST

### CHAPTER I

The sun was slowly sinking to the west  
Pavilioned with a thousand glorious dyes  
The turtle doves were winging to the nest  
Along the mountain's soft declivities — CROLY

Young Stanley's congratulations, that he alone knew of the communion held by Lucy Ellet and her sister with the mysterious creature whom he had seen, were not destined to be of long duration. The Lady of the Rock became an object of universal dread. The rumour, moreover, speedily grew rife that the object of her visitations was to hold unholy intercourse with the young slaves of the Governor of the colony. These, therefore, from having been the idols of all classes in the place, became subjects of curiosity and vague apprehension.

Recollecting that the wiles of this same adversary practised upon the mother of our race had become the means of expelling her from the bowers of Paradise, and bringing "death into the world and all our woe," it is not surprising that Lucy and Jossey Ellet were now regarded with suspicion on all hands. The society of the sisters became as much avoided as it had been previously sought after. Closer observation, however, caused the chief blame to rest upon Lucy, who was seen daily, at sunrise and sunset, wending her way to this haunted spot.

It was some weeks after Stanley's first sight of the phantom lady, that twilight overtook him on an evening ramble. He had carefully, since the time we last described, avoided bending his steps toward that vicinity, in any of his rambles. Accordingly, on this evening, he had turned off at the outskirts of the village, at a place where another road met that leading to the fearful spot. Having been occupied with reflections of a deeper cast than are common to youth, he had remained until the slow departing sunset reminded him to hasten home. On approaching the place where the two roads met, he was startled by the sight of a light figure emerging from the main path. The figure of the phantom lady of the Rock instantly suggested itself to the mind of the youth. A few moments had just risen behind the dim embodiment, and she was seen to pass the spot where he stood. The last beams of the setting sun were shining but beyond the distant hills, and nothing but the soft twilight of that evening shrouded the scene.

Stanley endeavored to make the spectral shape—it turned—a pair of dark eyes shined from beneath a white hood, and the clear tones of Lucy Ellet sounded in his ears.

"Well met, Master Frank Stanley," she said; "you have come at last, as have all our villagers."

"After what I have been witness to, Miss Lucy," he began, "I believe me, Frank, the interview you beheld between myself and the Lady of the Rock was pure as the intercourse above."

"I beseech you, Lucy Ellet," exclaimed the youth, earnestly, "and heeding her words 'for your own soul's sake, for your young sister's sake, cease these suspicious visits to yonder mysterious spot.'"

"Oblige me then, in relieving me of my duty toward that unhappy creature by assuming the task hitherto performed by myself, and I will go thence no more."

I would do aught but perjure my own soul, to have thee and thy sister reinstated in the opinion of our little community, to say nothing of saving both from 'future destruction.' Yet," continued he, "if I also must have frequent converse with that visionary form I dare not—"

Out on thee, Frank, interrupted the young lady, "I had thought thee a brave youth afraid of nothing but sin."

And is it not sin to hold constant speech with a spirit-messenger of Satan? inquired the boy.

"I will request thee to have no speech of her; I would merely desire you to bear morning and evening a little basket, resembling this, (and she drew one from beneath her shawl,) place it on the rock—wait until the phantom lady appears, to remove it and replace it with another—then return to the village. Do this to oblige me, Frank, and save me the necessity of doing otherwise by under of continuing the visits so execrated. More candidly, I cannot put in you at present, but will you not have faith that I would instigate you to the performance of an act that was otherwise than noble?"

"Lucy Ellet," said Stanley, looking on her steadily, "there is that in your manner and your words which show me that you are actuated by some generous principle in this singular affair. What this mystery may be, time must prove. I will do your errand."

"The Lord reward you," replied Miss Ellet. "The basket, then, shall be placed under the huge willow tree at the end of your father's orchard, and we may not seem to have any connexion in regard to it. You must always replace in the same spot the one you will receive at the rock; and I will cause it to be removed and replenished in time to have it there again, ready for your next visit. But here we are, within the village," added Lucy, "and had better not be seen together lest it might excite suspicion. You will find a circuitous path to the rock in yonder direction," she continued, pointing to the left, "and had better use it in your excursions, that you may be less likely to escape notice. So saying, and without giving the youth time to reply Lucy parted from Stanley, and soon after turned into her uncle's house."

The boy continued on his way with an undesirable sentiment of apprehension in his bosom. Some instinct had prompted him, notwithstanding all his preconceived notions of horror at the abandonment of the young Ellets to the power of the Lady of the Rock, to accede to Lucy's proposal that he should supply her place in her daily visits to that mysterious being; and so far from feeling any reproaches of conscience in remembering that he had given his promise to that effect, he rather enjoyed all the elation of spirit experienced by one who generously sacrifices himself to suspicion for a noble cause. Something in Lucy Ellet's manner convinced him that feelings of the same kind had actuated her conduct in this strange affair, and he thought of her now, more with admiration than reproach. "Yet what," said he to himself, "startled at the change which half an hour had wrought in his views, "if this approbation of myself and Miss Ellet be only a suggestion of the arch-tempter to place me in his power?" But, no, the idea was dismissed as a mockery, as incompatible with his feelings of satisfaction in what he had pledged himself to undertake.

Stanley rose at sunrise on the following morning, for the purpose of commencing the fulfilment of his promise. Seeking the willow-tree in the garden, he found the little basket prepared for him, and assuming the charge of it, set out upon his walk. He speedily turned into the winding path indicated by Lucy Ellet, and pursued his way. The morning beams were just breaking, and their light gladdened upon the dewy grass beneath his feet, and caused it to sparkle as though his tread were upon myriads of diamonds. The waking birds were chanting their matin lays, and the insects humming in every brake and dingle.

But the balmy morning, and the day it presaged, were alike lost on the hero, whose mind was filled with reflections concerning his singular mission. He walked on, wrapped in thought, till he approached the foot of the hill where the path ended, despite his conclusions of the previous evening, and with a doubtful feeling regarding his errand. He was about to descend the shadowy path, when he had twice beheld upon that fateful summit what fearful wraiths might be not weave around him by thus doing her will.

He ascended a short distance, and turned to look behind him. A scene of more complete solitude, having all its peculiarities heightened by the serenity of the weather, the quiet composure of the atmosphere, and the perfect stillness of the elements, could hardly be imagined. He could descry nothing of the scenes he had left, save the valley beneath him, and the spire of the village church in the distance. Should he return home, or proceed? He remembered his promise to Miss Ellet, and again applied himself to continue his ascent. He drew near the ominous spot—climbed a few steps higher—touched the rock, and placed the basket upon its base.

Slowly and gradually appeared the form of the Lady of the Rock. It was not without something like alarm that Stanley beheld this mysterious being standing close beside him. She had been about to speak, but seeing the boy, cast her beautiful azure eyes on him with a look of surprise, exchanged the basket for another, and, with a pensive smile, disappeared from his view.

Had all the spells he had dreaded in his approach to the spot been concentrated in that look and smile, the change in the feelings of young Stanley could not have been more instantaneous. Surprise succeeded to his former superstitious sentiments of awe, for he had discovered that the Lady of the Rock was no vague embodiment as he had deemed, but a gentle shape of human flesh and blood. Where or how she had vanished, however, was still a mystery; but he was so overpowered with a sense of his discovery, that he turned to descend without attempting to make any investigation, and reached the village to encounter a day of great agitation.

## CHAPTER XI.

"Through solid curls of smoke, the bursting fire  
Glimb in tall pyramids above the spires,  
Concentrating all the winds, whose faces, driven  
With equal rage from every point of heaven,  
Whirl into conflict, round the scathing point  
The twisting flames, and through the rafters roar."

BARTON.

SEVERAL topics of excitement began at this time to prevail in the village of L—, in addition to that connected with the haunted rock. One was the projected marriage with Lucy Ellet very shortly to Mr. Elmore, to whom she had been for some time betrothed; another, the reappearance of Messrs. Brooks and Dale in the village, where they took up their abode for a short period; and a third, the threatened incursion of some of the neighbouring Indian tribes.

To guard against this last evil, the inhabitants were obliged to appear at all times armed, and prepared for repelling hostilities. A fast was likewise appointed by the Governor of the colony, and public worship held daily, to offer up prayer to avert the impending danger. At such times, a guard of men, with muskets ready for immediate use, was stationed without the building to repulse any attack of the savages, and give the word of warning to those engaged within. In this way, as the situation of the village was in itself strong, owing to the hills that surrounded it, the inhabitants trusted that they were fully prepared to resist any sudden attack.

Things were in this state when, on a certain day, the morning beams had shone on the unpretending spire of L— for five or six hours, and the people had assembled in the building beneath as usual. The lengthy prayer with which the puritans were wont to commence their exercises had concluded, and just as every voice was attuned to the melody of a pious psalm, a loud and unusual noise was heard.

The worshippers of that humble meeting house paused to listen, with faces filled with boding expectation. It was the terrific yell of the approaching Indians. This was speedily followed by the appointed signal from the soldiery stationed without; and at the instant that the report of the musketry rang in the air, the congregation started from their seats in terror. Each man rushed for his arms, and crowding to the doors and windows, found the building completely surrounded by savages. The females, remaining in the interior, shrieked in the extremity of their alarm.

The scene that followed is not easily described. A fearful struggle ensued. Heaven, too, at that moment, added its terrors to the scene. A furious thunder-storm arose, and amidst the most vivid flashes of lightning, and awful reverberations, the rain began to descend in torrents. The villagers now yielded themselves completely to terror, and, abandoning the conflict, prostrated themselves on their knees, and resorted to prayer. The Indians took fresh courage from this circumstance, and commenced firing the meeting-house. For a little time the rain prevented their efforts from taking effect, but the fire was finally triumphant, and spouted in jets of flame out at each window of the consuming building, while huge flakes of burning materials went driving on the wind, and rolling a dark canopy of smoke over the neighbourhood. The rain, however, prevented the progress of devastation further. But the shouts of the Indians resounded far and wide, as they turned to continue their work of destruction, by setting fire to the other dwellings in the village.

At this crisis, the villagers, as if animated by a sudden and simultaneous impulse, arose from their knees, and betook themselves again to the defensive. Previously, in their resistance, wild confusion, despair, and frenzied efforts had been blended in such a manner as completely to destroy anything like unity of action. But now, in concert, and disposed according to the best military arrangements, they advanced a second time upon their invader.

The Indians, in confidence of their approaching triumph, had uttered the whoop of success, which called their warriors from the adjoining vicinity to behold the approaching scene. In surprise, therefore, notwithstanding this addition to their forces, they found themselves resisted with a power and skill, such as they had never before witnessed. But their previous success

had given new spirit to an enemy already sufficiently audacious; and continuing their war-cries with redoubled ferocity, they pursued the attack. The combat raged for about half an hour; when the Indians were utterly defeated, and betook themselves to flight.

At that moment the clouds of heaven suddenly opened, shedding the blessed light of the returning sun upon the village; and it might have been seen that the recent victory had been obtained through the means of a stranger, who had appeared and aroused the people from their panic of fear, assumed the command, arranged and ordered them in the best military manner, and thus enabled them to repel and rout the Indians, and save the village. This person was a man of dignified and majestic bearing, and with an interesting beauty and pallor of countenance.

The parting clouds had scarcely permitted the gleams of renewed sunshine to fall upon the rescued spot, and the inhabitants began to realise their safety, and look around to return thanks to the skillful and unknown commander to whom the rescue was due, ere it was discovered that he had mysteriously vanished. Awe and amazement filled the minds of the spectators, for they were utterly unable to account for the singular arrival and sudden disappearance of this remarkable person. After many unsatisfactory conjectures, the only conclusion they could arrive at was, that the Lord had sent an angel to their deliverance.

It was on the evening of the day on which this attack took place, that Frank Stanley was proceeding on his second errand to the rock. As he walked on, he pondered deeply upon the discovery he had that morning made. The recent scene of excitement in the village had banished the thoughts of it throughout the day from his mind. But now his curiosity recurred to the subject with all the strength with which that feeling fixes upon a mystery but partially solved. The stranger who had so singularly appeared during the conflict with the Indians, and put them to flight, seemed somehow associated in the boy's mind with the Lady of the Rock; and he could no more join with the villagers in believing the one an angel of the Lord, than he could now in supposing the other an evil spirit.

The more perplexed the more he reflected, Stanley one moment resolved, at all hazards, to penetrate the singular mystery—to overcome on his present errand the internal and undefinable feelings which would restrain him from accosting the lady, and offering her any further assistance in his power, and discovering the place of her retreat. Yet, to press himself on her confidence might be impertinence, and as she had in the morning disappeared without noticing his presence, it was evident that she did not mean voluntarily to make him her confidant; and probably she was involved in no difficulties where he might be useful. The next instant, therefore, he resolved to suppress all desire to penetrate the secret, dismiss his disquieting and fruitless conjectures, and, without attempting to invade the manner and place of the sudden disappearance of the fair, but living vision, await the period when time should throw light upon the subject.

He was thus divided in his own determinations when he reached the woods at the foot of the hill where his purposed visit lay. At that moment he became startled from his reflections by the rustling of leaves. Remembering the assault from the Indians in the morning, the youth paused, and leaned forward to listen. Silence, however, seemed restored to the disturbed foliage, and the boy pursued his course, supposing the noise he had heard simply to have been occasioned by a sudden gust of wind. But he had not proceeded many steps when the sound was distinctly perceptible of approaching voices, speaking in the deep tones of the savages. He turned, and ere many minutes elapsed, the forms of three Indians were visible; perceiving at once his danger, and determined to make one bold effort for his life, he bounded off with the swiftness of a deer. There was but one breathless moment; the Indians raised the cry of alarm, and pursued him.

Stanley knew too well the nature of the struggle in which he was engaged to lose one of the precious moments. Accordingly, he kept his way up the acclivity, which, though neither very high nor very steep, was yet sufficiently toilsome to one contending for life to render it painfully oppressive; and ere he had gained the summit of the second hill, he fell prostrate upon the ground. He rose, and proceeded again for a few moments at his former swift pace. By degrees this slackened—the Indians were within a few yards of him. He had a loaded pistol in his pocket—but he knew it could only destroy one of his enemies, and there would still remain two to contend with. Generously, therefore, he refrained from using it, and preparing to resign himself into their hands, yielded himself up a prisoner with a dignity that was remarkable for his years.

Dragging him to a glen which intervened between the two hills, they bound him tightly, and then turned, apparently to make some consultations respecting the prisoner's fate. The prospect of death is terrible at every period of life; but to sit, like young Stanley, in horrid uncertainty in regard to the mode in which life was to be extinguished, was a situation to break the boldest spirit; and the unhappy captive could not restrain the tears, which flowed from his eyes. This agony of mind continued until the feelings of the youth arose almost to a state of frenzy. He started up, and struggled violently to become freed from his bonds, that it almost seemed that they should have burst by the force of his strength, as did the withes of Samson. But the cords were of too firm a texture, and after an unavailing struggle, the boy fell back exhausted.

The Indians were evidently now preparing some torture which would put the sufferer to severe bodily anguish. As Stanley lay and looked on, overcome with his late violent exertions, the scene again passed him. At this instant he became aware of an interruption to the preparations of the savages, and had just time to recognise the mysterious stranger of the morning, to whom the preservation of his native village was due, and beheld him fall upon the enemy, when he became insensible.

## CHAPTER XII.

"I would not change  
My exiled, persecuted husband,  
Depressed but not distressed, overwhelmed  
Alive or dead, for prince or paladin  
In story or in fable, with a world  
To back his suit."—Two Foscari.

When young Stanley first returned to consciousness, he found himself in a place whose shaded artificial light seemed very grateful to his eyes, aching as they were in sympathy with his throbbing brain. Without arousing himself sufficiently to consider the nature of his situation, further than to know that his limbs were free, and that he was lying upon a comfortable bed, he fell into a heavy and unnatural slumber. During this lethargy, which lasted many hours, the sudden starts, the perspiration which stood upon his brow, the distortions of his countenance, and the manner in which he flung about his limbs, showed that, in his dreams, he was again encountering the terrors from which he had escaped. This lasted for several hours, but at length fatigue prevailed over nervous excitation, and he relapsed into a soft, untroubled repose.

After some time, he stirred and awoke. On looking round, he found himself in a place surrounded by walls of stone, with an opening on one side blocked by a piece of rock, and leaving a single crevice through which a faint ray of daylight fell. The floor and ceiling of earth showed that it was under ground; yet it contained various articles of rude furniture; and the moss bed on which he lay was soft and pliable under his weight. The brands of a fading fire had been carefully raked together in one corner, and were burning with a feeble and wavering flame, which cast faint, flickering shadows upon the dark walls.

Continuing his inspection more closely, the boy saw the figure of an aged man, seated upon a stone, bending over the pages of a large Bible which lay open upon his knee. His brow had a care-worn and anxious expression, yet withal an air of calm resignation inexpressibly sublime. His locks were almost completely white, though his dark and intelligent eye still retained much of the fire of early youth, while the hale cheek and undaunted presence indicated patience and content in the greatest suffering that can befall humanity.

Stanley neither spoke nor moved, but remained with his eyes riveted on the attractive countenance before him with a species of holy awe. As he gazed, the old man arose, knelt, and poured out the aspirations of a pure spirit, in fervent petitions, to that Power whose support he evidently needed.

While he was yet praying, a manly form entered at the opening of the cavern. The stranger wore a military cloak. He stood in the shadow until the aged man had ceased and risen, then dropped his cloak, and approached the latter; and Stanley knew him for the mysterious deliverer of the village, and the person whom he had seen, when he lay bound by the Indians, to fall upon them, and effect, he felt certain, the preservation he had experienced.

Overcome with surprise, the boy still remained immovable, and the old man addressed the stranger—

"Has she not yet arrived? the sun is high—it must be noon-day."

"It is reason enough for her detention," replied the other, in a half-impatient voice, the tones of which were deep and clear, "that I have gone forth to meet her. All objects that I seek elude my pursuit: there is a curse upon my every pathway."

"Give not way to repinings, my son; turn thine eyes upon the blessings that remain to thee, which far exceed the deserts of the best of men."

"Talk not to me of blessings, my father," replied the other. "If there crawls upon the earth a living being deserving of pity, I am that man. He who is immured in a living grave like this," he continued, after a moment's pause, "may well wish for one yet more calm and sequestered. Let us go forth, and challenge the death that awaits us. Hunted by blood-hounds, our fate is doomed. Rather, then, let it come at once than hold us longer in this state of misery."

"William," said the old man, "wouldst thou rashly cast away the boon of life that God has given thee? Canst thou be fated to death simply because the word of a vindictive king has gone forth against thee? And," he added, while a tear dimmed his eye, "would you leave Alice and your child? William," pursued the aged man, "you forbade me but now to tell you of blessings. But, surely, thou art strangely unthankful for thine—even for the inalienable blessing that thou hast in that noble-minded woman. Hath she not accompanied us hither, and cheered and sustained us with her angel presence?"

"My father, drive me not to frenzy," exclaimed the other. "You have struck the chord which another touch would break. It is the sight of her, dearer to me than life itself—immured in this ghastly hiding-place, and day by day, growing thin and waxing pale, and smiling in the midst of misery—that is more than I can bear. And it is I who have brought this evil upon her. Never were the bright prospects of opening life more cruelly dashed. And can she, frail as she is, much longer sustain the effort by which she has met this stroke of fortune? Will not the reaction, when it comes, be too terrible to be borne? Oh God, the thought of her is agony!" and he covered his face with his hands.

A female form entered. She advanced into the cave, and, throwing off a cloak and hood, Stanley recognised the mysterious Lady of the Rock. For a second she regarded the features of the two without speaking. "My dearest William," said she, as she drew close to him she laid her hand in a sympathetic manner on his arm, "why do you yield thus to grief?"

As if her touch and voice were magic, the unhappy exile raised his head to meet her glance. "I grieve for you, my Alice," he replied, after gazing on

her anxiously for some moments, and throwing his arms round her passionately, "to see you bereft of all the appliances of comfort, and to behold your noble spirit display its courage in unflinching submission and generous efforts to support the hearts of others. How cruel hath the decree of fate seemd to you, so pure, so gentle, so lovely, should be visited thus heavily!" Unable to endure his own thoughts, he broke abruptly away from her, and paced heavily up and down the cave.

"My dear husband," she said, approaching him, and looking in his face, "do not think of my lot. Remember, it would have been but too happy if it could have alleviated the bitterness of yours, or softened one sorrow of my father's heart. Come hither, my parents, I have words of encouragement for you both. There is reason to trust that our troubles will be but short-lived. Our friends have great confidence in the effect of a personal appeal from me to Charles II. Nay, look not thus distressed, my father: it is for your sake that I leave those who are dearer to me than life itself. I will present myself at the throne of the king, and petition him for your pardon; and Heaven grant that if we meet again on earth, it may be in circumstances of peace and safety."

"Alice, thou shalt not leave us!" exclaimed Henry. "Death were far preferable to life in this gloomy cavern, unshared by your presence. I will go forth and yield myself up to my pursuers, if thou talkest again of thine absence."

"Nay, William, I shall not leave you in this place. The marriage of Lord Ellet will shortly take place, and Mr. Ellet has kindly offered you both an asylum in his house until my return, or for the remainder of your lives, should it be necessary. The remote and secluded nature of the spot will withdraw you from the intrusions of importunate curiosity."

At that instant the voices of men were heard without the cavern, and a fearful suspicion dawned suddenly on the minds of all present.

"Oh God!" exclaimed young Stanley, starting from his couch, "your pursuers are seeking you; keep a profound silence, or your voices will betray you."

"Let them find us," said Heathclond. "I am weary of eluding them and am glad my hour is arrived."

"William, dear William, be silent!" whispered the lady, bending toward him with a look of unspeakable terror, as a deep flush mantled the cheek that a moment before was so pale.

"Alice, I tell you it is useless——"

"Hush, love, for my sake—for your child's sake," urged the lady in his ear as her countenance became agonized.

The voices without now grew so audible that words could be distinguished. The old man clasped his hands in resignation, and his half-parted lips murmured, "The Lord's will be done!"

Alice threw one arm around the neck of her husband, with a gesture of unutterable love, as though she would shield him, and placed the other hand on his mouth, while she trembled in every limb.

"The entrance of their asylum is well hidden," said one of the voices. "It will be a day's work to discover it."

"Let us spend the day at it, then," replied the other speaker, in a gruff and harsher tone. "We will not give up the search until we find it."

And they seemed approaching the mouth of the cavern. A moment of intense and breathless anxiety to the inmates elapsed. Their discovery seemed inevitable. In a few minutes, however, those outside passed on, and after a short time their voices grew fainter and fainter, until they were lost in the distance.

(Continued in No. 20.)

PLAYFULNESS OF ANIMALS.—"Erid, who has bestowed great attention to the habits of the crustacea, says that he has seen the *Cancer menas* play with little round stones and empty shells, as cats do with a cork or small ball. Dogs, particularly young ones, are carried away with the impulse, rolling over, and chasing each other in circles, seizing and shaking objects as if in anger, and enticing even their masters to join in their games. Horses, in freedom, gallop hither and thither, snort and paw the air, advance to their groom, stop suddenly short, and again dash off, at speed. A horse belonging to one of the large brewing establishments in London, at which a great number of pigs were kept, used frequently to scatter the grains on the ground with his mouth, and as soon as a pig came within his reach, he would seize it without injury and plunge it into the water-trough. The hare will gambol round in circles, tumble over, and fly here and there. Brehn witnessed one which played the most singular antics with twelve others, coursing round them, feigning death, and again springing up, seemed to illustrate the old saying of 'Mad as a March hare.' The same thing occurs with rabbits, and many others of the rodentia; and on warm days fish may be seen gambolling about in shoal water. Carp, in early morning, while the mist still hangs on the water, wallow in the shallows, exposing their broad backs above the surface. Whales, as described by Scoresby, are extremely frolicsome, and in their play leap twenty feet out of the water. Small birds chase each other about in play, but perhaps the conduct of the crane and trumpeter (*pelephas crepitans*) is the most extraordinary. The latter stands on one leg, hops about in the most eccentric manner, and throws comical antics. The American call it the mad bird, on account of these singularities. The crane expands its wings, runs round in circles, leaps, and throws little stones and pieces of wood in the air, endeavours to catch them again, or pretends to avoid them as if afraid. Water birds, such as ducks and geese, chase after each other, and cleave the surface of the water with outstretched necks and flapping wings, throwing an abundant spray around."—Thompson.

## THE LIFE OF BENJAMIN FRANKLIN.

THERE is no inquiry more interesting, and at the same time more instructive, than that which traces the progress of a great mind from its feeble beginnings to the period when it fills the world with its renown. Mankind are naturally curious to become acquainted with its early hopes and aspirations, and to learn what peculiar features distinguished it from other minds—and hence the charm thrown around autobiography. This charm is greatly enhanced when its pages are unsullied by that display of personal vanity, so difficult altogether to repress, and yet so injurious to the memory of its author when indulged in. It is this apparent truthfulness and absence of personal display which invest the lives of Gibbon and Hume with their remarkable fascination; and the want of these characteristics mars Rousseau's *Confessions* and Byron's *Letters*, even more than the immoralities they so unblushingly display.

Franklin fortunately left behind him an unfinished work of this class, containing a sketch of his early years, which, for perspicuity and unaffected simplicity, has no superior and but few equals. From this we learn that he was born in Boston, on the 6th day of January, 1706. His father, Josiah Franklin, emigrated to America about 1682, from the small village of Ecton, in Northamptonshire, England, where the family occupied a freehold for upwards of three centuries, of about thirty acres. "This small estate," continues the autobiography, "would not have sufficed for their maintenance without the business of a smith, which had continued in the family down to my uncle's time, the eldest being always brought up to that employment, a custom which he and my father followed with regard to their eldest sons. When I searched the register at Ecton, I found an account of their marriages and burials from the year 1555 only, as the registers kept did not commence previous thereto; I, however, learnt from it, that I was the youngest son of the youngest son for five generations back. My grandfather Thomas, who was born in 1598, lived at Ecton till he was too old to continue his business, when he retired to Banbury, in Oxfordshire, to the house of his son John, with whom my father served an apprenticeship. There my uncle died and lies buried. His eldest son, Thomas, lived in the house at Ecton, and left it with the land to his only daughter, who sold it to Mr. Isted, lord of the manor there."

His grandfather had four sons, viz: Thomas, John, Benjamin, and Josiah. Thomas, the elder, was bred a smith; John, a dyer, probably of wool; Benjamin, a silk dyer; and Josiah, the father of the philosopher, after serving an apprenticeship with his elder brother John, became a tallow-chandler, which business he prosecuted in Boston, America, until his decease, obtaining from it a frugal but honest support, and the means of rearing humbly, but respectably, a large and worthy family of children.

The father of Benjamin Franklin married quite young, and brought with him to America a family consisting of his wife and three children. He emigrated in company with a number of religious dissenters, to whose faith he was attached; but it does not appear that he was driven by religious zeal, like many of his sect, to seek an asylum in a new country from the persecutions he had experienced in his native land. Of his father, Franklin says, that "he had an excellent constitution, was of middle stature, well set, and very strong; he could draw prettily, (which from the specimens in a note-book kept by Franklin we conclude he could not,) was a little skilled in music; his voice was sonorous and agreeable, so that when he played on his

violin and sung withal, as he was accustomed to do after the business of the day was over, it was extremely agreeable to hear him. He had some knowledge of mechanics, but his great excellence was his sound understanding and solid judgment."

"At his table he liked to have, as often as he could, some sensible friend or neighbour to converse with, and always took care to start some ingenious or useful topic for discourse, which might improve the minds of his children."

Benjamin was the youngest son by a second wife, whose name was Abiah Folger, the daughter of Peter Folger, one of the earliest settlers in New England, and the author of a pamphlet on some controversial subject. Franklin was one of a very numerous family. His father had seven children by his first wife and ten by his second, of whom Benjamin remembers to have seen thirteen seated together at his father's table.

His elder brothers were all apprenticed to different trades, but Benjamin was sent to a grammar school, preparatory to an education for the pulpit, towards which his uncle proposed to contribute by leaving him a short-hand volume of the sermons of different clergymen taken by himself.

The increasing wants of his large family induced his father, in less than a year from the commencement of his studies, to alter his plan concerning his son and remove him from school, in order to make his services useful in contributing to the general maintenance of the family. He was, accordingly, at ten years of age made the errand-boy of his father's tallow-chandlery, and in this capacity was employed in carrying candles and soap to the houses of customers residing in Boston, besides performing various other offices connected with the trade, as cutting the wicks for candles, and filling the moulds with tallow.

"I disliked," says he, "the trade; and had a strong inclination to go to sea, but my father declared against it; but residing near the water, I was much in it and on it; I learnt to swim well, and to manage boats, and when embarked with other boys I was commonly allowed to govern, especially in any case of difficulty; and upon other occasions I was generally the leader among the boys, and sometimes led them into scrapes, of which I will mention one, as it shows an early projecting public spirit, though not then justly conducted.

"There was a salt-marsh which bounded part of the mill-pond, on the edge of which at high water we used to stand to fish for minnows; by much tramping we had made it a mere quagmire. My proposal was to build a wharf there for us to stand upon, and I showed my comrades a large heap of stones, which were intended for a new house near the marsh, and which would very well suit our purpose. Accordingly, in the evening, when the workmen were gone home, I assembled a number of my playfellows, and we worked diligently like so many emmets;—sometimes two or three to a stone, till we had brought them all to make our little wharf. The next morning the workmen were surprised at missing the stones which formed our wharf; inquiry was made after the authors of this transfer; we were discovered, complained of, and corrected by our fathers; and though I demonstrated the utility of our work, mine convinced me, that *that which was not truly honest, could not be truly useful.*"

Franklin was from his earliest years passionately fond of books, and devoured with avidity whatever species of reading came to his hand. His father's library was, unfortunately, but scantily stocked, and consisted chiefly of works on the religious controversies of the day, which he read, from the bare yearning for this pastime, and probably with but little profit to himself. There were a few books in this small collection of a different character, to which Franklin has attributed some of the peculiar characteristics of his subsequent life. Among these were Plutarch's *Lives*, and Dr. Mather's *Essay on the Means of Doing Good*. This latter book was quite a favourite with him, and he imagined it had a material influence in fashioning his train of thinking, and modifying the principal events of his future life. Every individual is certainly the best judge of those causes which affect his own mind; but we cannot avoid the conclusion that Franklin owed much more to the intuitive gifts of his intellect, than to any of the chance circumstances alluded to by him. It does appear to us, that the associations of his early boyhood were eminently unfavourable to the development of the philosophic reasonings which distinguished him in after life, and were even at this early age perceptible in the course of his reading, as well as his youthful actions.

His invincible repugnance to his occupation, and his desire to follow the sea, increased rather than diminished, and his father deemed it prudent, after the trial of one or two other kinds of business, to apprentice him to that of printing under his brother James, who had just returned from London with a press and types to establish himself in Boston. Franklin still retained his fondness for the sea, and declined for some time to enter into the contract. His objections were at last overcome by the persuasions of his parent, and he signed the indenture, which bound him as an apprentice to his brother, when but twelve years of age.

The new occupation he had selected, or rather which had been selected for him, provided him with the means of obtaining a more ready access to books than he had hitherto enjoyed. His acquaintance with the apprentices of booksellers, frequently obtained for him the loan of some small volume, which he was careful to return clean and at the appointed time. To what profit he turned this advantage may be judged from his own language. "Often," he remarks, "I sat up in my chamber the greatest part of the night, when the book was borrowed in the evening to be returned in the morning, lest it should be found missing." What the character of this reading was, he has not told us, but from the fact that he soon after appeared as the author of some very poor verses, we are inclined to the opinion that it was rather entertaining than substantial.

The manner in which he was led to correct his style in prose writing is,

not only worthy of note as illustrative of the development of his mental powers under such serious obstacles, but likewise as furnishing a lesson of perseverance, worthy of imitation by those who aim to overcome early disadvantages by careful and continued attention. He appears to have had a companion named John Collins, with whom he was fond of engaging in disputation, and to whom he gave the credit of possessing a style more fluent and pleasing than his own. On one occasion their dispute was interrupted before terminated, and was afterwards continued by a series of papers on both sides. These papers fell into the hands of his father, who, tallow-chandler though he was, certainly possessed strong natural sense. He at once perceived the strong points and the errors in his son's composition, and without entering into the subject in dispute, took occasion to talk to him about his manner of writing; observing that though he had the advantage of his antagonist in correct spelling and punctuation, (which he attributed to the printing-house), he fell far short in elegance of expression, in method, and perspicuity, of which he convinced him by several instances. Franklin saw the justice of his remarks, and thence grew more attentive to his manner of writing, and determined to endeavour to improve in style.

"About this time," he remarks, "I met with an odd volume of the *Spectator*. I had never before seen any of them; I bought it, and read it over and over, and was much delighted with it. I thought the writing excellent, and wished, if possible, to imitate it. With that view I took some of the papers, and making short hints of the sentiments in each sentence, laid them by a few days, and without looking at the book tried to complete the papers again."

In this manner he devoted each leisure hour torn from the laborious duties of his trade, to the improvement of his style, and the attainment of those elementary branches of education, now within the reach of almost every child, however humble, in every part of the civilised world.

The advantage derived from these exercises is thus with great modesty related by himself. "By comparing my work with the original, I discovered my faults and corrected them; but I sometimes had the pleasure to fancy that in particulars of small consequence, I had been fortunate enough to improve the merit or the language, and this encouraged me to think that I might in time come to be a tolerable English writer, of which I was extremely ambitious."

One great merit consequent upon the perusal of Addison's writings, and works of a kindred character, was the abandonment of a disputatious manner which had infused itself into his conversation and writings, and which he mainly attributed to the reading of the works on polemic divinity, found in his father's library. After the opportunities afforded by many years of observation, he pronounces it "a very bad habit, making people often extremely disagreeable in company, by the contradictions that are necessary to bring it into practice;" and adds, "persons of good sense, I have since observed, seldom fall into it." Having arrived at some proficiency in his style, he felt a great desire to ascertain its effects upon the public, and with this view, wrote an article in a disguised hand for his brother's newspaper, which was submitted to the inspection of several gentlemen who contributed to it, and pronounced worthy of insertion.

"Hearing," says Franklin, "their conversation, and their accounts of the approbation their papers were received with, I was excited to try my hand among them; but being still a boy, and suspecting that my brother would object to printing anything of mine in his paper, if he knew it to be mine, I contrived to disguise my hand, and writing an anonymous paper, I put it at night under the door of the printing-house. It was found in the morning, and communicated to his writing friends when they called in as usual. They read it, commented on it in my hearing; and I had the exquisite pleasure of finding it had met with their approbation, and that in their different guesses at the author, none were named but men of some character among us for learning and ingenuity. I suppose that I was rather lucky in my judges, and they were not really so very good as I then believed them to be.

"Encouraged, however, by this attempt, I wrote and sent in the same way to the press several other pieces that were equally approved; and I kept my secret till all my fund of sense for such performances was exhausted, and then discovered it, when I began to be considered with a little more attention by my brother's acquaintances."

This discovery of his talents as a journal writer, exercised a very important influence over the immediate, and perhaps ultimate destiny of Franklin. The consideration he received at the hands of his brother's friends, had a tendency to upturn the strict relations his brother sought to maintain between them as master and indentured apprentice. Whilst the master, on his part, manifested a peevishness and authority ill becoming a near relative and employer, Franklin, beyond doubt, arrogated somewhat more to himself than he was justly entitled to claim, by reason of the possession of his imagined superior mental qualifications. This led to frequent altercations, the infliction of occasional punishments, and the final determination of the apprentice to leave his master's employ—which his brother, by cancelling his indentures, in order to enable him to appear as the conductor of the newspaper carried on by himself, but which the Government had taken umbrage at, and ordered him to discontinue—enabled him to accomplish. Franklin, with that candour which characterises his entire personal narration, confesses that he was not justified in this step, and styles it in true printer's phrase, "the first error" of his life.

(Continued in No. 20.)

The Ganges and Burmipootee, issuing from nearly opposite sides of the same ridge of mountains, direct their courses towards opposite quarters, though they are more than 1,200 miles asunder; and afterwards meet in one point near the sea, after each has performed a winding course of 2,000 miles.

## STRETCHING THE LONG BOW.

THAT was a good story told of an occurrence which took place in a stage-coach one morning many years ago. A young, conceited fellow, who had been monopolising almost all the conversation of the company, consisting of sixteen passengers, had been narrating the wonderful exploits he had performed, the prodigies of valour of which he had been the hero, and the wonderful escapes of which he had been the subject. At last he related one adventure in which he was the principal actor, which was so perfectly astounding, that a low whistle of incredulity was a simultaneous demonstration on the part of the passengers. An old gentleman, with a solemn visage, and an ivory-headed cane, sitting in the back corner of the coach, here observed:—

"That last adventure of yours, my young friend, is a very extraordinary one—very extraordinary. One could hardly believe it without having seen it. I didn't see it; but I can relate a circumstance which happened in my family, and in which I was for a time deeply interested, which is almost as remarkable, and I believe quite as true. Will you hear it?"

"Certainly," said our braggadocio; "I should be very glad to hear it."

"Give it to us! give it to us!" echoed the whole company, getting an inkling, from the solemn phiz of the old gentleman, that something rich was in the wind.

"Well, sir," continued the narrator, "the circumstance to which I alluded is this: My father had three children. He had an only brother, who had also three children. My grandfather had left to my father and my uncle a large estate, in the executorship of which a quarrel broke out, which grew more and more bitter, until at length the aid of the law was invoked, and many years of violent litigation ensued, during all which time the costs of the proceedings were gradually eating up the estate. My father and uncle saw this, and though bitter enemies, they had too much sense to bite each his own nose off. They were chivalrous and brave men, almost as much so, probably, as yourself, sir," (addressing the daring young gentleman aforesaid), "and they determined to 'fight it out among themselves,' as the saying is, and thus keep the money in the family. Well, sir, my father made this proposition to my uncle; to wit: that the three sons of each, in the order of their ages, should settle the disputed question on the field of honour; the majority of the survivors to decide the affirmative. It was readily acceded to. My eldest brother went out on the appointed day, and at the first fire he fell dead upon the turf. My next eldest brother took his station at once, and at the second fire, shot my next eldest cousin through the lungs, and he never drew a whole breath afterward."

Here the old gentleman's emotion was so great that he paused a moment, as if to collect himself. Presently he proceeded:

"It now became my turn to take the stand; and upon me rested the hopes of my family. I can truly say, that it was not fear that made my hand tremble, and my pistol to waver; it was the deep sense of responsibility that rested upon me. We took our places; a simultaneous discharge was a moment afterwards heard, and—and—"

Here the narrator put his handkerchief to his face, and seemed to shake with irrepressible agitation.

"Well, sir," exclaimed our young Munchausen, who had listened to the narrative with almost breathless attention, "well, sir—well?—what was the result? How did it end?"

"I was shot dead the first fire!" replied the old gentleman; the property passed into the hands of my uncle and his family, and my surviving brother has been as poor as a rat ever since!"

An uproarious laugh, that fairly shook the coach, told "Braggadocio" that he had been slightly "taken in and done for" after a manner entirely his own.

This anecdote will not be lost upon bored listeners to those who shoot with the long bow; or, in other words, stretch a fact until they have made it as long as they want it. We have somewhere heard of a man at a dinner-party who was determined not to be outdone in this but too common species of archery. Some one present had been engaged in attracting the attention of the company to an account of a pike that he had caught the day before that weighed nineteen pounds.

"Pooh!" exclaimed a gentleman sitting near him, "that is nothing to the one I caught last week, which weighed twenty-six pounds."

"Confound it!" whispered the first fisherman to his neighbour, "I wish I could catch my pike again; I'd add ten pounds to him, directly!"

PICKLES AND THEIR ADULTERATIONS.—Are not the gherkins, cabbages, beans, &c., which we see in the bottles what they appear to be? And are other vegetables than those commonly known to us mixed with the ordinary kinds? To these questions we thus reply:—"Gherkins," on close examination, often turn out to be but shriveled or sliced cucumbers; the "young tender beans," to be old and tough; the "cauliflowers" to have run to seed; and the "red cabbages" to be nothing more than white cabbages, turned into red by colouring matter, as a dyer would change the colour of a dress. Further, that amongst the vegetables not unfrequently employed for the purpose of pickle-making, are some which do not enter into the calculation of the epicure, as vegetable marrow—which, when cut in pieces, forms a very respectable imitation of cucumber—and sliced turnips, the identification of which would be apt to puzzle even a botanist, as well as certainly all those who are uninitiated in the secrets of a pickle manufactory.—*Lancet*.

## PLEASURES OF TROPICAL LIFE.

**THE PLAGUES OF BRAZIL.**—Let the reader imagine himself roused from a comfortable slumber and blissful dreams, in the middle of the night, by a cold shuddering sensation as if an icicle, large as his arm, and long as a walking-stick, had been suddenly thrust down into the bosom of his shirt next his bare skin; he leaps from the bed, and down falls, like a dead eel, a venomous snake of the most deadly venom, who has quietly taken up his lodgings, not only in the bed, but actually within his shirt, without so much as saying, "by your leave."

Or only think of flinging yourself down in the cool inviting shade of an orange grove for an hour's nap, and after tossing uneasily about for thirty minutes, dreaming by snatches, perhaps, that you are shut up in a box along with four thousand full-grown lobsters, all with unplugged claws ready for war, you spring to your feet, and find the skin of your neck and face covered with little hard round protuberances like small peas, which you know to be the *bela rouge*; each one of which has driven his tiny screw, hard as tempered steel, deep into the skin: where, unless it is soon removed by the point of a friendly knife, it will lay the foundation of a loathsome ulcer. All your whole body, under your clothes, is swarming with ticks, worms, and bugs; your hair is alive with flies and insects, waging war upon each other for the sovereignty of the newly-discovered territory. On your cheek is fastened a great dusky vampire bat, with wings like Raphael's demons; at your nose hangs pendant a hideous-looking nondescript, armed with so many claws, pincers, horns and spears, that he seems a perfect amalgamation of the cricket, land-crab, locust and tarantula; two of his barbed spears he has fastened into your upper lip in order to steady himself, while he thrusts a long slender feeler up your nostril in search of a new route to your stomach. A dozen great overgrown black beetles are clinging to your fingers, and helping themselves to a "bite" at your expense; while a huge old scorpion, with a shell as hard as a land tortoise, is thrashing about inside of your boot leg, and stinging you a half-dozen times in as many seconds.

Take all these horrors, and add as many more to them as you can conjure up, and you will have some faint idea of what you will be doomed to undergo during an out-door nap of a single half-hour in the tropics.

Nor is your in-door life exempt from the million plagues that infest these regions. Besides the slimy snakes that crawl into bed with you, lizards, vipers, asps, and giant old cockroaches that seem to have been growing since the flood, dart, flip, and skip about the room, and conceal themselves in every chink and cranny around the walls. Fleas swarm in such countless myriads that if they were once unanimous in their efforts, they might lug you off in spite of your utmost struggles. You sit down to dine, and in a moment your soup is black with flies,—covered completely over from side to side, so compact that others pass across on their bodies, as one crosses the Douro from Villa Nova to Oporto, on the bridge of boats: and then after you have skimmed off the black mass, if you have still any appetite for the fly-seasoned soup, the moment you open your mouth to imbibe the first spoonful, in goes along with it a dozen of the greedy insects, lodging along the roof of your mouth, and on your palate, where they hang, struggling and kicking, till the next spoonful washes them down into your stomach. As Sydney Smith very justly remarks, "you eat flies, drink flies, and breathe flies."

After dinner the coffee is brought in, and you see a caterpillar, with fifty eyes, five hundred legs, and hairy, porcupine-quills all along his back, floating in your cup, coiled up like a Christmas wreath. You open the sugar bowl, and the beautiful white sugar is all astir with millions of small red ants, burrowing to its very lowest depths. A great flat bug, such as you have never seen before, with fifteen pair of legs, and ten wings, has cast himself down into the soft butter, and spread himself all over the surface, as though he laid claim to the whole plate.

Queer looking black things, half bugs and half worms, all head and no body, are industriously digging holes in the fresh loaf not an hour from the baker's: long-bodied grey flies are busily engaged founding a colony of their kind in the cheese, where they are depositing their eggs in clusters—in short, the whole insect world appear to have invited themselves to dine with you, and each particular one seems busy helping himself.

You wish to take a bath, and plunge into a pure crystal pool or a beautiful running stream; an amphibious thing, all head and horns, bursts up out of the sand at your feet, and rasps through between your bare legs, tearing off the skin as if a mad cat had been dragged over you by the tail. The next moment, a huge cayman, or a ravenous jaguar, darts out from a tangled growth of submarine plants, and makes a dive at you with open jaws. You leap out of the water to escape the monster, and in an instant your naked body is covered with a cloud of venomous gnats that rise from the sand, biting as they light, and blistering as they bite: by the time you are dressed, you feel as if your whole body had been scourged with nettles.

Everything in the insect or reptile kingdom of Brazil, bites, stings, poisons, or wounds in some way; and all seem to be more inimical to man here, than in any other portion of the habitable globe.

With a knowledge that through life he must battle with such plagues as these—worse ten thousand times than those that fell upon the land of Egypt, for the very reason that they are perpetual—what Englishman would exchange his home, nestled down among the old hills where first he looked out upon God's glorious sun-light, albeit that home is subjected at times to the dreariness of autumn rains, the biting frosts of winter, or the rude blustering March winds, for the luxuriant groves, the spice-laden breezes, the natural gardens of gorgeous flowers blooming in eternal summer, or the fruitful vale

## THE ARCTIC EXPEDITION.

**DR. KANE**, who was attached to the American Exploring Expedition, is delivering a course of lectures on this interesting subject at the Smithsonian Institute in Washington. From a brief report of the first two lectures, we extract the following:—

"The topic is full of interest. For the first time we were made aware of the geographical importance of the Arctic ocean—an ocean whose area exceeds four and a half millions of square miles, and whose tributary rivers drain a larger country than the Indus, the Ganges, the Mississippi, and the Orinoco combined."

"In discussing the much vexed question of the *cut bow* of these Arctic expeditions, Mr. Kane, after citing in detail their valuable contributions to general science, observed, that the cod-fishery of Newfoundland grew out of the voyage of Sir Humphrey Gilbert; the north-west passage of Davis opened the whale-fishery of West Greenland; and Probiher pioneered Hudson to that great bay, which now margins the most lucrative fur company of the age."

"Sir John Franklin was last seen in Baffin's Bay, in July, 1846, moored to an iceberg, and awaiting an opening to the west. By a strange coincidence, the American expedition was imprisoned for two successive seasons at the same spot. The next traces of his onward progress were the sad memorials of his first winter encampment, at the mouth of Wellington Channel, a large *iflet* opening towards the north. And here Dr. Kane, after describing the scene which he was among the first to visit, expressed his conviction that the missing vessels had proceeded in the early summer of 1846 up this inlet to the north. This seems to us extremely probable. The American expedition, in fact, drifted helplessly in this very direction. They attained a latitude (75° 26' north) never before attained on this meridian by keel of Christian ship, and there saw the dark water sky that indicated the *Polyni*, or open sea, advocated by Lieut. Maury. It was this painful and helpless drift to the north that urged upon Dr. Kane and his comrades the conviction of Franklin having preceded them upon this very passage."

Franklin was ordered by the British Admiralty to proceed through Lancaster Sound for some three hundred and fifty miles, to a cape called Walker; thence he was to steer to the southward and westward towards Behring's Straits. Failing to accomplish this, he was ordered to attempt a passage to the north by Wellington Channel. Dr. Kane, by a series of practical arguments, which seem to us almost conclusive, shows that this was the passage which he adopted; and we see, although a few of the English officers differed with him in opinion, that the recent publications of the British press fully sustain this view. The position of Sir John Franklin's first winter quarters, at the very south of this channel, is conclusive as to the fact of that judicious commander having contemplated its future navigation. It was the alternative enjoined by his "orders;" and the lecturer detailed in many facts to show that it was a *feasible alternative*. Dr. Kane, in investigating the natural laws which regulate the ice-drift, showed that the eastern side of this channel is earlier and more frequently open than the western; and the peculiar position of Sir John Franklin enabled him to see and take advantage of the *very first of these early openings*.

Add to this the singular and perplexing fact that Franklin left no written record of his intentions; and it really seems as if the ice had suddenly opened to the north, and that Sir John, with his daring and energetic promptitude, had pushed into this new water without delaying to give to the world behind him a notice of his course. Certain it is, that the deserted encampment bears marks of hasty departure, forcing us to the conclusion, that Sir John Franklin has six years ago reached the region north of this ice-bound inlet, and has since been unable to return.

Can he have survived?—This question was then taken up by Dr. Kane in a manner that surprised us. We were unprepared for the resources which that region evidently possesses for the support of human life. Narwhal, white whales and seal—the latter in extreme abundance—crowd the waters of Wellington Channel; indeed, it was described as a region "*teeming with animal life*." The migrations of the eider duck, the Brent goose, and the auk—a bird about the size of our teal—were absolutely wonderful. The fatty envelope of these marine animals, known as blubber, supplies light and heat; their furs warm and well-adapted clothing; their flesh wholesome and anti-scorbutic food; while the snow hut, or igloo of the Esquimaux, furnishes a dry and comfortable housing. In a word, Dr. Kane announced that, "*after a careful comparison of all the natural resources of this region*," he was convinced that food, fuel, and clothing—the three great contributors to human existence—were here in superabundant plenty.

In answer to the supposition of the entire destruction of the vessels and crews of Sir John Franklin by shipwreck, or the attacks of the ice, Dr. Kane said that wind-storms were rare, and that the simultaneous destruction of both vessels was hard to realise; but even supposing that winds should have foundered the ships, or that the ice should have crushed them, that *same ice* would serve, in either case, as a means of escape. In 1852, more than one thousand whalers were cast out shelterless upon the ice in Baffin's Bay; yet only seven perished.

The interesting question of an open sea around the Pole was then taken up. After citing the theoretical arguments in favour of such a body of water, which we cannot here review, Dr. Kane announced that the American expedition, under Lieutenant De Haven, had actually seen from their most northern point that unmistakable sign—the dark cloud known as the "*dark*"

seemed to have a great respect, confirmed this "sky" by the water itself.

Such an open sea has been vaguely called Polynya, a term from the Russian, which implies an open space. Do not think that, in a literal sense, such a sea exists in regions where the mean temperature is so far below the point of congelation. He fully advocated, however, the existence of a comparatively iceless sea, in which the drift never agglutinates.

It is in this region, not far to the north and west of the point which the American expedition reached, that he supposes Sir John Franklin and his companions to be immured; surrounded by seal, and the resources before described, but unable to leave their halting-ground and cross the frigid "Sahara" which intervenes between them and the world from which they are shut out.

## ENTERTAINING BOOKS.

THE age in which we live abounds with entertaining books. Stories of every description, some of them containing good moral lessons, are exceedingly numerous. Those of the better class furnish food for fancy and feeling.

Fiction has its peculiar attractions, and so has truth. Imagination can scarcely devise more striking events, more striking characters, or more romantic results, than occur on the pages of history. The entertainment derived from true books is the most valuable, because it is the most worthy of being remembered. The mind rests upon it with satisfaction. It accords with its native tastes. The child, as soon as it can speak, says, "Please to tell me a true story." Those who are most familiar with unfolding infancy, agree, that incidents simplified from the Scriptures, delight it, though they may frequently be repeated.

So, from the great storehouse of history, the young may entertain and enrich themselves at the same time. By extending their acquaintance through past ages and distant nations, the powers of thought expand themselves, an acquaintance with illustrious characters is formed, and knowledge gained which will be profitable through life, both for reflection and conversation.

Some have objected, that a wide range of history may give the young mind a premature introduction to the vices and follies that disgrace mankind. Yet thus to study them on the map of man, and to form a correct opinion of good and evil, and to deepen the love of virtue, and the hatred of vice, by the force of selected examples, might prepare the young better to understand character, and resist temptation in the actual struggle of life. The entertainments of history may be as safe as those of fiction, and more salutary. If they sometimes reveal the whirlpools of ambition, or the abysses of cruelty, they change the scene, and present the quiet waters of peace fertilizing the valleys, and the pure rose of virtue blooming in the wilderness. Examples of true greatness, generosity, and piety, if less frequent than those of an opposite nature, borrow force from contrast, and may therefore make a deeper impression, and thereby awaken a stronger desire of imitation.

The entertainments of history aid in acquiring a knowledge of human nature. We there see what man has been from the beginning, and what motives or temptations have moved him to good or to evil. Great care should be taken to form a correct judgment, and to measure by a true standard of excellence those whom the world has called illustrious.

Especially should opinions be cautiously formed of those whose fame rests only upon military exploits. Though the pride, cruelty, and revenge that stain many of those now applauded as heroes, are in a measure palliated because they were heathen, still we are bound to judge of right and wrong as Christians. When we think of the misery, mourning, and death that marked their course upon the earth, we cannot but wonder by what rule of equity "one murderer should make a villain, and many, a hero!"

To purchase a single conquest, how many eyes have wept, how many bosoms been pierced, how many hearts broken! If victories, and triumphs, and trophies dazzle the eye, look at their dark reverse; torrents of blood flowing, widows and orphans plunged in despair, throngs of unprepared souls driven into the presence of their Maker.

The patriotism that dates danger for the preservation of liberty, the firmness that repels the encroachments of tyranny, the courage that protects those whose lives are entrusted to its care, differ from the ambition that is willing to build its glory on contention, suffering, and death. This spirit is at war with His precepts, at whose birth the harps of angels breathed the song of "Peace on earth, and good-will to men."

History may be read by the young with a resolution of transcribing into their own character whatever it exhibits that is "just, lovely, and of good report." Thus will its pages not only afford rational entertainment, but be subservient to usefulness and piety in this life, and to the happiness of that which is to come.

**LIVE FOR SOMETHING.**—"Thousands of men," says Chalmers, "breathe, move, and live, pass off the stage of life, and are heard of no more—Why? they do not partake of good in the world, and none were blessed by them; none could point to them as the means of their redemption; not a line they wrote, not a word they spoke, could be recalled; and so they perished; their light went out in darkness and they were not remembered more than insects of yesterday. Will you thus live and die, O man immortal! Live for something. Do good, and leave behind you a monument of virtue."

## LOVE'S TRIALS; OR, MISTAKEN EVIDENCE.

(Continued from Page 231.)

JAMES had been fully acquainted with all his father's trials, and his sympathies were strongly excited. He was his constant companion through all the hours of business, encouraging by his cheerful smile and pleasant words whenever a favourable prospect was presented; and, through all adverse and untoward changes, still holding up before him that hope of better times which his fond father would have believed in if he could.

No youthful recreation had any charm for him, if he saw the shade of sorrow on his father's brow. Blessed youth! What son that mourns a father dead, but envies those rich tears which bathe thine eyes, and fall so silently before that sacred dust? It might not shame an angel's brow thus to let out the fulness of a heart like thine; and if the fond spirit that lives no more within that tenement of clay, looks from his hidden resting-place upon his noble boy, and reads his thoughts, it will almost make that better state more blissful, to know the true, fond, living love, that burns within thy bosom.

The funeral solemnities are over; there has been no lack of followers, to the narrow house—the world has done its part in the funeral payment. Many questions have been asked and answered as to the peculiarities of him whom they were following to the grave, and as to the circumstances in which he had left his family. Acquaintances have called and expressed their sympathy with the bereaved family, and then it was left alone. The world is filled with cold and unfeeling. Perhaps it is—at least it would not be surprising if, to those who call it hard names, it should present rather a severe aspect; but we ought to keep in mind that the world, as we call it, is made up of little circles in which each man lives, and moves, and concentrates its interest. That the world did not feel for this little family, was simply because the world knew nothing of it, and therefore it was left alone.

A few days after the funeral solemnities, persons of various descriptions were going in and out of the house, and the sharp stroke of the auctioneer's little hammer and his lively voice could be heard, mingled at times with the merry laugh which his smart repartee had excited; and then carts were driving up to the door in quick succession, bearing off loads of household goods, dear to those who lately owned them by all that was sacred in associations of parental and conjugal love, but only to be prized hereafter for the cheapness at which they had been purchased.

Throughout the day the scene continued, and the last load was then wheeled away until the shades of evening drew on. Strangers' feet then ceased to profane the spoiled home, and the little family close the door, and elude around the fireside where they had so often gathered.

It is a great mistake, which many are apt to indulge, that those who have enjoyed an elevated station in society, are disqualified to bear reverses of fortune; that those who have walked proudly on the summit level, cannot descend the lowest depths of life, and bear the ills of poverty, without proportionate distress. This is not so. The mind that has long cherished independent feelings—that has been refined by intercourse with polished circles—that has been accustomed to the homage of the many, and mingled with the nobler ones of earth as equals, still maintains its dignity and self-respect, when far, far down, it walks the humble, narrow path. The cottage, the menial employment, the pitying, sneering world cannot bend its towering crest, nor tear from it that proud support—its own self-respect.

Mrs. Edwards had been well aware that the circumstances of her husband were such as held out to her the certainty of a great and sad change. Pain would she have urged him to descend at once, to relinquish the struggle with opposing fortune, and be poor that he might be happy. But she knew well how sensibly alive he was to anything that concerned her standing in the world. He had taken her from its highest station, and there he wished to retain her; and when she knew the worst—when poverty, in all its cold and forbidding aspect, was full in view, she shrank not from its presence, but, with a calm and steady look, prepared to meet its stern realities.

She was still in the prime of life, and her beauty fresh upon her. The two lovely plants, her daughters, were but images of her former self. Mary, the eldest, was just fifteen, and Julia, nearly two years younger. Trained in an atmosphere of love, their beautiful features were but creases of their warm and noble hearts.

"It has been a trying day to you, mother; but it is all over now."

"Yes, my son; but it was a necessary sacrifice. Your father cannot now be remembered by any one as his debtor."

"That is a happy thought, dear mother," said Mary, her bright eyes kindling with emotion, as it looked full upon the sad, yet beautiful countenance of her parent: "if we have no friends, we can exult in the thought that we are no man's debtor."

"It has, indeed, been a trial, which once I could not have supposed it possible to bear—I mean what we have gone through this day. To hear strangers jesting over sacred relics of our family, to see rude hands carrying off what, to us, is associated with our tenderest feelings—oh! it has agitated me strangely; one thought alone has enabled me to bear it."

"You mean dear father's last wish."

"Yes, Mary; the idea of leaving the world with a blot upon his name. You know that his views on that subject were peculiar—but they were noble and just. He considered a debt uncancelled, a moral taint."

"I made him a solemn promise, mother, that everything should be paid to the last farthing."

"But, James, my dear son! how did you know that it could be accomplished?"

"This may be set down as one of Mr. Fightbody's unlucky days; there were unexpected hindrances continually coming up, but he had finally overcome all obstacles, and was ready for a start."—See Chap. iv.

"Why, mother, I pledged my strength, my life, for that one object, and the support of my mother and sisters; and sooner shall my arm wither than that pledge be unfulfilled. Your generosity in thus sacrificing all that was so valuable to you as the property of your ancestors, has relieved me from one part of this promise, and I have nothing now to do but labour for your support."

"God be your helper, James! and may you reap a rich reward for your past faithfulness to your dear father! His last prayer will, I trust, prove a rich legacy to you; but I cannot think of allowing you to spend your energies merely struggling to support us. You will find it hard enough, my dear boy, to make your own way in the world, without means and without friends."

James arose without replying to what his mother had said, and walked about the room, evidently under deep excitement; his lovely sisters watched him a moment, their bright eyes glistening with the tears that told how quickening was the sympathy that burned within.

"Brother, dear brother!" And each was clinging to an arm, and looking into his anxious countenance with expressions of the warmest love. "Don't, dear brother; don't, James——" And Mary wiped away in the gentlest manner the tear that was starting from its hiding-place. "We shall be able to help more than you think for; we have already thought about what we can do."

"My dear sisters, if you do not wish to distress me, you will cease at once." And leading them to the seats they had left, he placed himself beside her whose tones of love had ever been sweet music to his ear; and gently taking the hand with which she was concealing her strong emotions—

"Mother, I have one request to make of you. If you value my peace of mind, if you have any regard for my feelings as a son and a brother, you will never again, nor permit my sisters ever again, to speak in this way—never until it shall be proved that my efforts are hopeless. Let me fulfil what would have been my father's wish; at least let me try first."

There was a knock at the street door, and James rose immediately; it was a well-known single rap, and by the token a friend, although one in humble life.

There was a cordial grasping of hands, but neither spoke; silently the visitor followed James through the hall, to the room where the little family had scolded.

"Oh, Mr. Upjohn!" and Mrs. Edwards arose quickly and welcomed him with much feeling. He was not, indeed, an emissary from the gay and fashionable world; he was a plain-looking man, and plainly dressed; but had he been in princely garments, and his rank of high degree, he could not have been treated with more consideration. A seat was at once placed for him in their circle by the fire, but it was not until strongly urged by each member of the little family that he consented to take the place assigned him. He was one of those fine specimens of human nature that we sometimes meet

with, where a rough exterior conceals a warm and generous heart. He had a ready hand to help a neighbour in an hour of trial. They had experienced his timely aid in many ways during the scene of sickness through which they had just passed; and through all the painful close thereof he had done everything to relieve their sad hearts from care and unpleasant duty. He seemed to be gifted with the tact of discerning just where he could be most useful. Thus had he bound himself to the hearts of this family, by such ties as can never be destroyed while they retain the remembrance of him for whom those deeds of love were enacted.

As yet the visitor had not spoken; he seemed to feel that he was on sacred ground; that he was connected in their minds with all that was tender and heart-rending in the scenes of the few past days.

"You are truly welcome, Mr. Upjohn; we feel rather sad this evening after the events of the day, and were just now talking about our plans for the future."

He turned towards Mrs. Edwards as she addressed him, and answered in trembling tones—

"It is hard, madam; it must be very hard. It makes my heart sad to see the great change. But to you, madam, who have always had plenty to do with, it must be severe indeed. It makes my heart ache to think of it."

"God orders our change, you know, Mr. Upjohn. We must therefore submit patiently to whatever His will appoints."

There was no reply to this remark, unless a slight clearing of the throat, and a change of position and the smoothing down of his hair, which already lay as though it had been arranged with more than common care, might be taken as such. Mr. Upjohn could not, with all his heart, assent to the proposition; but he did not like to object to it.

"I am very glad that you have called this evening, sir, for I have no one to advise with, and just now we are much in doubt what course to pursue. Perhaps, my son, you have mentioned to Mr. Upjohn some of your plans."

"I have, mother; but Mr. Upjohn thinks that you will not be pleased with the country."

"I will tell you, madam; my first thought was, when Master James mentioned the matter to me, as he had been telling some of his troubles and how things are not just as you wish them, my first thought was that you, madam, and these two young ladies would not be used to the ways of the country. The country is more pleasant, no doubt, than this great Babel of brick and mortar, and country folks are clever enough in their way; but a body must know how to take 'em—and seeing that yourself and these young ladies have never been used to the rough and tumble of life, you might find it not so agreeable."

"But, Mr. Upjohn, it will not answer for us now to be particular as to where we live and how we fare; we are poor now, sir, very poor. And all we seek is a shelter, and——"

James looked at his mother with an expression of deep sorrow.

"I do not wish to pain your feelings, my dear son, and will not say what

I was intending to. But poverty, James, is no disgrace, since we have reduced ourselves to feel its pinchings, that we might be honest."

"It is not that, mother; I care not for poverty; the shame attached to it does not trouble me. But when you talk of the pinchings of poverty, you shall not feel them, nor my sisters either. Let me only get you a home in some retired place; I know that I can do more than you imagine. If nothing more, I can work as a day-labourer. Only gratify me in this one wish—to take the care of you on myself. You shall not want, you need not fear it; you must not talk about it."

The energy with which he spoke at once silenced the little company; his mother and sisters gazed at him with intense interest, but each with different feelings. The latter with an expression of strong admiration beaming from their glistening eyes; the former with all the softness of a mother's love and joy in witnessing this exhibition of his noble feelings, mingled with the painful thought that he knew but little of the stern realities of life's fearful struggle. Not willing to damp his filial ardour, she instantly changed the tenor of her remarks.

"Do you know of any place, Mr. Upjohn, not far from the town, some retired village, that would be desirable as a residence for us?"

"I do know of a place, madam, that of all others, it seems to me, would be desirable for one in your situation. Not so much on account of the people; they are well enough, good sort of folks, and will no doubt treat you with much kindness. Country people are kind-hearted to strangers, I will say that of them; that is, if they don't hold their heads too high. But I was thinking that it would suit you, madam, and the young ladies, on account of the blessed minister they've got. There is many of that craft (asking your pardon, madam,) that ain't no better than they ought to be; but Mr. Wharton is a prince among 'em; he's a true Christian, and a true gentleman, every inch of him; and his lady, if anything, is a little better than he is. She is a jewel of a woman, that Mrs. Wharton. They are none of your common, every-day folks. They seem to know what the world is made of, for they have seen a great deal of it; and while they would never stoop their heads for the proudest of the land, for they have been bred among the highest folks, yet the poorman is always welcome at their fireside. God bless them, they are a noble pair!"

"Is it far from the town?" asked Mrs. Edwards and her daughters almost in the same breath, for they had become much interested.

"Not very far, madam; a day's travel, not over thirty miles."

The mother and sisters now turned an inquiring look at James, who was also listening to Mr. Upjohn with much interest. He immediately noted down such directions as were necessary to lead him to the spot; and then their kind-hearted visitor, after inquiring in what way he could be of any service to them now, and receiving again and again the outpouring of their grateful hearts for all that he had already done, and the assurance that they would call upon him when they needed, bade them a good night, and James accompanied him to the door.

"You won't forget to call when you come to town, Master James, and let me know how they all fare. I feel much concern for your blessed mother and those dear girls."

And the old man let go the hand which James had given him at parting, and wiped away a tear more precious, in an angel's eye, than the costliest jewel that ever decked a monarch's brow.

### CHAPTER III.

It was a dark, chilly, November day; the clouds were flying fast across the murky sky, and strong gusts of wind, at times, swept along from the north-east, bending the tall poplars, and stretching out the more slender branches of the sturdy oak, and causing the forest to send forth a murmuring sound, as though spirits of evil were disturbing their lonely retreats.

A youthful traveller, dressed in rather light attire, such as would be more suitable for the streets of a city than for exposure to such a tempest in an open country, was just emerging from a small wood through which the highway led; and, as he did so, a country village of no great size, but of rather a pleasant aspect, opened before him. The spire of a well-conditioned country church first appeared, shooting up in pure white, and towering above the maples and willows which gracefully concealed, for the most part, the building itself; and on either side of the street, at intervals, for some distance, could be seen respectable dwellings, many of which were superior to the average of country habitations.

The day was drawing to a close, and it was with no little self-gratulation that the youth found himself so near the termination of his ride. He was on horseback, and, as large drops of rain began to accompany the gusts of wind, he spurred up his beast into a canter, casting his eye upon each tenement as he passed, in search of the tavern sign which he knew must be somewhere at hand.

Upon a large elm, whose giant branches hung far over the highway, creaking on its rusty hinges as it swayed backwards and forwards at the sport of the winds, he soon espied this token of shelter and welcome. His horse committed to the stable-boy, and himself warmed and refreshed at the crackling, open fire, he stepped to the bar, and inquired of the landlord, who was engaged in serving refreshments to some thirsty customers, "Whether he could direct him to the residence of the minister of the place, the Rev. Mr. Wharton?"

"The parsonage is next door, sir," pointing at the same time through an end window; "it is that stone building you see close by."

The young man bowed his thanks, and immediately walked to the window and surveyed the premises. He would scarcely have needed to make the

inquiry, if he had not been so intent upon that one object as he rode through the village—the signboard. The building bore upon its aspect, in all its parts and accompaniments, such marks of sacredness and peace, that, had its name been engraven on its front, it could not well have been more readily distinguished.

It was a stone building, as the landlord had said, but stuccoed with a dark cement that gave it an appearance of great age; while the perfect order of the wood-work about it showed that it had been well guarded against the ravages of time by judicious attention. It was two stories, with a small back building, and a wing on one side in front, which no one could mistake for anything else than the kitchen of the establishment. The house was set back sufficiently from the street to secure it against the dust of the traveller and to afford a neat yard, in which shrubs were plentifully scattered; and two borders, lining the paved walk from the front door to the gate, gave tokens of summer flowers and sweet perfume. A partition fence, the same with that which fronted the highway, separated this enclosure from the kitchen yard, so that nothing unsightly met the eye in front of the main building. Large trees encircled it, and their deep shadows added much to the sombre aspect it presented, at the same time foretelling cool and refreshing shade from summer's mid-day sun.

The young man surveyed the premises awhile, and then leaving the tavern, walked directly to the parsonage.

A neatly dressed domestic opened the door at his summons, and ushered him at once into the sitting-room and the presence of the reverend gentleman and his lady. The former immediately arose from his seat before the fire, and bowing very gracefully, added his pleasant smile to that of his partner, who had already greeted the stranger. The young man had been affected by the external appearance of the house, and was prepared to judge favourably of persons and things within doors; he was not disappointed.

If there is a station in society involving responsibilities the most delicate and interesting—responsibilities that embrace in their hold on human sympathy all interests, both for this world and the next, it is the station of one who has for many years been the pastor of a country parish; and if there is an object of true moral beauty, combining in itself the sublime and the pleasing, it is the daily course of such a faithful servant of the Most High. Now dropping a word of counsel into the ear of some wayward youth; now soothing the irritated feelings of some neighbour who has called to tell his tale of injuries, real or imaginary; now binding in bonds of holy union those who wish to cast their lot in life together; now at the sick-bed, bending with melting heart over one long known and loved, and feeding the flickering spirit with a few crumbs of angel's food; now wiping away the tears that cannot be repressed, because a widow and her little ones have deposited in the narrow house their love and their stay; and then, as the shadows of evening gather round, retiring to his little sanctuary, there to bear before his Father, his Master, his God, the cares, the pains, the sicknesses, the difficulties, the varied interests of those who had received his attention through the busy scenes of the day. Such scenes and duties, fully entered into, cannot fail to affect even the personal bearing of an individual, and to throw around many deficiencies in the outer man a sweet halo; much more, when a commanding form, a benevolent and manly countenance, peculiar neatness in dress, and accomplished manners, add their mite to the holy influence.

As Mr. Wharton bowed to the young stranger, he might have been well taken as the personification of his office; there was such a calm, easy, dignified manner, that was in perfect keeping with his appearance. His stature a little above the common height, well proportioned, almost robust, and yet without any approach to grossness; his face full, and warmly furrowed by age; his forehead fair and smooth, and the thin powdered locks that but faintly covered his foretop, falling carelessly upon its edge. His features open and manly; and although of a serious cast, yet apparently ready for a smile. From the crown of his head to the buckle that glistened on his polished shoe, there was a perfect harmony of dress and bearing.

If the young man was struck with the appearance of the reverend gentleman into whose presence he had been ushered, equally so was the latter with the gentlemanly address and pleasant countenance of the youth: he was somewhat excited, and the colour that mantled his cheeks just then could hardly be said to be natural; his dark hair, almost a raven black, offered a strong contrast to the high, pale forehead from which it was thrown carelessly back, and his keen black eye had an expression of sadness, not usual at the light-hearted age of eighteen. The very easy and benevolent manner in which he was received, at once removed the embarrassment manifest on his entrance.

"I address the Rev. Mr. Wharton, I presume, sir." Mr. Wharton bowed low. "If you will excuse the liberty of a perfect stranger, I wish to make a trifling inquiry; I am in search for a house in some country village, as a place of residence for my mother and two sisters, and although there is no one here with whom we are acquainted, yet from what I have learned of the place, I think my mother will be satisfied with it. I have, therefore, taken the strange liberty of making an application to you. Is there a probability, sir, that I could procure a place?"

Mr. Wharton did not reply immediately, but turning his eye from the young man, it met that of his lady, who at once put down her needle-work.

"If the white cottage was only good enough, Mr. Wharton?"

He shook his head. "It would hardly answer, my dear, for a family that had been accustomed to town life."

"If the house, sir, is only at such a convenient distance from the place of worship, so that my mother could walk there, we should not be particular about other things, for it is from motives of economy that we are about to change our residence."

THE ONLY MEMENTO OF THE GREAT EXHIBITION PRODUCED WITHIN ITS WALLS.

Just published, complete in Two Volumes, price 5s. each, elegantly bound in cloth and gold, with a View of the Crystal Palace gilt upon the cover,

THE PARLOUR MAGAZINE OF THE LITERATURE OF ALL NATIONS, Printed in the Crystal Palace, Hyde Park, at Machines No. 158, and 162, Class 6.

We have no doubt that the two volumes of the Parlour Magazine will be treasured by many future generations. People flocked to the Crystal Palace after its close, and eagerly bought up, at enormous prices, articles that had been exhibited there, that they might possess some memento of the Exhibition. We supply not only a work exhibited therein, but one actually produced by machinery within its crystal halls, and in the view of millions of spectators. The value of our book will therefore increase with the advance of years, until it will be regarded as a curiosity and a treasure.—These volumes contain translations of Literary Treasures from the

CHINESE.	GEORGIAN.	HINDOSTANI.	MORLACHIAN.	SPANISH.
DANISH.	GERMAN.	IRISH.	PERSIAN.	SWEDISH.
DUTCH.	GREEK.	ITALIAN.	POLISH.	TARTARIAN.
FRENCH.	HUNGARIAN.	MEXICAN.	RUSSIAN.	WEIN, &c.

With original English Contributions by celebrated authors, and choice adaptations from the American. Each Volume is embellished by a superior Steel Engraving, and by numerous Wood-cuts.

RE-ISSUE OF THE PARLOUR MAGAZINE.

In order to meet the wishes of numerous persons of the middle and working classes, who, during the excitement of the Exhibition, were unable to obtain this memento of that great event, the work will be RE-ISSUED in Weekly Numbers, price 2d., and Monthly parts, price 8d. or 10d. Order of any Bookseller.

London: HOULSTON & STONEMAN, 65, Paternoster Row.

THE HOME COMPANION:  
A WEEKLY MAGAZINE

PRACTICAL ILLUSTRATIONS, OF POPULAR  
FALLACIES.

No. XIII.—“A RARE SPREE! WHAT A LARK! SUCH FUN!”

THE world we live in would be a very queer place if it were all “diab oolour,” if it were unenlivened by a single spot of green. Suppose us all walking about with faces as long as it is now becoming the fashion to wear our beards—what a miserable mixture of melancholy morbidities should we represent. And we are not quite certain but that these long beards have a tendency to produce long faces; there is a degree of asceticism in the practice, a reminiscence of Sinton Stylites stuck on the top of his pillar; a casting off, as it were, of the refinements of civilisation; ignoring the razor manufacture, and condemning Mr. Mechi to the occupation of turning over his own manure heaps. Through the mass of hair that covers the face, we should never see a smile. It may suit the grave Turk, who, in his stationary life, clings to the usages of the past, with whom gravity of deportment clouds in the place of wisdom; but that it should have been adopted by the meteoric Frenchman, and copied by the imitative Englishman, argues the want of something higher and better in the mental conformation. The Frenchman cherishes his beard as a badge of liberty. We heard a Frenchman boasting the other day of the superiority which France enjoyed over England in the matter of liberty:—“In France,” he said, “we may wear our beards in what shape we like; but in England, if a man with a moustache were to seek a situation in any mercantile office he would be rejected. You have no such liberty in England as we have in France.” Very true, my good sir; but we know not how soon the Prince President may choose to issue an edict regulating the shape of beards, and placing policemen at the corner of every street, with scissors and razor in hand to clip all hirsute monsters into the proper regulation cut, after the fashion of the great autocrat of the north. That would be a rare spree, we take it, for the police. Here in England, notwithstanding some of our youths appear “bearded like a pard,” we have no great faith in the liberty of the beard: we look to some more tangible and useful effect of liberty, and somehow or other, we have contrived to preserve it without planting whole forests of trees of Liberty, and decorating them with red caps; and we really can venture to walk about with clean shaved faces, without feeling ourselves thereby enslaved.

Sterne says, if we remember rightly, that when a sensible man writes a chapter about noses, we may be certain he has some meaning in it. So have we, when we write about beards. It is not the mere suffering the growth of hair to flow on unchecked of which we complain, but the false and mistaken ideas which can invest the barbarian excrescences with the lofty thoughts appertaining to liberty and freedom. Whenever men combine base and low thoughts, with that which in itself is intrinsically noble and great, the base and low overrun and destroy all that is lofty and noble, eat into it as a canker, and render it as difficult to preserve, as the French have found it to keep their freedom. They rejoice in their beards, and have lost their liberty. But we also invest some things with thoughts and ideas which do not

naturally belong to them, fix our affections on the low and base, give a greater importance to these than to higher objects, and mistake low sensual pleasures for true enjoyment. There is a mocking spirit abroad in the world, which derides and scoffs at all noble things, turns them inside out, strips them of all that is lovely and attractive, and would assume that no mirth, hilarity, or cheerfulness can exist in connexion with any thing that is estimable and good. This spirit has even invented a new language to suit its purpose, and the three phrases we have placed at the head of our article, stand in the place of the genial mirth, the frank hilarity, and the bright cheerfulness, in which our ancestors rejoiced. It is in vain we search our dictionaries for the terms, they are words almost unknown to etymology; the oldest of them, *fun*, is dismissed by Johnson as a low cant phrase; neither the word itself, nor its derivatives, are to be found in Shakspeare, though he so well understood how to excite our mirth, how to deal with the comical and the ludicrous in every shape. *Spree*, is of still more modern date, and is, we believe, of Scottish origin; the only trace we find of it is in Jamieson; and the only authorities quoted are from the Scotch provincial dialect. And as for *lark*, that still remains embedded in the alms of slang.

These three mystical words exercise an immense, and a pernicious influence over the rising generation. They have not only become idioms in our language, but, unfortunately, fixed ideas in too many minds. “Let me write the ballads, and I care not who makes the laws,” says an old writer, confident of the power which the constant repetition of familiar sounds would exercise over the majority of men. “Let me invent phrases,” says another, “and a fig for all the preachers of morality and virtue, of the good and the beautiful; their lessons will all be thrown away before the powerful influence of these phrases.” There is more virtue in a name than poets dream of. A rose by any other name might smell as sweet; but give to any vile action a high sounding appellation, and the villainous is often lost in the title. A young man in fashionable life plunders his friend at cards; he calls it “play,” and feels no disgrace in the transaction; he shoots another in a duel, and the world terms it honourable satisfaction; and he walks about in all the dignity of a man who has maintained his honour; he seduces another man’s wife, and christens it gallantry. Oh! there is much virtue in a name! The force of association is very powerful; and if we continually represent certain actions to our mind in a pleasurable form, however questionable those actions may be, we shall learn to connect them with pleasurable thoughts, and it will not be long before all our sources of enjoyment will be confined to those very actions. It is every day’s experience, that the expressions which we have used as the title to this article, give currency to the most mischievous practices with many young men: they have learned to look upon the grossest debauchery as “a rare spree;” upon daring outrages as “a jolly lark;” upon tedious pranks as “such fun!” Not one single act will bear reflection or examination—not one, if it were called by its proper name, but they would shrink from with disgust. Unfortunately, names have been attached to them which convey pleasurable associations, and they seem to think that they should be depriving themselves of all mirth and gaiety if they did not rush into those excesses, which these “low cant phrases” seem to dignify. If the fabulist of old, who told us the fable of the boys pelting stones at the frogs, had lived in these our days, he would have added another sentence to the speech of the frog, that what is sport to the boys was death to the frogs, and have shown them that it brought death to the boys also, in the guise of sport; for the very weight of the stones would at last inevitably drag them into the pond, and bury them in the mud.

It was but the other day we met a young acquaintance looking very rueful, with a swollen lip and black eye, and sundry other marks about his person, not very reputable or respectable. He had been in for a “rare spree,” as he called it, the night before. It appears that it was the habit for a party of the young men of the public office to which he belonged, occasionally to sup together, and enjoy a cheerful glass; there was no very strict limitation as to the number of glasses, and somehow the wine, instead of increasing their wit and wisdom, seems to have produced a strong disposition for brawling. On this occasion another body of young men from another office, between whom and the first party there was some old feud, assembled at the same house on the same night in the determination to enjoy a “rare spree.” The parties were in different parts of the same room, and as the evening, or rather the night wore on, certain expressions were heard proceeding from one table offensive to the other; then they began to talk at each other, soon to talk to each other in anything but a tone of mirth and gaiety. Then some expressions elicited an extra amount of anger, and they no longer confine themselves to talking; the tables are upset, and amidst the crashing of glass and earthenware, the parties rush in to personal conflict. The police are called in to quell the disturbance and clear the house; some are there and then taken into custody; others escape for a time but with their blood heated ready to see an enemy in every passenger; and most of them were in the hands of the police for subsequent assaults. One, who succeeded in reaching his own lodging, could see nothing but a foe in his poor landlady who opened the door to him, and no sooner did she present herself to his inflamed eyes than she was saluted with a knock-down blow, and he was handed over to the police for his cowardly attack on a woman. The next morning but few were able to appear at their place of business;—some were sore with their bruises, some were ashamed to show their scratched and blackened visages, some were in the hands of justice—and yet this was talked of as “a rare spree!” The disgrace, the humiliation, was sought to be gilded over by applying to it this eulogistic term: by it they keep out of sight all that is calculated to shock and disgust, and dress up their low and vulgar row in borrowed plumes which do not belong to it, but which serve to tempt themselves and others into a repetition of the offence. They suffer their thoughts to dwell on the progress

they displayed, on the wine-inspired courage with which they attacked their opponent, on the fortitude with which they endured his blows, and altogether ignore the disgrace of being engaged in such a row.

What is commonly called "a lark," is something very different from the bright bird, whose name it bears, as it goes soaring up to the sky with its joyous song: it is a night bird, mocking with rude accents the enlivening strains. It is a miserable parody on true joyousness, springing from wild animal spirits from which the restraint of reason has been withdrawn. Combining frequently the ludicrous with the savage, as in some of the early atrocities of the first French revolution, Sir Lytton Bulwer, in one of his novels, gives us a specimen of what was considered "a lark" by some young students at the University. There is, certainly, much that was ludicrous mingled with the savage attack upon a helpless old man. Returning from some wine party, a set of young students met with an old fellow of one of the Colleges against whom they had some grudge. He was a queer, old-fashioned kind of man, who adhered to the garb of other days, wore a long pigtail, and in this costume excited the mirth and ridicule of the fashionable undergraduates. No sooner was his strange figure seen approaching, than he was surrounded by the youths, his academical vestments made into bandages for his limbs, and he was carried to the door of a venerable spinster to whom he had for many years been paying his addresses, but would not marry at the expense of losing his fellowship; to the knocker of her door he was securely fastened by his long pigtail, which was not quite so rigid as that of George the Third at the bottom of the Haymarket. In his struggles to free himself, dire was the din occasioned, and sundry were the vials of wrath that were poured upon his head from the windows of the incensed maiden. At length the proctor in his rounds came to his rescue, and pursued the offending parties, who had lingered near the spot to enjoy "the lark." They were traced to their college, though not identified; and suspicion fell most strongly on an innocent young man, who had just returned from another direction. He was expelled. The actual perpetrators were youths of rank and fortune, to whom expulsion would have been comparatively harmless; but to the innocent victim of their "lark," it was ruin. His prospects in life were entirely blighted, he was cast off by his friends, thrown upon his own resources, and perished. The perpetrators of the "lark" escaped punishment and disgrace, revelled in all the advantages of their position, became men of note and mark in the fashionable world, and were as conspicuous for their vices as they were elevated in rank. Their memories chuckled over their exploit without one thought being bestowed on the ruin they had brought upon another. They saw only the ludicrous, and felt neither shame nor remorse for the pain inflicted on the old professor, nor for the ruin that had befallen their innocent fellow-student. Instead of "heart-easing mirth," as Milton beautifully calls it, these "larks" are "heart-hardening."

We hardly know a much more melancholy sight than those men who are always chuckling and rubbing their hands over such "fun!" To them every incident in life is regarded only as productive of "fun," nothing wears a serious aspect. Friendship is a jest; love, ridiculous; the calamities of others are made sport of;—the old proverb describes them when it says, "Children and fools lead merry lives;" they are not concerned either for what is past, or for what is to come. Neither the remembrance of the one, nor the fear of the other, troubles them; nothing but the sense of present pain ever stops their grinning. They are merry, because they are vacant; they laugh, as the clown whistled, for want of thought. An anonymous writer asks, "Whence comes all this love of the ridiculous?" From ignorance, from idleness, from vanity. First, people are ignorant, and they laugh at what they do not understand; then they are idle, and go on laughing, because it is easier to laugh than to try to understand; lastly, they are vain, and keep on laughing, because others fancy they must be superior to all they laugh at, and because they half believe it themselves." Some of this snuff passing along the road, saw an elderly gentleman in a garden blowing bubbles from some soapbuds, and earnestly watching them as they glistened in the sun. They laughed, and jeered, and hoisted, and almost went into convulsions at "such fun,"—an old man blowing bubbles! It was Sir Isaac Newton, studying the prismatic rays of light and perfecting his theory of colours! And the pert and ignorant laughers could see nothing but what was absurd and ridiculous in the operation. Science is to them a bore, and its results are treated with ridicule. The highest poetry awakens no pleasure unless they can make a ridiculous parody of it. They seek to drag everything down to their own level. They are never in earnest; they do not understand it. Life in its various aspects is a mere Christmas pantomime, in which clown and pantaloon tumble over each other amidst roars of unmeaning laughter. Like the French of the middle ages, they are continually whirling in the dance *Macabre*, the Cemetery Dance; and over the graves of the dead, and the tombs yawning for themselves are jesting and sporting, without thought or reflection. *Vive la bagatelle!* From these are filled up the ranks of the lovers of "a spree," the delighter in "a lark;" and low vulgar "fun" takes the place not only of all that is great and noble, but of all that brings truly heart-inspiring mirth and gaiety. "A thousand sweets, bought with no following gale."

Again we say, "A drab-coloured world would be hateful." It is because we love mirth, enjoyment, gaiety, that we seek to mark thus strongly the evils of these false pretenders. Cowper, long ago, pointed out this distinction to us—

"Whom call we gay? That honour has been long  
The boast of mere pretenders to the name.  
The innocent knave only. The lark is gay,  
That dries its feathers saturate with dew,  
Beneath the cloud, while yet the beams  
Of day-spring overhead his humble post."

The peasant, too, a witness of his song,  
Himself a songster, in as gay a song  
But save me from the grief of those  
Whose headaches nail them to a noonday bed."

Too great a love of the ridiculous is the dry-rot of all that is high and noble in youth. And too great a love for those scenes of vulgar fun, which present, unfortunately, so many attractions to the young and headless, not only demoralise and taint the youthful mind, but bring after them a long train of sorrow and repentance, that embitters every thought. But it is not alone the mere influence which this love of the ridiculous, and this vulgar fun, exercise over those who participate in it, that it is fraught with evil, but it has a tendency to impede the real mirth and gaiety of the world—nay, to stay its progress towards better things. We live, it is said, in an age of progress; and that progress, we believe, would be much more rapid if it were not for the mocking spirit which sneers at all good, if it were not for the idle and destructive habits which it fosters and encourages. Great Exhibitions in crystal palaces bring together all the nations of the earth to contend for superiority in art and science, in the natural productions of their several countries, and the increased value that has been given to them by skill and labour; and the Exhibition is no sooner closed, than those who met in amity, seem on the point of the most furious discord. Peace Societies promulgate the most pacific doctrines, and all admit the advantages that would arise from their general adoption; but contemporaneously with them are the formation of rifle clubs, for the defence of our homes against a foreign invader. Schools and mechanics' institutes, and literary associations, have shed their unimproving influence over us, but the police force is still a necessity in the land. The mocking influence of ridicule, which derides all that is good and great, saps the principles of amity between man and man, between nation and nation; and the vice that springs up under its influence, still gives employment to the police, in spite of either secular or religious teaching. Still the signs of progress are visible, are recognised even by prime ministers, the reward it with an extended franchise. But if the mocking spirit stays in here, if we regard the election of a representative merely as a time for a "faree spree" or a "jolly lark," the minister had better have paused in his work. These words taint all they touch: are deadly destroyers, which convert all that is noble and virtuous into mockery and shame, make a jest of patriotism, and scoff at honour. They throw a cloud over the brightness of all that is beautiful and good, and interpose a dismal veil between the world and real mirth, gaiety and enjoyment.

## ABOVE AND BELOW.

O DWELLERS in the valley land,  
Who in deep twilight grope and cower,  
Till the slow mountain's dial-hand  
Shortens to noon's triumphal hour,—  
While ye sit idle, do ye think  
The Lord's great work sits idle too?  
That light dare not o'erleap the brink  
Of morn, because 't is dark with you?  
Though yet your valleys slunk in night,  
In God's ripe fields the dew is cried,  
And reapers with their sickles bright.  
Troop, singing, down the mountain side:  
Come up, and feel what health there is  
In the frank Dawn's delighted eyes.  
As, bending with a pitying kiss,  
The night shed tears of Earth she dries.  
The Lord wants reapers: O, mount up,  
Before night comes, and says,—"Too late!"  
Stand not for taking scap or cnap,  
The Master hunders while ye wait.  
'Tis from the heights alone your eyes  
The advancing, spear of day can see,  
Which o'er the eastern hill tops rise,  
To break your long captivity.

Lone watcher on the mountain-height!  
It is right precious to behold  
The first long surf of climbing light  
Flood all the dreary east with gold;  
But we, who in the shadow sit,  
Know also when the day is nigh,  
Seeing thy shining forehead lit  
With his inspiring prophecy.

Thou hast thine office; we have ours;  
God lacks not early service here,  
But what are thine eleven hours  
Ho counts with us for morning cheer;  
Our day, for Him, is long enough,  
And when He giveth work to do,  
The bruised reed is amply tough  
To pierce the shield of error through.

But not the less do thou aspire  
Light's earlier messages to preach;  
Keep back no syllable of fire,—  
Plunge deep the rowels of thy speech.  
Yet God deems not thine aided sight  
More worthy than our twilight dim—  
For meek Obedience, too, is Light,  
And following that is finding Him.

How to BUY YOUNG GESE.—A gentleman who paid the best prices for his provisions, and who liked to live as well as did his neighbours, was once deceived by his butcher in the age of some poultry he bought. Meeting him a few days afterwards, he walked up to his waggon and stammered out, (for he was affected, like poor Charles Lamb, in his speech)—

"G-gu-gu-got any geese, to-day?"  
"Oh, yes," said the butcher. "A fine lot."  
"How ma-ma-many have you got?"  
"A dozen—nice ones."  
The customer turned them over, and then added—  
"N-now you see, I've got a pe-pe-posky set o' fellows at my house, an' they eat a great deal o' poultry. Hain't you gu-gu-got any tu-tu-tough ones?"  
"Wal—yess," said the butcher, picking them over. "There's one—two—hens! four, five o' em."  
"Is them all the tu-tu-tough ones you've got?"  
"Yess—yess; that's all," said the seller, separating them.  
"Wal—well, then, I reck-reck'n on the whole," concluded the buyer, with a leap, "I'll take the other lot!"  
The feelings of the butcher, at this unexpected reply, may be more easily imagined than described.

## ONWARD!

**HYDRAULIC POWER AT SEA.**—Mr. Seydell, naval architect at Stettin, and Mr. Ruthven, an English engineer, are said to have constructed a ship which is impelled neither by wind, oars, nor steam, but by retro-active hydraulic power.

**PANOPTICON OF SCIENCE AND ART.**—The Royal Panopticon of Science and Art, now building in Leicester-square, is rapidly progressing. It is said, that besides many educational purposes to which the energies of the council are to be directed, will be the finding employment for females in the various branches of mechanical arts—in watch-making, jewellery, map and plan drawing, &c. This is a most desirable object, and will no doubt be the means of saving many from destitution and misery.

**PROGRESS OF ART APPLIED TO MANUFACTURES.**—The government have at last resolved to organize a special department at the Board of Trade, for the purpose of increasing the efficiency of the existing Schools of Design, and aiding Art-education generally as applied to manufactures—wants which the Great Exhibition of last year made very manifest; and we hear that they have offered a responsible office to Mr. Henry Cole, one of the acting members of the Executive Committee in the Exhibition.—*Athenæum*.

**RECLAIMING MARSH LAND ON THE ESSIX COAST.**—An extensive project of improvement is proposed to be brought before parliament, having for its object the embankment and reclamation from the sea of the vast green and samphire marshes, mudlands, flats, and shoals, on the eastern and southern coasts of Essex, together with the improvement of the rivers Colne and Blackwater. The subscription contract has been signed, we are told, for £162,000.—*Builder*.

**THE ARCHITECTURAL EXHIBITION.**—Slowly, but we hope steadily, this Exhibition is emerging from the shell of its original obscurity, and, by degrees, expanding into a valuable and useful institution. Two years ago it was first projected, chiefly, we believe, by the exertions of the Architectural Association of London; and, beginning with a few drawings and designs, it now numbers a collection of five hundred subjects, besides a variety of models and specimens of building and ornamental materials.—*Literary Gazette*.

**STEAM SUPERSEDED.**—A new motive power is said to have been discovered or invented by Mr. J. Bourke, of Limerick, coach-maker. "The mechanism of the invention is quite simple, consisting of only 16 plain formed iron cranks, with six frames, which stand in the centre of the machine, inclining one towards the other. It can be erected upon two pair of wheels and two pair of springs, there being also twelve small wheels, or pulleys, with three levers, one bearing on the other, and by which it will be propelled."—*Builder*.

**BATHS AND WASH-HOUSES FOR ST. GILES'S.**—The commissioners appointed under the 9th and 10th of Victoria, have commenced the erection of public baths and wash-houses for St. Giles-in-the-Fields, in Endell-street. The spot selected is the vacant ground, formerly the site of Lascelles-court, and the Bowl-yard, extending from Christchurch to Broad-street, contiguous to the notorious Rookery, Short's Gardens, Monmouth-street, and other thickly-inhabited streets. The proposed building will occupy an area of 5,000 square feet, and it will contain one hundred separate bath-rooms, a plunging bath, and laundries for one hundred women to wash and iron at the same time. The cost of the erection will be £14,000.

**THE PETERSBURG AND WARSAW RAILROAD.**—The Russian government have decided on completing these huge works even in a shorter time than was originally proposed. Hence, therefore, the line has been divided into eight sections, which will be separately under an especial direction, for thus expediting the works as much as possible. In imitation of the Romans, the earth-works are to be executed by the soldiery of two separate *corps d'armée*, by which a great saving of wages will be achieved. A space of nearly three years is now assigned for the completion of this hugest European line. That between Warsaw and Moscow is also to be put into immediate execution, also assisted by the labours of the soldiery. It is a question, however, unresolved yet, whether the intense cold of these regions (at times 25 degrees Réaumur below the freezing point) may not effect, by too great a contraction of the iron in the machinery and even the rails, the regular traffic during the winter months.—*Builder*.

**ELECTRIC TELEGRAPH BETWEEN DUBLIN AND HOLYHEAD.**—The *Warner* states positively that the same company which has executed the submarine telegraph between the French and English shores, has actually submitted to the government a proposal, by which it guarantees the completion, within a very limited period, of a submarine telegraph, upon the very same principle and construction, between Kingston and Holyhead. The sole condition required by the company is, that the government will pay it for the exclusive use of two wires, which they propose placing at its disposal, a yearly sum of £1,000.—*Athenæum*.—Mr. G. E. Deering, a gentleman of good and ancient family, and a young man of very considerable scientific acquirements, has devised a plan by which private communications may be transmitted from one to any other station on a line, without the possibility of their being read at the intermediate stations. This is an invention of great importance, and will tend to render the electric telegraph of avail in many instances of a confidential nature, which the old plan, from its publicity, did not allow.—*Observer*.

## STATISTICS.

**LONDON** stands upon 620 acres. The fixed property in houses located on this small spot is estimated at forty millions sterling; and the value of the moveable property in the city is considered to be worth one hundred millions sterling.

**STATISTICS OF LUNATICS.**—From the annual report of the Commissioners in Lunacy, just printed, it appears that on the first of January, 1851, there were 16,456 insane persons confined in asylums, hospitals, and licensed houses in England and Wales, of which 7,843 were male, and 8,613 females.

**THE PROFESSION IN PRUSSIA.**—A statistical account of the medical profession has just been published at Berlin. According to that document, there are at present 267 district physicians, 3,266 practitioners, 963 surgeons of the first class, and 973 of the second class. Sum total, 5,469. These figures being put by the side of the amount of population, which was, at the last census, 16,216,912 souls, will give one physician or surgeon for about 3000 inhabitants. The number of veterinary surgeons is 828, and the apothecaries amount to 1,471.

**AMERICAN LITERARY STATISTICS.**—In the United States, the one hundred and forty principal libraries contain 1,773,900 volumes, including the library of Congress, recently burned. The average number to each library is 12,670 volumes.—The recent census report contains interesting information respecting newspapers and periodicals. It appears that there are about 2,800 papers in the United States, of which 2,000 are published in the free, and 800 in the slave States. About 850 are Whig, 750 Opposition, 70 Free Soil, or Anti-slavery, 20 Agricultural, 10 Temperance, 200 Religious, and 870 Neutral and Miscellaneous. New York has 443 papers, Pennsylvania 527, Massachusetts 212, Ohio 300.

**STATISTICS OF CONVICTS.**—A parliamentary blue book has just been printed, containing Lieutenant Colonel Jebb's report for the year 1850 on the discipline and management of convicts. On the 31st of December, 1850, there were 6,128 convicts accommodated. Of the number, 2,269 were in separate confinement, 2,689 employed on public works, 654 in invalid depots, and 516 in the Juvenile Prison at Parkhurst. There was accommodation, as it is termed, at the end of the year for 6,181 convicts. On the 1st of January, 1850, there were in the convict establishments, 5,029; and the number received in the year was 2,949. In the year 2,495 were disposed of, leaving, as already stated, 6,128 in the prisons. In the same year (1850), the number transported was 2,092, of whom 1,386 were sent to Van Dieman's Land with tickets of leave, 381 to Western Australia for public works, 938 to Norfolk Island as incorrigible, and 284 for public works at Bermuda. There were 14 removed to lunatic asylums, and 13 to the Philanthropic Society's farm school. There were 217 pardons granted in the year, of which 11 were free, 20 conditional, 105 on medical grounds, and 111 on the expiration of a moiety of sentence, under a rule. There were 13 escapes, and 116 deaths. In Millbank, the average expense was £24 19s. 7d. per head; Pentonville, £25 9s.; Portland, £23 15s. 8d.; Hulks, £22 1s. 10d. In Millbank, the earnings of the prisoners averaged £2 15s. 5d.; in Pentonville, £8 19s. 11d.; Portland, £15 19s.; and in the Hulks, £3 6s. 10d. The average cost of each prisoner a year in England and Wales, was £21 13s. 3d.

**COMFORTABLE STATISTICS.**—An American work recently published, which purports to be a list of the wealthy men in Massachusetts, contains the names of 1496 persons who are reported to be worth one hundred thousand dollars, and over. This is about one in every 650 of the population; and, as Massachusetts is the wealthiest State in the Union, in proportion to its inhabitants, this may be regarded as somewhat beyond the general average:—

No. of rich men in the State . . . . .	1,496
Amount of property owned by ditto . . . . .	dols. 211,780,000
No. with over one million of dollars . . . . .	18
" just one million of dollars . . . . .	8
" three-fourths of a million of dollars . . . . .	10
" half a million of dollars . . . . .	45
" quarter of a million of dollars . . . . .	147
No. who began poor, or nearly so . . . . .	705
No. who received all, or the greater part, by inheritance or marriage . . . . .	262
No. of rich Farmers . . . . .	90
" Manufacturers (cotton, woolen, &c.) . . . . .	90
" Merchants (and various traders) . . . . .	463
" Lawyers (including judges) . . . . .	75
" Physicians . . . . .	51
" Clergymen . . . . .	12
" Brokers (including some speculators) . . . . .	46
" Publishers . . . . .	11
" Editors . . . . .	4
" Shoemakers (and dealers) . . . . .	60
" Tailors (and clothes dealers) . . . . .	10
" Carpenters (and ship-builders) . . . . .	15
" Masons . . . . .	9
" Butchers (and provision-dealers) . . . . .	13
" Distillers . . . . .	14
No. ascertained to be more or less benevolent . . . . .	375
No. of rich old bachelors . . . . .	69

## ENIGMA

Where am I when stern Winter binds  
the earth with icy chains,  
And, like a cruel despot, spoils the king-  
dom where he reigns?  
Loved by the old and young—by the  
wakeful and the sleeping,  
Though swept from off the fair earth, my  
spirit still is keeping;  
Her treasure for the future, and soon  
shall come the day  
Of my triumph o'er the enemy that keeps  
my charms away.  
Always past, and always coming—some  
times I'm here, and gone;  
As many battles I have lost, as victories  
I have won.

My touch is like a charm, which warms the earth's cold breast,  
And glads the weeping mourner, by gloomy cares oppress'd.

## MENTAL RECREATIONS.

2.

A person having an even number of counters in one hand, and an odd number in the other, to tell in which hand each of them is.

Draw: the person to multiply the number in his right hand by three, and the number in his left by two.

Bid him add the two products together, and tell you whether the sum be odd or even.

If it be even, the even number is in the right hand; but if it be odd, the even number is in the left hand.

## EXAMPLE I.

No. in right hand. No. in left hand.

18	7
3	2
54	14
14	

68 sum of the products.

## EXAMPLE II.

No. in right hand. No. in left hand.

7	18
3	2
21	36
21	

57 sum of the products.

3.

Any Number being named, to add a Figure to it, which shall make it divisible by 9.

Add the figures together in your mind which compose the number named, and the figure which must be added to this sum, in order to make it divisible by 9, is the one required.

Suppose, for example, the number named was 8654; you find that the sum of its figures is 23, and that 4 being added to this sum will make it 27, which is a number exactly divisible by 9.

You therefore desire the person who named the number 8654, to add 4 to it; and the result, which is 8658, will be divisible by 9, as was required.

This recreation may be diversified, by your specifying before the sum is named, the particular place where the figure shall be inserted to make the number divisible by 9; for it is exactly the same thing, whether the figure be put at the end of the number, or between any two of its digits.

## TRANSFIGURED PLAYING CARDS.

THE SIX OF SPADES.—A NURSERY GARDEN.

1.

A person having fixed on a Number in his mind, to tell him what number it is.

Bid him quadruple the number thought on, or multiply it by 4; and having done this, desire him to add 6, 8, 10, or any even number you please, to the product; then let him take the half of this sum, and tell you how much it is; from which, if you take away half the number you desired him at first to add to it, there will remain the double of the number thought on.

## EXAMPLE.

Suppose the number thought upon is	5
The quadruple of it is	20
8 added to the product makes	28
And the half of this sum	14
4 taken from this leaves	10

Therefore, 5 was the number thought upon.

5.

A person having made choice of several Numbers, to tell him what number will exactly divide the sum of those which he has chosen.

Provide a small bag divided into two parts, in one of which put several tickets numbered 6, 9, 15, 36, 63, 120, 213, 309, or any others you please that are divisible by three; and in the other part put as many different tickets marked with the number 3 only.

Draw a handful of tickets from the first part, and, after showing them to the company, put them into the bag again; and having opened it a second time, desire any one to take out as many tickets as he thinks proper.

When he has done this, open privately the other part of the bag, and tell him to take out of it one ticket only.

You may then pronounce that this ticket shall contain the number by which the amount of the other numbers is divisible; for, as each of these numbers is some multiple of three, their sum must be divisible by that number.

This recreation may also be diversified, by marking the tickets in one part of the bag with any numbers which are divisible by 9, and those in the other part of the bag with the number 9 only, the properties of both 9 and 3 being the same; or, if the numbers in one part of the bag be divisible by 9, the other part of the bag may contain tickets marked both with 9 and 3, as every number divisible by 9 is also divisible by 3.

## ANSWERS TO THE PASTIME OF LAST EVENING,

Page 285.

## PICTORIAL ENIGMA.—DESPOTISM

## ENIGMAS.

1. JOHAN IN THE WHALF.  
2. TIME.  
3. A RED.

4. CHIMNEY-SWEEPER.  
5. A FAN.  
6. MIRROR.  
7. HORNS.

8. LOVE.  
9. INNOCENCE.  
10. A COLORED.

## OUR CORNER CUPBOARD!

THE improbabilities of experience are many, the impossibilities are few.  
Wisdom is the talent of buying virtuous pleasures at the cheapest rate.—  
*Fielding.*

WHOLEsome sentiment is rare, which makes the fields of daily life fresh and odorous.

WHY are crows the most sensible of birds?—Because they never complain without cause.

THE intoxication of anger, like that of the grape, shows us to others, but hides us from ourselves.

As easily expect oaks from a mushroom bed, as great and durable product from small and hasty efforts.

WHICH has the greatest amount of animal heat, the beaver or the otter? Why, of course, the *otter* of the two.

WE saw a drunken man lately trying to get a watchman to arrest his own shadow. His complaint was that an ill-looking scoundrel kept following him.

GRATUITOUS SERVICES.—Never let people work for you *gratis*. Two years ago a man carried a bundle for us to Boston, and we have been lending him two shillings a week ever since.—*American Paper.*

How few are found with real talents blest!

Fewer with nature's gifts contented rest.

Man from his sphere eccentric start astray;

All hunt for fame, but most mistake the way.—*Churchill.*

THEODORE HOOK once dined with Mr. Hatchet. "Ah, my dear fellow," said his host, deprecatingly; "I am sorry to say you will not get to-day such a dinner as our friend Tom Moore gave us." "Certainly not," replied Hook, "from a Hatchet one can expect nothing but a chop."

A CANDIDATE for medical honours, having thrown himself almost into a fever from his incapacity to answer the questions, was asked by one of the professors—"How would you sweat a patient for the rheumatism?" He replied, "I would send him here to be examined."

SHUN all rash acts. Let moderation mark

Each enterprise in which you may embark:

And from your mind ne'er let them be effaced

The old, yet sterling proverb, "Haste makes waste."

THE WAY TO THE WORKHOUSE.—John Reeve was accosted on the Kensington Road by an elderly female, with a small bottle of gin in her hand. "Pray, sir—I beg your pardon—is this the way to the workhouse?" John gave her a look of clerical dignity, and, pointing to the bottle, gravely said, "No, ma'am, but that is."

NOT TO BE BEAT.—A public dinner in Edinburgh had dwindled away to two guests, an Englishman and a Highland gentleman, who were each trying to prove the superiority of their native countries. Of course, at an argument of this kind, a Scotchman possesses, from constant practice, overwhelming advantages. The Highlander's logic was so good, that he beat his opponent on every point. At last the Englishman put a poser. "You will," he said, "admit that England is larger in extent than Scotland?" "Certainly not," was the confident reply. "You see, sir, ours is a mountainous, yours a flat country. Now, if our hills were rolled out flat, we should beat you hundreds of miles!"

A WOMAN AS SHE SHOULD BE.

In person decent and in dress,

Her manners and her words express

The decency of mind;

Good humour brightens up her face,

Where passion never leaves a trace,

Nor frowns a look unkind:

No vexing sneer, no angry word,

No scandal from her lips is heard

Where truth and sweetness blend;

Submissive to her husband's will,

Her study is, to please him still,

His fond and faithful friend;

She watches his returning way,

When from the troubles of the day

He seeks an hour of bliss—

She runs to meet him with a smile,

And if no eye be near the while,

The smile is with a kiss!

A CONTINENTAL TRAVELLER.—An Englishman at his inn, knowing well the stringency of police regulations in Austria, where he was, called for the usual register of travellers, that he might duly describe himself. His newly-hired valet replied that he had anticipated his wishes, and had registered him in full form as a "Rentier Anglais." "But how have you put down my name? I have not told it you."—"I can't exactly pronounce it, but I copied it faithfully from Milor's portmanteau." "But it is not there. Bring me the book." On it he found, instead of a plain English name of two syllables, the following portentous entry of himself;—"Monsieur Warrantedsolid-leather, Anglais Rentier."

## OUR MEMORANDUM BOOK!

THE humble, the meek, the merciful, the just, the pious, and the devout, are everywhere of one religion; and when death has taken off the mask, they will know one another, though the diverse liveries they wear have made them strangers.

MAXIMS FOR PARENTS AND TEACHERS.—Never give reproof, if it can be avoided, while the feelings of either party are excited. If the parent or teacher be not calm, his influence is diminished, and a bad example is set. If the child is excited or provoked, he will not feel the force of argument or rebuke. On the other hand, do not defer too long. Seize the first favourable opportunity while the circumstances are fresh in the memory. Reprove each fault as it occurs, and do not suffer them to accumulate, lest the offender be discouraged by the amount.

## COMMON-PLACE BOOKS.

"In reading authors, when you find  
Bright passages that strike the mind,  
And which, perhaps, you may have reason,  
To think on at another season,  
Be not contented with the sight,  
But take them down in black and white.  
Such a respect is wisely shown,  
As makes another's thoughts our own."

ACTIVE WOMEN.—As a general rule, noisy women do less than they seem to do, and quiet women often do more. But it does not follow that all quiet women are active; on the contrary, six out of ten are indolent; and work only on compulsion. Indolent women have their good points, and of the most valuable of these is their quietness. It is a great luxury in domestic life; but perhaps it is a luxury which is too expensive for a poor man, unless he can get it combined with activity. The wife of a poor man, no matter what his profession or position, ought to be active in the best sense of the word. She ought to rule her house with diligence, but make no boast of it. Her managing powers ought to be confined to her own house, and never be sent out to interfere with her neighbours. Her activity should be kept healthy by being exercised upon important matters chiefly, though the trifles must not be disregarded. A woman who will make herself unhappy because the usual custom of cleaning the house on Friday is, on a particular occasion, inevitably infringed, is inadequate to perceive the difference between the lesser and the greater. Some active women, who pride themselves on their housekeeping, seem to forget that the object of keeping a good house is, that human beings may be accommodated in it; their sole idea seems to be this, that the object of keeping a house is that the house be kept in a certain form and order, and to the maintenance of this form and order they sacrifice the comfort the house was established to secure. Such active women are pests to society, because they want sense to direct and control their energies. With a true wife a husband's faults should be secret. A woman forgets what is due to herself when she condescends to that refuge of weakness—a female confidant. A wife's bosom should be the tomb of her husband's failings, and his character far more valuable in her estimation than his wife. If this be not the case she breaks her marriage vow.

## WINTERS IN OLDEN TIME.

IN 1664 the cold was so intense that the Thames was covered with ice sixty-one inches thick. Almost all the birds perished.

In 1693 the cold was so excessive that the famished wolves entered Vienna and attacked beasts and even men. Many people in Germany were frozen to death in 1695, and 1699 was nearly as bad.

In 1709 occurred that famous winter called, by distinction, the Cold Winter. All the rivers and lakes were frozen, and even the sea for several miles from the shores. The ground was frozen nine feet deep. Birds and beasts were struck dead in the fields, and men perished by thousands in their houses. In the south of France the wine plantations were almost destroyed; nor have they yet recovered that fatal disaster. The Adriatic sea was frozen, and even the Mediterranean about Genoa; and the citron and orange groves suffered extremely in the finest parts of Italy.

In 1716 the winter was so intense that people travelled across the straits from Copenhagen to the province of Senia, in Sweden.

In 1729, in Scotland, multitudes of cattle and sheep were buried in the snow.

In 1740 the winter was scarcely inferior to that of 1709. The snow lay ten feet deep in Spain and Portugal. The Zuyder Zee was frozen over, and thousands of people went across it. And the lakes in England froze.

In 1744 the winter was very cold. Snow fell in Portugal to the depth of twenty-three feet on a level.

In 1764 and 1765 the winters were very severe and cold. In England, the strongest ale, exposed to the air in a glass, was covered with ice one-eighth of an inch thick.

In 1771 the Elbe was frozen to the bottom.

In 1776 the Danube bore ice five feet thick below Vienna. Vast numbers of the feathered and furred tribes perished.

The winters of 1774 and 1775 were uncommonly severe. The Little Belt was frozen over.

From 1800 to 1812 also, the winters were remarkably cold, particularly the latter, in Russia, which proved so disastrous to the French army.

## LADIES' BONNETS, of the most Fashionable kinds.

The richest and best materials, at moderate prices.  
Millinery Bonnets, 10s. 6d. to 21s. 6d.

**THE FAMILY FRIEND, an established**

Magazine, published upon the First and Fifteenth of  
every Month, price Twopenny. Thirty-two pages, beau-  
tifully printed, and neatly covered. The following is a type  
of the GIFTED FORMED OF THE FAMILY FRIEND, and ex-  
pressed by upwards of THREE HUNDRED NEWSPAPERS:—

"The Boys and Girls will like it, for it contains good  
Stories; the Young Ladies will like it, for the sake of its  
pretty Poetry, and its Receipts for various kinds of Fancy-  
Work; Young Men will like it, for it smacks of Science;  
the Woman will like it, for it abounds in useful Household  
Receipts; the Man will like it, for it treats of Gardening  
and Natural History, and advises wives to be kind to their  
husbands; those who love amusement will like it, for it  
swarms with Conundrums; everybody will like it, for it  
has a corner for everybody; and nobody need be afraid of  
reading any harm in it."—*Gentleman's Observer*.

The Work may be had upon the 1st and 15th of December, 1851,  
in Fifth Volumes, price 5s. 6d. each.

The Fourth Volume contains a **QUADRUPLE INDEX**  
to the First Four Volumes, embodying about THIRTEEN Thou-  
sand Five Hundred References to matters of every-  
day usefulness. The Work forms a most perfect Encyclo-  
pædia of Domestic Economy.

London: HOULSTON & STONEMAN, 65, Paternoster Row.

## THE HOME COMPANION PORTFOLIO.

We strongly recommend to our Subscribers the adop-  
tion of the "HOME COMPANION PORTFOLIO," for the  
preservation of the Weekly Numbers or the Monthly  
Parts. The Portfolios are made with elastic cords at  
the back, to hold Fifty-two Numbers, or Twelve Monthly  
Parts, which comprise one Volume. At the end of each  
year they may be taken out and bound, and the Portfolio  
may be employed to preserve the Numbers or Parts of the  
succeeding Volume. The Price is Two SHILLINGS. The  
outlay will be saved by the preservation of the Numbers,  
which, hereafter, may be difficult to obtain. The Port-  
folio is beautifully embossed, and illuminated with silver,  
by a new invention introduced by LIGHTON, SON, &  
HODGE. It is an ornament for the drawing-room table.—  
Order of any Bookseller.

**TUTOR'S ENGLISH GRAMMAR** is  
illustrated by numerous spirited Wood Engravings,  
by which a dry and tedious study is made peculiarly easy  
and interesting. Price 2s. 6d.

**STORY BOOKS FOR YOUNG  
PEOPLE**, by ANNE MARY.—Now ready No. 1, THE  
COMICAL HISTORY AND TRAGIC END OF RICHARD  
THE FOX.

Aunt Mary submits, with great pleasure, the First of  
her Story Books for Young People. In the Selection of  
Stories, great care will be taken to secure those which are  
peculiarly interesting, and calculated to excite a thirst for  
knowledge, as well as to impart a high Moral tone. The  
Series will consist of Twelve Story Books, and when com-  
pleted, will form a Volume of Tales for Young People,  
unequalled by any work of similar price.

London: HOULSTON & STONEMAN, 65, Paternoster Row.

Now publishing, No. I. and II. of

**GRANDFATHER WHITEHEAD'S  
CATECHISMS;** designed to make the Acquisition  
of Useful Knowledge by the Young, and by Beginners of  
all Ages, easy and pleasing. The Catechisms are pub-  
lished Monthly, each containing 32 pages, crown 8vo.,  
illustrated by numerous Diagrams. The price of each  
Catechism will be 2d., stitched in a neat Wrapper. The  
whole Series, bound in cloth, 2s. 6d.

**PAYAWAY.**—Composed by J. F. Duggan, Esq. Written  
by Mrs. Maria L. Child. (In No. 25.)

**THE FAMILY WALTZ.**—By Miss Philp. This Waltz  
has been greatly admired. It is a suitable companion to  
"The Family Polka." (In No. 27.)

**LOVE IN THE REIGN OF THE ROSES.**—Composed  
by Herr Mengis. (In No. 29.)

**"I WOULDN'T, WOULD YOU?"**—Composed by Alex-  
ander Lee, Esq. (In No. 31.)

**MY MOTHER'S GRAVE.**—Composed by J. F. Duggan,  
Esq. (In No. 33.)

**"SLEEP, GENTLE BABY!"**—Composed by Weber.  
(In No. 35.)

None of these Musical Compositions can be obtained from  
any other source. To secure any particular Piece, it is  
only necessary to order the Number containing it, price 2d.;  
but Purchasers are recommended to obtain the Volumes,  
and thus secure the whole **SERIES OF FAMILY MUSIC**  
in an elegant form, and at a trifling cost.

London: HOULSTON & STONEMAN, 65, Paternoster Row.

**THE FAMILY FRIEND, Price 2s. 6d. each,** elegantly  
bound, form a Complete First Series, with a general  
index to the Contents of the Four Volumes, arranged in  
one alphabetical order, and comprising about Three  
Thousand Five Hundred references to matters of every-  
day interest and utility.—Sold by all Booksellers.

## HOOPER'S FAMILY COUGH

**PILLS.**—Composed only of the choicest drugs, and  
from a genuine Medical Prescription, are recommended  
on high medical authority as the safest and best remedy  
for Coughs, Colds, Sore Throat, &c.; and may be obtained  
of or through any respectable chemist from the sole agents,  
WILLIAM SUTTON & Co., 10, Bow Church Yard, London.

## THE HOME CIRCLE.

Edited by  
PIERCE EGAN. Vol. V. just out. A Great Presti-  
ge, 53 engravings, and 432 pages. Tales, poetry, sci-  
ence, geography, histories, accomplishments for ladies,  
music, knitting, crochet, embroidery, cookery, columns for  
studious youths, chess problems, intercommunication on  
all subjects, enigmas, &c. This volume contains the con-  
tributions of the various members of families who received  
the numerous prizes awarded. No home should be without  
it. Weekly, 1d.; stamped, 2d.; monthly, 6d.; vols. 3s.  
and 4s. 6d. gilt. Back numbers to be had at the office, 29,  
St. Martin's Lane, and all booksellers. Liverpool: FRANK  
& SON; Edinburgh: OLIVER & BOTS; and MANSING;  
Dublin: M'GLASHAN, and J. CURRY & Co.

## VENTILATING BOOTS AND SHOES.

This new and valuable discovery gives instant ease and  
comfort to the wearer, prevents corns from throbbing, the  
feet from swelling or being tender, and keeps them perfectly  
dry. The inventor solicits one trial, feeling assured that,  
having once experienced the comfort which they give, no per-  
son will wear any other. The Trade supplied with the larger  
sole and connecting piece (which contain the invention),  
at the small charge of 18s. per dozen sets, all ready for use,  
so that no maker can make any mistake. Between three  
and four hundred persons have proved their value.

To be had of the Patentee, C. MARSHAM, near the Bridge,  
Kingsland Road, London.

## THE FAMILY TUTOR, AND SCHOOL

**COMPANION.**—Was published on the 1st of January,  
1851, and subsequently on the 1st and 15th of each Month,  
in Parts price 2d. each.

• **THE FAMILY TUTOR**, as its name implies, is a Work of  
a highly instructive character, and realises, as far as can  
be accomplished in print, the advantages of a **FAMILY  
TUTOR** to every reader—a Tutor whose teachings are lively,  
kind, and comprehensible, making the acquirement of  
knowledge a PLEASURE, not a TASK.

The First Volume contains—A COMPLETE ENGLISH  
GRAMMAR, improved and Simplified; FAMILIAR LIT-  
ERATURE ON MEMBERS; TALES OF HISTORY AND OF TRAVEL,  
Zoology; THE PHYSICAL HISTORY OF MAN; THE  
PHYSIOLOGY OF HEALTH AND DISEASE; CELESTIAL AND  
TERRESTRIAL PHENOMENA OF THE MONTHS; MATHE-  
MATICAL, GEOMETRICAL, ARITHMETICAL, AND OTHER  
PROBLEMS; EDUCATIONAL EXERCISES; "THE TUTOR  
AND HIS PUPIL," being Answers to Educational Ques-  
tions; and A VARIOUS MISCELLANY.

THE SECOND VOLUME contains a Complete System of  
NATURAL GEOGRAPHY, with PICTORIAL Illustrations, dis-  
playing the Contours and the Architectural and Natural  
Features of the various Peoples and Countries of the world.

THE FAMILY TUTOR may be had complete up to the end  
of 1851, in Two Volumes, price 2s. 6d. each.

London: HOULSTON & STONEMAN, 65, Paternoster Row.

To the PUBLIC and all BOOKSELLERS.—Just out,

## THE YOUNG CHEMIST; or, Scien-

tific Recreations for Youth; containing several hun-  
dred attractive and interesting Experiments in various  
branches of Science, all of which may be performed with  
perfect safety in the parlour or drawing-room. 1s.; free  
by post, 1s. 6d.

The Ladies' Own Book, Vol. I., handsomely bound, con-  
tains the clearest elementary information of every descrip-  
tion of Needlework, illustrated by diagrams, and consisting  
of new and useful patterns in crochet, knitting, embroidery,  
point-lace, frivolate, and Berlin work, original, and selected  
from the Family Magazine of the *Home Circle*. Price 5s.,  
free by post 5s. 6d., or in Parts, 6d. each, free by post 6d.

**USEFUL ITEMS**, price 6d. each, free by post, 8d.:

Etiquette: How to Conform to the Rules of Society.

The Complexion: How to Produce and Maintain a Clear  
White Skin.

Home.

The Baby: How to Manage and Rear.

Printed and published at the Office of the *Home Circle*,  
by W. S. JOHNSON, 60, St. Martin's Lane, and all Book-  
sellers.

### Editor's Note-Book.

**BE SELECT IN YOUR FRIENDSHIP.**—Sweet language will multiply friends, and a fair speaking tongue will multiply kind greetings. Be in peace with many; nevertheless, have but one counsellor in a thousand. If thou wouldst get a friend, prove him first, and be not hasty to credit him: for some men are a friend for his own occasion, and will not abide in the day of thy trouble. Separate thyself from thine enemies, and take heed to thy friends. A faithful friend is a strong defence, and he that hath found such an one hath found a treasure. A faithful friend is the medicine of life. Forsooke not an old friend, for the new is not comparable to him: a new friend is as new wine, when it is old thou shalt drink it with pleasure. Whoso casteth a stone at the birds frayeth them away, and he that upbraideth his friend breaketh friendships: for upbraiding, or pride, or disclosing of secrets, or a treacherous wound, every friend will depart.

**TO CLEAN SPONGES.**—Precure one pennyworth of salts of lemon, put it into about two pints of hot water, and then steep the sponge in it. After it is clean, rinse it in a little clear water. The above quantity will clean a large sponge, or three or four small pieces.

**THE DIVING-BELL.** G. H. L.—The credit of having been the first to apply the diving-bell in aid of civil engineering operations is usually attributed to Smeaton, who used it in 1779, in repairing the foundation of Hexham Bridge. One of the largest diving-bells ever constructed, is that at the Polytechnic Institution.

**TO TAKE STAINS OUT OF SILVER.** J. P.—Steep the silver in soap lye for the space of four hours; then cover it over with whiting, wet with vinegar, so that it may lie thick upon it, and dry it by a fire; after which rub off the whiting, and pass it over with dry bran, and the spots will not only disappear, but the silver will look exceedingly bright.

**WEDDING VISITS.** C. C. W.—Wedding visits must be returned during the course of a few days, and parties are generally made for the new married couple, which they are expected to return. This does not, however, entail much visiting, neither is it expected from young people whose resources may be somewhat limited, or when the husband has to make his way in the world.

**STEEL ENGRAVINGS.** Astor.—The cost of engraving upon steel is infinitely greater than that of engraving upon copper; yet as steel plates afford so many more impressions than copper, they enable the publisher, by calculating his return upon a large instead of a small number, to issue works of art at so low a price as to ensure a very wide circulation.

**DRESS.** M. L.—The beauty of dress, as Dr. Gregory well observed, consists in not being conspicuous. In neither do torturing nor yet concealing the human form with unnatural additions. Dress ought to be simple, elegant, and becoming, without being too expensive for the wearer, and ridiculous fashions should never be adopted, while at the same time singularity ought to be avoided.

**DYEING MATERIALS.** A. A.—These are alum, tartar, green copperas, verdigrise, blue vitriol, roche alum, quercitron, oak bark, logwood, sassafras, old and young fustic, Brazil-wood, brazilletto, camwood, barwood, and other red woods; peachwood, sumach, galls, weld, madder of three or four sorts, safflower, navy, green-wood, annatto, turmeric, archil, endeban, cochineal, lac-dye and indigo. The whole of these may be purchased of druggists or colourmen.

**CLEANLINESS.** H.—Cleanliness, our correspondent must be aware, is a positive duty, and not a mere matter of inclination. Society at large has a right to take up the cudgels against any person who wilfully accustoms himself to slovenly habits. No one was more particular in respect to cleanliness than Lord Byron, who, in one of his letters, says:—"I never was a great phrenologist. P—, nor do I pretend to read mankind as quickly as yourself; but if a stranger comes in, I generally look at the state of his hands. To a gentleman dirty hands are an abomination—that settles one point. A respectable man never presents himself with dirty hands and foul nails: so if I find my customer with these credentials, I conclude that he is an idler, a drunkard, or a scamp, and I show him out as soon as possible."

**AN EXCELLENT RECEIPT FOR BURNS AND SCALDS.**—A correspondent has favoured us with the following:—Take equal parts of olive oil and linseed oil, which, when well mixed together, forms a beautiful white ointment, which may be spread with a feather upon the part affected, and a thin rag laid over it. Two or three dressings will generally take out all the fire, after which apply a little healing ointment. Families ought always to have this remedy by them, that it may be applied immediately after the accident, as it very soon gives ease.

**TO BLEACH ENGRAVINGS.** Mentor.—Simple immersion in oxygenated muriatic acid, letting the article remain in it a longer or shorter space of time, according to the strength of the liquor, will be sufficient to whiten an engraving. If it is required to whiten the paper of a bound book, as it is necessary that all the leaves should be moistened by the acid, care must be taken to open the book well, and to make the boards red on the edge of the vessel in such a manner that the paper alone shall be dipped in the liquor. The leaves must be separated from each other, in order that they may be equally moistened on both sides.

**POPULAR MEASURES.**—The article entitled "The Plague of Beggary," at page 276 of our miscellany, has already received the unqualified approbation of many of our subscribers, who have written to express their satisfaction, that a subject of such importance to the community at large, has been brought forward in the pages of the *Home Companion*. A correspondent, however, under the designation of a "Well Wisher," and who is, consequently entitled to our consideration, objects to occasional political allusions, which, he argues, might have been avoided. We perfectly agree with the general tenor of the suggestions so kindly presented to our notice; and would state, in reply, that the article in question was published from a desire to assist in suppressing a formidable public evil, and to encourage honest industry, and not to identify ourselves with the political opinions of the author. We wish it to be clearly understood, that as *Home Companions*, we eschew politics altogether, and we shall not be found to clamour for celebrity by

ENDING TO RAISE A FOUR POUND MEASURE.

**EXCHANGE BILLS.** H. Vernon.—The Government securities, so called, were first issued in 1697, and first circulated by the Bank in 1796. These bills are, in effect, accommodation notes of Government, that are issued in anticipation of taxes, at daily interest; and, being received for taxes, and paid by the Bank in lieu of taxes, in its dealings with the Exchequer, they usually bear a premium. The first Chancellor of the Exchequer was Eustace de Fauconbridge, Bishop of London in the reign of Henry the Third.

**AMPLIFICATION OF THE POOR.** Guiseppe.—We give our correspondent full credit for his philanthropic schemes to soften the hardships of poverty. Much may undoubtedly be done to alleviate distress, but we are far from considering that poverty produces crime; neither is it the greatest curse in the world. It has given birth to many a noble virtue—it is, in fact, oftentimes an invaluable blessing of itself. The poor are frequently mentioned in both the Old and the New Testaments, in terms of the tenderest endearment, while those who receive their "good things" in this life are spoken of in quite a different manner. As man is constituted, the entire removal of poverty from the world would perhaps be the greatest curse that could be inflicted upon the race.

**TO WASH CHINTZ.** Maria.—Take two pounds of rice, and boil it in two gallons of water until soft; then pour the whole into a tub; let it stand till about the warmth you fit general use for coloured linens; then put the chintz in, and use the rice instead of soap; wash it in this until the dirt appears to be out; then boil the same quantity as above, but strain the rice from the water, and mix it in warm clear water. Wash it in this until quite clean; afterwards rinse it in the water the rice was boiled in, and this will answer the end of starch. If a gown, it must be taken to pieces; and when dried, be careful to hang it as smooth as possible.

**COMMUNICATIONS RECEIVED.**—S. J. R. (thanks).—**THALASSA** (we shall endeavour to comply with the suggestions of our correspondent).—G. FAY (we especially avoid any political subjects).—**ALPHONSE** (the discoveries at Nineveh are likely to prove of great interest to science and the arts. Our correspondent is in error to suppose that Mr. Layard's efforts have produced no useful result).—W. T. (apply to a medical practitioner).—P. P. (declined, with thanks).—E. B. W. (cultivate the graces of the mind; these are of infinitely more consequence than personal decoration).—**ALPHONSE M.** (wood-engraving opens a wide field of emulation for talent, and when pursued with industry and perseverance, will, no doubt, prove lucrative).—**GOMUS** (the utility of the mariners' compass results from the magnetic virtue of the needle).—**A READER** (omits to inform us what is the substitute for tea to which he alludes).—**THACKERY** (there can be no doubt that Australia presents, at the present time, many inducements to the industrious and pains-taking population of our country, who find the means of obtaining a subsistence difficult. It is against our plan, however, to offer any advice on the subject of emigration, so much depends upon individual circumstances).—**CONSTANT READER** (should apply to a medical practitioner).—**FRITS** (we think the ladies will scarcely approve of some of the sentiments expressed by our poetical correspondent).—**NEMO** (the idea of paving the streets of modern cities is derived from, and based upon, the Roman roads. Many of these are still in perfect repair in Italy, especially in the neighbourhood of Rome).—**Q. Q.** (the dial-plates of clocks, the scales of barometers, and other similar articles, are silvered by rubbing upon them a mixture of muriate of silver, sea-salt, and tartar, and afterwards washing off the saline matter with water).—**JUNUS** (the tallow-tree is a native of China, and has, from a remote period, furnished the Chinese with the material out of which they make their candles. It is cultivated in some parts of America).—**W. Tims** (the subject is not suited to our pages).—**C.** (a rate of descent of only one foot in two hundred suffices to render a river impassable to ships).—**JACINTHA** (birds have no teeth, yet their food in many cases is of such a character as to demand mastication. Nature has provided for them in these respects).—**STATICS** (the Bible Society was established in England in 1804).—**W. M. GIBSON** (there are certain points in the inquiry we do not understand. With regard to the velocity of the galvanic current, it is stated to travel at the rate of 28,324 miles in a second).—**JUVENS** (the Italian kind of printing was invented by Aldus Manutius, in 1490, at Venice).—**TOBIAS** (shillings were first coined in England in 1505).—**JAMES R.** (the definition of a gentleman consists in a high sense of honour, a love of truth, delicacy of manner, and strict adherence to correct principles).—**R.** (boasting people are generally shunned. This vice is usually made up of ignorance and conceit. We should recommend our correspondent to avoid such acquaintances).—**ELIZA** ("Worship" is a title that belongs to magistrates and municipal corporations. The dukedom, the most elevated dignity in the British peerage, was first introduced by Edward the Third).—**YOUNG** (to transfer coloured prints to wood, they should be laid on vinegar and water—two-thirds of the former and one of the latter—to destroy the size which is in the paper; then be removed, and be placed between blotting-paper. The wood should have a coat of transfer varnish previously, and be set aside for twenty-four hours to dry).—**M.** (in making home happy, everything depends upon the parents of a family. If children are early trained into habits of obedience and self control, they cannot fail to cheer the domestic hearth).—**CURIOSITY** (the artichoke is a native of the south of Europe, and was introduced into England in 1548).—**ARTIST** (a very simple method for preserving water-colour, coloured chalk, and other drawings, is to cover them with a plate of glass in front, and a piece of millboard behind; then paste a narrow strip of coloured paper along the edges).—**CONCORD** (frequent and loud laughter is unbecoming in society, and invariably indicates an indifferent education).—**HERALDRY** (a person may be prevented by the Herald's office from using arms to which he is not entitled).—**L.** (to etch upon egg-shells, cover the shells with appropriate designs in talow or varnish, and immerse in strong acetic acid. The design appears in relief).

## THE DYING MOTHER.

On a night dark and dreary,  
In a room all uncheery,  
Lay a mother on a pallet of straw;  
Her infant was hushed in its slumbers  
sweet,  
And two little cherubs breathed soft at her  
feet,  
On their little truck-bed,  
While close at their head  
Stood an angel, his love-vigils keeping.  
The cold wind was blowing,  
And fast it was snowing,  
And the heart of that mother grew  
chill,  
As she thought of the morn when her charge  
should awake,  
With no one to feed them—none pity to  
take;  
For the angel of death  
Was short'ning her breath—  
In the midst of her babes she was dying!  
How awful is dying,  
With the heart torn with sighing,  
For the loved ones that linger below—  
For the sweet little babe, with its soft silken  
smile,  
And the cherub-eyed twain, uncorrupted  
with guile—  
Oh, how could she go,  
And leave them below,  
In a world full of sin and of danger!  
While she lay thus in sorrow,  
And thought of the morrow,  
With the angel of death at her side,  
There broke on her vision a glorious light,  
And brighter than day seemed the noon of  
the night.

And a light form descended,  
And over her hended, [came  
And she knew that from heaven he  
On the mother he smiled,  
And he kissed the sweet child,  
While thus he unfolded his mission—  
"I am sent"—and he smiled on the mother  
again, [and pain;  
"I am sent to release thee from anguish  
And thy spirit to take,  
And thy child's for thy sake,  
Thy right to thy Saviour in heaven.  
"No more shalt thou part  
Then clasp to thy heart  
The form of thy soft-breathing cherub;  
But leave to the care of thy Father in heaven  
Thy motherless ones—for to them shall be  
given  
An angel of light,  
To guide them aright— [ing."  
Look! now by their side he is watch-  
He ceased, and the angel of death hovered  
near,  
And touched with his dart  
The mother's warm heart,  
And stilled all its wild throbbing pulses  
Then stooping, he kissed from the child's  
rosy lips  
The fragrance of life—as the young morn-  
ing slips  
With her first golden ray,  
The dew drop away,  
Thus hangs on the violet's bosom;  
And folding the mother and babe to his  
breast,  
The angel soared up to the home of the  
blessed.

## THE LADY OF THE ROCK.

A HISTORICAL TALE OF THE TIME OF CHARLES THE FIRST.

(Continued from page 201.)

"Seize the opportunity of escape ere their return," said Alice, breaking the death-like stillness that had been preserved. "Quick, father! William! the moments fly. Make your way toward the house of Mr. Elmore. I will linger here to baffle the inquiries of your pursuers."

"Come, my son," said the old man, rising with a sudden energy. "The Lord has opened another door of safety for us. Dost thou hear?"

"Nay, I will not again fly for my wretched life," said Heath. "I will passively await my fate."

"William! William!" exclaimed his wife, in an agony of heartfelt urgency and sweetness, "I pray you, by whatever is dear in our past association together—by all the claims I will not say of the continued love you but this day professed for me, but by those of an affection on my part which would endure all things for your sake—to use the proper means for your preservation. Depart without delay; and an expression of unanswerable entreaty beamed in the eye of the suppliant.

"I will do aught that you ask, beloved one, even to the prolonging of my life of wretchedness," rejoined her husband, as he imprinted a kiss on her brow, and drew her with him toward the door of the cave.

"Let me be your guide," said Stanley, advancing, and addressing Heath. "It will be some small return for the service you have rendered me."

"I had almost forgotten, in my affliction, to see to you, kind youth. But you have slept long, and appear to be recovered."

"Thanks to you, sir, I am living and well," answered the boy. "But time grows apace. Will you accept my services?"

"Nay, I am acquainted with the whole neighbourhood. You will do me a greater favour to remain with this deserted lady, and see her safe in the hands of friends."

With a countenance of perfect calmness, the heroic wife and daughter endeavoured to hasten the moment of separation.

"Farewell!" she said, casting her arms around the old man, while a smile was on her lips. "Farewell! we may be parted for years, perhaps for ever"—and she made a violent effort to repress her distress. "Bless me and forgive me, my parent, ere you depart."

"Thou hast, thou hast my blessing, my suffering dove! and for my pardon, how canst thou ask it, who hast never done me an offence since God made me parent to so noble a child? May the Lord be to thee a rock of shelter and a path of deliverance from affliction."

The old man here turned away, and began to descend the hill.

"You must not linger longer, William," said the lady, turning to her husband, who stood with his eyes fixed upon her face. "Farewell! our fortunes look dark, it is true, but mayhap the same bright morning will yet dawn for us. And if not, we are not still denied the glorious hope that in the darkest moments of separation clings to humanity the anticipation of reunion in the future."

"Farewell!" said Heath, folding her in a long embrace to his heart, while his cheek trembled, and a tear dimmed his manly eye. "My beloved wife, farewell!" And drawing his cap over his brow, and tightening the folds of the cloak he had resumed, he broke away, and followed his aged companion.

The lady watched the fugitives until they were out of sight, and Stanley remained by her side silent, judging it best not to disturb her feelings at the moment with any ill-timed remark.

While they stood he had time to examine the entrance to the cavern, which had eluded his discovery so completely on his former visits to the rock. Nothing could be more concealed than its entrance. The opening, extremely small, lay directly behind a large grey rock, which served at once to conceal it from strangers, and as a mark to point out its situation to those who employed it as a place of retreat. The boy did not marvel when he perceived its secret position, that it had previously been unnoticed by him; for it might have eluded the attention of those who had stood at its very opening. As he was still engaged in admiring its security, the lady turned and said to him, "Let us return within, till I make the necessary preparation for my departure."

"I leave this spot," said she, as they entered, "endeared by many sad associations, never to return to it again."

"You are likely to leave it in a way you do not imagine," said a man, springing in at the opening. He was speedily followed by another, and both stood within the cave.

Alice turned, at first much startled; but when a moment was past, she prepared herself to receive the intruders with the perfect confidence which a woman never fails to feel in the mildness and reason of a man, however rude. Moreover, having nothing to fear for her husband and father, she found little difficulty in retaining her self-possession, supported by her inherent dignity.

One of them, who was distinguished from his companion by much superiority of mien, lifting his hat respectfully, addressed her, "It is unpleasant to question one of your appearance; but, madam, where are your companions?"

"I am unable to inform you," said Alice, modestly; "yet I must say that in my present situation I could have wished to be spared the pain of confessing my ignorance."

The harsh features of the elder contracted into their sternest look, and it was evident how much he was disturbed by the cool manner of her reply. Alice gazed at his lowering features for a moment in perfect composure, as if she had naught to fear from his intentions.

"Perhaps you can give us the information," said he, turning to Stanley. "Like this lady, I must confess my ignorance of their whereabouts, if you allude to Messrs. Lisle and Heath."

"Pardon us, fair lady," replied the younger cavalier. "but we shall be obliged to search its inmost recesses."

"True, perhaps they are here, and this coolness may be assumed," said the other: "let us proceed to make a thorough investigation."

"I will vacate the premises for you, gentlemen," said Alice, drawing her arm through Stanley's, and leaving the cave. After which, at a slow pace, they proceeded together towards the village.

## CHAPTER XIII.

"Bring flowers, fresh flowers, for the bride to wear!

They were born to blush in her shining hair:

She is leaving the home of her childhood's mirth,

She hath bid farewell to her father's hearth:

Her place is now by another's side;

Bring flowers for the looks of the fair young bride!"

MRS. HEMANS.

A calm and cloudless evening followed the exciting morning which had been experienced in L—. The fairest moon of May shone above the ruined meeting-house, which lay in blackened rubbish upon the ground. Her soft light lit up the white dwellings and shrubbery of the village with a

holy beauty, until they stood out in bold relief against the surrounding hills, which in like manner stood out in similar relief against a sky sparkling with myriads of stars. The herbage sent up its sweetest fragrance, and the air was balmy and delicious.

The laws regulating wedlock in the colonies were suited to the state of society, and it was not usual to celebrate their nuptials in places of public worship.

This was peculiarly fortunate in the case of Lucy Ellet, whose marriage having been fixed for this evening, would have had to be deferred, had it been the intention to celebrate it in the village meeting-house. The arrangements, however, had been made for the performance of the ceremony in the house of her uncle, and the unpleasant affair of the morning was not permitted to retard a matter of such vitality. Lucy's nerves, too, being of that firm kind which no shock could shatter or disturb beyond the passing moment, there was no necessity for deferring the period.

The hospitalities of her uncle's house were thrown open to the villagers. The best parlour was graced with vases of the freshest spring flowers, and tasteful green branches interwoven with white roses, the whole answering to the idea of a fitting place for a marriage scene.

The gate leading to Governor H—'s house was besieged by vehicles of almost every shape and description. The company had assembled about eight o'clock, and were awaiting the entrance of the bridal train, when their attention was diverted by the appearance of Jessy Ellet, the younger sister of the bride, holding by the hand a lady, who, from the fact that she was a stranger, as well as from something striking in her aspect, elicited an unusual degree of notice. Care, more than time, had made inroads upon a face still exquisitely lovely; and the extreme simplicity of her attire served to adorn the melancholy and touching beauty of her countenance. There was something elevated in the sadness of her expression, as though her hopes lay scarce any longer upon earth, but were removed into a sphere where disappointment and sorrow could never come. But withal there was occasionally a lustre in her eye, and a beaming smile upon her lip, that proved her capable of the deepest and strongest earthly attachments.

This was evinced in her manner toward the child, upon whom she frequently bestowed these momentary marks of affection. Returning to a distant part of the room, it was evident that she sought to escape observation. As she seated herself, and the little Jessy clung to her and looked up into her face, to make some childish sadly, a strange resemblance became perceptible between the two. Upon the brow of each there was the same mild and placid expression; the same azure eyes, and the identical peasant smile, changing the expression of the whole countenance.

The bustle attending the arrival of the guests had subsided, and the minister stood waiting the entrance of those upon whom he was to pronounce the nuptial benediction. The door opened, and a group moved slowly forward. Lucy appeared attired in a manner suitable to the simplicity as well as the importance of the ceremony. A dress of simple white concealed by its folds the graceful proportions of her slender form. A few orange blossoms were carelessly entwined in the taven braids of her hair, showing more spotlessly by the contrast.

In a moment, the low solemn tones of the minister were heard. After performing the ceremony, when he came to the closing words—"What God hath joined together let no man put asunder," he lifted his voice as though he were addressing the guests; and when the blessing was pronounced, for a few moments not a sound was heard in the room. The minister advanced first, and congratulated the pair, followed by the guests, who also approached and made their compliments.

The enjoyments of the puritans were of a quiet nature, religion being the chief topic of their thoughts, and the principal subject of their conversation.

A tone of cheerfulness, however, prevailed over all, except when an eye occasionally rested on the stranger lady, of whose melancholy look the faintest token of liveliness seemed a mockery. This lady was not introduced to any of the company, but remained throughout the evening in the recess she had first chosen. She kept the hand of the fair child, who seemed fascinated by her presence, and continued directed to her side. Every kindness and attention was paid her by her hosts. Frequently Governor H— and his wife approached her and conversed; and the bride at one time during the evening remained seated with her more than an hour. Several persons made attempts to satisfy the curiosity her presence and appearance excited, by questioning those whom they had seen speaking with her; but they obtained little or no satisfaction. For several days succeeding she continued to form a subject of much gossip and surmise. Not afterward, however, being seen in L—, her existence was soon forgotten.

A table groaning with every variety of excellent cheer, and in the greatest abundance, was provided. This repast was partaken of at an early hour, and the company returned to their homes.

#### CHAPTER XIV.

"I, that please some, try all; both joy and terror  
Of good and bad; that make and unfold error—  
Now take upon me in the name of Time  
To life my wings. Impute it not a crime  
To me or my swift passage that I slide  
Over sixteen years, and leave the ground purged  
Of that wide gap!"—WATSON'S TALE.

THE course of our narrative obliges us to pass over sixteen years, and we again introduce its characters to our readers. To those of them who may happen to have lived nearly twice that period, the interval will not appear long.

Lucy Ellet had removed on the day following her marriage to the house of

Henry Elmore, situated about five miles distant from New Haven. It was a cheerful country residence, fitted up with much neatness. Around it lay a perfect wilderness of flower-gardens, amid which a refined taste had caused to be erected little summer-houses, which afforded points of view over the distant bay of New Haven. Attached to these grounds was a large farm, over which Lucy soon learned to preside with much matronly grace and dignity. The house itself had been originally small; but shortly after the marriage of the owner, it had been enlarged by the addition of a wing at the back part. This was not exactly adjoining the main building, but connected with it by a corridor. With regard to the purpose for which it had been added, nothing was known in the neighbourhood with any certainty. Many stories had been circulated concerning its object, and a belief had at length become current that it was haunted by spirits. There were those, indeed, who stated that they had beheld through the opening of a curtain at the window, a strangely emaciated face, with sunken eyes of an unnatural lustre, and a look that was not of earth.

The mystery that was attached to this portion of the building, and the tales that were circulated in relation to it—together with the former reports that had attached to Lucy Ellet and her young sister—rendered its inmates avoided and unpopular throughout the neighbourhood. No distress or mortification, however, seemed to be felt at this circumstance by Henry Elmore and his wife, who showed no disposition for the society of their neighbours, and who never exchanged visits with any other persons than Governor H— and his wife (who still resided in L—) visits which were mutually given and rendered as often as the distance that intervened between their homes allowed.

Jessy Ellet, now grown to womanhood, resided with her sister. She had retained the exceeding beauty of her childhood, but exhibited what appeared a wildness of character to those who were incapable of understanding the superiority of her nature. There was a life and animation in her gait, a fascination in her manner and expression, both of language and countenance; a touchiness also in her purity of thought, which, in conversation with the few persons with whom she associated intimately, gave her society a charm.

The parlour of Lucy Elmore's house was a neat and comfortable apartment. All its arrangements bespoke the skill of a refined female genius—which genius was, in fact, her tasteful and fastidious sister. It was Jessy who had, on this dark autumn day, caused the sofa to be wheeled out opposite the fire; she it was who had, a few weeks previous, directed the graceful looping of the dimity and silk curtains in the windows. The inventive mind of the same guardian divinity had likewise anticipated the more modern fashion of the centre or sofa table, and induced her to keep a piece of furniture of that description constantly replenished with various new specimens of literature and art. The grammars and other house-plants in the windows owed their flourishing condition to her training hand; and many other little accessories to the *tout ensemble* of the room, giving it an air of exceeding home elegance and comfort, which rather than perceived, were the results of her care.

It was evening. Henry Elmore was in his little study, and his wife had taken her book in her hand, and retired to the mysterious wing of the house where her sister knew she always spent an hour every morning and evening, though for what purpose she had never inquired, perceiving that Lucy desired the object of these visits to be secret.

Jessy was seated alone in the parlour we have described. She had drawn near the table, and, bending over a volume of poetry which lay open before her, one fair hand was engaged in playing with the ringlets of her hair, and the other lay upon the classic page. The fire had given a slight flush to her cheeks, usually perhaps a shade too pale, and, as she sat thus, it would have been difficult to imagine a more beautiful object.

A light knock at the door interrupted her reading, and a young man of polished manners and handsome exterior presented himself. The new comer was about five-and-twenty, in a military dress, and bearing in his manner and looks a good deal of the martial profession. Notwithstanding the great change which the lapse from youth to manhood makes in his sex, it would not have been difficult for any who had known him in the former period, to trace in the countenance of the visitor the lineaments of his boyhood. There was the same now, summed up by its chestnut curls—the latter, it may be, a shade darker, and a fold thicker; there was the same hazel eye, with its peculiarly thoughtful expression, and a lip which had preserved the native frankness of its smile. In short, the person entering was—but, reader, we will not anticipate Jessy Ellet in calling him by name.

She seemed slightly startled on recognising him, but rose with a blush and extended her hand.

He advanced and took her offered hand with more of tenderness than courtesy in his manner, for he held it a moment ere he resigned it.

Some little time had elapsed in a few commonplace remarks, when the gentleman drew his chair close to Jessy's side. "Miss Ellet," said he, "I have come this evening emboldened to pour into your ear the story of a long and devoted attachment."

"Mr. Stanley," interrupted the lady, blushing deeply, while the small hand which lay upon the edge of the table might have been seen slightly to tremble, "I cannot allow you to place yourself at the disadvantage of uttering anything you might regret, when you become better acquainted with what I must have to reply in regard to any declaration of this kind."

"Do not, I beseech you, Miss Ellet, say aught to dash my dearest earthly hopes. I had flattered myself—"

"I know what you would say," rejoined the young lady, again interrupting him. "You mean that you had hoped—?" and she hesitated an instant, "that you were not altogether indifferent to me. But what avails it whether or not this be the case, when I have that to reveal to you which may make you instantly withdraw your proffered affection!"

"No revelation that you could make would have the power to effect a change in the feelings of one who has known you so well."

"Nay, wait until you hear what I have to tell. Know, then, I am not what I appear."

"Your language is enigmatical," said her lover, looking at her bewildered; "but if it were possible for any human being to surpass in internal graces the loveliest outside, in that way I can believe that there is truth in your words."

"I thank you for the compliment," said Jessy, smiling in acknowledgment. "But it is not in regard to my personal graces, either external or internal—for I have too much vanity, I assure you, to suppose that there is aught that can be said in disparagement of either—but in regard to my outward position I speak. I pass for the niece of Governor H—, and the sister of Lucy Elmore. Now I am confident that I am neither."

"What is it you say?" said her lover, looking at her in astonishment.

"Mr. Stanley," continued she, "do you recollect the melancholy-looking lady who was present at Lucy's wedding?"

"I do," said he, "and can tell you more than you have probably ever known. She was the mysterious Lady of the Rock, and the noble wife of the exiled regicide. I shall never forget her touching beauty, nor the heroic fortitude with which she hastened the flight of her husband and father on the day when their hiding-place in the cave was discovered. But what were you going to say of her?"

"I felt drawn to her by yearnings of a peculiar kind, and a strange sympathy such as I have never known before or since for any human being. Mr. Stanley," she continued, looking at him steadily, "do you see no singular resemblance to me in that strange lady? Methinks I can behold a marvellous likeness."

As she spoke, a curious similarity in the beloved being before him to the unhappy lady whose image was impressed upon his memory, struck him in the most forcible manner, thrilling him in addition to Jessy's words with the suspicion they suggested.

"She was my mother," continued Miss Ellet. "I know it by an instinct that cannot err. Look, too, how little coincidence of looks, no less than fate, exists between myself and my uncle's family. Lucy, too, although affectionate and kind, resembles me in nothing. I am a mysterious and lonely being."

"There may be truth in what you surmise," replied Stanley, who had been pondering deeply during her last remarks; "but will not yourself lonely, unless you positively decline the companionship of one who desires no higher pleasure in life than to share it with you?"

"You do not shrink from me, then, because I am thus shrouded in mystery?"

"Nay," said he, venturing to take her hand, "nothing that could be either surmised or proved in regard to your parentage, could change the feelings or wishes of my heart toward you. Jessy, I sail in a few days for England, to be absent for six months, and would know your fate from you ere I depart."

There was a pause of a few moments of that expressive kind which such an occasion only witnesses, and Stanley gathered from its stillness that he might deem his suit not rejected.

So no time longer passed, in which the lovers remained alone conversing. Their language was of that kind which none but those who have been in the same situation can properly repeat, and which, therefore, the inexperience of the historian prevents being here repeated.

At length Lucy made her appearance, not like one who had been dealing with spirits, but full of cheerful interest in those earthly beings whom she contemplated. Time had passed lightly over her, and she looked as young and blooming as on the day of her marriage. The remainder of the evening passed pleasantly. Stanley mentioned his intended visit to England, and the conversation turned for awhile upon the mother country. The hour for family prayers arrived. Henry Elmore read a chapter of the Old Testament in a deep, solemn voice, and, all standing up, he prayed fervently.

The house being some miles distant from the town of New Haven, the guest was shown to a room above the parlour.

A cheerful fire burned on the hearth; the bed was curtained and quilted with white, and everything invited comfort and repose. The occupant, however, was too full of his late happy interview to feel inclined to sleep, and he threw himself into a large easy chair that stood near the fire. He sat there long in a deep reverie. After other reflections more intimately connected with his blissful emotion, his thoughts reverted to the revelation Jessy had made to him of her suspicions in regard to the Lady of the Rock. His own mind had readily received these suspicions, until, in reconsidering them, they amounted almost to a certainty. What, then, had become of the lady, and what was the fate of her companions? She had announced in his hearing, in the cavern, her intention of going to England, for the purpose of endeavouring to obtain their pardon. But she had never returned, nor had he heard her mentioned since the excitement caused by her appearance at Governor H—'s had subsided. There had been no rumour of the apprehension of the regicides, and it was therefore possible that they still remained hidden. Young Stanley now recalled what he had likewise overheard in the cave, about the exiles having been offered a home with Mr. Elmore. He had been absent prosecuting his studies, when the mysterious wing was attached to the dwelling, and in that way had missed hearing the reports to which it gave rise, or it is possible he might have surmised differently in regard to it from the ordinary conclusion. At his return, the gossip had pretty much subsided into a steady avoidance of the family, so that none of the rumours had ever reached him. It was hardly possible, then, he thought, as he had seen or heard nothing of the outcasts, that they could be residing with Mr. Elmore. Jessy, too, had never named any such inmates to him; nor, this evening,

when he mentioned them in connexion with the lady for whom she had expressed such interest, had she evinced a knowledge of their being. They were not, therefore, he concluded, repaired to Mr. Elmore's; whither had they gone?

Casting aside his reflections, after a considerable length of time Stanley rose from his seat, and began to prepare for bed. Walking to a window, he beheld a light in what seemed a house or room opposite. It seemed strange to him that there should be any dwelling situated in this manner in regard to the house he was in, since it was in the country. He was about to persuade himself that it was merely the reflection of his own room, when he saw, standing face to him, the aged man of the cave. Convinced now that his own imagination was at work, and had conjured up the likeness of one of those who had just occupied his thoughts to so great an extent, he turned away, and hastened to court repose.

(Continued in No. 11.)

## ASCENDING THE NILE.

SOME travellers have paid £45 a month for their vessels, but I found little difficulty in getting a large and convenient boat for two persons at £20 a month. This price, it should be understood, includes the services of ten men, who find their own provisions, and only receive a gratuity in case of good behaviour. The American consul, Mr. Kahil, had kindly obtained for me the promise of a bark from Ismail Pasha, before our arrival—a superb vessel, furnished with beds, tables, chairs, divans, &c., which was offered at £30 the month, but it was much larger than we needed. In the course of my inspection of the fleet of barks at Boulak, I found several which might be had at £15 and £17 a month, but they were old, inconvenient, and full of vermin. Our boat, the *Cleopatra*, has been newly cleansed and painted, and contains, besides a spacious cabin with beds and divans, a sort of portico on the outside, with cushioned seats, where we proposed to sit during the balmy twilight, and smoke our *chibouks*.

My companion as far as Assuan of Korosko, is the European of our triad. The Asian returns to-morrow to Smyrna with an Abyssinian boy, whom he purchased in the slave bazaar for about sixty dollars. The little fellow received a certificate of his freedom at the Austrian consulate, and seemed perfectly happy in his new white Turkish dress and red shoes. The European is one of the most agreeable fellow-travellers I ever met, and I count it a lucky day that brought us together. Nowhere is a congenial comrade so desirable as on the Nile. My friend appreciates the river; and even without the prospect of seeing Thebes, Ombos, and Philæ, would cheerfully bear all the inconveniences and delays of the journey for the Nile's sake alone. Commend me to such a man, for of the hundreds of tourists who visit the East there are few such.

The furnishing of a Nile-boat requires considerable knowledge of house-keeping. The number of small articles required for this floating speck of civilisation in a country of barbarians, is amazing to a bachelor. I had no idea that the art of cooking needed such a variety of tools and appliances, and, for the first time in my life, conceived some respect for the fame of Ude and Soyer. There are frying-pans and stew-pans; coffee-pots and tea-pots; knives, forks, spoons, towels, cups, balls, and boxes; butter, lard, flour, rice, macaroni, oil, vinegar, mustard, and pepper; and no end to the groceries. We must have a table and chairs, quilts and pillows, mats, carpets, and napkins, and many other articles which I should never have thought of without the help of M. Pini, who keeps a general dépôt of supplies. His printed lists, in four languages, lighten the traveller's labour very greatly, and he well deserves the moderate profit which he is content to ask. His experience in regard to the quantity required is also of much service; otherwise an inexperienced person would not know whether to take twelve or fifty pounds of rice, nor how much sugar belonged to so much coffee. The expense of our outfit, including bread, fowls, mutton, charcoal, and every other requisite, was about two thousand piastres—a little more than one hundred dollars. The calculation was made for one month's provisions for two persons, and one month for one.

A few phrases I have picked up on the way to Alexandria would avail me little in Nubia, where either the Berber language, or a different Arabic dialect is spoken, and I therefore engaged a dragoman for the journey. This class of persons swarm in Cairo at present, and I had not been there a day before I was visited by half a dozen who were anxious to make the trip to Khartoum. How they knew I was going there, I cannot imagine, but I found that they knew the plans of every traveller in Cairo as well. Among my visitors was an old man named Solyman Ali, who had been a servant of Champollion. I made choice of a dark Egyptian, born in the valley of Thebes. His name is Achmet; and, from what I can learn, he is one of the best of his class. He speaks English and Italian, but one of the stipulations of our bargain is that he shall teach me Arabic. He dresses very handsomely, and has the faculty of making himself respected by the Arabs, a very necessary quality.—*Bayard Taylor*.

THE BEST TRAINING.—It is not the man who has seen the most, or read the most, who can do the most: such a one is in danger of being borne down like a beast of burden, by an overloaded mass of other men's thoughts. Nor is it the man who can boast merely of native vigour and capacity. The greatest of all warriors who went to the siege of Troy, had not the pre-eminence because nature had given him strength, and he carried the largest bow; but because self-discipline had taught him how to bend it.—*D. Webster*.

## THE WOMAN WHO HAD NOTHING TO DO.

BY CAROLINE ORNE.

"WELL, Mary," said Charles Lewis to his young wife, who had returned after an absence of a few days from an exploring expedition, "I think I have found a place which will suit us both."

"Where is it?" inquired Mary.

"In Bloomfield, about fifty miles from here. There is not a single shop within a mile, and every person to whom I mentioned the subject is of opinion that I cannot fail to do a good business."

"And can a suitable house be obtained?"

"Yes, one that will exactly suit you. Were you to see it, you would imagine that it was built on purpose for us. It is white, with green blinds, and is literally embowered among trees and shrubbery."

"Are there any flowers?"

"Plenty of them. They border all the paths, and as for roses, judging from the number of bushes, we may, if we please, have a 'feast of roses,' as they do in the East."

"According to your description, it must be an earthly Paradise. When shall we go?"

"Next Monday, if you can be ready so soon as then."

"I could, if necessary, be ready before that time," was Mary's reply.

Though Mary's expectations had been raised high, she was not disappointed with the appearance of their new place of residence. It was exactly what she wished. By the close of the week everything was arranged, and all the apartments were a neat, quiet, home look. Mary had never been accustomed to do housework, having before her marriage taught in a school for a livelihood; but she had, whenever opportunity presented, been a close observer, and bade fair with a little experience to make a most excellent housekeeper. Though her husband thought that it would be impossible for her to get along without, at least, a girl of a dozen or fourteen years to assist her, she told him that she could at any rate make the attempt, as they could not afford to increase their household expenses.

"Don't you think, Charles, that I am nearly equal to any heroine," she said, one day, as she placed some fine strawberries and cream upon the table for the dessert.

"I am sure I do. How very fragrant they are."

"That is because they are fresh."

"Who gathered them for you?"

"No one—I gathered them myself."

"But we have none in the garden."

"I found these in the fields."

"Let you find them where you would, they are delicious; I believe that they are superior in flavour to those which are cultivated. Didn't you find it fatiguing to rove round the fields after them?"

"I was a little tired by the time I reached home, but I shall enjoy my reading and sewing all the better for it this afternoon."

"Spraking of reading makes me think of the *Home Companion* I brought from the booksellers."

"I'm glad the magazine has come. The little room we have fitted up for a library will be a delightful place to read in. Those maples shade the windows and create a cool, delicious gloom; while the rustling of their foliage makes exactly the right kind of music for one who wishes to read or indulge in reverie. You must not be surprised if the rural influences by which I am surrounded, prove so inspiring that I shall, one of these days, write something for the magazine. Don't you think that the name of Mary Lewis would look very well among the list of original contributors?"

"Admirable."

"I wish you could stay at home this afternoon and read with me."

"Oh, never fear for me," said he, gaily, "as long as I can measure calico and ribbons, an employment which is delightfully varied by weighing sugar, coffee, and tea."

Half an hour afterward, Mary had seated herself near the open door of the library, whence, whenever she chose, she could step out upon a smooth green terrace. She had just commenced cutting open the leaves of the *Companion*, when she was somewhat startled by a voice that said—

"You are the lady of the house, are you not?"

Looking up, she saw a tall and lean, yet vigorous-looking woman standing at the door.

"I am," was Mary's answer.

"And my name is Pickins; and as I am your nearest neighbour, I came right in without knocking. I set out to come and see you yesterday afternoon, but Mrs. Hopson came in and hindered me."

Suspecting that she had come with the intention of spending the afternoon, Mary invited her to take off her things, and then conducted her into the parlour.

"This is my work," said Mrs. Pickins, opening a large bundle as soon as she had seated herself. "I've a large family to sew for, and have to improve every minute. I was telling Mrs. Hopson, yesterday, that if I was in your place I shouldn't be able to find anything to do a tenth part of my time. I should be obliged to sit and fold my hands."

"I read, or cultivate the flowers when I have no work which I am obliged to do," said Mary.

"Well, I know a body can read when worst comes to worst, but it is terrible dull music according to my way of thinking. And as for flowers, though I don't say but what they look pretty enough, there is no profit in them

—they'll neither give you meat, drink, nor clothing. Mrs. Hopson and I were wondering between ourselves why you didn't keep a cow. Taking care of the milk, and making a few pounds of butter now and then, would be pretty work for you, and help to fill up your time. And you haven't a mite of knitting to do neither. Well, as Mrs. Hopson and I said, it's a mystery how anybody that has no more to do than you have, can get through the day with any kind of comfort. I believe, if anything, it is worse than to have as much to do as I have. Only see what a lot of work I've brought with me, and there's not a stitch of it but that I may safely say we are suffering for. Here's an apron to make for our Sally, another for Kitty, a gown to make for Betsy, and the buttonholes to work on Sam's jacket, and how I'm ever to get them done is more than I can tell."

"If you are very much in a hurry, let me assist you this afternoon," said Mary.

"Well, if you will take something and help me a little, I shall be the thankfullest creature that ever lived. Here's the buttonholes I spoke of, to work on Sam's jacket—I know you are good at buttonholes—ain't you, now?"

"I believe I can work a buttonhole," said Mary.

"I knew so. Now our Sally, though she's a good, smart girl about house, mortally hates to touch sewing; and as for buttonholes, she can't work one that is fit to be seen. You see that this jacket is a pretty good piece of cloth. It looks as if it would wear well, and I don't think it will fade. By good rights, the buttonholes on such a good jacket as this ought to be worked with twist, but I haven't a needleful in the world."

"I believe I have some that will do," said Mary; "I will look and see."

"So do, that's a good, dear woman; and sometime when it comes handy I will do as much for you. I suppose Mrs. Hopson can go with me," said Mrs. Pickins, after Mary had found the twist, and commenced working the buttonholes, "to go and see Mrs. Creamly to-morrow in the afternoon. She's a good woman to go and see. She knows how fond I am of warm cakes and custards, and so when I go to spend the afternoon with her, the minute it is four o'clock she puts the oven to heating, and then we have something with our tea that's worth eating."

Mary, after this broad hint from her guest, thought that she could do no less than follow Mrs. Creamly's example. She, therefore, worked as hard as if she had been on a wager, so as to finish the buttonholes in time to bake some cakes. When she rose to go into the kitchen in order to perform her task, she requested Mrs. Pickins to excuse her absence.

"I hope you don't think," said her guest, "that I am going to stay here alone while you are getting tea. I'm going to keep you company, for I wouldn't have you think that I am so proud that I can't sit in the kitchen."

Mary remonstrated as far as politeness would permit, for, considering herself, as yet, a mere novice in the culinary art, she did not like to be subjected to the scrutiny of such an adept as Mrs. Pickins declared herself to be, during the performance of her onerous task. Remonstrance, however, to such a determined woman as Mrs. Pickins, proved vain, and taking Sally's apron to her, because, as she said, "it was more careless work than anything else she had to do," she followed Mary into the kitchen.

"You find the oven to be first-rate, don't you?" said she. "That's the name Maria Griggs used to give it. Mrs. Grovener, that used to live here, was an ailing woman, and used very often to have to get Maria to help her."

"I haven't tried the oven yet," replied Mary, "I use a cooking-stove."

"Well, I couldn't imagine what kind of a piece of furniture that was. It's the first that was ever in the place. I've heard tell of 'em, but never had a great opinion of 'em; can't think it's possible to bake anything so well in 'em as in an old-fashioned brick oven. Come, now, suppose you go and heat the old oven just for the notion of it. I can tell you all about it, and perhaps you won't have another such chance for a long time."

But, as Mary's wish to please was not strong enough to overcome her reluctance to trying the experiment of heating the oven for the first time, she declined in a quiet, yet so decided a manner, that Mrs. Pickins did not urge the matter any further. She kindled a fire in the stove, and hoped that when the room became uncomfortably warm, Mrs. Pickins would take refuge in the parlour, as the consciousness of being watched in every movement perplexed her exceedingly, and rendered her task doubly oppressive. She had underrated her guest's powers of endurance, when tried in the balance against her curiosity. She endured the heat with stoical fortitude, and evidently had no thoughts of withdrawing. At last, Mary ventured to suggest, that as the stove made the room very warm, she would be much more comfortable in the parlour.

"Well, if you can bear the heat, I can," was her reply.

"I am obliged to bear it," said Mary.

"Well, I don't care for that. I wouldn't have you think I'm so selfish as to go off and leave you here all alone. You have to mope here by yourself enough without a single person to speak to; and, besides, I love to watch the manoeuvres of young women when they first set up housekeeping, to see if they bid fair to make good, smart wives."

Though Mary, from the first, had a kind of vague suspicion that curiosity was the real cause why Mrs. Pickins so pertinaciously insisted on remaining in the kitchen, this ungenerous announcement of her motives heightened her embarrassment to such a degree, that she found it impossible to recollect whether she had put the requisite quantity of sugar into the cakes she was preparing or not. This put her to the necessity of trying a small cake by itself, also to renew the fire, that the oven might longer retain the proper degree of heat. As the cake refused to rise, she found that she had omitted something, which elicited from Mrs. Pickins the savoury admonition, "to mind and always have her thoughts about her."

As soon as the cakes were fairly in the oven—"I want to know," said Mrs. Pickins, "if the currants ain't big enough to preserve!"

"I don't know," replied Mary, "for as we have had plenty of strawberries, I have not noticed them particularly."

"I think they are," said Mrs. Pickins. "Come, supposing you and I should go into the garden and pick a few to eat with our tea. They make first-rate sauce—an excellent thing to refresh the appetite."

The currants were accordingly gathered, and, after due preparation, were placed upon the table.

"There; now go and set your table, if you want to," said Mrs. Pickins, "and I'll watch the cakes, and see that they don't burn, too."

Mary thanked her, and gladly availed herself of her offer; for the custards were now very nearly done, and she did not wish them to get too cold to suit her guest's taste. It was also about time for her husband to come home to tea, and, as he had no clerk, he would not like to be obliged to wait. When Mary returned to the kitchen, she was surprised not to see Mrs. Pickins.

"Here I am in the store-closet," said she. "I'm hunting round for a pan, or something of the kind, into which to put the dish of currants. There, you needn't come, I've found something at last. What a grand, good provider your husband is!" said she, as she placed the dish of currants before her. "While I was in the store closet, I took the liberty to look round a little, and saw that there was plenty of everything the heart could wish for."

In a few minutes, Mr. Lewis arrived. While at the table, Mrs. Pickins gave him a faithful account of the household labour she was obliged to perform, "week in and week out." She also averred that, had she not seen it done with her own eyes, she could not have believed it possible that such complete cakes could have ever been baked in a stove oven. When she took leave, she assured Mary that she had found her to be a much more agreeable person than she expected—not half so proud or starched up; and that as for buttonholes, she *did* think she was the neatest hand at 'em of any person she ever came across.

The next day, Mary had starching and ironing to do, which, besides the cooking, and other necessary tasks, kept her closely employed till dinner time. The weather was uncommonly warm; and, by the time she was ready to sit down in the afternoon, she had seldom in her whole life felt so much fatigued. As on the preceding day, she seated herself near the open door of the library, with the magazine in her hand, she could not help thinking that she had earned the right to read it. She had finished cutting open the leaves, and had read about half a page of an interesting tale, when she heard some one rapping at the back door. On answering the somewhat noisy summons, she saw a large, awkward-looking boy, with a bundle in his hand.

"Will you walk in?" said she, after vainly waiting for him to make known his errand.

"Well, I suppose I can't stop," said he. "Mother has sent you Tim's best jacket and mine for you to work the buttonholes. She seed them you worked for Sam Pickins, and Sam's mother says you're nothing to do, and would rather work them than not. They must be done to-morrow by noon, 'cause Tim and I want the jackets to wear over to Uncle Thomas'."

"What is your name?" inquired Mary.

"Ben Hopson, and I live over in the red house next to the school-house."

Before Mary had made up her mind what to say in reply to this singular request, Ben had deposited his bundle on the door-sill, and turned to go. She thought of calling him back, and sending word to his mother that she was busy, and could not work the buttonholes; but a little hesitation on her part gave him time to get beyond the sound of her voice, had she made the attempt. Having thus tacitly consented to perform the task so unceremoniously imposed, she took the bundle into the house and opened it. On examining the jackets, she found they were of a flimsy fabric, which would ravel at the slightest touch. This would make it very difficult to work the buttonholes in a manner at all satisfactory. As there was nothing sent to work them with, she concluded that Mrs. Hopson expected that she would find whatever was necessary, as she had done for Mrs. Pickins. Having succeeded in finding some silk of the right shade, she, with a sigh, resumed her seat in the library, with a jacket in her hand instead of the magazine. As she had anticipated, it required the utmost exertion of her skill to make them look decent. She worked with unremitting assiduity, and was barely able to finish them by the time it was necessary to prepare tea. Some sewing of her own that could not well be dispensed with, which, with a little reading, she had intended to employ herself with during the afternoon, occupied her time till late in the evening; and then she was far too weary to have any wish to read.

The following day, her household duties, as usual, consumed all her time till dinner, when she again took her seat in the library, with the magazine in her hand. She found it impossible to give herself up to the full enjoyment of its pages. Rows of unworked, ravelly buttonholes, seemed to form a kind of spectral framework round the columns of neat, clear letter-press. She started nervously at the slightest noise, for she was haunted with a presentiment that even then there were loads of buttonholes on their way, which, by some means, she would be inveigled into working, though she had made up her mind to refuse in the most positive manner.

"The buttonholes have arrived," said she to herself, starting quickly from her chair at the sound of a low, modest knock at the front door. She went and opened it, and beheld a pretty, rosy-cheeked girl of eighteen. She held a small bundle in her hand, and Mary was sure that there were unworked buttonholes in it; yet the girl's blue eyes beamed so modestly, and her voice was so low and sweet when she said, "I believe this is Mrs. Lewis?" that Mary could not help inviting her to walk in, not coldly and ceremoniously; but in a manner so warm and sincere, that the blue-eyed beauty's courage at once revived.

Mary insisted on her taking off her bonnet, and spending the afternoon. She soon afterward took some sewing, to encourage her young guest (whose name, she found, was Ellen Gray) to undo the roll of snowy linen, which, at her entrance, she laid on the table. She soon took it thence, and Mary observed that her colour heightened, and her hands trembled as she unrolled it.

"Though I dislike very much to trouble you," said she, taking up a shirt-sleeve which was neatly made, "I have taken the liberty to call in order to request you to teach me how to make a buttonhole. But I mustn't learn on this." And, restoring the sleeve to the bundle, she produced a piece of cloth, on which were sundry longitudinal perforations intended for buttonholes, all of which were decided failures. She was right in thinking that they did not look fit to appear on the wristband of the sleeve she had just exhibited.

"These are the best I can do," said she, "and you see what miserable-looking things they are, and they will be so unmercifully criticised by Edward's sister."

This allusion to Edward brought another blush to her cheek, deeper than before.

"Do you think it will be possible for me to learn to make buttonholes as nice as you can, Mrs. Lewis?"

"Oh, yes," replied Mary, "with a little instruction you will be able to make them quite as well."

"Do you think so? I am very glad, for Edward's sisters are so nice, and have laughed at him so much about being obliged, when we are married, to come to them to have all his nice sewing done. He wished me to show them that they were mistaken, by making some nice shirts for him. I have taken a great deal of pains with them, and have succeeded pretty well, I believe, till I came to the buttonholes. They were too hard for me."

"I suspect you didn't begin right," said Mary; and so it proved. By carefully following the directions of her instructress, her sixth buttonhole she felt sure was quite equal, if not superior, to what Jane Horton, Edward's eldest sister, could work.

"So," thought Mary, as she listened to her remarks, and noted her earnest countenance, "by teaching Ellen how to work a buttonhole, I have perhaps given her the means of working herself into the good graces of her future sisters-in-law, without which her domestic happiness might rest on a precarious foundation."

And this reflection, when she remembered that Mrs. Pickins was the primary cause, somewhat ameliorated the feelings of dislike with which she regarded her too unceremonious next-door neighbour. "There must," thought she, "be an end to the buttonholes," and so there was for that season, at least; but the pity lavished upon her because she had nothing to do, appeared to be inexhaustible. This, while it sometimes amused her, still often annoyed her; the more so, because she really had so much to do as to suffer more or less from fatigue every day.

One woman, when compassionating her on the subject, like Mrs. Pickins on a different occasion, declared that if she had nothing more to take up her time than she had, she should be tempted to commit suicide. That Mary might not be beset by such an awful temptation, she told her that she thought she should send her a cap and collar to work.

"It would," she said, "be sweet, pretty little innocent work to amuse her with when she was all alone."

"So it would," said Charles Lewis, who entered in time to hear this last sentence, "but as ill, or perhaps good luck would have it, Mary has got to make a dozen shirts for me, and I can hardly tell what beside. You see, therefore, that working the cap and the collar is out of the question."

"La, well!" she replied, "if she only has some kind of employment to keep her from being low-spirited, it's all one to me, I'm sure. I wasn't governed by any selfish motive. I despise being as selfish as Mrs. Pickins is. I wish, though, I hadn't gone to the expense of buying the muslin. I got plain muslin instead of sprigged, on purpose for your wife's sake."

"I am much obliged to you, Charles," said Mary, after their neighbour had gone, "for relieving me of the cap and collar, but I thought that you had so many shirts, that you would not care to have any more made at present."

"You thought right. You can, if you please, take the next dozen years to do them. It is, however, necessary that you make an immediate beginning, otherwise every woman in the village will have a cap and collar for you to work—not because they care about having them done, but because you have nothing to do."

It was soon circulated through the village that Mrs. Lewis had a dozen shirts to make; a circumstance, which, while it saved her much time and eyesight, proved a great injury to the sale of her husband's plain muslin. The sprigged, however, went off with unexampled rapidity.

"THE BABY'S DEAD!"—One day, when we were riding a short distance from the city, (remarks a contemporary,) we met a little girl, who appeared to be in great haste, and whose eyes showed that she had been weeping. She looked as if she wanted to speak, and on our stopping, she came close up to the carriage, sobbing as if her little heart was broken, while the tears were standing in her eyes. "The baby's dead!" she said. We were an entire stranger to her; but she knew of but one baby in the world; and that baby, to whom no doubt she was tenderly attached, was dead. These short words were a full text for reflection the rest of the ride. We might write columns on them, but we will merely repeat to our readers what the little girl said to us, and let them reflect, as we did, on the thought that "the baby's dead!"

FRANKLIN AS A BOY.

## THE LIFE OF BENJAMIN FRANKLIN.

(Continued from Page 283.)

UNABLE to obtain employment in his native town, on account of the representations made of him by his brother, and fearing lest if he attempted openly to leave, he might be prevented by his relations, Franklin managed, through the intervention of his friend Collins, to leave clandestinely, in a vessel bound for New York. At New York, he met with no better success, but was told by the only printer there at that period, that his son, who resided at Philadelphia, had recently lost his most valuable workman, and that he would doubtless employ him. Franklin accordingly left New York, and, after a series of misadventures, was landed at Market-street Wharf, in Philadelphia, on Sunday morning, from a small boat in which he had performed the last part of his journey.

"I was," says he, "in my working-dress, my best clothes coming round by sea. I was dirty from my being so long in the boat, my pockets were stuffed out with shirts and stockings, and I knew to one, nor where to look for lodgings. Fatigued with walking, rowing, and the want of sleep, I was very hungry, and my whole stock of cash consisted in a single dollar and about a shilling in copper coin, which I gave to the boatmen for my passage. At first they refused it on account of my leaving rowed, but I insisted on their taking it. Man is sometimes more generous when he has little money than when he has plenty; perhaps to prevent his being thought to have little. I walked towards the top of the street, gazing about, still in Market-street, where I met a boy with bread. I had often made a meal of dry bread, and inquiring where he had bought it, I went immediately to the baker's he directed me to; I asked for biscuits, in some such as we had at Boston; that sort, it seems, was not made in Philadelphia. I then asked for a three-penny loaf, and was told they had none. Not knowing the different prices of bread, nor the names of the different sorts, I told him to give me three pence worth of any sort. He gave me, accordingly, three great puffy rolls. I was surprised at the quantity, but took it, and having no room in my pockets, walked off with a roll under each arm, and carried the other. There I went up Market-street as far as Fourth street, passing by the door of Mr. Reed, my future wife's father, where she, standing at the door, saw me and thought I made, as I certainly did, a most awkward, ridiculous appearance."

There were, at this time, but two printing establishments in Philadelphia, and both were of the most meagre kind. In one of these, conducted by a man named Keimer, he obtained employment, and by a singular sort of coincidence, was lodged by his employer at the house of Mr. Reed, before whose door he had passed but a few days previous, in the grotesque manner so quaintly related by himself. His chest of clothing having arrived, he was enabled to make "a rather more respectable appearance in the eyes of Miss Reed," than when she had first chanced to see him munching his penny loaf of bread.

Among the acquaintances made by him in Philadelphia, was that of Sir William Keith, the governor of the province, who appears to have been a kind-hearted and jovial sort of personage. While on a visit to Newcastle, he had seen a letter written by Franklin to his brother-in-law, Holmes, and was so much struck with the superior ability displayed by a youth of seventeen years of age, that on his return to Philadelphia he sought him out, and treated him with great kindness and attention. He told Franklin to give him an inventory of such things as he wanted, to establish himself as a printer, and promised to send to England for them, allowing Franklin to return the money when he was able. "I agreed that this might be advantageous," "Then," said he, "get yourself ready to go in the *Annis*, which was the annual ship at that time passing between London and Philadelphia."

On arriving in the British Channel, and overhauling the mail bag, Franklin found, to the utter discomfiture of his plans, that the expected letters, promised by the Governor, had never been sent. By the advice of some friends he had formed on the passage, he betook himself in these straits to his trade, and very soon found employment as a journeyman printer. For some time he continued to lead a free and easy sort of life, visiting such places of amusement as were within his reach, and trying to

think, in the excitement of the great metropolis, as little of Philadelphia as possible.

The great fundamental error of Franklin's life thus far, was his precocious free-thinking sentiments. He tells us, that notwithstanding the strict puritanical notions of his parents, and the religious maxims they strove to inculcate in him, he "was scarce fifteen, when, after doubting by turns several points as I found them disputed in the different books I read, I began to doubt of the Revelation itself." One of his chief reasons for leaving his native place, when he cut himself loose from his brother's employment, was that "his indiscreet disputations about religion began to make him pointed at with horror by good people, as an infidel or atheist."

Franklin, however, soon discovered that the practical effects of his theories were most pernicious to society, and he afterwards "grew convinced that truth, sincerity, and integrity in dealing between man and man, were of the utmost importance to the felicity of life; and," as he, "I formed written resolutions, which still remain in my journal book, to practise them ever while I lived."

After a residence of about eighteen months in London, he prepared to return to Philadelphia, as a merchant's clerk, in the employ of a gentleman named Denham, whose acquaintance he had made in his outward passage. He sailed from Gravesend on the 23d of July, 1726, and landed in Philadelphia on the 11th of the following October. His old acquaintance and employer, Keimer, appeared to be in a more thriving condition than when he left, having a larger establishment and a better supply of material; but as Franklin had relinquished his trade, as he thought for ever, he became interested in the success of his new occupation, and gave but little thought to his former companions. Denham took a shop in Philadelphia, and Franklin not only became his clerk, but his friend. They lived together in the most uninterrupted harmony until the following February, when Mr. Denham was seized by an attack of disease, that soon after terminated in death, leaving Franklin, who had just recovered from a very severe attack of pleurisy, once more alone in the world.

Franklin, now about twenty-one years of age, was soon after induced by an offer of liberal wages to return to his trade, and undertake the management of Keimer's establishment, which comprised a number of poor and inexperienced workmen. Keimer and himself quarrelled in less than six months, and he left his employ, and soon after established himself in the printing business on his own account, in partnership with an intemperate man named Meredith, whose father furnished one hundred pounds to enable them to purchase the necessary materials to commence business. This connexion was soon broken up by the embarrassment of their concern, and the withdrawal of Meredith. Franklin's friends now came to his aid, and lent him what notice was necessary to carry on his establishment. Keimer, in the meantime, who had started a newspaper, finding it an unprofitable concern, offered it to Franklin for a small sum, which he gladly paid, and undertook its management. His qualifications as a writer were now of great use to him. By a series of fortunate circumstances, as well, perhaps, as a sprightly manner of writing, it soon grew in public favour, and commanded a large circulation for that period.

In tracing his humble, but successful progress into business, we have, like Franklin himself, very near forgotten Miss Reed, or as she now was, Mrs. Rogers. Under the influence produced by Franklin's neglect, the disappointed girl had yielded to the solicitations of her parents, and married a man named Rogers, a potter by trade, who proved in every way unworthy of her. She soon after separated from him, and refused even to bear his name, as it was reported that he had another wife then living. In 1730 she was married to Franklin.

Franklin set up his married establishment on a very economical scale, and lived in the most frugal manner. He "kept no idle servants," but probably imposed all the menial labour of their slender household upon his wife, who not only cheerfully performed this duty, but likewise assisted him in his business, by attending in the press, and folding and stitching pamphlets.

In his dress and habits he likewise preserved a scrupulous regard for what his fellow-townsmen might think and say of him. Early and late he was engaged at his employment; and frequently trundled home his purchases of paper on a wheelbarrow.

In 1732 Franklin began the publication of *Poor Richard's Almanack*, which he continued for a quarter of a century. It became very popular and profitable. In 1736 he was made clerk to the General Assembly, and in 1737, deputy post-master at Philadelphia. His public employments turned his attention to public affairs, from which not a few good results flowed to the citizens of Philadelphia.

The plan he adopted for conducting his newspaper, styled the *Pennsylvania Gazette*, is worthy of all admiration and imitation. "In the conduct of my newspaper," he remarks, "I carefully excluded all libelling and personal abuse, which of late years have become so disgraceful to our country. Whenever I was solicited to insert any thing of that kind, and the writers pleaded, as they did, the liberty of the press, and that a newspaper was like a stage-coach, in which any one who would pay had a right to a place, my answer was, that I would print the piece separately if desired, and the author could have as many copies as he pleased to distribute himself, but that I would not take upon me to spread his detraction, and that having contracted with my subscribers to furnish them with what might be either useful or entertaining, I could not fill their papers with private altercation, in which they had no concern, without doing them manifest injustice."

Among the earliest of his strictly scientific productions, is an *Essay on the Causes of Earthquakes*, published in his newspaper, December 15th, 1737, giving a succinct account of the received opinions among philosophers, as to their causes and phenomena.

In 1789, George Whitfield, a dissenting clergyman of very persuasive manners, and gifted with the highest order of oratorical powers, made his appearance at Philadelphia, and soon enlisted Franklin as one of his warmest admirers and most steadfast friends.

Franklin, whose mind was almost instinctively turned towards philosophical pursuits, issued a circular, dated the 14th of May, 1783, proposing the plan for the "American Philosophical Society," since adopted; and Franklin was elected president, which office he continued to hold until his death.

His pecuniary circumstances were day by day becoming more prosperous. "My business," he remarks, "was now constantly augmenting, and my circumstances growing daily better, my newspaper having become very profitable, as being for a time the only one in that and the neighbouring provinces. I experienced, too, the truth of the observation, 'that after getting the first hundred pounds, it is more easy to get the second;' money itself being of a prolific nature."

In 1758 he was appointed, in connexion with William Hunter, Esq., to a situation in the Colonial post-office, by the English Government. This official employment caused him to take a journey to New England, and while there he received the honorary degree of Master of Arts from Cambridge College, and likewise the same honour from Yale College. "These degrees were conferred," says Franklin, "in consideration of my improvements and discoveries in the electric branch of natural philosophy." Electricity, as a subject of scientific pursuit, does not appear to have attracted his particular attention prior to 1746. In that year he met at Boston a Scotch gentleman named Spence, who had an electrical apparatus, and performed some curious experiments, which being new to Franklin, interested him exceedingly. By a singular coincidence the Philadelphia Library shortly after his return home, received from Peter Collinson, of London, and a member of the Royal Society, a present of an electrical glass tube, with instructions for its use. Franklin, with this instrument, and a few others ordered to be made by himself, commenced a series of experiments, the results of which are detailed in a series of letters to Mr. Collinson, beginning with one dated 28th March, 1747. Dr. Priestly, in speaking of these letters, says, "There is hardly any European language into which they have not been translated, and as if this was not sufficient to make them properly known, a translation of them has lately been made into Latin. It is not easy to say, whether we are most pleased with the simplicity and perspicuity with which these letters are written, the modesty with which the author proposes every hypothesis of his own, or the noble frankness with which he relates his mistakes, when they were corrected by subsequent experiments."

In compliance with the promise made to Mr. Collinson a few months previous, Franklin addressed to him a letter dated 11th July, 1747, informing him of the discoveries he had made. The first of these was the power of pointed bodies to draw and throw off the electrical current. In order to demonstrate this, he placed an iron shot of three or four inches in diameter on the mouth of a glass bottle. He suspended immediately above it, by a silken thread fastened to the ceiling, a cork ball, in such a manner as to allow the cork to come in contact with the iron ball. When this ball was electrified the cork was repelled to the distance of about four inches from it. On approaching a pointed bodkin to within about eight inches of the ball, the cork immediately returned to the shot. It was necessary to approach a blunt body to within an inch of the ball, to produce the same effect. When the experiment with the pointed instrument was made in the dark, a light resembling that of a fire-fly was seen to culminate upon its point at a distance of one foot or more.

Another discovery communicated by this letter was, that the electric fluid was not created by friction, but merely collected from the adjoining non-electric bodies, and he had succeeded in demonstrating its affinity to the electrical sphere, as well as its eflux by means of little paper wind-mills, with the vanes fixed obliquely, and turned on wire axes.

(To be continued.)

**NIGHTY REQUIRED IN ASTRONOMICAL CALCULATIONS.**—In a late number of the *Edinburgh Review* we find the following remarks, in substance, with regard to the closeness required in astronomical calculations, and showing to what an enormous extent a slight error may be propagated. In measuring a base line, astronomers use a rod about ten feet long; with this they may be said to mete the distance of the stars. An error in placing a fine dot which fixes the length of the rod, amounting to the thickness of a single silken fibre, will make an error of seventy feet in computing the earth's diameter, of 316 miles in the sun's distance, and to 65,200,000 in that of the nearest fixed star.

Again, as the astronomer in his observatory has nothing further to do with ascertaining lengths and distances, except by calculation, his whole skill is exhausted in the measurement of angles; for by these alone inaccessible spaces can be compared. Happily, a ray of light is straight and inflexible; were it not so, astronomy would be at an end, for its instruments are anything but perfect. Now an angle of a second, of which there are 3,600 to a single degree, is a very subtle thing. Its breadth is utterly invisible to the naked eye, unless accompanied with so intense a splendour, as in the case of the fixed star, as actually to raise on the nerve of sight a false image, having a sensible breadth. Yet it is on the measure of one single second that the ascertainment of a sensible parallax in any fixed star depends; and an error of one-thousandth part of that amount, a quantity still unmeasurable by the most perfect instruments, would place the star too far or too near 200,000,000, a space which light requires 118 days to travel.

## LOVE'S TRIALS; OR, MISTAKEN EVIDENCE.

(Continued from Page 307.)

Mr. WHARTON looked steadily at the youth as he said this, and his heart began to warm towards him; he had been struck with his personal appearance on his entrance, and this acknowledgment of straitened circumstances, made so candid and manly, excited at once his noble and generous mind; his countenance assumed immediately that blandness which was its most natural expression, and the tones of his voice were softened as he replied:—

"There can be no objection on the score of its distance from our place of worship; and I think, with a few trifling repairs, it might answer your purpose. But we shall not be able to visit the place this evening; make yourself at home with us to-night, and in the morning I shall be happy to accompany you to it."

The young man arose, and bowing politely, said, "I could not think, sir, of thus encroaching upon your hospitality. I have left my horse at the tavern, and feel that I have taken a great liberty in even making the inquiries I have."

"By no means, by no means, sir. And if you have no particular objections, I should rather esteem it a favour than otherwise, for there are many questions I wish to ask about the town, and a visitor from thence is a treat at this season of the year."

"Your horse will fare better," said Mrs. Wharton; "our tavern is not just what we could wish, so you must permit me to add my warmest request to my husband's, and besides, you know, as a lady, I may be indulged in a little curiosity. If we are to be neighbours, it is right that we should get somewhat acquainted."

The young man could not resist this united plea; he blushed deeply, and seemed hesitating as to the propriety of resuming his seat, when Mrs. Wharton, smiling in her most winning manner, continued: "You know visitors are not apt to be so plentiful as when the warm weather drives our friends from the town, and perhaps you may be acquainted with some of them?"

"I fear not, madam. Since our residence in the city, circumstances have prevented us from forming acquaintances; we scarcely can be said to have made any."

"Then you have not been long at C—?"

"But three years, madam."

The storm now commenced in earnest, and beat furiously against the windows; the prospect without was cheerless indeed, and the young man began to congratulate himself that he was not exposed to its fury on the road. The strong contrast, too, which the scene within presented, was not lost upon him, and in spite of his feelings, as a stranger in a strange place, he began to enjoy the tokens of comfort with which he was surrounded. The cheerful fire blazed briskly in the fire-place, illuminating its black and polished sides, and showing the little figures with which it was ornamented in all their glossy beauty; while from the brazen knobs and fender, and tongs and shovel, and from every little hook, were bright rays dancing off and enlivening the hazy scene. And, as he cast his eye around, every article of furniture, whether of wood, brass, marble, or silver, was throwing off from its bright surface the lively, dancing light which the crackling blaze sent forth.

There are spots in this varied world of ours, like oases in the desert, where sweet sights, sweet odours, and sweet sounds, throw upon the senses their united influence, charming the wearied spirit to repose, causing it to forget the trials of the past, and renewing its strength for the onward struggle.

To many a wearied sojourner had this humble dwelling proved a resting-place for the heart. The neatness and order that were displayed, even in the most trifling matters; the air of calm and dignified enjoyment that was so manifest in the countenances and deportment of that happy pair; the spirit of love that flowed forth in words, and tones, and manners, perfuming, like the breath of spring, the very atmosphere around them; all, like a potent spell, entranced the spirit, hushed its troubled heavings, and soothed it into humility and peace.

To the youth such an influence was all-powerful; he felt it stealing over him each moment in sweeter and stronger bonds. The world looked brighter to him than it had done for months or years.

"Excuse me," said Mr. Wharton, "did I understand aright? is your name Edwards?"

Mr. Wharton had been walking about the room, as was his custom, and looking out occasionally upon the driving storm; while his lady, in her mild and pleasant way, was drawing out from the young man such relations of his family as were consistent with delicacy, and a strong desire to know more of those whose representative had made such a favourable impression on her mind.

"Yes, sir, James Edwards." Mr. Wharton took his seat and eyed the youth with an earnestness that was almost painful to him.

"And did you say that your father came from Hertford?"

"Yes, sir."

"May I ask your Christian name?"

"John."

Mr. Wharton laid his hand on the shoulder of the young man.

"Are you a son of John Edwards? Was your father ever at college?"

"He was, sir, two years; but I have heard him say that, at the death of my grandfather, he was obliged to return home and take charge of the estate."

Mrs. Wharton had laid down her needlework, and seemed to be equally excited with her husband, as though some strange development were at hand.

"Mr. Wharton, can it be? is it so? that this is a son of your old friend?"

"Mr. Tighthead was immediately provided with a seat, but it was some time before he could make up his mind to take possession; he had two or three extra bows to make, and finally, just as he had apparently decided to be stationary, all at once he made a rapid movement towards Mrs. Edwards."—See Chap. vi.

"My dear son," said Mr. Wharton, taking the hand of the youth in both of his, "is it so? Yes, it must be, I see your father's bright eye and raven hair; how has this come about? Who has directed you to me? Welcome, a thousand times welcome!"

Young Edwards was deeply affected; a rich glow suffused his naturally pale features, and he returned the cordial greeting of Mr. Wharton with a warmth that showed how much his heart felt this unexpected recognition by one who had been his father's friend.

There were now a thousand questions to be asked and answered; and the calm, blue eye of Mr. Wharton was more than once suffused with a tear as he listened to the recital of the dark trials which had clouded the latter years of one whose youth was so bright and prosperous.

"You can little imagine, my dear young friend, what feelings this interview excite. Did you never hear your father mention an act of kindness which he did for a class-mate when in college?"

"No, sir, never."

"That would be just like him. He was a noble-hearted man, but his true character was understood by very few. Did he retain in his later years a peculiar *bonté* in his intercourse with strangers?"

"He was very reserved, sir, to all with whom he was not on terms of closest intimacy; and even in his family, had we not all known that his feelings of affection were of the strongest and most tender kind, his peculiar manner might have been misunderstood."

"Exactly so; he did not, probably, have many associates?"

"I may almost say none, sir."

"So I should have expected; and yet, perhaps, no man ever possessed a warmer heart, or one more susceptible to the strongest ties of friendship. The first time that I saw him was about one week after he took his seat in the class at college; we were in the same division of the class, and were seated together. There was something in his appearance that attracted my notice, although his cold and formal bow, as he took his place beside me at recitation, without the slightest relaxing of his stern countenance, and the dogged staidness of his deportment affected me rather unpleasantly, and was in such strong contrast with those on either side of us, that for some time I felt his presence to be irksome. I judged him to be extremely sensitive, and was, therefore, constantly in dread lest the thoughtless, though good-natured levity of these immediately about us, might produce an outbreak on his part, that would inevitably bring off him the ill will of all. Examining the opinion I did of him, and which happened to be a correct one, I presume my manner towards him was regulated thereby. I did not fear him, for we were about equal as scholars, but I studiously avoided, from feelings of delicacy, what ever might give him dissatisfaction. I also noticed that, as he shunned society, others also avoided him. He was alone in the midst of the multitude."

James was looking intently at Mr. Wharton, listening with thrilling interest to the peculiarities in his father's early life, when the last remark deeply affected him.

"And that may be said of him especially for these few years past; my father—"

But the endearing name was yet too tender a remembrance, under his present state of excitement. He could proceed no farther. Mrs. Wharton's sympathising heart was fully waked up, the more so as she perceived the efforts of the youth to suppress the feelings that were struggling for utterance.

"I never intruded myself upon him," resumed Mr. Wharton; "but as circumstances kept me from engaging in many of the frivolities of college life, and compelled me to seek retirement, I fancied, at times, that Mr. Edwards felt more complementally towards myself than he did to any others. On one occasion, I remember, he invited me to his room, and once or twice he did me the honour to seek my assistance in a difficult problem; to me he was civil and gentlemanly; to others distant, though polite."

"In our second year a sudden blow came upon me. My father was utterly ruined in business, and I received information that I must return home, and seek some other calling. It was a moment of agony. I had maintained somewhat of a distinguished station in the class. I was intensely anxious to complete my course; all other employment appeared like drudgery of the most painful kind, and, to crown my calamity, I was in arrears to a considerable amount, not having for the last term received any remittances, and the letter which had just come to hand contained only money sufficient to pay my expenses home."

"Disappointed, mortified, and almost hopeless, I shut myself up, and made apologies of indisposition for non-appearance at recitations. Many of my class-mates dropped into my rooms in the course of the day, but to none of them could I unbosom myself, and when the evening began to close I was almost in a frantic state. There was a gentle tap at my door; your father entered, a kindly smile was visible to me. He accosted me in friendly tones, such as, until then, I should never have expected from him. He had seen, at the first glance, that some trouble was upon me."

"I am not apt," said he, "to intrude myself upon my friends—nor do I wish to do so now; but excuse me for inquiring if some peculiar trouble does not at present agitate you?"

"There was so much sincerity in his whole manner, that I could not resist the impulse, and at once unburdened my mind. He said but little, yet the few sentences he uttered went to my heart. After remaining a short time he left me, and very soon the porter of the college handed me a letter. It was from your father. It contained not more than half a dozen lines, informing me that the inclosed was what he could spare with perfect convenience, until such time as I might be able to return it; it contained one hundred pounds."

The trembling tones in which Mr. Wharton closed his narrative, showed with what deep feelings he had treasured up this generous act. Young Edwards arose, and walked to the window; his soul was on fire. He knew his father's noble spirit. The world had never known him; it had looked coldly upon him, but his ear had heard the living testimony of one who realised his worth, and had felt his generosity.

The fountains burst forth; they had been sealed, even to his heart's bitter aching, in the presence of others, but now they could not be restrained; and other tears were flowing faster than those of that devoted, noble boy; and love, pure and true, was gushing forth its feelings, and the heart of him who came there as a stranger, was made to feel the joy, the comforting assurance of strong and enduring friendship.

#### CHAPTER IV.

It is an easy matter with a few dashes of a pen, even a poor one, to accomplish a mighty deal of work—to change residences, build houses, set people in love, get people into trouble and out of it; but each operation, in its actual performance, has many concomitants; many agents must be employed, and as one event in this shifting life either leads to another or has proceeded from another, it will not always answer to dash on from point to point in the story of human affairs, without sometimes entering into particulars, both of character and agency, that we may see more clearly the mutual dependence of cause and effect.

When such an operation as the removal of a family into the country is to be performed, it cannot be accomplished without time and patience, or, at least, it could not at the time when the scenes which this story narrates took place.

It was then, and is now, a very easy matter to send for a carman, and order him to take certain articles down to a certain wharf, and place them on board a certain vessel, bound to a certain place, and to sail, wind and weather permitting, on such a day. But the sailing of the said vessel, and the time she would reach her destination, were very doubtful matters many years ago.

James had, at the earnest request of Mr. and Mrs. Wharton, taken his mother and sisters immediately to the Parsonage. It was a sweet relief to their torn and sensitive spirits, to exchange the town, with its associations now so painful to them, for that quiet resting-place; amid warm and congenial feelings to enjoy the sweets of sympathy, and revel in the interchange of pure and exalted friendship; to hold communion with those whose hearts opened wide to receive them; to talk of him whose clouded day had passed, but whose memory was embalmed in thoughts that blessed his noble spirit.

There is in every village, almost without exception, some one active and stirring body, whose business it seems to be to do all the odds and ends; and generally, this personage is one upon whom his own cares and duties hang rather loosely. He keeps a pair of wild, daring horses, is ever on the drive, from "pillar to post," and is seldom at home but at meal times.

The village in question, however, was supplied in this respect by a very different sort of character. Mr. Timothy Tightbody kept the only shop in the place. He was a man well to do in the world. He had worked his way from very small beginnings to quite a respectable station in society. Early in life he had left his home by the bonnie banks of Doon; and acting even on the principle that "mony mickles mak a muckle," had found himself, at length, able to purchase his present shop and stock of goods.

Mr. Timothy Tightbody carried his economical, thriving principles into his new business, and as he took care of his shop, that, very soon, began to take care of him. He was a thickset, little man, of rather prepossessing countenance, with a sprightly way of speaking, and just enough of Scottish accent to give piquancy and force to it. He was well versed in all the proprieties of life, and had a winning way with him, that took well with all classes. To Mr. Wharton he failed not to pay the utmost deference, being always the first to aid in such duties as the parish owed to their minister, and punctually attendant upon all the services of the Sabbath. How far the spiritual advice of the good pastor was attended to by Mr. Timothy, we will not pretend to say; but he was always in his seat, never slept during the sermon, and was sure to be just opening his pew door as Mr. Wharton passed down the aisle; and there was then such a cordial grasping of the hand, and such earnest inquiries after the health of Mr. W. and his good lady, as was quite a lesson to all who witnessed it.

Mr. Timothy was just now a widower, and, as he often said, "had neither chick nor child." A young man that assisted him in the business, an old woman who kept his house, with a "young varmint," as he called a boy that was for ever committing some blunder, constituted his household.

Mr. Timothy had a pair of fine horses, and a very respectable barouche, in which he sometimes flourished on extra occasions. But the barouche was seldom drawn out of its resting-place, a good strong waggon served his turn, generally, and, like all Mr. Timothy's establishment, was turned by him to very good account. It served to bring and carry goods from and to the landing, which, being at some distance from the centre of the village, it became a matter of great convenience to that vicinity.

Mrs. Edwards' goods had been placed on board a barge, and were daily expected. Mr. Timothy had been applied to by Mr. Wharton for aid in bringing them to the white cottage the moment the vessel should arrive. Mr. Timothy had also called and conversed with Mrs. Edwards on the subject. He had seen her two lovely daughters, and had made one of the most polite bows which he ever remembered to have made, as he took his leave. Mr. Timothy was much elated; it was a new era in his being. Never before had he come in contact with such feminine sweetness; and many animating thoughts excited his rather susceptible heart. "These were to be his neighbours;" "he would doubtless have many opportunities of doing them a kindness;" "he would have the privilege of waiting upon them at his thriving establishment, measuring off yards of ribbon, and supplying *et cetera* of nice things, such as would be suitable for persons of their standing." For, although Mr. Timothy knew of their reduced circumstances, yet he was a man who strongly believed in degrees of rank in this lower world, which depended not on mere pounds, shillings, and pence. High, very high on the scale did he place the widow and her daughters. The son he had not yet seen.

Time brings along events at last; and so, in days long gone by, barges would get to their destination; but oftentimes not without a sad wear upon the patience. In the present instance the delay was a matter of small moment to the good people at the Parsonage, either to the visitors or their obliged entertainers; for the latter certainly appeared to feel, and doubtless did so, that the favour was all done to them. It was a sunny hour to them all; one of friendship's holy communion, where hearts were opened in their truth and beauty, and sweetly read by each, until, in one strong bond of love, they were fastened for the rest of life.

But Mr. Timothy, to use a homely phrase, "was on the tenter-hooks;" day after day had he watched with an eagle eye for the long-expected craft; and when it was at length seen winding its tortuous way on the river that passed through the long stretch of meadows, he found that it was too late in the afternoon to hope that his important commission could be accomplished until the following morning.

Mr. Timothy was an early riser, and tried hard to bring his "family" into the same commendable habit; but old Bet was never in a hurry to go to bed, and equally as disinclined to use expedition in the morning. The boy was always ready with his "Yes, master," as soon as he was called, but it often amounted to nothing farther until the same call had been repeated some several times. This morning, Mr. Tightbody had, however, succeeded in getting the lad to his "wide awake senses" just as the grey dawn was tinging the eastern sky. It was not very light in the stable, but, as every thing there was kept in its right place, it mattered not.

"Oh, you precious villain, see here!" Mr. Tightbody made this exclamation on passing by the side of his favourite horse, and feeling his head-gear. "You rascal, how is this? Why, look here; the whole blessed night has the poor beast been standing on his legs!"

Charles made his appearance from behind the other horses, and letting his under lip fall, stared somewhat wildly at his master.

The boy was rather an odd-looking specimen of humanity, somewhere between seventeen and thirty years of age; it being a difficult matter to determine, by looking at him, to which of the periods he ought to be assigned. He was short, and rather thickset, with very large features; his eyes, and nose, and mouth, and the whole apparatus of his head, seemed to have been designed for a tall frame. The first impression on a stranger was, that he was on his knees, or had lost his legs. He was, however, to use his own expressive term, "a whole man;" the body, legs, and arms, were all there, and the head part and parcel of the concern.

Charles was verily confounded; he saw the dilemma in which the poor horse had been, but not the most distant recollection had he of having done the deed.

"He's been playing me a trick," was his next thought. Charles had a strong religious belief, but it was all of the dark kind. It affected him when in the dark. The spirits, in whose power he believed, wore dark spirits; he never expected any help from them, his only idea being, that their chief aim was to do him a mischief, or, as he said, to get a poor lad into trouble. All the evil that happened to him he charged to their account; all his wrong-doings, especially if found out, he laid upon their shoulders; and if any extraordinary event took place which brought him into trouble, without his being able to see how he was to blame for it, he had a ready solution for the difficulty. "He's been playin' me a trick." Who Charles meant by *he*, was best known to himself. He never spoke his name, but evidently considered him Captain-General of evil doers and evil doings.

"Don't look at me, boy; look here at your doings; the horse tied tight to the ring of the rack, and not a bit could he lie down the blessed night. Aint you a precious villain? and won't I thrash you!"

Charles was somewhat startled by the tones of his master's voice; the names he called him by, being rather household terms, were matters of indifference to him; the tones were decidedly sharp. He pulled hard at his hair; he must do something to start the ideas; he began to remember a little of what had passed the previous day.

"Me, master; me! no, no. I don't remember tyn' Tom that way—it is somebody else."

Mr. Timothy's ideas began to collect themselves. He had been out late with the horse; he had called at Mr. Wharton's, and he now remembered having put the horse in the stable himself, not caring to disturb the slumbers of Charles, who was, after all, quite a pet with his master.

Why he had fastened the beast in such an unusual manner was, however, beyond the clear comprehension of the good man.

Mr. Timothy had, for a few days past, begun to hold his own head up. He was anxious to appear to the best advantage, to make the most of himself. Perhaps some such thoughts were passing his mind while tying his steed; he was much puzzled, however, to account for the act.

The recollection of matters at once softened his feelings towards the lad.

"Well, Charles, never mind it now, my boy," he said; "finish cleaning the horses, and give them a good polish—do you hear?"

"Yes, I will, master."

Charles was again at his work, rubbing away with more than usual industry. There are some days in this ever changing life of ours, when every thing goes with a hitch and a check. It generally happens on some busy day; we seem to be under the influence of nightmare. We would go very fast; the urgency of the case demands it, but we are constantly meeting with pull backs, and often, under such circumstances, the faster we drive the less speed we make.

This may be set down as one of Mr. Tightbody's unlucky days; there were unexpected hindrances continually coming up, but he had finally overcome all obstacles, and was ready for a start. And as he expected to have considerable handling to do, the boy was summoned as an accompaniment. (*See Engraving, page 296.*)

Now Ready, Nos. I. and II. of

## GRANDFATHER WHITEHEAD'S CATECHISMS,

I.—NATURAL PHILOSOPHY. II.—NATURAL HISTORY. Price 2d. each. These Catechisms will appear at intervals of about one month, in the following order:—

- |  |   |
|--|---|
| 1. NATURAL PHILOSOPHY—ELEMENTARY PRINCIPLES.     | 9. ANIMAL PHYSIOLOGY & ANATOMY.   |
| 2. NATURAL HISTORY—PRINCIPLES OF CLASSIFICATION. | 10. ZOOLOGY.  |
| 3. MECHANICS.                                    | 11. ASTRONOMY AND PHYSICAL GEOGRAPHY.   |
| 4. CHEMISTRY.                                    | 12. GEOLOGY AND METALLURGY.   |
| 5. ELECTRICITY, OPTICS, & ACOUSTICS.             | 13. THE APPLIED SCIENCES—LOCOMOTION, ARTS, MANUFACTURES, & NATURAL IMPROVEMENTS, &c., &c. |
| 6. PNEUMATICS, HYDRAULICS, &c.                   |   |
| 7. VEGETABLE PHYSIOLOGY & BOTANY.                |   |

Each subject will be treated with the utmost care; especial attention being paid to the latest discoveries of facts and principles of Science. The Catechisms will therefore supply, when complete, a work eminently adapted by its cheapness, simplicity, and completeness, to promote the diffusion of Useful Knowledge in Schools, and in Domestic Circles. The Volume will be ready at the close of the year, price 2s. 6d., elegantly bound.

## THE HOME COMPANION:

A WEEKLY MAGAZINE.

## PRACTICAL ILLUSTRATIONS OF POPULAR FALLACIES.

No. XIV.—RESPECTABLE MEN.

We remember once asking a young lady what sort of a person it was who had married a cousin of hers. The reply was—"A very respectable person, indeed—quite a gentleman; he does nothing." In this case, it was the "doing nothing" that made him respectable—the idleness that caused him to be "quite a gentleman." It bespoke a foregone conclusion, that either his friends before him, or he himself previous to that time, had contrived to put a respectable sum of money in his pocket, and he could afford to be idle and "do nothing." Some little while ago, the regular definition of a respectable man was, that he kept a gig. But gigs are gone out of fashion, or are only driven by commercial travellers, when the world has not yet elevated into the regions of respectability. It takes something more than a gig in these days to make a respectable man. A brougham is respectable, however greatly the noble lord who bears the name may be displeased at having it linked to such an adjective. Still more respectable is a close carriage, with a double crest on the hammercloth, and in which a grey old gentleman drives up to his office in the city from the classic regions of Russell Square. No matter what may be the state of the inner man of him who sits so bolt upright in his carriage—no matter if deceit and trickery are in his heart, if hypocrisy shows a veiled over view, if no one generous feeling ever animated his soul, if no one single thought or idea ever crossed his mind—save how to extract from other people's pockets the largest amount of the current coin of the realm—still, there he sits enthroned in his chariot, the representative of the false gods we worship under the name of "respectable men."

There seems to be only one thing in the world that we honour as "respectable"—success in making money. As the Israelites of old erected a golden calf in the wilderness, so we bow down before a gilded ass, and deny it with all imaginable honours.

"The world is too much with us: late and soon,  
Getting and spending, we lay waste our powers—  
Little we see in nature that is ours;  
We have given our hearts away, in a sordid boon!  
This sea, that bares her bosom to the moon;  
The winds, that will be howling at all hours,  
And are up-gathered now, like sleeping flowers;  
For this—for everything, we are out of tune!  
It moves us not. 'Tis not God, it's not  
A pagan, suckled in a creed outworn;  
So might I, standing on this pleasant lea,  
Have glimpses that would make me less forlorn."

We by no means under-estimate the value of money—we fully understand its power both for good and for evil; but the worship which the world pays to the possessors of it, makes one feel dreary and forlorn. There seems something mean and despicable in ignoring all private virtues and moral excellence—in neglecting the wealth of intellect, and the play of fancy, for the mere sordid dross which enoases dullness, stupidity, and perhaps vice. It gives us so low an estimate of human nature, that we feel as if all high and noble feelings, all manly powers, must droop and pine before such false worship. But, mixed with the dreariness with which we regard this stinky spirit of the world, there is also a strong feeling of the ludicrous. We cannot refrain from laughing both at the fools who bow to the gilded ass, and at the animal itself. We lose all respect for what is called "respectability." Tunbridge Wells is doubtless a most "respectable" place, full of people of "respectability," from the brougham upwards, dwelling in villas, and lodges, and cottages "with a double coach-house;" rejoicing in parks and paddocks, in hot-house and conservatory, in "purple and fine linen"—all of the very highest "respecta-

bility." And among them comes to dwell a true and earnest man, without horse, or gig, or brougham—simple and unostentatious in his habits, but with a wealth of thought, and power of mind, which the whole herd of respectabilities by whom he was surrounded could neither understand nor appreciate. He was one of those of whom we say with Wordsworth—

"Blessings be with them, and eternal praise,  
Who gave us nobler loves, and nobler cares—  
The poets—who on earth have made us heirs  
Of truth and pure delights, by heavenly lays."

The "respectable men" of the neighbourhood held the poet altogether unworthy of their sweet company; the "respectable women" might have desired to have staid at him, just as they would at the Marionettes or the hippopotamus, but they scarcely thought it "respectable" to have any acquaintance with a poet. And so the poet was allowed to live on, unnoticed and unregarded; not one of the "respectable" inhabitants would condescend to visit him. But, at length, a change came over the spirit of their dream. It happened that royalty paid a visit to the lovely scenery of that neighbourhood, and, with the graceful frankness that marks the actions of our good Queen and her royal consort, one of their first acts was to do homage to intellect in the person of Alfred Tennyson, by visiting the poet whom the "respectables" had despised and neglected. Dite was the consternation amid the whole "respectable" cohabitation. The cringing, stinky spirit was roused within them, and they sought to be reborn in the poor poet with civility. The knocker of his door had no longer any real, its rusty hinge became quite flexible with us; regards showered in upon him by whole packs; he sought to be acquainted with the man whom the Queen delighted to honour—not for his power of thought, his deep feeling, his rich imagination, his playful fancy—but because royalty had placed its stamp upon him, and it became the fashion to visit him, it became "respectable" to call upon him. But they recoiled without their host. Alfred Tennyson had too much too dignity to accept their tardy homage. The meanness of spirit they had deigned placed the "respectable man" beneath the man of letters. Their ears were returned, their acquaintance declined, and the whole stinky world were in amazement that a poor poet did not feel honoured by the condescension of such "respectable" people.

In different parts of the country, different degrees of respectability are found to exist: that which is highly "respectable" in some places, is *respectable* in others. In some places every clergyman, whatever may be his rank in the church, is held to be "respectable," unless some private vices taint his character; in other districts they are not "respectable," unless they hold preferment. A rector, or a vicar, or a vintner, a plethoric pluralist, or a dainty dean, are highly "respectable;" not so the careworn curate, who does the work for which the others are paid. He is not worthy of admission to their general society, but is condemned either to solitude, or to deal with those who have not received the potent of respectability from the dominant class. James Smith, the rich retired tallow-chandler, who lives at Smythe Lodge, in the county of Bedford, and whose sons are still dipping candles and gilding moulds, thinks it not "respectable" to associate with the curate of the parish, or with the lawyer or the surgeon of the neighbouring town, however great may be their talents, their skill, or their integrity. In like manner, the lawyer and the doctor would think it not "respectable" to associate with the young Smiths, while still employed in trade, however estimable may be their character. And thus the ball goes round: realised wealth looks down upon professional labour; professional men in turn despise the trader who is a *trading* wealth; the wholesale trader thinks the retail trader not respectable; the "billions" turn up their noses at the "Till-ums." And so we go round, round, round, from one end of the social scale to the other. And wealth is at the bottom of all respectability. It may be true that it is not every wealthy man who is "respectable," low and vulgar vice may deprive even wealth of its fascinating power over the public, but even these with find parasites of some kind or other to do homage to their wealth. Nay, sometimes, and that not seldom, although the wealthy man may be living in open and notorious vice, he is still courted by society; yet if he do not act virtuously in itself, but running counter to the prejudices of society, he is no longer deemed respectable. The wealthy Richard Hawkins, —and because wealthy, therefore the "respectable" Richard Hawkins—was living in open and notorious adultery with a low woman who resided in a cottage at a very short distance from his own house. The world knew it, but was silent; and all the "respectable" people of his "respectable" neighbourhood visited at his house, and partook of his hospitality. But the fancy of the "respectable" Richard Hawkins took a different direction; he discarded the disreputable female who had so long been his mistress, and determined to marry the young and amiable daughter of an honest farmer. The consternation of all the "respectable" people of the neighbourhood was intense; no "respectable" person could visit a man who had thus lowered himself; pious clergymen talked to him of the impropriety of his conduct, and tried by every means to prevent his entering upon the holy state of matrimony. Not one of them had ever remonstrated with him on his life of vice—it would not have been "respectable," we presume, to have interfered with that; but the moment he contemplated doing that which the Church commands, and determined on sanctifying his desires with holy rites, the "respectable men" and pious clergymen are dreadfully shocked, and strive, by every means in their power, to prevent him from entering upon a course of life which, by some strange and fallacious process of reasoning, was more offensive in their eyes than living in a state which all true religion and sound morality condemn. Verily conventional respectability is a strange anomaly.

Then again, it often happens that the cloak of respectability is a mere delusion, covering not only poverty but knavery, and giving an opportunity

for depredations, to which poor rogues can never attain. Fannieroy was a most respectable man in the eyes of the world until it was discovered that the very wealth which had glided over his vices was not his own, but was the produce of a series of frauds and forgeries, which his very "respectability" had given him the opportunity to perpetrate and effect. In the case of the Hochdale Savings' Bank again, we have another instance of a most "respectable man," whose respectability was altogether fictitious; he was "respectable" for his supposed wealth, and to this he had added all those external appearances, which, when honest and sincere, are deserving of real respect. He was always to be found at his place of worship, his name was mixed up with philanthropic institutions, his subscriptions were on the list of every charity, he was of the class of men who are chosen for trustees and executors, the arbitrator in disputed accounts; a man of business, full of the decorums of the world, ostentatiously grave, and moral, and sanctimonious. And all this was but "a huge translation of hypocrisy." During the time when he was exhibiting himself as a most "respectable man," he was in the most business-like manner perpetrating the grossest frauds upon the community, and ruining the poor labourers who had deposited their little earnings in the bank—robbing the poor to maintain a position among the rich. And this "respectable man" was neither more nor less than what Alfred Tennyson so pithily calls

"A rogue in grain,  
Veneer'd with a sanctimonious theories."

The criminal records of the country unfortunately contain the names of several, who, by dint of apparent wealth or deep hypocrisy, had at one period of their lives earned for themselves the title of "respectable men." When Rush was committed to take his trial for one of the most deliberate and shocking murders that ever disgraced humanity, the world was horrified that such a "respectable man," who kept a gig, and hired governesses, should have been implicated in such a crime. When Tawell perpetrated the most cunning and heartless murder that disgraces the whole history of crime, with such deep calculation that nothing but the invention of the electric telegraph, which has made the most subtle of elements our winged messengers, could have detected the criminal, he was classed among the most "respectable men;" the very murder itself was intended to hide his vices and preserve his respectability. But the crime he had committed destroyed at once his respectability and his life: he might have indulged the vice, and still been "respectable" in the eyes of a very considerable portion of the world. When a man confines himself to vices which are denounced by the preacher, but are not punished by the law, he often maintains the character of a "respectable man;" but if he be once detected in a crime which brings him within the scope of the law, his "respectability" is gone for ever.

The open and notorious scandal of crime, even when it does not affect life, puts the "respectable man" out of the pale of respectability. Vice, when gilded by wealth and covered with the thinnest of veils, still often retains for its possessor the name of "respectable." Neglect of the most urgent duties but rarely affects the wealthy. They may leave undone many things that ought to be done, without losing the character of a respectable man, when if a poor man had neglected the same duties, he would have been overwhelmed with the keenest reproaches and the bitterest invective. As the old proverb says, "One man may steal a horse, while another must not look at a halter." A man professing an elevated tone of religious feeling, if he has also wealth, may neglect the most urgent duties and still be regarded as most respectable; nay, we are not quite certain if any one ventured to question his respectability, whether he would not be branded as an infidel for presuming to doubt such a pious character. Edward Thompson was a person of considerable natural abilities; he was the illegitimate child of a poor woman by whom he had been sent to the Sunday-school of a dissenting congregation. He made so rapid a progress in his education that the minister and elders of the congregation enabled him to obtain higher acquirements, and he became one of their preachers. In this situation he attracted the attention of a benevolent clergyman who, partly from a desire to encourage rising talent, and partly perhaps from the hope of detaching that talent from the heresy of dissent, furnished him with the means of going to college, and ultimately of becoming regularly ordained in the Church of England; and he began to rise in the world. It frequently happens that a very thick outer covering of religion is the surest road to wealth; and Edward Thompson was never seen without all the outward symbols of his profession. Like many of those who quit one form of religion for another, in leaving the simplicity of the one he adopted the extreme formulas of the other. From boot to hat he was an epitome of clerical costume. From the service of the church to the relaxations of society he was everywhere a *priest*, (and we use the term here in what Bentham would call its dyslogistic form, as contradistinguished from *paster*). His rigidity of deportment won the heart and purse of a wealthy lady, and he became elevated from a poor curate into a "respectable man," with a carriage and servants in grave, clerical liveries. His first step towards fortune was soon followed by others; he was no longer a curate, church preferment poured in on him, and he became more respectable than ever. His wife died, leaving him all her wealth; and all the marriageable young ladies of the district were constant in their observance of all religious duties, and in paying due homage to the priest whose vows had not bound him to celibacy. Beautiful surplices of the finest linen were worked and ornamented for him; no one had so numerous a collection of the very purest and most gracefully fitting bands; ornaments for his private oratory, and decorations for the altar of his church of the finest needlework and embroidery poured in upon him, and he accepted them all in the most bland and gracious manner. He was undoubtedly the most courted and the most "respectable" man in the neighbourhood. And, again, another lady of large fortune was won by his sanctity, and another carriage and a larger

establishment bore testimony to his increased respectability. It was well for him he possessed so large a stock of bands and ornaments, for somehow, notwithstanding his increased respectability, the supply fell off; and there also seemed to be, a decrease in the religious enthusiasm of the feminine world around him; the week-day congregation sensibly diminished, and it began to be rumoured that polkas and waltzes were regaining their ascendancy. Still, he was at the height of his prosperity—the very quintessence of a respectable man. But where was his poor mother all this time in which he had been climbing to wealth and "respectability?" Sinking deeper and deeper into poverty and distress. Not once had his hand been stretched out to aid her; and she who had brought him into the world, who had watched over his early days, and, if herself a sinner, had striven to give him an education that might lead to a religious and moral life, now, in her old years, was compelled to seek parochial relief. He was applied to by the board of guardians to make allowance to his destitute mother out of the superfluity of his wealth, and this "respectable man" sheltered himself upon the plea that, as he was illegitimate, he was not legally bound to provide for the woman who had given him birth. To avoid a public exposure, he at length consented to allow half-a-crown a week to his mother, and he still continues to flourish in all the odour of sanctity, and the full possession of all the honours due to a "respectable man." Ben Jonson, in his comedy of *The Devil is an Ass*, makes Satan say of the men of this world, and not without good foundation,—

"They have their vices there, most like to virtues;  
You cannot know them apart by any difference:  
They wear the same clothes, eat the same meat,  
Sleep in the self-same beds, ride in those coaches.  
Or very like, four horses in a coach,  
As the best men and women."

Wealth, success, hypocrisy—these are the staple from which "respectable men" are formed. And if we find a virtuous honourable man, whose life is a pattern of benevolence, whose intellect is constantly exerted for the benefit of his fellow-creatures, upon whose fair fame no shadow rests, in whom even poverty looks bright, the "respectable men" grace him with a patronising nod, and condescendingly admit that "he is a good enough kind of person in his way." When will the day arrive, in which we shall learn to distinguish true respectability from the false ideal that is now worshipped? When will realities take the place of shams? In these our days, we have need of realities—of honour, courage, patriotism—of all that can arouse the true spirit of men in us. Wordsworth, moralising over the expected invasion of 1803, furnishes us with some thoughts that are at once appropriate to the subject of which we have been treating, and to the events which the success of that now "respectable man," Louis Napoleon, may bring upon us—with these we conclude our paper:—

"These times strike monied worldlings with dismay!  
Even rich men, brave by nature, want the air  
With words of apprehension and despair;  
While tens of thousands, thinking on the assay,  
Men unto whom sufficient for the day,  
And minds not stunted or unskilled, are given,  
Sound, healthy, children of the God of heaven,  
Are cheerful as the rising sun in May.  
What do we gather hence but from our faith,  
That every gift of Heaven's origin  
Is breathed upon by Hope's perpetual breath;  
That virtue and the faithful within  
Are vital—and that riches are akin  
To fear, to change, to covetousness, and death."

## REMEMBERED MUSIC.

### A FRAGMENT.

Thick rushing, like an ocean vast  
Or brows the far prairie slaking,  
The water crowd heavily and fast  
As surf, one plunging while the last  
Draws seaward from its foamy breaking.  
Or a low murmur they began,  
Rising and rising momentarily,  
As o'er a harp Æolian

A stifled breeze, until they ran  
Up to a sudden ecstasy  
And then, like minute drops of rain  
Ringing in water silvery,  
They lingering dropped, and dropped  
again,  
Till it was almost like a pain  
To listen, when the next would be.

**THEORY IN ITS HIGHEST SENSE.**—All branches of the study of nature, in their progress from the period of observation to that of generalization and theory, appear destined to endure the same storm which astronomy has weathered, and like that noble science, to come forth renewed and purified in the struggle—strengthened by popular applause, and fertile of public benefit. To quicken the inertness of prejudice, and rouse the despair of ignorance among the masses of mankind, may appear unnecessary for the "advancement" of science, which must ever be entrusted to a few superior minds; but the opinion which would separate the acquisition from the diffusion of knowledge is no less erroneous than ungenerous, since the highest and most comprehensive truths in natural science are but the concentration of common phenomena, the laws of common experience. "In the determination of these phenomena, in the correct association of them into laws and systems, immense preliminary labours must be undergone, before the most powerful intellect—however deeply versed in abstract science, and the philosophy of causation—can ascend to that comprehensive view of a whole series of dependent truths which constitute a general theory."—*Lardner's Cyclopædia*.

## ONWARD!

**THRESHING, &c., BY STEAM.**—A very interesting exhibition has taken place on the farm of R. D. Mangles, Esq., M.P., near Guildford, viz., the working of the machine of Messrs. Clayton and Shuttleworth of Norwich. It is the first machine of the kind which has been put up in Surrey. From the time of the wheat leaving the hands of the feeder until it was winnowed and in the sack ready for market, was (each sack) exactly five minutes.

**GONDOLA STEAMERS ON THE THAMES.**—Early in the ensuing spring a "fleet of gondola steamers" will be placed on the river, to run between London Bridge and all the piers to Richmond. They are ten in number, of a new and novel construction, resembling somewhat in form the gondolas that ply on the canals of Venice. A splendid saloon occupies the whole of the after part of the vessel, with a promenade above. Most of them are building at Liverpool.

**IMPORTANT DISCOVERY.**—It is stated that a new method of determining longitude at sea by observation independent of the chronometer, was discovered by the Rev. Tyler Thacher, on his late passage to San Francisco in the *Capitol*. His method is partly geometrical and partly arithmetical, but is plain and certain. The certificates from the master and first mate of the *Capitol*, show the discovery was made and tested by Mr. Thacher, during his late voyage to California. Mr. Thacher is now preparing for the press a work which will contain his discovery, so important to navigators and the whole commercial world.

**THE LADIES' GUILD.**—An industrial refuge for impoverished gentlewomen of rank and station has just been founded, with appropriate official ceremony, under the title of "The Ladies' Guild." An establishment is formed in connexion with it for trading operations, called *The Ornamental Works Company*, and it is proposed to deal in Berlin wool, bread-cloths, kettle-holders, patchwork, anti-macassars, and all those interesting results of feminine domestic industry for which ladies are now famous. The Guild is described by the managers as "not being in the remotest degree eleemosynary, and requiring only the ordinary business support of customers." The "labours of the fair executants" are stated "to be at present concentrated upon a valuable process of almost universal decoration, patented and presented by a lady of family and fortune;" and, "before the meeting closed," continues the report, "orders poured in upon the clerks from every side."

**NEW AND VALUABLE INVENTION.**—We saw yesterday, at the office of Mr. Friend, No. 105, Broadway, a new article which he calls "ligneous marble," which cannot fail to come into general use as soon as it is known. It is a composition of Mr. F.'s invention, which is laid on wood, and bears so close a resemblance to real marble that nothing but its weight can betray it. The specimens already made are variegated tables and mantels of the richest description of jasper, cornelian, lapis-lazuli, &c. It is said to be uninjured by lemon-juice and all the ordinary staining matters usual in a house. What adds immensely to its usefulness, is the fact that it may be used as a finish for walls, and is susceptible of forming all shades of colour. We cannot imagine anything more gorgeous than walls and columns of this splendid material. For tables, stands, &c., it is handsomer, more durable, lighter, and more easily managed than marble.—*American Paper*.

**NOVEL EMPLOYMENT OF INDIA-RUBBER.**—An ingenious discovery, by which India-rubber and gutta-percha are rendered applicable to the formation of artificial features, and to the covering of artificial limbs, has been made by a Mr. Gray. By this discovery the necessity of what is called the Taliaocottian operation in supplying the place of a lost nose to the face, is removed, for that feature can be formed, and as it were grafted on the integuments in such a manner as closely to resemble nature. The human ear can also be closely imitated by the substance produced by the mixture of the gums of which India-rubber and gutta-percha are constituted. In respect to artificial hands, the material of which they are formed can be covered with this substance, which perfectly resembles the natural skin, and is almost equally flexible. So complete is the deception, that it is nearly impossible to discover that art has superseded nature.

**THE NEW CURE FOR CONSUMPTION.**—"We recently mentioned some statements, concerning the virtues of phosphate of lime in scrofula and other diseased states of the system, made by Professor Stone in the *New Orleans Medical Register*. The *Worcester Spy* publishes the following confirmatory statement, which will add to the interest awakened by this discovery.—"On the appearance of this article, a friend of ours addressed a letter to a professional gentleman of high standing in New Orleans, who is known by reputation throughout the Union, making inquiries respecting it. The answer is of a highly satisfactory character. The writer says that Professor Stone is an eminent physician, and, in fact, stands at the head of the medical profession in New Orleans. Dr. Stone says that there can be no doubt of the usefulness of the new remedy. The phosphate of lime should be incorporated with the cod-liver oil, in doses of six to eight grains of the phosphate with more or less of the oil, according as the stomach of the patient is able to bear it, and be taken every morning, noon, and night. This comes from a source that entitles it to the consideration of the medical profession." We also notice that Dr. Ira Warren, of this city, in a communication in the *Boston Medical and Surgical Journal*, speaks favourably of the new remedy. He suggests, however, that phosphate of soda may perhaps be preferable to phosphate of lime, as the latter is insoluble."—*New England Farmer*.

## POETICAL QUOTATIONS.

## ADVICE.

LET me entreat you  
For to unfold the anguish of your heart:  
Mishaps are master'd by advice discreet,  
And counsel mitigates the greatest smart.

*Spenser's Fairy Queen.*

Know when to speak—for many times it brings  
Danger, to give the best advice to kings.—*Herrick*.

Direct not him whose way himself will choose;  
'Tis breath thou lackest, and that breath wilt thou lose.

*Shakspeare's Richard II.*

I pray thee, cease thy counsel,  
Which falls into mine ears as profitless  
As water in a sieve.—*Shakspeare's Much Ado About Nothing*.

Love all, trust a few,  
Do wrong to none; be able for thine enemy  
Rather in power than use, and keep thy friend  
Under thine own life's key. Be checked for silence,  
But never taxed for speech.—*Shakspeare's All's Well*.  
Love thyself last; cherish those hearts that hate thee;  
Corruption wins not more than honesty.  
Still in thy right hand carry gentle peace,  
To silence envious tongues.—*Shakspeare's Henry VIII.*

What could I more?  
I wou'd thee, I admonish'd thee, foretold  
The danger, and the lurking enemy  
That lay in wait; beyond this had been force,  
And force upon free-will hath here no place.

*Milton's Paradise Lost.*

Learn to dissemble wrongs, to smile at injuries,  
And suffer crimes thou want'st the power to punish;  
Be easy, affable, familiar, friendly;  
Search, and know all mankind's mysterious ways;  
But trust the secret of thy soul to none.  
This is the way,  
This only, to be safe in such a world as this is.

*Rome's Ulysses.*

Aye free, off han', your story tell,  
When wi' a bosom enemy;  
But still keep something to yourself  
Ye scarcely tell to any.

Conceal yourself as weel's ye can  
Frae critical dissection;  
But keek thro' ev'ry other man,  
Wi' sharpen'd shy inspection.

*Burns's Epistle to a Young Friend.*

## ADIEU.

Then comes the parting hour, and what arise  
When lovers part—expressive looks, and eyes  
Tender and tearful—many a fond adieu,  
And many a call the sorrow to renew.—*Crabbe*.

We part—  
But this shall be a token thou hast been  
A friend to him who pack'd those lovely flowers,  
And sent them as a tribute to a friend,  
And a remembrance of the few kind hours  
Which lightened on the darkness of my path.—*Percival*.

## AFFECTION.

What war so cruel, or what siege so sore,  
As that which strong affections do apply  
Against the fort of reason, evermore  
To bring the soul into captivity!—*Spenser's Fairy Queen*.

Of all the tyrants that the world affords,  
Our own affections are the fiercest lords.  
*Earl of Stirling's Julius Caesar.*

Affections injured  
By tyranny, or rigour of compulsion,  
Like tempest-threatened trees, unfirmly rooted,  
Ne'er spring to timely growth.—*John Ford's Broken Heart*.

Oh! there is one affection which no stain  
Of earth can ever darken—when two find,  
The softer and the manlier, that a chain  
Of kindred taste has fastened mind to mind.  
'Tis an attraction from all sense refined;  
The good can only know it. 'Tis not blind,  
As love is, unto baseness; its desire  
Is but with hands entwined to lift our being higher.—*Percival*.

## ENIGMA.

Swifter than Time we speed  
 Most unlike the life  
 To places never known we lead,  
 And tales untold I relate  
 To us there are no dead,  
 We murmur, but we never kill,  
 Wounds made by us have never blue,  
 Nor evil deeds brought ill  
 Look at the wretch, by yonder cliff,  
 Champing with wild despair;  
 The fiend pursues, to strike him down,  
 With terrifying air  
 The blow is struck, the fiend has fled,  
 With form and visage grim;  
 No wound is made, but the victim found  
 A pleasant "down" for him.

## QUESTIONS SOMEWHAT PARADOXICAL.

1. WHAT is it that leaves us with every demonstration of rage and violence, though we give no offence, and, after a season, returns to provide for our necessities with the same marks of fury and anger that accompanied his departure? Like many other odd personages, he had no rest while away from us, and as little on his return. He is constantly in motion, travelling from one place to another, and yet seems never fatigued. He no sooner sets down in one place, than he starts up, and is off to another. While he cheers and invigorates the temperate with his pleasing presence, he abandons the more unfortunate circles, and leaves them to deplore his absence, and their own melancholy fate! He is very industrious, follows several trades, and is a stationer of the very first eminence. I recommend him to your consideration, though, I must confess, he is not to be depended on, being very capacious; even in his most benign fits, a gloom will sometimes overspread his countenance, and you will suddenly become a dupe to his deceit, and be inundated with a shower of disappointments.

2. If you were invited to an assembly, what single word would call the musicians to their post, and, at the same time, tell you the hour to begin dancing?

3. WHAT part of your ear would be the most essential for a martial band?

4. WHY is good music like a medicine not publicly known?

5. WHAT is it that is always present; yet, now 'tis going, coming—now 'tis gone, and never will return? It flies with the swiftness and exactitude of the sun. Some strange mortals say it is slow and tedious on the way—are for ever trying to kill it; but they injure themselves in the attempt, and, at length, meet their own destruction; for they fall a victim to the avenger, who himself destroys all things. It is now too long—then too short. Always a theme of complaint. Some have too great a portion—some not half enough; but, strange to say, those who have the least are best content, while those who have more than they know what to do with, are bewailing their miserable destiny!

6. WHAT is it that stands aloft, and regulates our daily movements; yet feels no interest in our concerns; directs us when to go, and when to come;

## TRANSFIGURED PLAYING CARDS.

EIGHT OF CLUBS.—CHINESE PASTIME.

yet cares not whether we attend or not: still, thus indifferent to our fate, he often strikes a heavy blow to urge us on, and we feel no resentment when the reproof is given?

7. WHY is a magnificent house like a book of anecdotes?

8. WHY is a stupid fellow like G sharp?

9. WHY is the moon like a domestic?

10. WHAT city is that which imperatively desires the first letter in the alphabet to depart?

11. WHAT will a venomous serpent, and an old bit of linen placed before us, become?

12. WHY is a state of indolence like a man in the midst of battle?

13. WHY is the letter O like a great personage travelling under a feigned name?

14. Is myst'ry and darkness I'm involv'd,  
 Although by you, perhaps, I may be solv'd  
 Difficulties vanish, before active minds,  
 The Wise—to study, perseverance binds.  
 Be not dismay'd then, though I am obscure,  
 You'll find me out in time, I'm pretty sure.

15. WHICH of the signs of the Zodiac was the greatest enemy to the Reformation?

16. WHAT must Tom be to make a cleaver?

17. WHY is a gardener like a housemaid?

18. WHY is a baronet like his great coat?

19. PRAY tell me, kind friends, what trade is the sun?

I'm firmly persuaded he does pursue one.  
 Indeed, I suspect, between you and I,  
 That he follows another confined to the sky:  
 And two or three more perhaps you will find,  
 If you consider it well in your mind.  
 Some say—they're sure—in one month of the year,  
 He embarks in a third, and that's very clear.  
 I'll leave you to guess them all for awhile,  
 When you find out the last, perhaps you will smile.

20. WHAT ornament would you put on, which, if it could speak, would say—I forsake you?

21. WHAT kind of mechanic is a bridge?

22. WHY is a fine artist like a looking-glass?

23. WHY is a large dish like a war-horse?

24. WHY is a bell like hospitality?

25. WHY is an alderman's table like a donkey?

26. WHY is quizzing like the letter D on horseback?

## OUR CORNER CUPBOARD!

One never loses by doing a good turn.

FAIR dealing is the bond and cement of society.

PLEASURE is precarious, but virtue is immortal.

ALL things are soon prepared in a well-ordered house.

A PASSIONATE man scourgeth himself with his own scorpions.

ONE hour gained by rising early is worth one month of labour in the year.

ONE hour lost in the morning by lying in bed, will put back all the business of the day.

ONE hole neglected in a fence will cost ten times as much as it will do to mend it at once.

THE whole number of railways in the United States is 335, measuring 10,287 miles in length, and constructed at a cost of 306,607,954 dollars.

WITHIN a man's conscience begins to get hard, it does so faster than anything in nature. It is like the boiling of an egg; it is very clammy first, but as soon as it gets cloudy, one minute more and you may cut it with a knife.

"MADAM," said old Roger to his boarding-house keeper, "in primitive countries, beef is often the legal tender; but, madam," said he, emphatically, thrusting his fork into the steak, "all the law in Christendom couldn't make this beef tender."

LORD NORTH, during a severe sickness, said to his physician—"Sir, I am obliged to you for introducing me to some old acquaintances." "Who are they?" my lord, inquired the doctor. "My lord," replied his lordship, "which I have not felt for many years until now."

"I REMEMBER," says the celebrated Wesley, "hearing my father say to my mother—'How could you have the patience to tell that blackbird the same thing twenty times over?' 'Why,' said she, 'I told him but nineteen times, I should have let my labour.'" "I told him but nineteen times, I should have let my labour."

THE report that a member of Congress from the West made a speech so dull and heavy, that telegraph wires of ordinary strength broke down at every paragraph while the speaker was endeavoring to read it to the honorable gentleman's constituency, is doubtful.

"FRIEND JOHN,—I desire thee to be so fitted as to go to one of those sinful men in the flesh called attorneys, and let him take out an instrument with a seal thereunto, by means whereof we may seize the estate and inheritance of George Green, and bring him before the laudable King men at Westminster, and teach him to do as he would be done by.—Thy friend, B. C."

Who is the lightest man in the world? The Frenchman.—Who is the heaviest? The German.—Who is the most serious? The Englishman.—Who is the most vivacious? The Swiss.—Who is the proudest? The Spaniard.—Who is the most humble? The Russian.—Who is the most enterprising? The Pole.—Who is the widest awake? The American.—Who is the sleepest? The Hottentot.

WHEN fumes of wines do once the brain possess,  
Then follows straight an imbecility.  
Throughout, the legs so fitted in that case,  
They cannot with their reeling trunk keep pace.  
The tongue trips, mind droops, eyes stand full of water,  
Noise, hiccough, brawls, and quarrels follow after.—*Lucilius*.

CONJUGAL AFFECTION.—A woman went into an apothecary's shop the other day, with two prescriptions—one for her husband, and the other for her cow. She inquired what was the price of them, and the apothecary replied it was so much for the man and so much for the beast. The woman, finding that she had not money enough, reflected for a moment, and said—"Give me, at all events, the medicine for the cow; I can send for my husband's to-morrow."

A CELEBRATED divine, who prided himself upon his originality, was startled one day by a friend coolly telling him that every word of his favorite discourse was stolen from a book he had at home. The astonished writer begged for a sight of this volume. He was, however, released from his misery by the other solemnly announcing the work in question to be *Johnson's Dictionary*, "where," continued his tormentor, "I undertake to find every word of your discourses."

A FACTIOUS gentleman, travelling in the country, on arriving at his lodging-place in the evening was met by the ostler, whom he thus addressed—"Boy, extricate that quadruped from the vehicle, stabulate him, denote him an adequate supply of nutritious aliment, and when the Aurora of morn shall again illumine the oriental horizon, I will reward you a pecuniary compensation for your amiable hospitality." The boy, not understanding a word, ran into the house, saying—"Master, here's a Dutchman wants to see you."

A SHORT time since, a poor Irishman applied at the churchwarden's office at Manchester for relief, and upon some doubt being expressed as to whether he was a proper object for parochial relief, he enforced his suit with much earnestness. "Och, yer honour," said he, "sure I'd be starved long since, but for my cat." "But for what?" asked the astonished interrogator. "My cat," rejoined the Irishman. "Your cat! How so?" "Sure, yer honour, I could her eleven times, for sixpence a time, and she was always hemo before I'd get there myself."

## OUR MEMORANDUM BOOK!

THE BEST FRIEND AND COMPANION.—The most agreeable of all companions is a simple, frank man, without any high pretensions to an oppressive greatness; one who loves life, and understands the use of it; obliging, alike at all hours; above all, of a golden temper, and steadfast as an anchor. For such a one we would gladly exchange the greatest genius, the most brilliant wit, the profoundest thinker.—*G. E. Lessing*.

## GRATITUDE.

WHAT is grandeur, what is power?  
Heavier toil, superior pain;  
What the bright reward we gain?  
The grateful memory of the good.  
Sweet is the breath of vernal show'r,  
The bee's collected treasures sweet,  
Sweet music's melting fall, but sweeter yet  
The still small voice of gratitude.—*Grey*.

BROTHER AND SISTER.—As fathers love their daughters better than sons, and mothers love their sons better than daughters, so do sisters feel towards brothers a more constant sentiment of attachment than towards each other. None of the little vanities, heart-burnings, and jealousies that—alas for poor human nature!—are but too apt to spring up in female hearts, can (or, at all events, should) arise between brother and sister; each is proud of the success of the other, but it cannot interfere with self; nay, on the contrary, is flattering to self. Hence, if there be a bond of family union more free from the selfish bias that interrupt all others, it is that which exists between an affectionate sister and brother.—*Lady Blessington*.

THE ANIMAL KINGDOM.—A good winter takes the following view of the animal empire, and adoration of the animal kingdom.—"Bees are prompt criss. Their cells are so constructed, as, with the least quantity of material, to have the largest sized spaces and the least possible loss of interest. The eagle is a meteorologist. The hawk called a nine-killer is an arithmetician; and also the crow, the wild turkey, and some other bird. The torpedo, the ray, and the electric eel, are electricians. The nautilus is a navigator. He is a good lawyer, he sails east and weighs anchor, and performs other matters of fact. Whole tribes of birds are mathematicians. The beaver is an architect, builder, and wood-cutter. He cuts down trees, and erects houses and dams. The mole is a civil engineer. He does not only build houses, but constructs aqueducts, and drains to keep them dry. The white ants maintain a regular army of soldiers. Wasps are paper manufacturers. Caterpillars are silk makers."

LEARNING ARABIC.—Bayard Taylor, who is now traveling in the East, gives the following account of his experience, in the *New York Tribune*:—"Sometimes I varied this repose by trying to pick up Arabic. Wilkinson's *Vocabulary* and Captain Hayes' *Grammar* did me great service, and after I had had a number of words with Ibrahim, to get the pronunciation, I made bolder essays. One day, when the sators were engaged in a most vociferous discussion, I broke upon them with:—'What is all this noise about? Stop a minute!' The effect was instantaneous; the men were silent, and Seid, turning up his eyes in wonder, cried out 'Wallah! wallah! the Howady takes Arabic!' The two copper-faced Fellahs thought it very amusing and every new word I learned sufficed to set them laughing for half an hour. 'O fishman, have you any fish?' and he held up a string of eels, and made answer:—'O Howady, I have.' This solemn form of address, which is universally in use, makes the language very piquant to a foreigner. The construction of the sentences, so far as I have learned, is very simple, and the common colloquial Arabic does not seem near so difficult as I had been led to expect."

COLOURS IN LADIES' DRESS.—Incongruity may be frequently observed in the adoption of colours without reference to their accordance with the complexion or stature of the wearer. We continually see a light blue bonnet and flowers surrounding a sallow countenance, or a pink opposed to one of a glowing red, a pale complexion associated with canary or lemon yellow, or one of delicate red and white rendered almost colourless by the vicinity of deep red. Now, if the lady with the glowing red complexion had worn a transparent white bonnet, or if the lady with the glowing red complexion had lowered it by means of a bonnet of a deeper red colour—if the pale lady had improved the cadaverous hue of her countenance by surrounding it with pale green, which, by contrast, would have suffused with a delicate pink hue; or had the face

"Whose red and white  
Nature's own sweet and cunning hand laid on,"

been arrayed in a light blue, or light green, or in a transparent white bonnet, with blue or pink flowers on the inside, how different, and how much more agreeable, would have been the impression of the spectator! How frequently, again, do we see the dimensions of a tall and embosomed figure magnified to almost Liblupian proportions by a white dress, or a small woman, reduced to Liliputian size by a black dress? Now, as the optical effect of white is to enlarge objects, and that of black to diminish them, if the large woman had been dressed in black, and the small woman in white, the apparent size of each would have approached the ordinary stature, and the former would not have appeared a giantess, or the latter a dwarf.—*Mrs. Merryfield in the Art Journal*.

**DO YOU WANT YOUR COAT OF ARMS OR CREST.**—A drawing of them for 2s. 6d. Description and answer to queries 1s. An Heraldic Painting 9s. Book-plate of Crest 5s.—of Arms 21. Heraldic College consulted; specify with place and County. Apply by Letter, enclosing stamps or order to Mr. James Friwell, Heraldic Engraver, 12, Brook Street, Holborn, London.

**HOOPER'S FAMILY COUGH PILLS.**—Composed only of the choicest drugs and from a genuine Medical Prescription, are recommended on high medical authority as the best and best remedy for Coughs, Colds, Sore Throat, &c.; and may be obtained or through any respectable chemist from the sole agents, WILLIAM SUTTON & Co., 10, Bow Church Yard, London.

**LADIES' BONNETS,** of the most Fashionable kinds.  
The richest and best materials, at moderate prices.

Ponstables, 1s. to 10s. 6d. Fancy Straws, 3s. 6d. to 18s. 6d.  
**BETHEL WARE.**  
Manufacturer, 217, Tottenham Court Road.

A SINGLE BONNET AT THE WHOLESALE PRICE.

**THE 1,000,000 PATRONISE FREESTONE'S ROYAL BLUE HOUSES, FOR BONNETS**

OF THE MOST FASHIONABLE KINDS.  
Omnibuses from all parts of London to the Angel, Islington, and the Eastern Counties Railway, every five minutes. Parcels free of carriage by the Royal Blue Vans, to all parts of the Metropolis, Morning and Evening.  
Copy the address—The Royal Blue Houses, Islington and Shoreditch. Manufacturers, Pinneridge, E. W. FREESTONE, Proprietor.

**THE HOME CIRCLE.** Edited by PIERCE LEECH. Vol. V. Just out. A Splendid Frontispiece, 51 engravings, and 432 pages. Table, poetry, 51 engravings, geography, notices, accounts, and letters for ladies, and for knitting, crocheting, embroidery, and every other thing for the young ladies of the metropolis. The volume contains the continuation of the various numbers of families who receive the magazine, and is a most interesting and useful work. Weekly, 1s.; stamped, 2s.; monthly, 6d.; year, 7s. and 1s. 6d. gilt. Back numbers to be had at the office, 60, St. Martin's Lane, and all booksellers. Liverpool: THOMAS & SON, Edinburgh: OLIVER & BOYD, and MANCHESTER: MCGEEHAN & J. CLEGG & Co.

**VENTILATING BOOTS and SHOES.**  
This new and valuable discovery gives instant ease and comfort to the wearer, prevents cure from the sun, and is a most useful and being tender, and keeps them perfectly dry. The inventor solicits and has a right to a reward, having experienced the comfort which it gives to a person who has any other. The Boots supplied with the inner sole and connecting piece (which come on the bottom), at the small charge of two pence each, all in all, for six, and that no maker can make any mistake. Between three and four hundred persons have proved their value.  
To be had of the Patience, C. MARSHALL, near the Bridge, Kingsland Road, London.

**READABLE BOOKS.**

Published this day, complete in one vol., containing nearly 300 pages of Text, and about 30 Illustrations, Price 1s. Ornamental Boards.

**TALES OF MYSTERY, IMAGINATION, AND HUMOUR, AND POEMS.** By EDGAR ALLAN POE. Being Vol. I. of READABLE BOOKS.

**CONTENTS:—**

Memoir of the Author.  
The Gold Beetle  
Startling Effects of Mesmerism on a Dying Man.  
A Descent into the Afterlife.  
The Parlored Letter.  
The Mystery of Marie Roget.  
The Premature Burial.  
Some Words with a Mummy.  
The Murders in the Rue Morgue.  
The Raven, and other Poems.

The present is the first occasion of the republication in this country of the above remarkable Tales, several of which have been already translated into every European language.

The distinguishing feature of this series of READABLE BOOKS is the combination of a sterling class of literature with a certain vivacity of style or subject, which, while it cannot fail to interest the masses, the man of taste and reading will not turn aside from. These works will, therefore, be found equally suitable to the family circle, and the solitary student—to the latter suffering from ennui, and the man weary with work—to the sedentary stayer at home, and the more mercurial traveller on river, road, and rail.

Part I., price 6d., and No. 1, price 1s., are published simultaneously with the volume.  
London: HENRY VARETRILL, Gough Square, Fleet Street; JAMES M'GLASHAN, Dublin.

**TO THE LADIES.—MRS. PULLEN**  
successor Mrs. WARREN as EDITRESS of the  
**NEEDLE-WORK Department of THE FAMILY FRIEND.** Beautiful Patterns in every Number.  
London: HOULSTON & STONEMAN.—Price 2d.

**THE FAMILY FRIEND.—Price 2d.**  
Number Sixty-five contains—Chess.—Problem and Game; Solution to Problem IV. *Bazaar Work*.—Stall the Second. *Domestic Receipts.* Miscellaneous.—Advice to an Author; Habits; Industry and Punctuality; Principles in Tea Making; The Pious King; Trifles; Treasures. *Fashions*.—Uncle Robert's Merry Makings; Enginas; Characters, &c. Answers to Enquiries. *Poetry*.—To Religion; The Falcon; There's Something for us all to do; To Nature; Woman's Mission. *Science*.—Grandfather Whitehead's Lectures to Little-folk. The Senses Vision. *Self Made Men*.—Francis Joseph Haydn, Musician and Composer. *Tales*.—The World's Opinion, or the Heart's Truth; Obedience in Children. *Appendix*.—The Editor and his Friends.

**THE FAMILY TUTOR.—Price 2d.**  
Number Twenty-nine contains—A QUICK WALK FOR AN APPETITE. *Eastern Rambles and Reminiscences*.—Jerusalem. *Miscellaneous*.—Arlotecture a Witness of Religion; Benefits of Science; Effects of Monotony on Health; Chinese Transmission. *Popular Geology*.—Charles V. Grants and the Primary Bodies. *Reviews of NEW PUBLICATIONS.* THE BIRD TALISMAN—AN EASTERN TALE. *Zoology*.—Class, Cuckoo, and Crabs, Lobsters, &c. *Appendix*.—The Tutor and his Pupils. London: HOULSTON & STONEMAN, 63, Paternoster Row.

To the PUBLIC and all BOOKSELLERS.—Just out,

**THE YOUNG CHEMIST; or, Scientific Recreations for Youth,** containing several hundred attractive and interesting Experiments in various branches of Science, all of which may be performed with perfect safety in the parlour or drawing-room. 1s., free by post, 1s. 6d.

**THE ONLY MEMOIR OF THE GREAT EXHIBITION**  
PRODUCED WITHIN ITS WALLS.

Just published, complete in two Volumes, price 7s. each, elegantly bound in cloth and gold, with a View of the Crystal Palace put up on the cover.

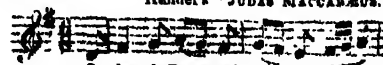

**THE PARLOUR MAGAZINE**  
OF THE LITERATURE OF AMERICA. Printed at the Crystal Palace, if de Latt, at Machine No 158, and 162, Class 6.

We have no doubt that the two volumes of the PARLOUR MAGAZINE will be treasured by many future generations. People flock to the Crystal Palace, and it is close, and eagerly bought up, at enormous prices, articles that had been exhibited there, that they might possess some memento of the Exhibition. We supply not only a work exhibited therein, but one actually produced by machinery within its crystal walls, and in the view of millions of spectators. The value of our book will therefore increase with the advanced years, until it will be regarded as a curiosity and a treasure. These volumes contain translations of Literary Treasures from the

CHINESE.	HUNGARIAN.	POLISH.
DANISH.	HIND-USTANI.	RUSSIAN.
DUTCH.	ITALIAN.	SPANISH.
FRENCH.	MEXICAN.	SWEDISH.
GERMAN.	MORLACHIAN.	TARTARIAN.
GREEK.	PERSIAN.	WELSH, ETC.

With original ENGLISH Contributions by celebrated authors, and choice adaptations from the American. Each volume is embellished by a superior Steel Engraving and by numerous Wood cuts.

**RE-ISSUE OF THE PARLOUR MAGAZINE.**  
In order to meet the wishes of numerous persons of the middle and working classes, who, during the excitement of the Exhibition, were unable to obtain this memento of that great event, the work will be RE-ISSUED in Weekly Numbers, price 2d., and Monthly Parts, price 8d. or 10d. Order of any Bookseller.  
London: HOULSTON & STONEMAN, 63, Paternoster Row.

Handel's "JUDAS MACCABEUS."  
  
O love thy Peace, with plenty crown'd.

**NOVELLO'S MUSICAL PRESENTS**  
—Octavo Editions of HANDEL'S Israel in Egypt 6s. 6d.; Messiah, 6s. 6d.; Solomon, 7s. 6d.; Judas Maccabeus, 6s. 6d.; Jephtha, 6s. 6d.; Joshua, 5s. 6d.; Salomon in progress. HAYDN'S Creation, 5s. MESSIAH: St. Paul, 6s. 6d.; Lobgesang, and A. the Hair Falls, 5s. 6d. Three Masses by Mozart, Haydn, and Beethoven, 8s. 6d.—LONDON: MACAN MUSIC WAREHOUSE, 69, DEAN STREET, SOHO, AND 24, PORTLAND.  
Catalogues, postage-free, six penny stamps.

**RIMMEL'S TOILET VINEGAR**  
is now universally preferred to Eau de Cologne, being more tonic and beneficial as a lotion, pleasant as a perfume, and far more economical. Its numerous, useful and salutary properties, render it an indispensable requisite in all families. Price 2s. 6d. and 5s.  
Sold by all Perfumers and Chemists, and by E. RIMMEL 59, Gerrard Street, Soho.

Notice.—Persons can be Members of the Land and Building Society, or of the Benefit Society, or of both Societies, as they think proper.

Great and Important Benefits to the Working Classes Office—13, Tottenham Court, New-road, St. Pancras, London.

£100 " for 15 Years. " 1 0 8

Surveyor, for examination of Property, and Expenses of Solicitor, for executing Lease of Mortgage, paid by the Society.

**EXAMPLE.**—If a man can purchase a house for £300, supposing, before purchase, he pays a yearly rent of £30, he borrows from the Society £300 for ten years and pays yearly £4 8s., or £14 18s. more than he paid for rent, for which, in ten years, he purchases the house, and has no more rent to pay. Other examples of less payments over a longer period of years can be taken (see Table). For further information, apply to the Secretary, enclosing three postage stamps. Agents required, in form Branches in all parts of the Country. Commission, Five per Cent.; reasonable compensation allowed for extra services.

### Editor's Note-Book.

**HINTS TO FAMILIES.**—It is better to accomplish perfectly a very small amount of work, than to half do ten times as much. Charcoal ground to powder will be found a very good thing to give knives a first-rate polish. A honnet and trimmings may be worn a much longer time, if the dust be brushed well off after walking. Much knowledge may be obtained by the good housewife observing how things are managed in well regulated families. Apples intended for dumplings should not have the core taken out of them, as the pips impart a delicious flavour to the dumpling. A rice pudding is most excellent without either eggs or sugar, if baked gently; it keeps better without eggs. "Wilt! waste makes woful want!"—do not cook a fresh joint whilst any of the last remains uneaten. Wash it up, and with gravy, and a little management eke out another day's dinner. The shanks of mutton make a good stock for nearly any kind of gravy—and they are very cheap—a dozen may be had for a penny, enough to make a quart of delicious soup. Thick curtains closely drawn around the bed are very injurious, because they not only confine the miasma thrown off from our bodies whilst in bed, but interrupt the current of pure air. Regularity in the payment of accounts is essential to housekeeping. All tradesmen's bills should be paid weekly, for then any errors can be detected whilst the transactions are fresh in the memory. Allowing children to talk incessantly is a mistaken indulgence; we do not mean to say that they should be restricted from talking in proper seasons, but they should be learnt to know when it would be proper to cease.

**ALMONDS.** Beta.—Almonds, more especially the bitter, and all nuts which possess the peach blossom or hyacinth flavour, contain a portion of that deadly poison, prussic acid, and should therefore be eaten with extreme caution. Sugar is supposed to be a counteraction to a certain degree, when taken with them; but the best way is to avoid eating substances of so questionable a character.

**TO MAKE PAPER FIREPROOF.** E. S. W.—Nothing more is necessary than to dip the paper in a strong solution of alum water, and when thoroughly dry, it will resist the action of flame. Some paper requires to imbibe more of the solution than it will take up at a single immersion, and the process must be repeated until it becomes thoroughly saturated.

**ARABIC.** M. S. R.—This is a name first applied by the Arabians to the carbonate of potash and soda derived from the ashes of plants, but now extended to those substances which dissolve in water, generally form soaps with oils, and neutralise acids, forming crystalline salts. The chief alkalies of importance in the arts are potash, soda, ammonia, and quina.

**TO CLEAN HEAD AND CLOTHES BRUSHES.** Cypher.—Put a tablespoonful of pearl ash into a pint of boiling water. Having fastened a bit of sponge to the end of a stick, dip it into the solution, and wash the brush with it. Next pour over it some clean hot water, and put it aside for a short time; then drain and wipe it with a cloth, and dry it before the fire.

**CORK.** John H.—This is the bark of the *Quercus Ilex*, a species of oak which grows along the shores of Mediterranean Europe. It is removed from the tree by making circular incisions, and connecting these by longitudinal ones; the bark is then peeled off, wetted to soften it between boards, and afterwards fire-dried, which blackens the surface.

**COPERNICAN SYSTEM.** Volens.—According to this system, the sun is supposed to be placed in the centre, and all the other bodies to revolve round it in a particular order, which theory is now universally adopted under the name of the Solar system. This system of the universe is the same as that anciently taught by Pythagoras, and afterwards revived by Copernicus, a Polish astronomer.

**TO SILVER IVORY.** Workman.—Immerse the ivory in a weak solution of nitrate of silver, and let it remain until the solution has given it a deep yellow colour; then take it out and immerse it in a tumbler of clean water, and place it in water to the rays of the sun. In about 12 hours the ivory acquires a black colour; but the black surface, on being rubbed, is soon changed to a brilliant silver.

**ENTERING INTO SOCIETY.** George.—Our young correspondent inquires what rules he is to observe on mixing with the world, after a long confinement at college. Space will not permit us to enlarge on this subject, which must be left to his own good sense and discretion. There are five points, however, we would especially impress upon his memory, and which are these:—

"If a woman's ways you wisely seek,  
Five things observe with care;  
Of whom you speak—to whom you speak;  
And how, and when, and where."

**FAMILY CLOSING MOVEMENT.**—In compliance with the wishes of many of our young friends, we strongly urge upon the principals of commercial and trading establishments, the necessity of unanimity on the question of early closing, now that the days admit of more out of door exercise. In whatever light we regard this subject, a positive advantage to all interested in it is clearly shown. The merchant or manufacturer, by contributing to the health and happiness of the individuals in their employ, surround themselves with active and willing agents, who are in a condition to fulfil their duties much more efficiently than if they were exasperated from over-taken labour and discontent. The workpeople of all classes have, on their side, opportunities of mental culture, by reading, or attending lectures, &c., which must influence all their actions, and render them diligent and trustworthy in their several vocations. Society at large will see and appreciate such important benefits, resulting from a cessation of business at reasonable hours, and custom will induce the purchase of goods within a stated time. We believe that every friend to humanity will hail with delight the emancipation of the industrious classes from evening toil; and that such will be the case sooner or later is most certain, for the inquiring spirit of the age, the many resources opened for those who desire to improve their minds, and the more extended diffusion of wealth, are altogether opposed to

THE LATE HOUR SYSTEM.

**LACE.** Maria.—The first lace made in this country was of the sort called *Brussels point*, the network being formed by bone bobbins on the pillow, and the pattern and sprays worked with the needle. Such appears to have been the kind worn by the higher ranks, as is evident from the portraits of Vandyke in the reign of Charles I., and of those painted by Kelly and Kneller, in the succeeding reigns of Charles II., Queen Anne, and George I.

**PHOTOGENIC DRAWING.** A. Z.—This term has usually been applied to representations of various objects upon paper imbued with some of the salts of silver. If a piece of paper be dipped into a weak solution of nitrate of silver, carefully dried, and preserved out of the contact of light, it remains white, but if exposed to light, it gradually becomes dark, acquiring a brownish or grey tint, and ultimately blackens, the depth of colour depending upon the intensity of the light, and duration of exposure.

**VARNISH TO COLOUR BASKETS.** M. H. S.—Take either red, black, or white sealing-wax, whichever colour you wish to make. To every two ounces of sealing-wax, add one ounce of spirits of wine; pound the wax fine; then sift it through a fine lawn sieve until you have made it extremely fine; put it into a large phial with the spirits of wine, shake it, and let it stand near the fire forty-eight hours, shaking it often; then, with a little brush, brush the baskets all over with it; let them dry, and do them over a second time.

**WALKING ON WATER.** W.—Our correspondent informs us, in reference to an alleged discovery at Paris of a means for walking on the water, and which, it is stated, has been tried with success on the river Seine, that this is no new discovery; for, in 1821, a Mr. Kent, of Glasgow, invented a machine, by which he was enabled to walk on the surface of the water with perfect safety, at the rate of three miles an hour. A trial was made on the Monkland Canal, which was witnessed by two hundred persons.

**EDUCATION OF CHILDREN.** Parents.—We cannot better assist our correspondent, who describes himself as the father of a family, than by quoting the following excellent precepts we have met with in our reading:—"Accustom a child as soon as he can speak, to narrate his little experiences, his chapter of accidents, his griefs, his fears, his hopes—to commemorate what he has noticed in the world without, and what he feels struggling in the world within. Anxious to have something to narrate, he will be induced to give attention to objects around him, and what is passing in the sphere of his instruction; and to observe and note events will become one of his first pleasures; and this is the ground-work of a thoughtful character."

**TO COLOUR ALUM CRYSTALS.** Juvenis.—In making these crystals, the colouring should be added to the solution of alum in proportion to the shade it is desired to produce. Coke, with a piece of lead attached to it, in order to make it sink in the solution, is the best substance for a nucleus; or, if a smooth surface be used, it will be necessary to wind it round with cotton or worsted, otherwise no crystals will adhere to it. *Yellow*—muriate of iron. *Blue*—solution of indigo in sulphuric acid. *Pale blue*—equal parts of alum and blue vitriol. *Green*—infusion of madder and cochineal. *Black*—Japan ink, thickened with gum. *Green*—equal parts of alum and blue vitriol, with a few drops of muriate of iron. *Milk-white*—a crystal of alum, held over a glass containing ammonia, the vapour of which precipitates the alumina on its surface.

**COMMUNICATIONS RECEIVED.**—G. (we shall always be glad to hear from our correspondent).—**CONSTANT READER** (we do not remember to have seen the book in question).—**TAMERUND** (will find the information he requires at page 208 of our miscellany).—**F. L.** (apply to a medical practitioner).—**TOBY** (ambassadors have *excellency* prefixed to their other titles, and their accredited rank added).—**JAMES LEE** (a lieutenant-colonel in the army ranks with a post-captain in the navy).—**MASSACHUSETTS** (the coloured waters used by chemists to fill the large bottles in their windows, are made thus:—*Blue*—Prussian blue dissolved in water. *Purple*—infusion of logwood, with a little hartshorn added. *Green*—To three ounces of common verdigrise, dissolved in vitriol, add of water two quarts. *Red*—Red-cabbage liquor, with vinegar; or spirits of hartshorn and cochineal. *Yellow*—Dissolve iron in spirits of salts, and dilute with water).—**WILSON** (the following plan may be adopted for removing glass stoppers.—Put a piece of small string around the neck of the bottle one coil round, and fix one end of the string to a nail, then, holding the other end in your hand rapidly move the bottle from end to end. The heat caused by friction will expand the neck of the bottle, and loosen the stopper).—**H. G. S.** (the Society for the Diffusion of Knowledge was projected by Dr. Hirkbeck, upon a suggestion of Sir Richard Phillips).—**ALSTON** (Cardinal, the first important Anglo-Saxon writer, lived 220 years before King Alfred).—**W. W.** (the paper is too long for insertion in our pages).—**ETIQUETTE** (if a lady is engaged with her needle when a visitor arrives, she ought to discontinue her work. To continue thus occupied during a visit of ceremony would be extremely uncourteous).—**H. B.** (you are not obliged to entertain your friends at an expense that entails discomfort. On the contrary, it would, no doubt, afflict those who really esteem you, to know that such was the case. Remember this advice of the great Duke of Sully—"Shut not your heart against those who have a claim upon your hospitality; but remember, that if they really love you, they will come, not to look at your table and furniture, but to enjoy your society.")—**W. OATES** (declined with thanks).—**SURPRISE** (we are gratified with the praise bestowed on our exertions, but we are aware there is always room for improvement, and our constant efforts shall be directed to this end).—**ARCHAEOLOGOS** (we shall be glad to receive the traditional notes alluded to, and we shall feel equally obliged to those of our country subscribers who forward information of local antiquities).

# THE HOME COMPANION:

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL

No. 21.—VOL. I.]

SATURDAY, MAY 22, 1852.

[PRICE ONE PENNY.]

"Mr. Phillips sat some time a witness to the subdued grief of these friendless ones, till feeling it unfitting to obtrude upon such profound sorrow, he at length rose, and requesting the weaver and his dame to leave to him all the arrangements for the obsequies of Mrs. Adams, took his departure; slipping at the same time a bright yellow piece into the hand of the latter, for the purchase of some refreshments."

## THE CALIFORNIANS;

OR, BOTH SIDES OF THE PICTURE.

### CHAPTER I.

"I do not see my little pet, Susan Adams, this morning," said Mr. Phillips, a gentleman of some sixty years, and a weekly visitant of one of the ward schools in the city of New York, and as he spoke he looked around as if seeking some object.

"No, neither she nor her sister Mary have been present for a week past," replied Miss Wise, the principal instructress. "However, here is a note from them, which came this morning, by the hand of one of their little school-mates; an urgent request, you will perceive, sir, for me to call on them as soon as the afternoon exercises are over. But that will be impossible, as I shall then have a teachers' meeting to attend."

Mr. Phillips, without further parley, offered to make the visit in her stead. He was a man of tender sympathies and much benevolence of heart; and he thought he perceived in the language of the note, though penned by a child, a tone of sadness and despondency, not becoming childhood's years.

Mr. Phillips possessed himself of the necessary information for finding the abode of the Adamses, and repaired thither without delay. A half dozen windings up narrow, dark, dingy staircases, brought him to the attic of a miserable lodging-house in O— Street.

As he was about to enter the room, which had been described to him as the Adams' apartment, an elderly woman of decent demeanour and slightly foreign accent, hearing footsteps approach, appeared at the door, and in a voice scarcely above a whisper, accompanied by a solemn, significant shake of the head, said, "Too late, too late, doctor; all is over!"

Mr. Phillips comprehended that he had been mistaken for a physician; and

hastened to undeceive the woman, by informing her that he had called on the part of Miss Wise.

"Oh, yes, sir, I know how it is; my little granddaughter carried the note to the mistress this morning; and mayhap, sir, you would know the little girls—Mary and Susan—if you be one of the gentlemen as looks to the schools."

"Yes, I know them, and very sweet children they are too," said he.

"Well, they'm gone done below to my room. The poor little things took so when they seen their mother was really dead, and didn't breathe no more, that I had much ado to set myself on making things decent about here; for although Miss Juliet, Heaven bless the angel!—always kept matters clean and tidy, yet the blood that found its way out of the poor lady's mouth—for lady indeed she was, good sir, notwithstanding her great poverty—prevented the same order being preserved."

"I am to understand then," apostrophised Mr. Phillips, while leading his way into the chamber of death, "that the immediate cause of Mrs. Adams' decease was hemorrhage from the lungs?"

"Yes, sir, that was it: we didn't think her so near her end, though she has been very poorly, and forced to keep her bed for a week or more past. But two hours ago, or thereabouts, she was seized with such a violent fit of coughing that the lungs burst; and she was very soon suffocated, poor, dear lady! before we could get the doctor here. I think if he had come when Miss Juliet first went after him—but doctors ain't apt to hurry themselves when there isn't no pay in expectation—he could have done something to relieve her; and she might have got up again; and even if she hadn't never been able to sew any more, might have been a great use and comfort to them little girls, so dutiful and affectionate them children always was to their mother, and it delighted one's heart to see it, sir. I always told my little grand-daughter that I wished she would take pattern by them, and then, to give advice and counsel to Miss Juliet; though, dear girl, she never seems to be any way but discreet and correct in her conduct. Yet it is a very sad thing, sir, for a young woman of Miss Juliet's age to be deprived of her

mother; particularly if she be the comely-looking person that Miss Juliet is. It is dangerous, sir, for a poor young girl to look well; because there's so many heartless persons who would not for a moment take into consideration her unprotected and friendless situation. I think her mother had many pains of heart in view of this thing; for since doing that great job of sewing for the Californians—which wore her down to dreadfully—and the disappointment they caused her, and things all together worrying on her mind so, I have heard her frequently talk about it, as though she felt that she was not long for this world. As to matter of looks, one would hardly have thought when she came to this lodging, eight or nine months ago, as might be, that she could live along even to this time. However, that was just after she had received news of the death of her only son, her last prop and hope, who took a fever at one of them sickly places where vessels sometimes stop to get water and provisions, when making that long voyage round to California. It is a sorrowful thing, sir; but many of them young men who have gone off there to seek their fortune, and like Mr. Henry Adams, to get something to support their poor mother and sisters with, find their grave before they even reach the El Dorado, as it is called. And again, in any of them live to send home great treasures of gold to their friends; some of them as don't exactly need it. But that is the way of life, sir, clouds and darkness for some, sunshine and rain for other. Although the last arrival brought golden intelligence to some, it brought sorrow and darkness to this family, sir. Mr. Henry Adams was an extraordinary good young man, and handsome to look at, they say, and was very much doted on by his mother and sisters, than he was on his part devoted to them. So you see, sir, his loss must have been a great blow."

"The Californians, to whom you, madam, alluded a few moments since, as having given Mrs. Adams employment, are they friends of the family?" inquired Mr. Phillips.

"Why, no, sir, not exactly—that is to say, they're not relations; but they're old township folks, that used to know one another before Mr. Adams broke, and moved here from the *country*. They're folks as wasn't then in as good circumstances as Mr. Adams was; and as one time and another he had done the Swifts a good turn, Mrs. Adams, when she heard Mr. Swift had come back from California with half a mill of dollars, or thereabouts, and was living with all his family at that great hotel on Broadway, thought she would call on them, and revive old acquaintanceships; and I don't know all her misfortunes; and see if they couldn't give her and Mr. Juliet some sewing to do, that would be more profitable than making gentlemen's shirts and collars for their stores—why, you wouldn't believe, sir, if I don't suppose you buy your shirts at such a very cheap rate—how little pay they make them give. Indeed, sir, Mrs. Adams and Miss Juliet, after keeping the needle going incessantly from morning's dawn till late at night, weren't able, both together, though being right handy with the needle, to take in but a dollar and three-quarters from Monday morning to Saturday night. And a dollar and three-quarters is a very trifling sum, sir, to support four persons on a week, and out of that, to pay for three quarters for room rent. So, as I said, Mrs. Adams went to the source, and asked them if they could give her something to do, and as she pushed her way through the crowd, as it happened, they had great lots of sewing to do, so you may imagine, sir, for they was fixing off the three boys, and two girls, a little girl to go to boarding-school. Then Mr. and Mrs. Swift, and the two other daughters, were going to travel all over the country to California, and wherever they were going in America, all the railroads, and canals, and what not, and the White House at Washington, and all such things, they was then going ahead into other parts of the world. Well, sir, the preparation of all these things required a deal of clothes." Here the speaker stopped for a breath, and then resumed—"You must know that there was a great many rich ladies living at the hotel as well as Mrs. Swift; and they each one had some poor folks to propose to her, who would do her sewing at a right cheap rate; mere nothing, as that lady said, because they considered even that would be better than working for the shirt stores. So Mrs. Swift told Mrs. Adams, if she would do her work on the same terms that these other sewing-women had offered to, she, for old acquaintance sake, would prefer to give it to her. Accordingly Mrs. Adams and Miss Juliet threw up their shirt work and undertook the job. Then after she and Miss Juliet had sewed steadily on, almost night and day for six weeks, and made a great lot of garments, they went off without paying her a dollar."

"Went off without paying her!" exclaimed Mr. Phillips, "how so?"

"Why, you see, sir, that Mr. Adams and Miss Juliet carried home every Saturday night the garments they had made during the week, and when they got to the hotel—which was generally pretty late in the evening, for they had a long way to walk, and heavy bundles to carry—the Swifts was always in the great drawing-room, amusing themselves with dancing, cards, and all that, and couldn't be disturbed. So it was on the Saturday night preceding the Monday morning that they had agreed to leave; and not understanding they knew they were going, they didn't take no pains to see Mrs. Adams, nor let her know nothing about it; but left a bill with one of the ladies in the house for her, telling her that they couldn't possibly come into such a disagreeable, out-of-the-way place as where she lived, but would see that her bill was settled when they returned to the city, which, God willing, would be in the course of some six or seven weeks; that as to the work she then had on hand, it being for the children as was at boarding school, they didn't think it a matter to wait for it to be done. So poor Mrs. Adams was thrown into great disappointment and distress at not getting her money when she had finished her job. But their people as is very rich, sir, and always has plenty of money in hand, never seem to take into consideration but what the poor can live just as well without any in hand, as they can with their plenty."

"What was the amount of Mrs. Adams' bill against Mrs. Swift?" inquired Mr. Phillips.

"Eighteen dollars, sir. I must tell you that she didn't take up her pay from week to week, because she knewed it would be all safe with them; and to have such a nice large sum come in all at once, she thought would make her feel quite aforchand. It was not a very wise thing, perhaps, and at the end couldn't but bring the matter all the same. For to support them along, she had to draw in that nice little bit of earning of them two children, which she was laying by again the time when they would need their fitting out to go into the school as teachers—the occupation that Mrs. Adams and Miss Juliet, ever since Mr. Henry's death, have been striving so hard, and labouring so diligently, almost night and day, to fit them for. Because, sir, they meant it shouldn't be with them children, as it was with Miss Juliet when she wanted to be a teacher; and was refused for not having received her bringing up and education in a public school. They're the most industrious children I ever saw in my life. Why, if you'd believe it, sir, them little girls, ever since they moved to this place, have earned a shilling a piece, week in and week out, besides going every day to school. Come into this room when you might, you would always see them down by their rag-basket, sewing away as fast as they could make their little fingers fly. Then you would never hear them tramping their mother's heels, to let them go and play around with the other children. And though it seems hard for little ones to be always working, and never take a minute's time to join in the glee and frolics so natural to their young days, yet on the whole I think it is better for them than to spend their out-of-school hours running at large in the streets, where they see and hear so much that is pernicious and corrupting to their tender minds. I often tell my granddaughter that I wish she would take pattern by them little girls, and not worry me so much to be playing in the streets the minute she is out of school. And her grandfather, too, is so wifful to keep her away from the bad she learns there, that he offers if she will only stay in the house, and sew rags for him like the little Adams girls, to give her sixpence more a week than he pays them—my husband is the carpet-weaver that you see, sir, down below in the basement of this house; and who, ever since they came into this lodging, has employed them little girls to sew rags for him, as I've already said, I believe. Well then, sir, after Mrs. Adams' disappointment in getting her money from the Californians, there was no way to do but for her and Miss Juliet to go and hunt up work again at the shirt stores; though they had thought never to try it no more; but with that eighteen dollars coming in from the Swifts to keep 'em along awhile, to endeavor to get into some more profitable sort of business. So two, three,—let's see—June was—yes, three weeks ago it was then, just as that spell of cold wet weather come on, Mrs. Adams and Miss Juliet had to go out on this business of hunting up work, and they was out all day long in the wet snow upon a week; for when takes it out of more, they can't wait for sunny days, and that's how Mrs. Adams, sir, come by that dreadful cold which she has suffered so much which, and which has now at last brought her to her death-bed."

"Had Mrs. Adams relations, do you know, madam?" inquired Mr. Phillips.

"Why—no, sir, I believe not any very near relations; that is, we've never heard talk of any; and if she had, since she has moved away from the old town part of the city to the hotel, where she was born and brought up, it were as if they had lost it all, and it were. I don't when folks has been so far away, and all that time, and they once was, that they're not to be taken up by the old folks, and a great deal more. And now, sir, very likely you'd be surprised to see little girls, and Miss Juliet, who'm gone down below into my apartment, and I'll go and bring them if you please."

"So to do, with your grace, don't I go, seeing them where they now is?"

Mr. Phillips bowed this worthy woman down to her half subterranean abode, and she again glanced a sad farewell to her domicile, whose treble appropriation was that of manufactory, of distillery, and domestic workshop; he darted it to the street, and of elements, than for its provision of human comforts, and thought well a fosterer how much more estimable was the combination of nature and rag, poverty and benevolence, than mountains of gold and a host of slaves to a hell-watered man.

Seated on a rude stool, partly screened behind the loom which the old weaver was industriously plying, Mr. Phillips beheld a young woman of singular beauty and loveliness, whom he at once understood to be Miss Juliet Adams. The two little girls were on the ground on either side, with their faces buried in the hands on their sister's knee, and weeping in silence, while often the sister would dry off her own tears, and tenderly imprint a soothing kiss on the brow of the one and the other.

Mr. Phillips, at some time a witness to the subdued grief of these friendless ones, still finding it difficult to obtrude upon such profound sorrow, he at length rose, and requesting the weaver and his dame to leave to him all arrangements for the obsequies of Mrs. Adams, took his departure; slipping at the same time a bright yellow piece into the hand of the latter, for the purchase of some refreshments, for which the wasted forms and wan countenances of the young mourners indicated immediate necessity.

Ere the lapse of much time from Mr. Phillips' absence, from this scene of bitterness, Miss Wise, having been apprised by that gentleman of the sad event, called to offer her condolence, and saying that she had been commissioned by Mr. Phillips to provide the orphans with a suitable wardrobe for the mournful occasion, ordered a young woman to accompany her to take the necessary measures for two entire suits for the three.

Then soon came a man with plummet and rule, to take the dimensions of the little narrow house, and make the requisite appointments for the closing scene—that of committing dust to dust, and ashes to ashes.

(To be continued.)

## THE LADY OF THE ROCK.

## A HISTORICAL TALE OF THE TIME OF CHARLES THE FIRST.

(Continued from page 327.)

## CHAPTER XV.

"This is the power to give,  
This is the power to deny,  
Joy for the hour I live,  
Caltness to die."—WILLIAMS.

As the object of young Stanley's visit to England has no bearing upon the dénouement of this tale, we will not follow his footsteps thither.

It is known that when Alice Heath sailed for England, she had strong hopes, from obtaining an interview with Charles II., that she might succeed by her persuasions in procuring the pardon of her husband and father. But so far, at first, from her obtaining the desired interview with Charles, his minions had seized upon Alice as a hostage for the escaped prisoners, and thrown her into strict confinement. Here she lingered during the sixteen years of which our narrative takes no account.

At length, however, at the time we again recur to her, she had succeeded in gaining the ear of one who stood high in the favour of the king. Through his influence she had been released, and was this day to have an audience with Charles in behalf of her proscribed relatives.

Noonday was long past when Alice entered the palace, and the usual hour of the king's levee—if anything could be termed usual when there was much irregularity—was over. The hall and staircases were filled with lackeys and footmen in the most expensive liveries, and the interior apartments, with gentlemen and pages of the household of Charles, elegantly arrayed.

Alice, bestowing a page to her, had been a passport from the Duke of Buckingham. On glancing his eye over it, he requested her to follow him. He led her some distance, through various passages elegantly carpeted, and paused before a small withdrawing room. Throwing open the door, he desired her to enter.

Upon this day, the king held his court in Queen Catherine's apartments. These were thrown open at a given hour to invited persons of some importance, than the highest rank, though the nobility had likewise the privilege of being present.

While he was occupied in sauntering about from one to the other with that easy grace which made him so popular, the page who had conducted Alice into the withdrawing room suddenly entered. He spoke a few words to an attendant upon the court, who immediately approached and informed her majesty that a lady, refusing to announce her name, desired to be admitted.

"By what right, then, does she claim to enter?" demanded the queen.

"She used the name of the Duke of Buckingham," replied the usher.

"Who can she be?" said a nobleman present.

"In the name of adventure, let us admit her," said the king.

"Does your majesty desire the lady to be admitted?" inquired the attendant.

"Certainly; but no, I will see her in the ante-room." So saying, he left the apartment.

Alice had sat some moments on one of the sofas we have mentioned, when a person entered whose appearance caused her heart to beat rapidly, and if conscious that he was the individual with whom she sought an interview. As he approached, Alice, conscious of the deep die which hung upon the issue of this meeting, grew paler than even impalement and remorse had left her, and her heart palpitated with such energy that it seemed as if it would burst its prison-house. She rose as the king approached, and fell upon her knees.

Charles, ever alive to the charms of her sex, paused, much struck at the interesting picture she presented. Advancing, after he had gazed on her for an instant, he bade her rise and be seated.

Her glance was one rather of uncertainty and hesitation, than of bashfulness or timidity, as she still knelt and said, "I behold his Majesty, the king of England, I presume."

"It is Charles Stuart, madam, who requests you again to seat yourself," said the king.

"The posture I employ is the most fitting for one who comes to ask such a boon as I have to solicit. I am the daughter and wife of certain of thy unhappy father's enemies."

The king's countenance instantly changed. "Ah," said he, "her whose release I have recently granted?"

"The same," replied Alice, "and I come now on behalf of my husband and father to beg you to extend your clemency to them."

"Madam," said Charles, "you have at length obtained your own pardon, and methinks that is already a sufficient act of generosity, when I might have held you still as a hostage for the escaped prisoners."

"If you entertained any hope from that circumstance," rejoined Alice, "that those whom you pursue would ever deliver themselves up for my redemption, believe me, they were idle; for I had taken care to prevent the knowledge of my situation ever coming to their ears. And except from such a hope, I can hardly think you would desire longer to confine an innocent female."

"Your own release is freely granted," said Charles; "and I grieve, now that I behold you, that it should have been thus long delayed."

"My release is something, it is true," said Alice, "since it will permit my return to those unhappy beings for whom I plead. But will you not add to

this act of generosity one still more noble, and let me bear to them the news of their pardon?"

"It grieves me to refuse you," answered Charles. "But your father was one of the most implacable judges in that partial court that condemned Charles I. to death."

"Hear me," said she at length, after a violent struggle. "I have one plea to urge in behalf of my request, and if it fails of success, I will depart in despair."

"Say on, madam," answered the king; "your plea must, indeed, be powerful, since you are about to advance it with so much fervour and confidence."

"It is in the confidence of small desert, Sirs. But I will at once proceed to offer it. This is not the first time that I have come to beg the boon of a human life within these walls—a life not endeared to me by personal ties as are those for whom I now implore your forgiveness. Unprompted by any motives of self-interest, but urged merely by feelings of compassion such as I would fain excite this moment in your bosom, I came hither to beg the life of your father, my liege, the late unhappy king."

Charles looked much astonished as she narrated her interview with his unfortunate father, recorded in a previous chapter, and said, "Your appeal is granted. But ask not your demand as a boon at my hands; urge it as a debt of gratitude due from a son to one who would have saved the life of his parent."

Alice pressed his hand with grateful warmth, and raised it to her lips. "May the Lord reward you for the blessed and healing words you have uttered," said she. "No thanks my tongue can speak may suitably express my acknowledgments for what you have done. You have yourself, my liege, known what it is to be hunted down by those who would have deprived you of life. And when you first learned that you might again hold your existence without fear, the thrill of happiness you must have experienced; may be named as a far greater boon than that you now confer, on those two outcasts whose lives and liberty hang upon your word. May God repay you for the joy you have conferred upon my heart."

"I am already repaid by your gratitude," said the king. "Besides, let me not forget that I am only returning an obligation."

"I little dreamed," rejoined Alice, "when I made an effort on account of the late king, that the time would ever arrive when I should urge it to your majesty as an obligation on your part. It was a simple act of compassion, and some instinctive feelings of loyalty toward my unhappy sovereign. But I find I did not misjudge his son when I thought to found on it some claims to his mercy and generosity."

"The circumstance affords an illustration of the truth, that deeds of kindness sooner or later meet their reward even in this life, said the king."

"May you live, then, to reap your recompense for that you have but now performed," said Alice, terminating the interview, and turning to depart.

The king accompanied her in person to the outer door of the palace, and a page conducted her to the gate, where a carriage was in waiting.

## CHAPTER XVI.

A small light-built brig was preparing to sail from London. On her deck might have been seen in all the confusion usually attendant upon the departure of a vessel from port. Men hurrying to and fro with baggage—sailors handling the ropes, and calling the ladders, and fastening the boats to the ship—passengers packing on board, and friends accompanying them for the sake of remaining with them till the last moment—and the voices of all resounding in the air.

Among the passengers a person might have been particularly noticed. One was an exceedingly delicate and lovely-looking woman, apparently about the middle of life. She was clad in black, and as she threw aside her veil to ascend the plank leading to the vessel, she discovered a face of such exquisite beauty, and an expression of such elevated purity, that all who caught a passing glimpse of her lineaments, turned to examine them more closely. She was alone, and borrowed the arm of a sailor to walk the plank, ascending it with a firm and dignified tread. As soon as she touched the vessel's deck, she put a small pile of money into the hand of her companion, drew her veil again tightly over her face, and immediately sought the cabin.

The other was a young man of handsome exterior, who boarded the brig just after the lady we have described had disappeared below. Walking towards the stern of the vessel he leaned over the side. He remained thus for some time, apparently absorbed in a pleasing reverie, and heedless of the bustle and confusion by which he was surrounded. At length he drew from his pocket a letter, evidently written in a delicate female hand, and read it with much interest—seemingly pondering upon every line of it with that lengthened perusal which a man bestows only upon the epistolary communications of the woman of his love.

Finally, the preparations were ended. A bell rang, and those persons who intended to remain in England left the vessel. Slowly she got under sail, and the breeze soon bore her out of sight of the harbour.

Six weeks passed away. The brig being bound for New Haven, had arrived within a hundred knots of Block Island on a certain afternoon, when the attention of the captain was attracted by the sight of a sail.

Immediately men were sent aloft to spy the approaching stranger.

"It is plainly visible," said the captain, after a long and anxious search with his glass, to the young passenger we have described, who was standing by his side.

The person addressed raised his own glass, and swept the water in the direction named. After one or two unsuccessful trials, his eye caught the object.

"What do you make of it?" he asked.

"Unless I am greatly deceived, sir, there is a full-rigged vessel under sail approaching us."

The young man was silent for a few moments. He cast a cautious glance over the crew, who were anxiously regarding the approaching vessel, that was gradually becoming more and more distinct, and at length could be seen with the naked eye.

At that instant, without hoisting colours or hailing, two shots were discharged from the sloop, one of which glanced across the bows of the brig, and ran dipping into the water, while the other went through her sail.

The captain replied by hailing the sloop through a speaking-trumpet, and demanding what she was, and wherefore she was guilty of this unprovoked hostility.

The only answer he received was the command, in a stern voice, "Down with your sails, and we will presently show you who we are."

It was evident now that the brig was assailed by pirates, and the captain knowing that the command to lay to would be immediately followed by a broadside if he refused, and, being totally unarmed, perceived that there remained no choice to him between flight and instant surrender. The one, he knew, would be impossible, from the rapid advances which the sloop had already made upon them, and the other was still less consonant with his inclinations.

The order was therefore given to clear the deck for the reception of the pirates. Whatever might have been the private feelings of the captain, when the character and force of his enemy were clearly established, he betrayed no signs of indecision from the time when his resolution appeared to be taken. He issued the further requisite commands from the spot where he first stood, in perfect calmness, and with that distinctness and readiness so important to one in his position.

A boat was at once lowered by the sloop, and filled with armed hands, which rowed to take possession of their prize.

"Perhaps you might pacify them by fair words," said the young man, as he still stood by the captain's side.

"There is no hope of that."

"Is there not a lady below?"

"There is," answered the captain. "I had forgotten her until this moment."

"I will see to her," replied the other, and turning away, he quickly disappeared below. He had known that there was a female on board; but as she had throughout the voyage kept the cabin, and taken all her meals in private, he had not yet seen her.

When he entered, he felt the blood rush to his heart, for he fancied the pensive countenance before him was familiar. He stood uncertain, when the hand was removed from her face, and, raising her head, she perceived that she was no longer alone. Their eyes met, and each started with a mutual glance of recognition. In her he beheld the wife and daughter of the regicides; and she, in turn, had little difficulty in tracing the features of Frank Stanley.

If Stanley had before felt for the lady's situation on board of a captured vessel, merely from the compassionate feelings due to her sex, with how much more sympathy did he regard her now. After his interview with Jessy Ellet, on the night before his departure for England, with auspicious aroused in his mind that she whom he beheld might be the mother of the object of his affections, how painful, too, to him must have been the thought that the worst fears her mind might have suggested would probably be realised.

"I fear I can do little to quiet your apprehensions, madam. I have before had occasion to witness your strength of mind and courage, and, all things considered, I deem it best to prepare you for the worst. The ship is attacked by pirates, and being unprepared for defence, has been obliged to surrender. I will remain with you, and protect you as far as I am able."

Alice received the awful determination with calmness.

Meanwhile, Stanley had scarcely left the deck ere the boat drew alongside, and a number of men jumped on board. One of them, who was evidently the commander, approached the captain and claimed the brig.

"You intend to capture us," said the captain. "Be it so, then; but use civility toward the lady passenger in the cabin."

"Civility to the lady passenger!" echoed the pirate commander; "when are we otherwise than civil to the women. Where is this Dulcinea? We would see her, for she may be the flower of our prize."

So saying, he turned on his heel and descended to the cabin. The captain of the captured brig followed, hoping that his presence might in some measure serve to protect the lady.

"A beautiful woman!" exclaimed the pirate, as he entered; "and with a look of sorrow, too, enough to soften the heart of a stone. Come," added he, "most fair and lovely queen of affliction, let me sympathise with you."

The lady drew her veil closely over her face, and with much offended dignity endeavoured to extricate herself from his grasp.

"Let go of her, sir!" exclaimed Stanley, in a tone of anger.

"Why should I let her go; and by what right do you interfere in her behalf?" replied the pirate, turning roughly upon the speaker.

"Because I command you, sir; and because I will protect her with my life."

"You command me, indeed!" sneered the pirate. "Come," he continued, addressing the lady, "cast aside this muffling: you have a face, from the glimpses I caught just now, that can bear to be uncovered with the best."

Suiting the action to the word, the ruffian had torn off Alice's veil, when Stanley interposed, and struck him a blow which sent him reeling to the farthest end of the cabin. He fell heavily against the brass railing of the stairway, and lay completely stunned. It was evident that his head had

come in contact with the metal in his fall, for the blood streamed from it copiously. The noise brought the other pirates into the cabin. Seeing their commander in the plight we have described, they raised him and placed him in a berth.

Demanding next an explanation from Stanley and the captain of the brig, they seized upon them both and bore them on deck, where they were placed under a guard, and threatened, if they were guilty of another aggression, with instant death.

Whilst the incidents above related were occurring, the brig had been got under sail again by her captors, and was moving on in the wake of the sloop, which had changed its course, and was putting towards land in a north-easterly direction.

## CHAPTER XVII.

About twenty-four hours after the capture of the brig, related in the last chapter, every evidence of a violent storm was abroad. These indications were speedily followed by heavy rain.

Two weeks previous to this storm, an aged colonist from New Haven had arrived with his son at the island on which Newport now stands. The advantages of that situation for sea-bathing, at this day so thoroughly known and tested, had even at that early period been discovered, and the season being spring, their object was to make arrangements for putting up a rude bathing-house for the accommodation of invalids.

As the old man and his son looked around them, the sea swelled and heaved with the agitation of the recent storm, the effects of which upon the waves had been too violent to subside for many hours.

All at once, the young man started, and exclaimed:—"God in heaven! father, there is a vessel drifting upon the opposite strand."

The old man perceived an object amidst the waves. He took his spy-glass and looked through it. "She is dismantled," he said; "nothing but her hull is left upon the water."

"And drifting against the breakers," cried his son, in horror, "without the slightest means of weathering the point!"

"She makes no signal," replied the other; "she must be deserted by her crew."

"No open boat could have existed through such a storm as is just past; all must have perished."

"Most probably," answered the old man, with the mild composure of his years.

The hulk was now in the midst of the current, and drifting rapidly toward the strand. Their sight of it, however, was still indistinct, though from the black speck it had at first appeared, it grew a visible object. At length they perceived a plank floating toward the land, to which were fastened two human beings. As they drifted nearer the beach their forms were more distinct. One of them, a delicate female, her wet clothing hanging in heavy folds upon her form, and herself tied by a handkerchief round her waist to a plank, being placed with her face uppermost. The other was that of a man, lying by her side in a reversed position, with his left arm thrown over his companion, as if to keep her more securely in her place, and his right clinging round the plank, with the tight convulsive grasp with which he had taken hold upon it. In both these persons sense and the power of motion appeared to be gone.

Just as the youth who had come in the hope of being their preserver had discovered them, he saw a billow approaching, and hastened to interpose his efforts before it reached them, lest, in receding, it might bear away the sufferers.

It was not without a severe struggle on his part, that he, as well as his lifeless companions, were not swept off by the wave, which proved even stronger in its might than he had anticipated. He succeeded, however, in retaining his position; and before the return of another wave, by a violent exertion of strength, he dragged the plank upon the small strip of dry sand, as well as those attached to it.

Bending over them, their preserver discovered that they both still breathed, but so feebly, that the respiration of each was scarcely perceptible.

At this moment, the youth's father crept cautiously along the beach. Anxious for his son, as well as wishing to assist him in his hazardous enterprise of mercy, he hastened to the spot. He uttered an exclamation of thanks on beholding him uninjured. Then, after a moment's consultation, the father untied the handkerchief which bound the female to the plank, and lifting the insensible and fragile form in his arms with much care, he set out with rapid steps by the same path he had come.

His son had more difficulty in raising the body of her companion. But by one of those superhuman efforts of strength which great emergencies are known to inspire, he at length succeeded, and with laboured breath followed after his father, as rapidly as the heavy weight of his burden would allow.

It was about twelve minutes after the old man that the youth reached a place of safety with his burden. The lady, by this time, under the vigorous exertions of his father, had revived so far as to open her eyes and sigh heavily.

Both the men, therefore, deemed it best to devote themselves to the other sufferer. He too, though not so readily as his companion, owing to his face having lain downward, and his respiration having been thus impeded, at length gave signs of returning life.

Reader, we will not stay to behold their complete restoration to consciousness. We leave you to imagine the circumstance. Doubtless you have anticipated us in the information, that in them you behold Alice Heath and Frank Stanley, both of whom the storm had been the means of delivering unharmed from the hands of the pirates.

## CHAPTER XVIII.

HENRY ELMORE and his wife had been suddenly called to New Haven, in consequence of the receipt of a brief letter. By the same messenger, a letter had also come to Jessy Ellet, from her lover, informing her of his arrival in Connecticut, and giving some account of the capture of the vessel in which he had sailed, and of the shipwreck, with the details of his escape from which, the reader is already acquainted. He also hinted at some tidings which would make her heart leap for joy; but added, that as he expected to have the bliss of meeting her before twenty-four hours from the time of his writing, he would defer his intelligence until then.

As Jessy sat alone, after having seen her sister and brother depart for New Haven, counting the hours until their return and her lover's arrival (for she supposed they would come in company), her thoughts and feelings were of that agitated kind natural to her situation, in expecting to meet so soon the object to whom her affections were plighted, after his absence for months in a distant land.

As she sat musing one evening, she was startled by the sound of a deep groan, issuing from the door opening upon the wing of the house to which the corridor led. Much surprised, and inclined to think that her imagination had deceived her, and that in the occupation of her mind she had mistaken some ordinary sound, and fancied in it that manifestation of distress which she deemed she had heard, she aroused herself completely from her reflections, and listened breathlessly to hear whether or not it should be repeated. In a few minutes it was audible again. This time it was impossible that she should be mistaken; it was a groan of human agony which she had heard. She rose instantly, and approached the door from whence it came. She had never before sought entrance here, having always supposed the place sacred to her sister's devotions, and containing no possible attractions for her.

Hastily she glanced her eye along the door in quest of a handle or latch to assist her in opening it; but it contained none. She then pushed it, in hopes that it might give way to her pressure. It was firmly secured, however, and resisted all her attempts. At length she was about to desist in despair, when another groan, deeper and more heartrending than those she had heard previously, caused her to make one more effort. She exerted her utmost strength, and in doing so, her hand accidentally touched upon a secret spring, and the door suddenly gave way. She found herself at the foot of a low flight of steps, up which she quickly ascended.

Jessy Ellet here encountered another door, which stood ajar. She heard within, the sound of a heavy tread, and filled with astonishment, hesitated whether to advance or retreat. Again a moan of distress fell upon her ear. Stimulated by feelings of kindness and compassion, no less than of intense curiosity, she proceeded, and stood within a neat though humble apartment. It was carpeted, and otherwise comfortably furnished. A table, strewn with prints and newspapers, was placed in the centre of the room. A low fire burned on the hearth, notwithstanding the lateness of the season, and a couch was drawn near it: beside which was placed a stand covered with phials, and a bowl containing nourishment for an invalid.

Upon this couch lay the form of a person covered with a cloak. Jessy's quick glance rested here, and, at that moment, another of the sounds of pain, such as she had heard, issued from beneath the folds of the mantle. Instantly approaching, she turned down the cloak, and beheld the face of the dying person lying beneath it. It was that of an aged man, whose features were wan and worn. His eyes were closed, and through the midst of the traces of pain which rested upon his countenance, might have been discerned the calm beauty of holiness, and the placid smile of one whose hopes were placed in heaven.

As Jessy stood, she became conscious, by a slight movement behind her, that there was still another inmate of the apartment. Turning, she beheld standing near, a form of manly grace and dignity. As she did so, the countenance of the person whom she viewed underwent an entire change, and he regarded her with a fixed and painful earnestness, while a flush that overspread his fine features evinced no little emotion.

"Excuse my intrusion," said Jessy, addressing him modestly, and with embarrassment. "I heard a sound of distress, and came hither to learn from whence it proceeded."

At the tones of her voice, the invalid, with another groan, stirred, as if about to awake. It seemed as though there had been some magic in her notes to arouse him, for his sleep had been deep, and she had spoken but in a low key.

"I heard the voice of my Alice, did I not?" said he, faintly.

Opening his eyes, he beheld Jessy standing by his side. "The Lord's blessing be upon thee, Alice," he murmured, endeavouring to stretch out his withered and feeble hand towards her. "I knew thou hadst not utterly forsaken me! See, William, she has returned; the Lord is still merciful to us. Mine eyes have beheld her once more, and I have now no other wish than to close them again and die."

Jessy, supposing his words caused by the delirium of illness, gently took the faded hand he tried to offer, and he continued: "Years have passed over thee, my daughter. Thou lookest scarce older, or less fair, than when thou wert wont to trip about thy father's halls, ere trouble visited us. Time has not dealt so lightly with thy husband and myself. See how thine absence has wasted me, until I am dying to-day. Alice, thou must have been happier than we have been during thy separation."

Surprised at these words, Jessy turned towards the other stranger.

"He mistakes me for another," said she.

"Well, might I, too, believe that thou art she," replied the person addressed, regarding her fixedly in an absent manner, and speaking as if to

himself. "Maiden," said he, suddenly, shaking off for a moment his waking dream, and advancing a step nearer to her, "by what name do they call thee?" "I am known as Jessy Ellet, sir," she replied, modestly. "Whom do I so much resemble?"

The person spoken to did not apparently hear the query. His whole senses seemed absorbed in the one sense of sight; and he continued to gaze upon her until, in spite of all his efforts at self-control, he seemed almost completely overcome by some feelings of extraordinary emotion.

Jessy looked in surprise at his working features for a moment, and she felt her nature melt in a flow of generous sympathy towards him, as she tremulously and apprehensively repeated her question.

"Whom dost thou resemble?" he said, at length. "Thine own mother, my daughter—my wife, and the child of that dying man. Behold your father and grandfather in the unhappy beings before you. Come, my child, to this long-forsaken bosom!" And he stretched out his arms to receive her.

There was a moment's doubt on the part of Jessy; but a mysterious instinct convinced her of the truth of the words she had heard, and the next moment her arms were about the neck of the stranger, and her voice was uttering, through sobs and tears, the endearing name of father.

After a while, gently disengaging herself from his embrace, she knelt down by the side of the aged sufferer, and bathed his feeble hands with her tears. The old man seemed to have no part in the recognition which had taken place; his imagination mistook the gentle creature before him for the lost child of his memory.

He appeared now to be sinking rapidly, and as the father and daughter sat with full hearts in the consciousness of being thus united, and listened to his laboured respirations, the sound of approaching carriage-wheels slightly shook the house. It ceased, and a vehicle stopped at the door. A few moments more, and a creaking was heard upon the stairs. Presently after, a step fell upon the floor of the room, and a female figure softly advanced. The father and daughter started simultaneously, and rushed towards her. In a moment the arms of both were around her, and the heroic Alice Heath was at length restored to her husband and child.

We will not linger on the scene. Pass we on, then, to the conclusion of our story.

The morning of the next day dawned on few who had pressed their customary couches in the house of Henry Elmore, for the aged sufferer, on the night that intervened, had breathed his last beneath its roof. The body extended on the bed, exhibited, even in death, the mildness and serenity of expression that had characterised his face during the latter portion of his life.

He was followed to the grave not only by his relations, but by Henry Elmore and his wife, whose feelings on the occasion were scarcely less deep than their own. In these the deceased, as well as his unhappy companion, had found true and sympathising friends; and to their unremitting care and attention it was that they had not both sunk, long ere the return of Alice, into the same grave to which the one had now finally departed. Governor H. and his excellent lady likewise attended the funeral with much sympathy, and returned afterward to the house of their niece, to rejoice with Alice on her return, and congratulate her husband on the pardon of which she had been the bearer.

An interesting scene ensued, in which Jessy wept upon the necks of those generous friends, and returned her thanks to them for having so long sought to shield her from the misfortunes of her family. Between Lucy and herself a still more affecting embrace followed. The former, through the strict secrecy of her uncle and aunt, had never suspected that the tender name of sister, by which she had known Jessy, was only assumed. But though she received the intelligence in some sorrow, it was scarcely of a heart-felt kind; for both had a consciousness that it was in the name alone that a change could take place, and that in feeling and affection they would ever remain sisters still.

Stanley, too, was present on this occasion. His meeting with Jessy at such a season of deep feeling for her had been tender in the extreme; and although he had not as yet had time for many words in private with the object of his affection, she read in his manner and countenance his deep and ardent sympathy.

The rumour of the strange reunion between the parent and child, of the long seclusion of Lisle and Heath in the wing of Henry Elmore's house, thereby explaining all the mystery formerly attached to it, soon spread throughout the colony. But it scarcely excited the astonishment which such a romance in real life would create at the present day, for those were periods of tragical confusion and strange catastrophe, when the reading asunder of domestic ties were often without an hour's warning, and when reunions were as dramatic as any exhibited on the stage.

It created little surprise, therefore, when Heath removed to Boston with his gentle and lovely wife, there to reside permanently, or when Jessy Ellet appeared as an inmate of their family.

It was just three months after this removal that Stanley and Jessy were united in marriage. No wedding party was invited to grace the occasion; but Governor and Mrs. H., and Henry Elmore and his wife were the only guests.

We will now bid the reader adieu, leaving him to imagine that henceforth the fortunes of all our characters ran in as smooth a tide as is possible in this world. We all know that the stream of actual life flows in an even course with but few. With most it is, as our tale has shown it, a confused succession of alternating sensations, sometimes dark and dull of hue, like the clouds of winter; at others, breaking out into the glowing splendour and bright illusions of a dream.

## THE LIFE OF BENJAMIN FRANKLIN.

(Continued from Page 385.)

The analogy between lightning and electricity Franklin proved by actual experiment, which embraced the bold project of bringing down the lightning from the heavens and subjecting it to the test of his analysis. He at first proposed to effect this object by placing a sentry-box on some elevated tower or spire, from which could be raised a pointed metallic conductor, terminated beneath by a cake of wax for the purpose of insulating it. At that time no building was to be found in Philadelphia sufficiently elevated; and while waiting for the erection of a church spire, then in process of building, the thought occurred to him that he might with greater readiness secure a contact with the clouds by means of an *electrical kite*, which differed from the one in common use only in material; it being made of a silk handkerchief, instead of paper, the former being less likely to be affected by the rain. The top of this was terminated by an iron point, and in communication with this point was a hempen cord, joined near the bottom to one of silk: where the hempen and silk cords were united, he attached a metallic key.

Thus prepared, he went out on the commons, on the approach of a thunder-storm, accompanied by his son, to whom alone he confided his intention, fearing the ridicule that might attach to an unsuccessful experiment of the kind; and having protected himself from the rain by a small shawl, he raised his kite in the air, and awaited the result. A thunder-cloud passed over without affecting his kite, and he began almost to despair of success, when he remarked the loose fibres of his string in motion, and bristling, in an upright position, as if placed on a conductor. On applying his knuckle to the key, he experienced a smart shock in his finger, accompanied by a bright spark. The experiment had succeeded, and his theory was proven. It would be easier to imagine than to describe his sensations at this moment. The string soon became wet with the rain; and, in this condition, being a better conductor, he was enabled to collect an abundant supply of electricity, with which he charged a jar prepared for that purpose, and afterwards exhibited with it all the phenomena developed by the Leyden jar charged by the electric battery.

He afterwards had an insulated rod constructed to draw the lightning into his house, with a bell attached, in order to inform him when the rod was affected by electricity. By means of this apparatus, he was enabled to collect a considerable quantity of electric fluid on which to experiment at his leisure.

From two of the discoveries made by Franklin, namely, the superior power of pointed bodies to attract electricity, and the identity between lightning and electricity, he sought to establish an invention whose advantages to the human race can scarcely be estimated. This was the protection of buildings from the effects of lightning, by placing above them a pointed metallic conductor, terminating in the earth. This metallic rod being the best as well as the most ready conductor, the lightning would necessarily traverse it, and thus preserve the building harmless from its effects.

We leave Franklin to relate the manner in which the letters, containing these important discoveries were at first received in England. "Collison got them read in the Royal Society, where they were not at first thought worth so much notice as to be printed in their *Transactions*. 'One paper,' says Franklin, 'which I wrote for Mr. Kinnerley on the *Sameness of Lightning and Electricity*, I sent to Mr. Mitchell, an acquaintance of mine, and one of the members also of the Society, who wrote me word that it had been read, but was laughed at by the connoisseurs. The papers, however, being shown to Dr. Fothergill, he thought them of too much value to be stifled, and advised the printing of them. Mr. Collison then gave them to Cave for publication in his *Gentleman's Magazine*, but he chose to print them separately, in a pamphlet, and Dr. Fothergill wrote the preface. Cave, it seems, judged rightly for his profession; for by the additions that arrived afterwards, they were swelled up to a quarto volume, which has had five editions, and cost him nothing for copy-money."

While in the midst of his electrical experiments, and soon after his letters on electricity began to excite a profound impression in Europe, he was nominated by Governor Hamilton one of four commissioners on the part of Pennsylvania, to meet commissioners from the other colonies, in a congress to be convened at Albany, by order of the Lords of Trade, to consult as to the means necessary for their mutual protection, in an apprehended rupture with France.

The political condition of the American colonies requiring a representative in England capable of supporting with energy the interests of America, Franklin was appointed to proceed to London for that purpose.

He was received by the Royal Society, of which he was already a member, with marks of especial attention; and the principal learned men, both of England and France, hastened to pay him that sort of consideration due to his great attainments and exalted position in the learned world.

About this time the degree of Doctor of Laws was conferred upon Franklin by the University of St. Andrews, in Scotland. The presentation of this degree was accompanied by an urgent invitation to visit Scotland, which he did not feel himself at liberty to decline. On this visit, which took place during the ensuing summer, he was for some time a guest of Lord Kames, and became acquainted with most of the eminent men of Scotland, among whom were the celebrated historians, Robertson, Hume, and Watson. In whatever

direction he travelled, he received marks of the most unbounded attention, not the least flattering among which was the freedom of the cities of St. Andrew's and Edinburgh. In alluding to this visit afterwards in a letter to Lord Kames, he adds, "On the whole, I must say, I think the time we spent there was six weeks of the *happiest* I have met with in any part of my life."

Although Franklin's attention was mainly directed to the political affairs of the colony, for whose benefit he had visited England, yet he found time occasionally to prosecute his scientific investigations, and correspond on such subjects with his scientific friends. At an early period of his residence in England, he addressed a letter, by request, to Sir John Pringle—a surgeon of great eminence, and afterwards President of the Royal Society—on the effects of electricity in paralysis. As great cures are professed to have been lately performed by electricity and electro-magnetism, the results of his observations may not be uninteresting. "The first thing I observed," writes he, "was an immediate, greater, sensible warmth in the lame limbs that had received the stroke than in the others, and the next morning the patients usually related that they had in the night felt a pricking sensation in the flesh of the paralytic limbs; and would sometimes show a number of small red spots, which they supposed were occasioned by these prickings. The limbs, too, were found more capable of voluntary motion, and seemed to receive strength. A man, for instance, who could not the first day lift the lame hand from off his knee, would, the next day, raise it four or five inches; the third, higher; and on the fifth day was able, with a feeble languid motion, to take off his hat. These appearances gave great spirits to the patients, and made them hope a perfect cure; but I do not remember that I ever saw any amendment after the fifth day, which the patient perceiving, and finding the shocks pretty scarce, they became discouraged, went home, and in a short time relapsed, so that I never knew any advantage from electricity in palsies that was permanent." We apprehend that these cautious and candid observations of Franklin will be confirmed by the experience of every intelligent practitioner of medicine, who has had occasion to witness the effects of electricity in nervous diseases.

He likewise made some experiments on the electrical peculiarities of the tongue, which he communicated in a letter to Dr. William Heberdeen, a distinguished physician, well known by his elegant medical commentaries. The two specimens of this fossil subjected by Franklin to experiment, were the property of Dr. Heberdeen, the largest of which was presented by him to Franklin.

The business which brought him to London having been terminated, he now began to think seriously of returning to his native land. He, accordingly, left England on the 17th of August, 1762, and arrived at Philadelphia on the first day of the following November, after an absence of upwards of five years.

The services he had rendered abroad, not only to the colony of Pennsylvania, but to the American provinces in general, were warmly appreciated, and testified by a vote of thanks passed by the legislature, and another granting him three thousand pounds, for his expenses whilst engaged in its service.

One of the first acts performed by Franklin, as Speaker of the Assembly of Pennsylvania, was to sign the resolutions of that body condemning the Stamp Act, contemplated by the British government, as an unlawful infringement upon their privileges. The intense excitement and burst of indignation which pervaded the American colonies on the receipt of the news of the passing of this Act, are too well known to be related here. The British government clearly saw that it had gone too far, and now attempted to retract a step which, if prosecuted, seemed fraught with imminent peril, and if retracted, to furnish an acknowledgment of their want of strength, to carry it into effect. It was on the occasion of the attempt to repeal this Act, that Franklin appeared before the House of Commons as a witness. He had never before occupied so eventful a position, and in no one did he acquit himself with more consummate ability. His exalted reputation, his frank and manly manner, and his perfect acquaintance with everything relating to American interests, served to give the greatest weight to his testimony, which went far towards producing the repeal of the Act so odious to his countrymen.

Taking advantage of the interval of quiet succeeding the repeal of the Stamp Act, Franklin, accompanied by his friend Sir John Pringle, paid a visit to Paris, where he was received with marked attention by the royal family, and the different learned societies of the French metropolis. His reputation, as a distinguished philosopher and eminent diplomatist, had preceded him, and although he visited it for the first time, he found himself surrounded by warm friends and devoted admirers. He was soon recalled to his post by the steps taken in Boston against the Revenue Act, which was conceived to be as oppressive and unjust as the one recently repealed, and which was sought to be evaded by refusing to purchase the articles introduced into the country wherever it could possibly be avoided. The disastrous consequences of ministerial mismanagement are well known.

Franklin now supposed that the last link of friendly connexion between the government and the Colonies had been severed; and feeling that his residence in London could be productive of no benefit to his constituents, prepared to carry into execution his long desired wish of returning to America. During the voyage between London and Philadelphia, which was undertaken on the 21st of March, 1776, and terminated by his arrival in Philadelphia, on the 5th of the following May, his ever active mind was employed in writing out an account of his negotiations in London, just closed. Franklin, on the day after his arrival, was unanimously chosen by the Assembly as a delegate in the second Congress, which assembled at Philadelphia, in four days afterwards.

When General Washington, a few months later, assumed the command of

the army; Franklin was selected, with two others, as a committee to visit the commander-in-chief, and advise with him on the most effectual manner of establishing an army to meet the emergency. He was likewise appointed a commissioner of Indian affairs, and in addition was chosen, by the city of Philadelphia, as one of its delegates in the Provincial Assembly. So that there was probably no public personage of the time who had so many and such multifarious political occupations, or whose services were so eagerly sought for, or so much relied upon as Franklin.

Sometime previous to the signing of the Declaration of Independence, which took place on the 4th of July, 1776, Franklin, as one of the committee of secret correspondence, had written to his friends abroad, and particularly to Mr. Dumas, at the Hague, to ascertain whether the different governments of Europe would be likely to afford aid to America in her struggle with England. After the emanation of this document it was thought advisable to appoint three commissioners to France, to procure aid from that government, which it was thought their animosity to England might facilitate. Franklin was selected as one of these commissioners, his colleagues being already in Europe. His distinguished reputation as a philosopher and statesman made his arrival a matter of the greatest importance in the French metropolis. Not only learned societies and people of station strove to do him homage, but the masses vied with each other in their unlimited adulation, so that wherever he appeared his presence was greeted with emotions of pleasure. Pictures, busts, and prints of him were sold in astonishing numbers, and medals of all sizes to set in rings and snuff-boxes, with the inscription of "Turgot"—"*Turgot, viri fidei, sapientie, et ingenii*"—were everywhere to be met with. After a residence of upwards of eight years in France, he was relieved at his own urgent request, by the appointment of Mr. Jefferson as his successor, and immediately prepared to return to his native country. He had, for some time, been a sufferer from the gout and other ailments.

When he arrived at Philadelphia, he was met by a large concourse of his fellow-citizens, who carried him in triumph to his house, where he was waited upon by the most eminent personages in Philadelphia, among whom was General Washington. The Assembly of Pennsylvania, the American Philosophical Society, and the University of Pennsylvania, each hastened to make him appropriate addresses of welcome on his return home.

Whatever dreams of retirement from public duties he had indulged, were not so edily to be realized, for he was chosen, in the General Assembly, his return to Philadelphia, President of Pennsylvania, and continued to hold that office, under an annual election, during the period of three years, limited as to term of eligibility by the constitution. Franklin himself had been instrumental in framing it.

When the convention assembled for the purpose of forming a constitution for the United States, in 1787, he was returned as one of the delegates from Pennsylvania, and although far advanced in years, and infirm in body, he felt himself called upon by the importance of the subject, to devote his time almost exclusively to the business of the convention. His term of office as President of Pennsylvania ceased in the autumn of 1788.

He was not long permitted to outlive the period of his official duties; yet he was fully prepared for the moment of his dissolution. "About sixteen days before his death," writes his physician, Dr. Jones, "he was seized with a feverish disposition, without any other symptom standing in, till the third or fourth day, when he complained of a pain in the left breast, which increased until it became almost insupportable by a cough and laboured breathing. During this state, when the severity of his case drew forth a grain of complaint, he would always say the least of it, and that he did not hear them as he once felt, when he was told of the many blessings he had received from the Supreme Being, who had raised him from such small and low beginnings, to such rank and consideration among men, and made no doubt that his present afflictions were kindly intended to warn him from a world in which he was no longer able to act the part assigned him. In this frame of body and mind he continued until two days before his death, and on the 17th of April, 1790, about eleven o'clock at night, he quietly expired, closing a long and useful life of eighty-four years and three months."

His funeral was attended by the mayor and city council in a body, the Executive council and members of Assembly, the American Philosophical Society, and other societies, by a concourse of about twenty thousand of his fellow-citizens. Amid the waving of flags at half-mast, the discharge of successive volleys of artillery, the tolling of muffled bell, and the solemn tones of martial music, his remains were conveyed to the earth, beside those of his wife's, in the cemetery of Christ's Church, over which have been erected a plain marble slab, according to the directions expressed in his will.

We may close this biography by stating the interesting fact, that in a dark corner at the extremity of a room in the Museum at Washington, may be seen the original printing-press, now about 125 years old, at which Benjamin Franklin, drinking water and saving money to buy books with, toiled for many a long day, with sleeves tucked up, in Lincoln's Inn Fields, in London. There it is, worn-eaten and old-fashioned, it is true, but eloquent of the history, plain, practical, and worthy, of one of the best and most useful of men.

Curzon is a violent and treacherous schoolmistress. She, by little and little, slyly and unperceived, slips in the foot of her authority; but having, by this gentle and humble beginning, with the benefit of time, fixed and established it, she then assumes a serious, tyrannic countenance, against which we have no more the courage or the power so much as to lift up our eyes.

## LOVE'S TRIALS; OR, MISTAKEN EVIDENCE.

(Continued from p. 396.)

It was rather a cool morning, and Charles was chilly; he had therefore "saw to it," and arrayed himself in an outer coat, which had been in its day a plump little garment, that fitted well to the person of its master. It looked rather baggyish on the present wearer, but it suited the hand. Charles was not particular; he had turned the cuffs up to let his hands out, and it offered no obstruction to the full play of the legs. Mr. Tightbody was about to object to the singular appearance which his master made, but the lad stowed himself away in the bottom of the waggon, and as his head only was visible, was allowed to pass muster.

His own person Mr. Timothy had attended to with more than usual care. He might, in the course of the morning, see some "good company," and he wished to appear as a man should.

Never did the horses behave better; they held their heads up as though the spirit of their master possessed them; and as they passed the parquage, put on some of their best airs, so that Mr. Timothy had much ado to restrain their excited feelings. After passing the mansion, which just then attracted the little man with so much interest, the horses' heads were gracefully turned from the highway into a narrow road which led directly to the landing. They had proceeded but a short distance, probably a quarter of a mile, when, by some error, one of the horses got his head under his fellow's rein. By dint of much pulling and coaxing, Mr. Tightbody succeeded in bringing them to a halt, and Charles was ordered out to fix things straight.

As I have said, this was one of Mr. Timothy's unlucky days. Wishing to return two empty flax-seed casks by the large from which he was to receive the goods, he had placed them in the waggon. Being a careful man, the heads had been replaced as soon as the sacks were emptied, and as Mr. Tightbody said, were as tight as a drum. On one of these casks he had packed himself, and had felt not only quite elevated, but perfectly secure.

Just as Charles had succeeded in putting things to rights, and was leaning against the horses' heads, he heard a slight noise, and turned quickly towards the waggon.

"My star!"

Charles looked around him on every side, but no master was to be seen; he took his arms akimbo, dropped his under jaw, and opened his eyes to their widest stretch. He was utterly confounded.

"My stars! where is master?"

A deep hollow call reached his ear—

"Help—help—Charles—quick!"

"He's got him. My stars! master's gone mad."

Charles started off to one side of the road; again the voice called; it seemed further off still—

"Help! help!"

Charles could stand it no longer. The sudden disappearance of his master, the call for help, as if from under ground, all convinced him that his master had been spirited away. His turn might be next.

"Master's carried off, sure enough!"

Charles's legs had full play, and they travelled off with a speed equal to the extremity of the case.

Mr. Tightbody had not gone lower than the bottom of the flax-seed cask; it was, however, low enough, in the position that he entered it, to hide what was mortal of him. The tallest among us would make but small show in the world doubled up like a holer, and could be stowed away in no very large apartment; but Mr. Tightbody was not tall, as I have said. Once in, he was fully embowed, and as helpless as Jonah in the whale's belly. The horses were restless beasts, and no sooner was Charles away from their heads, and well on his race, than they started likewise. Mr. Tightbody felt that they were going, and might, firmly anchored as he was, have held on to the reins with a tight purchase. But here was a difficulty, he had but one hand at liberty; the other happened to be, at the moment of his descent, in a hind-pocket, and there it had to remain; and the reins had been slackened, the better to assist the lad in fixing the horses. He felt them gathering speed; in fact, they were taking matters into their own heads, or heels, and where he or they would stop was an uncertainty not very pleasant to anticipate; he knew that the road he was upon soon led over two bridges that crossed the creek in its windings, and neither of them protected by railings; and he thought of many things that are apt to be kept out of mind in the common run of life. In fact, there was a rush of feeling such as the poor man had never experienced before.

Just as Charles started on his race, a young man sprang over the fence from an adjoining field, and made rapid bounds towards the waggon. He had witnessed the scene through an opening in the bushes that lined the road, but had not been observed by either the lad or his master. Fearing if he attempted to seize the horses' heads he should give them an alarm that would only increase the difficulty, he made directly for the back end of the waggon; he was within a few feet, and grasped at the hind-board, but a sudden spring of the horses took it beyond his reach.

"Help, help! I'm a dead man, Charles—help—quick!"

Excited by the cries from the helpless man, the youth made a desperate effort; he felt that the life of a human being depended upon his success. One leap more, and he seized the board; his feet in an instant flew from under him, for the horses were at their speed; but his grasp was strong, and his arm served with the vigour of youth, and the desire to rescue the sufferer.

"The next moment the eye of the lovely Sarah, beaming with emotion, was fixed upon him. She had thrown off the hood and cloak in which she had been disguised, and as she stood gazing upon him, just as she appeared at home, she seemed like an angel of mercy that had descended to shed some rays of light and hope on his dreary path."—See Chap. XI.

from his deadly peril. A few efforts more and he was within, and the reins grasped by a skilful hand. Without any fear himself, he soon managed to calm the apprehensions of the beasts, who were beginning to be alarmed at their unrestrained speed. As soon as he had brought them to a halt, he cast his eye down upon the sufferer, who also looked up piteously to him. They were strangers to each other.

"The blessing of all things be upon you, for a brave heart and a true hand! I was a dead man but for your aid, my young gentleman."

"Have a little further patience, my good sir, until I untackle the horses, for they are much excited."

It was the work of but a few moments, for the young man was no novice at such business. The horses were released from the waggon and fastened to the fence, and a fair prospect was now opened for the deliverance of Mr. Tightbody. Many expedients were thought of by both parties, and the only feasible one seemed to be that of rolling the cask on its side, with its cargo of humanity, and by some means, not very obvious just then, helping him to work his way out.

Mr. Tightbody found it no easy thing, with all the assistance the young man could give him, the work of the latter being to keep the head and feet as near together as possible, until the whole carcass had been withdrawn, when he lay stretched straight out upon the bottom of the waggon, taking long breaths, and making sundry short exclamations, the purport of which was not very easily defined. Starting up, finally, from his prostrate position, he cast his eye around, as if to take the bearings of his whereabouts, and speaking very deliberately—

"Can you tell me, my young gentleman, have you seen anything of a young varmint, that was by the horses when this spree came on?"

"I saw something like a youth, sir," said the young man, smiling, "making rapid strides towards the village; he has probably gone for help."

"The scoundrel! and a pretty story he'll make of it. But may I take the liberty of asking the name of one who has been so serviceable to me? you must be a stranger, I take it, in these parts?"

"I am a stranger, sir, having but recently come to the village; my name is Edwards—James Edwards."

Mr. Timothy was utterly confounded; what an unfortunate circumstance!—but he must make the best of it.

"Edwards! What! not a son of that excellent lady who is about to settle among us?"

"I am the son of Mrs. Edwards, sir, and am very happy that, in my ramble over the fields, I happened to be in this vicinity, and thereby so fortunate as to be of service to one to whom our family will be neighbours."

"And right proud and happy am I, sir, in the prospect of such an event, and shall hope to prove my gratitude to you, my young gentleman, before we've done with one another. I am not the man to forget a kind act. Will you ride to the landing with me, Mr. Edwards? it's a fine morning, and the beasts are in good condition."

"I was on the point of asking the favour, sir. Your servant, I believe, is returning; at least, I think yonder is the boy who left you so suddenly."

Mr. Timothy answered not; he looked in the direction to which the young man pointed, satisfied himself, doubtless, as to the identity of Charles, and also of the fact that he had been for help, for a man was walking beside him, and both were making haste towards the waggon; and then springing to the horse, began with all haste to tackle them.

The surprise of the lad on beholding his master in the breathing world, safe and sound, was very manifest in his bewildered look. It was all a mystery to him, but he said nothing; for his master had given him an expressive shake of the head, as much as to say, "Very well, my gentleman, you've done it; never mind."

Mr. Tightbody was well acquainted with the person whom his servant had brought with him, and he was one to whom he felt little inclined to be under obligations. He, therefore, assumed a very indifferent air, as though nothing had happened, called Charles to "pump in," cracked his whip, and was off, leaving the man in no little astonishment at the whole affair.

The ride was as agreeable now as a ride could be. Mr. Tightbody became quite enamoured with his new acquaintance, for James not only proved himself a skilful manager of horses, but when work was on hand, manifested a readiness to take hold that was very satisfactory to the mind of Mr. Tightbody, and a few days after, in speaking of him to a person of some consequence in the village, he did it with much emphasis.

"He's a true gentleman born and bred, that any man can see; and he is not afraid nor ashamed to put his shoulder to the work when it is on hand to do."

As things go, this opinion of Mr. Tightbody was of some consequence, and it may prove so to our hero.

## CHAPTER V.

THAT there are many noble sentiments cherished in the heart, which are never brought to light in real life, because the energy necessary to carry them into effect is wanting. A few untoward circumstances are, in most cases, sufficient to damp the zeal and put an end to the finest suggestion.

To acquit ourselves like men in the great contest on the field of life, we must keep our eye fixed on the goal to which our hopes aspire, amid all the obstacles that obstruct our way, and through all the windings to which necessity compels us.

James Edwards had accomplished one part of the plan in reference to his mother and sisters. He had procured for them a dwelling in a retired country village, and he had attended them to their new abode, and assisted in arranging the few articles of furniture which they had reserved from the general sale. He had introduced them to kind friends, and when he left them to seek a living for himself and them, rich were the tokens of love he had received from those dear ones of his heart, and strong was his confidence,

that he should soon send tidings of good, to relieve their anxiety, and prove his ability to accomplish what his true heart had devised.

Those of my readers who have been long acquainted with the town of C—, will remember, in the upper part of what was once Sidmouth Street, houses were not quite so plentiful as they now are. And perhaps, on a fine afternoon in the fall of the year, some of them may have taken a game of ball there, and sometimes have been obliged to climb over the piles of boards, which belonged to a lumber-yard near by, in search for the missile, which some unlucky blow had sent in the wrong direction.

Near to this lumber-yard stood a small wooden building, back from the street and almost hidden by a high board fence running parallel with it; and on a range with the two-story brick houses, which commenced at some distance from the square. In this fence was a gate or door, generally open, and the passer-by would be almost sure to give a second look, as the rural aspect of the place attracted his eye; for there were a few shrubs scattered around, and the premises were always neat and orderly. Over the gate was a little tin sign, bearing the inscription, "Boots and shoes mended here by J. Upjohn."

As the dwelling-house in which Mr. Edwards lived was not far from the described premises, James had become acquainted with the family, by stepping in occasionally to take advantage of the handiwork of Mr. Upjohn.

The pleasant manners of the boy won the heart of the old man; and often when at leisure, James found it an agreeable place to stop and chat for an hour. He was always made so welcome, and there was such an air of comfort by the fireside of this little family, and each one had so much to say to him in their homely, pleasant way, that, with the exception of his own home, he knew no place so agreeable.

Mr. Upjohn was a plain, unassuming, sensible man, who worked diligently through the day, but who would, for no consideration, put his hand to hisawl after candle-lighting; he was fond of reading, and fond of arguing, and sometimes a little too positive in expressing an opinion, and then in adhering to it; but with something of a bluntness of manner, not always agreeable, he possessed a kindness and gentleness of heart which few could boast. His wife was an amiable, kind-hearted, soft-spoken woman, with a pleasant countenance, upon which there could always be seen the light of a smile. Besides this couple, there was but one other member of the family—a niece—without parents or other kindred nearer than those who had taken her as their own. They loved her tenderly, but perhaps not wisely. Gertrude had some wild ways with her, which should have been corrected when a child, and now they might have been remedied by a little care; but the good folks did not perceive that there was anything out of the way.

Gitty was a thought giddy; but she was only a child, they said.

She was sixteen, however, and rather tall of her age; marks of beauty were already developing, and gave promise of more than a usual share of that dangerous attendant. Her flaxen hair had, indeed, been too light to please the fancy of many, but it was evidently assuming a browner tinge. It curled, one would have thought, quite enough naturally, but Gitty helped it along a little. It still lay in a childish manner around her ears and down upon her shoulders. Whatever coquetry it exhibited, it certainly evidenced much taste. Her features were well made, forming an open, joyous countenance, and her complexion was pure and bright.

The kindness of Mr. Upjohn during the illness and death of Mr. Edwards has already been noticed, and when James returned to the city, and called according to his promise, he was welcomed with all the warm-hearted interest of near relatives.

"And now, Master James, I hope you will not take it amiss, that I ask you to tarry with us; we are poor folks, to be sure, but what we have you are heartily welcome to, and my wife can fix you a place to sleep in, not quite so good as you have been accustomed to, but it will be clean, that I'll warrant, and perhaps you will rest as well in it as in some grander place."

As Mr. Upjohn said this, his wife laid down her needle-work, took her spectacles off, and with a look of earnestness, while a smile played over her honest countenance, spoke as truly as looks could speak, that she heartily agreed to all her husband had said; while Gitty pulled one of her long curls, and blushed, and manifested by many restless signs, that it also met her decided approbation.

James felt the kindness of the offer, and the colour which mottled his pale cheek, and the moistening of his bright eye clearly indicated how much he was affected by it. A moment he looked at the honest pair in silence, and they, from their hearts, hoped that he was concluding to do as they desired.

"I thank you, most truly, my dear sir, for your kind offer; I should be happier here, now, than any where else in this great city; it seems indeed like home to me; but you know that my plan is, with all expedition, to procure a situation where I can be earning something. The only business with which I am acquainted is that which will qualify me for a clerkship in some merchant's office; to accomplish this, I must be where I can meet with such as might employ me. You know also, how strangely destitute I am of friends, or even acquaintances, who could aid or recommend me. I must form acquaintances for myself. I must be among those who are in active business, and—have, therefore, engaged board at a house in the business quarter of the city."

Mr. Upjohn felt that there was just reasoning in what the youth spoke.

"You will come, then, as often as you can, to see us," said Mrs. Upjohn. "and let us know how you get along; and if at any time we can do anything for you in the mending way, just bring it along, and if the work is too fine for my old eyes, why Gitty will be proud to do it."

Gitty became very restless; she pulled the curls harder than ever, and smiled until her beautiful white teeth were fully exposed through her ruby

lips. Gitty's mouth was, to say the truth, finely formed, and gave a richness to the whole expression of her countenance.

James expressed, as well as he was able, his sense of their kind offer. It was to his young heart a draught from the cup of life, that warmed its generous throbbings into a glow of love. At the very threshold, as he stepped forth into the wide world of strangers, he had been met by a generous sympathy. It was a bright world—he knew it was; there might be dark spots in it, but it was much better than many said it was, better than he himself had thought it. And as he left those humble friends, and walked with elastic step to his new place of abode, kind faces seemed to smile upon him, and generous hearts seemed ready to pour out their felicity for him, in all the hurrying multitude that passed him on his way.

## CHAPTER VI.

HOP is a mighty power within the fresh young heart, and, like the daring chief of Macedon, the youth, with reckless ardour, ventures forth upon an untried region, beneath that soul-inspiring banner, with scarce the meagre ration which that hero had. Well for him will it be, if, in his bright and sunny hour of life, he meets not with those blasting storms, which often sweep across the track which man must travel; when his heart will quiver at the gathering of the blood-red tempest, and his limbs falter beneath the influence of the poisoned air, and his banner, torn from his grasp, go with the roaring wind, and, on the weary wilderness, himself lie down a hopeless human wreck.

Many such there are. We meet them in our daily walk. We hear of them in our daily tidings from the busy world. We heave a sigh, perhaps, or drop a tear, and then pass on.

A situation such as James sought for, is not so easily obtained as persons unacquainted with the city are apt to imagine. Interested friends and strong recommendations are often needed to place a young man where an amount of salary is paid that would make it desirable; and especially are these necessary when a stagnation of business has made clerks abundant and places scarce.

The pressure of such a trial to the mercantile community was now felt in all its sad realities, with full as much severity as it had been for months past, and with the exception of the favoured few who were beyond the chances of trade, the mass was struggling amid difficulties that caused many a sleepless night, and many a sad and silent fireside.

"I wonder why it is, wife, that James,"—they all called him James, so much at home had he become at Mr. Upjohn's—"I wonder why it is that James has not been here now for more than two weeks?"

"I fear the poor child is getting discouraged; he seemed very much down-hearted when he was last here. I think he finds it hard to get a place; and aint you most afraid, husband, that he is spending all his money. Poor boy! you know he hadn't much."

"I met him last evening, aunt,—or rather I passed him in the street; he looked very pale and thin. I had almost a mind to stop and speak to him, but I didn't."

Mr. Upjohn looked a moment rather sternly at Gitty, and then cast a significant glance towards his good woman, as much as to say—"There, wife, there's something about that; you had better see into it."

"And where did you say, Gitty, that you met him? In the street? I thought you were spending the evening at Lydia's."

"Well, so I was, aunt, but you see we girls got tired of sitting so still; the old folks, you know, are rather dull, and we wanted a little run."

"What! you two girls alone, Gitty?" and her uncle looked very soberly as he said this, into the bright fire. Gitty gave her head a toss, just to throw the curls back where she would have them.

"Oh! you know, uncle, Mr. Jones was with us; he stepped in to see Lydia."

Mas, poor uncle! he knew nothing about it; but Gitty smiled so sweetly at him, and put her arm so playfully upon his shoulder, that whatever severe thing he may have designed to say was at once suppressed.

"Be careful, Gitty, be careful! Jones, did you say? what Jones?"

"Oh! how should I know, uncle! but Lydia knew him, you see. He seems to be a clever fellow, any how. I felt very sorry, though, about James, and meant to have spoken to you about him." Gitty was very anxious just then to turn the thoughts of her guardian away from herself.

"I think, papa"—Mrs. Upjohn frequently gave this title to her husband for the reason, perhaps, that there were no little ones to call him so—"I think, papa, you had better go to-morrow and see about him."

"Not to-morrow, wife; there is much work on hand, and I've promised it to be done; but there, some one has opened the gate, perhaps he is coming."

A gentle tap at the outer door was immediately recognised as his, and Gitty arose at once to admit him.

"Ah! Mr. James, welcome, right welcome; take a seat. Gitty, that chair. How has it been with you? Draw your chair close to the fire, it's a chilly evening."

"We were just talking about you. I was saying to Mr. Upjohn that I wished he would walk down and see how you got along; do you know it is more than two weeks since you were here?"

James had, as yet, said nothing in answer to either of the good folks. He bowed politely to them, took the seat which Gitty placed for him, and, as Mr. Upjohn requested, drew it a little nearer to the corner. The bright light shone full upon him, and all present noticed the change which had passed upon his countenance. It was much paler than usual, and had almost a haggard look; had he passed through some great trouble it could not have worn a more marked expression.

## THE ONLY MEMENTO OF THE GREAT EXHIBITION PRODUCED WITHIN ITS WALLS.

Just published, complete in Two Volumes, price 6s. each, elegantly bound in cloth and gold, with a View of the Crystal Palace gilt upon the cover.

## THE PARLOUR MAGAZINE OF THE LITERATURE OF ALL NATIONS. Printed in the Crystal Palace, Hyde Park, at Machines No. 106, and 162, Class 6.

We have no doubt that the two volumes of the ParLOUR Magazine will be treasured by many future generations. People flocked to the Crystal Palace after its close, and eagerly bought up, at enormous prices, articles that had been exhibited there, that they might possess some memento of the Exhibition. We supply not only a work exhibited there, but one actually produced by machinery within its crystal walls, and in the view of millions of spectators. The value of our book will therefore increase with the advance of years, until it will be regarded as a curiosity and a treasure. These volumes contain translations of Literary Treasures from the

CHINESE.	GEORGIAN.	HINDOSTANI.	MORLACHIAN.	SPANISH.
DUTCH.	GERMAN.	IRISH.	PERSIAN.	SWEDISH.
ENGLISH.	GREEK.	ITALIAN.	POLISH.	TARTARIAN.
FRENCH.	HUNGARIAN.	MEXICAN.	RUSSIAN.	WELSH, &c.

With original English Contributions by celebrated authors, and choice adaptations from the American. Each Volume is embellished by a superior Steel Engraving and by numerous Woodcuts.

## RE-ISSUE OF THE PARLOUR MAGAZINE.

In order to meet the wishes of numerous persons of the middle and working classes, who, during the excitement of the Exhibition, were unable to obtain this memento of that great event, the work will be RE-ISSUED in Weekly Numbers, price 2d., and Monthly parts, price 8s. or 10d. of any Bookseller.

London: HOUGHTON & STONELMAN, 65, Paternoster Row.

THE HOME COMPANION:  
A WEEKLY MAGAZINE.

## PRACTICAL ILLUSTRATIONS OF POPULAR FALLACIES.

## No. XV.—"SPARE THE ROD AND SPOIL THE CHILD."

MANY a bright child under the influence of this castigatory proverb, has been led to wish itself one of those dear little cherubs who sit up aloft with nothing to sit upon, because then also it would have nothing to be whipped. "Spare the rod, and spoil the child!" More children have been spoiled by the rod than ever were damaged by abstinence from its use. It is the idleness and incompetency of parents which drives them to rule by the rod; they neither know, nor will endeavour to attain the knowledge, how to rule judiciously; and the domination of fear comes easier to them than the domination of love. "Depend upon it," says a grave portly old gentleman, as he sips his wine, "depend upon it you must begin correction very early with your children, if you wish to have them under command. For my part, I always commenced when they were six weeks old. The best thing, sir, to correct them with at that early age is a newspaper; it makes a great noise, sir, and frightens them without hurting them much." And the newspaper was shaken and rattled over the astonished and frightened infant, and the cane and birch diligently plied with advancing months, and a more miserable, dull, dismal, spiritless family never existed; the grace and playfulness of childhood were never known; they had been whipped into precocious quietude, been flogged into cunning and deceit, been terrified into cruelty and falsehood; and as they grew up in life became a scourge to their parents, more bitter and severe than any of the stripes they had themselves received. The fifth commandment had lost all authority over them; it was too difficult to honour those who were continually attacking them with the birch. And thus all the kindly feelings, all the endearing ties that should exist between parent and child were never fostered and encouraged; the whole moral system was disorganised; and, instead of love, reverence, affection, we had fear, distrust, deceit, indifference, almost hate.

"Fathers have flinty hearts," say some of our old sages; and we presume it is from this reason that the most paternal governments are those which are found inflicting the severest chastisement upon their children, as they name their subjects. Thus the "father of his people," the great Czar of Russia, exercises his paternal authority entirely on the principle of our rabbinical friend who began flogging at six weeks old, but not with the same kind of weapon. A newspaper, though by its noise and rattle it might frighten an infant of a few weeks, is capable also of being turned upon those who thus use it, with more effect than the weapon of the paternal Czar—the knout. This gentle instrument of parental care leaves nothing behind but the pain, and the degradation of spirit which makes slaves of those who are subjected to its stripes; but a newspaper might spread some thoughts and ideas which would not be altogether consonant with the duration of such parental authority as he chooses to establish, and so not even as an instrument of punishment is it permitted to be used. "Spare the rod, and spoil the child," is the one sole maxim of his government; and from rank to rank the lashes of the knout resound. No more freedom of action or of thought is permitted to

them than to the children of the newspaper-flogging father; like the Scotch schoolmaster, with whom all learning was to be found in the "law," so with the Czar all virtue, morality, obedience, all reverence for authority, all veneration of the law, all patriotism, courage, and devotion to the sovereign proceed from the knout. With the happiest effects has this system been carried out, as the lives, or rather the deaths, of the sovereigns of that empire will faithfully show. It was not long since that a Russian nobleman was dining at an Englishman's table, when the conversation turned on the government of his country; the Englishman pressed, with all their thoughts full of their own Constitution, began to question him on the Constitution of Russia, as if under such a paternal rule any Constitution was needed. The Russian, however, was prepared with his answer; he drew from inside his vest a dagger, and placed it on the table—"There," said he, "is the Constitution of Russia; this it is which keeps our parent, the Czar, in order." The government of the knout had produced the Constitution of the dagger; and the assassination of prince after prince in that country, is the faithful commentary of the text.

Austria, again, is another example of this parental authority, the severity of which is increased by the emperor being only step-father to many of his children. To his own legitimate children he is sometimes very paternally condescending; talks a great deal of the love he bears them, throws them occasionally a sugar-plum or two to keep them quiet; but he can never be made to understand that they have arrived at man's estate, are capable of managing their own affairs much better than he can do it for them, and that his own estate would be in a much better condition if he would trust it to them; but the old parental authority is afraid if he spared the rod, he should spoil the child, so he punishes them severely, takes their goods and chattels from them without their consent, and notwithstanding he has continually put his hand in their pockets, is ever on the verge of bankruptcy. His severity at length became so intolerable, that they determined they would endure the rod no longer, so they got rid for a time of the old despotic father; but they had been so badly trained under the influence of the rod that they could not agree very well together; those who had caught most of the old man's sugar-plums when he threw them amongst them, thought they should have a chance of catching some more if he came back again, and they turned upon their brethren who had not been so fortunate as themselves; so, what with their help and the assistance of other parental authorities who still kept the rod in their hands, together with abundant promises from the old man that he would be more sparing of the rod in future, and allow them to have some influence in the management of the estate, all which being fairly written out in legal documents, lawfully stamped, and religiously sworn to, the rod was once more trusted in his hands; but no sooner did he get firm possession of it, than, regardless of all his oaths and promises, he tore up the agreement and flogged them all round with greater severity than ever. Thus even with his own legitimate children he had trained them so badly that he drove them to rebel against his authority; to cast off love, reverence, and affection; to obey only through fear, and to wreak their vengeance when the opportunity shall serve, when the hour and the man shall come, as come they will. But if these children had been spoiled by the use of the rod, what shall we say of his step-children, or rather his wards, those to whom he stood so much in the relation of what our law-books call Guardian in Chivalry, under which name, amongst the feudal nobles committed the most barbarous depredations on the estates and property committed to their care. Some three hundred years ago the people of Hungary selected the emperor of Austria for their governor, or king, but upon the strict condition that they should manage the estate according to the Hungarian customs, laws, and practices. They were ruled by a people from a distant land, aliens in blood and in language, if not in religion, from the house of Hapsburg in whose paternal hands they had placed themselves. They had received a pretty good training, had enjoyed a considerable amount of liberty under their own management, and had deserved reward instead of punishment, praise instead of the rod, for having stood in the gap when Europe was attacked by the Mussulman, and been the bulwark of Christendom against the infidel. But these things were forgotten. The paternal hand did not exactly like being tampered with on conditions, the "spare the rod and spoil the child" policy could not be effectively carried out if the free use of the rod was checked by its restrictions. So other principles of bad nursery government were had recourse to, and cajolery was brought into play, and sugar-plums were promised if they would only be good children and not cry when some or other of their ancient toys, their old laws and customs, were taken away from them; and some of the children liked sugar-plums better than old laws, and helped to place the rod in the hand of the guardian, and held down some of the other children to be flogged; and the power of the rod became so oppressive that they repented of the choice they had made, and rose up against it: "the baby leans the nurse, and quite athwart goes all decorum." And the Austrian nurse calls in the Russian knout to its assistance, and the two together fall on the unhappy children, and burying over a few with sugar-plums, flogged the others almost to death's door. And now the "spare the rod and spoil the child" policy is fully established, male and female come under its lash perpetually—and they are locked up in dark rooms, and neither allowed to receive any visitors, nor to go out for recreation or amusement. When all the world was rushing to the grand Exhibition of last year, and enjoying and improving themselves, these poor children were not allowed to go out, although some of their works carried off the best prizes, the credit of which was usurped by the paternal hand which wielded the rod over them. They were confined within bonds, and we can hardly expect that any great increase of love and affection towards their fathers could grow up. The rod has spoiled them, and as the child gains strength it will have no mercy on the oppressor in his decrepitude.

But this is not the only family of step-children which Austria has under its command. In the full spirit of burning Italy her rod is felt. Here, amidst the traditions of ancient freedom, which not all the bad schooling they have received can entirely root out; where their own great *papa* has wielded the rod over them for centuries, and has mingled with the rod all the bugaboo fears that foolish nursery-minds use to frighten children—the black man up the chimney, and old Bogee at the door; the “spare the rod and spoil the child” policy has produced a race of those turbulent spirits, whom nothing but the cannon and the bayonet can control. Here is no willing obedience—no respect to paternal commands—no reverence for authority that is based only on the rod. Like their own volcanic region, they are ever breaking out into eruptions which carry desolation and dismay on all around. And the maintenance of the power of the rod is draining the pockets of the wielder of the rod so thoroughly, that he must ere long be compelled to give it up. The step-children and wards of Austria will unite against the paternal authority; and, in spite of the ignorance which the discipline of the rod condemns them to, and which is absolutely necessary for the maintenance of the power of the rod, they will have learnt the power of combination and co-operation. Its own legitimate children will understand that they cannot assist him in using the rod for his wards and his step-children, without, at the same time, keeping a “rod in pickle” for their own backs. And we shall have all parties uniting to destroy the rod itself, and to paralyze the arm that wields it. It is in vain that the tyrannical flogger exercises his power to keep free men out of his dominions. Free thoughts and opinions will find their entrance in spite of passports and police—will spring up and germinate in spite of stripes and blows—will flourish the more vigorously where cruelty steeps the land in blood. The power of the rod in the end defeats its own object; spoils the child; makes slaves of the weak, the timid, and the ignorant, and hardens the man into cruelty or despair.

In another land, long under the paternal government of one with a rod in his hand, we have seen the grievous fallacy of “Spare the rod and spoil the child” illustrated. France had its paternal authority, by whom the rod was not spared, and yet the child scarcely escaped the spoiling. The whole training of its young life was under the influence of the rod; at length, as it waxed to maturity, the power of the rod in the school of life became so oppressive, that young France rose in its might, and “barred out” the rod bearer. They beat the master; but the beatings they had before received had made them cruel, and therefore they slew the master they had beaten; and not only him, but his wife and children, his sisters and brothers—nay, all who had been in authority under him on whom they could lay their hands. Fear of the old oppressor produced terror that nothing could alleviate but death. The blood-stained land could no longer be called their mother, but their grave—

“Where nothing  
But who knows nothing, is once seen to smile;  
When sigh, and groans, and shivers that rent the air,  
Are made, not marked; where violent sorrow sees  
A modern ecstasy; the dead man’s knell  
Is there scarce asked, for whom? and good men’s lives  
Expire before the flowers in their cups,  
Dying, ere they sicken.”

And like children broke loose, they began to play at republics, and christened themselves Brutus and Scipio, and all the names that were famous in olden story, and imagined that with the name came the virtues of the men they represented. But they soon fell into the power of a greater than Cæsar, for they had been spoiled by the rod, and, rushing into the other extreme, were still further spoiled by indulgence, indulgence in all that was vicious, and heartless, and cruel. They had been so badly trained they knew not how to use the liberty they had gained; they degraded it to anarchy; and their false notions of glory and honour placed them again in the hands of one who wielded the rod with tenfold fury; and made them the scourge of all the neighbouring states, without teaching them how to manage their own. These neighbouring states took the part of the old paternal authority, and replaced him in power with a modified authority. But the old authority had learned nothing by his former defeat; he had still a hankering after the rod, and once more he was “barred out.” Another dynasty now reigned—not over France, but was placed at the head of the French people—an embodiment of popular power; a constitutional ruler with a restricted power of the rod; and then there was a struggle to increase these restrictions on the one hand, and to escape from them on the other. And one wintry morning Louis Philippe awoke, and found he was no longer King of the French. They had taken the management of their own affairs into their own hands; and strange blunders these spoiled children made. Nothing would serve them but some dream of military glory, and they placed at their head a man who bore the name of their greatest commander; and the man thus chosen by themselves upset in a minute all they had been doing towards self-government, seized the power of the rod into his own hands, clapped all their leaders into gaol, transported some to the pestilential swamps of the tropics, banished others from their country, and sent them to wander as exiles in foreign lands—he himself had wandered in former times, gagged their press, stopped their newspapers, and, by the power of the rod, now rules supreme, until the next freak of these spoiled children shall, by one means or another, put an end to his rule. For, as Prince Schwartzburg wittily said, “Bayonets are all-powerful; you can do anything with them but sit upon them.” From the beginning of their career to the end, from the time when Clovis smote the soldier to the ground for insisting on his rights, to the last act of Louis Napoleon, it has been the rod, and nothing but the rod, by which France has been ruled, and her children spoiled.

In the country, fortunately for us, a better kind of discipline has been adopted: the rod has been sparingly used. We have had our punishments

and indignities like other children; but some of our earliest teachers knew that the power of love was a better talent than the power of fear; and that children made better men from having good principles originally instilled into them, than by attempting to dog bad ones out of them. In modern times we have a Wilderstein establishing infant schools for the training of babies and sucklings, so in former days the Baron Altes was the Wilderstein of the nation; he was the great teacher of the children and youth of this kind. He gave us laws that would enable us to exert the power of the rod,—he taught us to take part ourselves in the management of our own affairs,—he made us the judges of the propriety of using the rod,—he bade us understand the equity of our laws, and the necessity of obedience to law,—and from his days have descended those feelings of veneration for law and justice, which form the distinguishing feature of our country. We have indeed sometimes had rulers who have exercised the rod more freely than was in accordance with good government, but they themselves were under the restraint of the moral feeling of the nation, and never carried it to the extent which spoils the children of other lands. And when our rulers really sought to govern by the rod, to east off all the checks which law and custom had imposed upon its use,—we got rid of them and supplied their place with better governors. But never for one instant did we degenerate into anarchy. Even the most questionable proceedings of the most turbulent times were conducted with strict adherence to all the forms of law; not hastily and in the heat of the moment, but with grave cool deliberation and debate. Our rulers, notwithstanding the proverbial slowness of those possessing power to admit the younger branches of the family to share in the power over the family estate, have admitted that a very large portion of us are fully capable of being entrusted with such management. Many more amongst us believe that they have given proofs of such capacity, and some of our rulers have admitted the proofs to be sufficient for a large extension of this power. The rod has been spared, and we have not yet been spoiled. When last summer our neighbours from some of the paternal governments escaped, for a time, from the rod, and spent their holidays on our shores, they ran about in a state of wonder at seeing us collected together by hundreds of thousands without a single soldier to remind us of the rod; and that they themselves might run about where they liked with no one to question them whence they came, or where they were going; was a thing they could not understand. The everlasting rod under which they lived would not let them move, or speak, or think, but as paternal authority dictated; and here they witnessed a whole people whose ruler never interfered with their movements, whose liberty of thought and speech was perfect, whose press was perfectly free to record the thought of their hearts, who enjoyed their liberty without abusing it, who, being without the government of the rod, had escaped being spoiled in spite of the proverb.

## THE BEGGAR.

BY JAMES RUSSELL LOWELL.

A beggar through the world am I—  
From place to place I wander by.  
Till up my pilgrim’s scrip for me,  
For Christ’s sweet sake and charity!

A little of thy steadfastness,  
Rounded with leafy gracefulness,  
Old oak, give me,  
That the world’s blasts may round me blow.

And I yield gently to and fro,  
While my stout hearted trunk below  
And firm set roots unmoved be.

Some of thy stern, unyielding might,  
Enduring still through day and night,  
Rude tempest shock and withering blight—  
That I may keep at bay  
The changeful April sky of chance  
And the strong tide of circumstance—  
Give me, old granite grey.

Some of thy mournfulness serene—  
Some of thy never dying green,  
Pit in this scrap of rhyme,—  
That griefs may fall like snow-flakes light,

And deck me in a robe of white,  
Ready to be an angel bright,—  
O sweetly mournful pine.

A little of thy merriment,  
Of thy sparkling, light content,  
Give me, my cheerful brook,—  
That I may still be full of glee  
And gladness, when’er I be,  
Though fickle fate hath prisoned me  
In some neglected nook.

Ye have been very kind and good  
To me since I’ve been in the wood;  
Ye have gone high to fill my heart;  
But good-bye, kind friends, every one,  
I’ve far to go ere set of sun;  
Of all good things I would have part;  
The day was high ere I could start,  
And so my journey’s scarce begun.

Heaven help me, how could I forget  
To beg of thee, dear violet!  
Some of thy modesty,  
That flowers here as well, unseen,  
As if before the world had been,  
O, give, to strengthen me.

RATHER SINGULAR NAME.—Mr. Frog, a tailor, who had left Charleston at the commencement of the war, returned soon after the capitulation, and got acquainted with a certain J. W. Gibbs, who was requested by Frog to stand as godfather to one of his children, which was agreed to by Gibbs. provided he should have the naming of the child. As they were going to church, the father asked Gibbs if he had thought of a name. “Yes,” says Gibbs. “What do you think of our Lieutenant-Governor Bull?”—“We’ll name the child after him.” “Very good,” said the father, “I approve of it very much.” The child was accordingly named Bull. Frog did not immediately think of the drollery of the name, but when he did, he could have killed Gibbs for such an imposition on his reliance and friendship. He thought to have recourse to the board of police to get permission to re-baptize the child, but when he saw Lieutenant-Governor Bull, then presiding, he thought it would be an affront to relate the story, therefore he postponed the matter, and the child still remains under the appellation of Bull Frog—Connecticut Journal.

## ONWARD!

**POSTAGE STAMPS FOR THE ROMANS.**—The Roman Government have sanctioned the introduction of postage stamps for the pre-payment of postage on letters. The stamp is about the size of the English postage stamp; and on it is a representation of the tiara and keys, the badge of papal dignity and power.

**NEW PLANING MACHINE.**—An invention of Mr. W. H. Bunnell for planing deals, mouldings, &c. has been tried before Rear-Admiral Superintendent Prescott, C.B., and the engineering officers of this dockyard, in the joiner's shop. It planes 80 feet per minute by steam power. The trial was pronounced successful.—*Portsmouth Times*.

**A NEW CAR.**—A "Brougham Cab" has been registered, to carry four inside, and run the same draught as the Hansom cab. The body of the vehicle is oval, and the seat semi-circular, and stretchies both behind and before the axle. There is a frame below on which to carry luggage, which is secured by a leathern strap. The driver's seat occupies the same place behind as in the Hansom cab.

**STEAM TO AUSTRALIA.**—The departure of the first vessel of the Australian Steam Company's line is fixed for May, from Plymouth, for Sydney, touching at the Cape of Good Hope, King George's Sound, Adelaide, and Port Philip. She will have accommodation for a hundred and fifty cabin, and a hundred and fifty intermediate and steerage passengers, as well as for nine hundred tons of freight. Travellers will now be able to circumnavigate the globe in almost as little time as they can read the narratives of the voyagers of former days.

**IMPORTANT DISCOVERY.**—At a late meeting of the Philosophical Society, established at Glasgow, Dr. Penny communicated the important discovery, made by himself, of the presence of a considerable quantity of potash salts in the soot from blast iron furnaces. From the well-known value of potash salts, there is every reason to expect that this discovery will prove of considerable importance to those who are interested in these commercial products, and also to ironmasters, who will be enabled to turn to account a substance which has not hitherto been applied to any practical use.—*Observer*.

**SCHOOLS OF DESIGN.**—A new department of the Board of Trade, called "The Department of Practical Art," has been created. Mr. Henry Cole is to be Superintendent of the general management, and Mr. Richard Redgrave Art-superintendent. Mr. Cole's duty will be to communicate with manufacturers, local committees, managers of institutes, &c.; to visit and inspect schools, &c., assisted by Government, and report as to these and the establishment of new schools; regulate the admission of students into the head school, and other duties; all to be exercised, of course, under the sanction of the Board. Mr. Deverell remains as secretary.—*Builder*.

**JUNCTION OF LITERARY AND SCIENTIFIC INSTITUTIONS.**—A proposition of some importance is at present before the council of the Society of Arts, contemplating the affiliation of the Literary and Scientific Institutions, the Mechanics' Institutes, and other similar bodies throughout the country. The matter is brought forward by Mr. Harry Chester, who points out in his letter the various advantages both to the progress of popular science and art in general, and to the prosperity of the several institutions, by a system of organised correspondence and mutual influence. By regular communication with a central institute, and with each other, there is no doubt that new activity and spirit will be given to the local associations.—*Literary Gazette*.

**PROGRESS OF TEMPERANCE IN AMERICA.**—Temperance and teetotalism are gaining ground rapidly in America—in the old States, at least, of the Union. Massachusetts and Maine have already enacted very stringent laws against the sale, as a beverage, of anything that can intoxicate. Mr. Munroe has introduced a bill into the New York Senate, prohibiting the sale of an intoxicating liquor in a smaller quantity than thirty gallons, except when it is required for medicinal purposes, and under the strictest provisions; the prosecutor to be admitted as a witness on the trial, and no person engaged in the traffic of liquor to be allowed to sit as a juror in such cases. Other stringent enactments are reported, which show that, with all their love of freedom, the Americans remember that there are other benefits worth securing, even at the cost of some sacrifice of liberty.—*Observer*.

**NEW OMNIBUS.**—During its twenty years' existence the London Omnibus has scarcely undergone a single alteration for the better—except as regards price. Yet there are a few things in which improvement would add to the comfort of many persons. A new idea has just been started in the shape of omnibus construction. The chief novelty consists in the fact that the seats, capable of containing ten passengers inside, are detached, somewhat after the style of those in first-class railway carriages, and so contrived that the passengers sit with their faces to the horses, leaving a clear passage up the centre of from eighteen to twenty inches in width and six feet four inches in height. The passage is covered in by a semi-circular glass roof, by which means ample light is obtained. The ventilation is effected by interstices over the windows in each compartment, and perforated metal panels in the vehicle—which altogether weighs no more when loaded than the usual omnibuses. At the head of the vehicle is an alarm bell, to communicate to the driver and conductor, accessible to all the passengers. There are also a couple of clips for newspapers, an almanack, indicator, and a lamp. The inventor of this vehicle is said to be a private gentleman having no property in omnibuses, and no connexion with the road.—*Literary Gazette*.

## POETICAL QUOTATIONS.

## AGE.

O LET us have him; for his silver hairs  
Will purchase us a good opinion;  
And buy men's voices to commend our deeds;  
It shall be said,—his judgment rul'd our hands;  
Our youths, and wildness shall no wit appear.  
But all be buried in his gravity.—*Shakespeare's Julius Caesar*.

Youth no less becomes  
The light and careless livery that it wears,  
Than settled age his sables and his weeds,  
Importing health, and graveness.—*Shakespeare's Hamlet*.  
Though I look old, yet I am strong and lusty:  
For in my youth I never did apply  
Hot and rebellious liquors in my blood.

*Shakespeare's As You Like It*.

I know thee not, old man: fall to thy prayers.  
How ill white hairs become a fool and jester!  
*Shakespeare's Henry IV*.

These are the effects of doting age,  
Vain doubts, and idle cares, and over caution.  
*Dryden's Sebastian*.

Age sits with decent grace upon his visage,  
And worthily becomes his silver locks;  
He wears the marks of many years well spent,  
Of virtue, truth well tried, and wise experience.  
*Rowe's Jane Shore*.

This heart, by age and grief congeal'd,  
Is no more sensible of love's endearments,  
Than are our barren rocks to morn's sweet dew,  
That calmly trickles down their rugged cheeks.  
*Miller's Mahomet*.

Fresh hopes are hourly sown  
In furrow'd brows: to gentle life's descent,  
We shut our eyes, and think it is a plain:  
We take fair days in winter for the spring;  
And turn our blessings into bane.—*Young's Night Thoughts*.

Thus aged men, full loth and slow,  
The vanities of life forego,  
And count their youthful follies o'er.  
Till memory lends her light no more.—*Scott's Rokeby*.

Yet time, who changes all, had alter'd him  
In soul and aspect as in age: years steal  
Fire from the mind as vigour from the limb:  
And life's enchanted cup but sparkles near the brim.  
*Byron's Child Harold*.

## AMBITION.

SOME thought to raise themselves to high degree  
By riches and unrighteous reward;  
Some by close should'ring, some by flattery;  
Others through friends; others for base regard;  
And all, by wrong ways, for themselves prepared.  
Those that were up themselves, kept others low;  
Those that were low themselves, held others hard,  
Nor suffered them to rise or greater grow:  
But every one d.d strive his fellow down to throw.  
*Spenser's Faery Queen*.

Who soars too near the sun, with golden wings,  
Melts them;—to ruin his own fortune brings.  
*Shakespeare's Henry VIII*.

Cromwell, I charge thee, sling away ambition:  
By that sin fell the angels; how can man, then,  
The image of his Maker, hope to win by't?  
*Shakespeare's Henry VIII*.

I have no spur  
To prick the sides of my intent, but only  
Vaulting ambition, which o'erleaps itself,  
And falls on the other side.—*Shakespeare's Macbeth*.

That is a step  
On which I must fall down, or else o'erleap,  
For in my way it lies.—*Shakespeare's Macbeth*.  
Yet do I fear thy nature;  
It is too full o' the milk of human kindness  
To catch the nearest way; thou would'st be great;  
Art not without ambition; but without  
The illness should attend it; what thou would'st highly,  
That would'st thou holily; would'st not play false,  
And yet would'st wrongly win.—*Shakespeare's Macbeth*.

ENIGMA.

I've led the powerful to deeds of ill,  
And to the good have given determined will.  
In battle-fields my flag has been outspread,  
Amid grave sonators my followers tread  
A thousand obstacles impede my upward way,  
A thousand voices to my claims say "Nay."  
For none by me have e'er been urg'd along,  
But envy follow'd them and breathed a tale of wrong.

Yet struggling upward, striving still to be  
Worshipp'd by millions—by the bound and free,  
I've fought my way, and on the hills of Fame,  
The trumpet's blast pronounc'd the loud acclaim.

When by the judgment of the world I've been  
Hurl'd from the height my eyes have scarcely seen,  
And I have found the garland o'er my head  
Too frail to live—my home was with the dead.

ENIGMAS.

1.

My face is smooth and wondrous bright,  
Which mostly I keep out of sight  
Within my house; how that is made  
Shall with much brevity be said.  
Compos'd with timber and with skin,  
Cover'd with blankets warm within;  
Here I lie snug, unless in anger,  
I look out sharp, suspecting danger;  
For I'm a blade of mighty wrath,  
Whene'er provok'd, I sally forth;  
Yet quarrels frequently decide,  
But ne'er am known to change my side.

Tho' e'er so much our parties vary,  
In all disputes my point I carry.  
Thousands by me are daily fed,  
As many laid among the dead.  
I travel into foreign parts;  
But not in coach convey'd, or carts.  
Ladies, for you I often war,  
Then in return my name declare.

2.

In Moses' time there lived one,  
As Scripture will declare,  
Who spoke, and ever spoke the truth,  
Which plainly will appear.  
He liv'd on earth, and did not sin,  
Guileless he liv'd and died;  
And all his actions were most just,  
And to be justified.  
Yet for all this, 'tis said in heaven  
He ne'er shall find a place,  
Nor may of his ancestors,  
Nor yet his future race.

3.

When first presented to the world,  
I'm innocent and fair;  
But catch the vices of the age  
Before I've long been there.  
While new my face, I'm sure to please;  
But short-liv'd is my way;  
For scarce I'm won, e'er fickle man  
Casts me with scorn away.  
Not satisfied with quitting me,  
To aggravate my shame,  
When he's obtain'd all I can yield,  
He gives me a bad name.  
In vice, in virtue, folly, sense,  
In wit, too, I abound;  
In short, in me variety  
Of ev'ry sort is found.  
Arts, science, war, Parnassian wreaths,  
Law and divinity;  
Actions, wits, beauties, often owe  
To me celebrity.  
I'm found in almost ev'ry land,  
In Britain well am known;  
A welcome guest where'er I go—  
I visit e'en the throne.  
Wealth, fame, and honour I dispense,  
And sometimes cause disgrace;  
To dismal prisons some I send;  
To others give a place.  
In life and death, too, I've a hand,  
These give and take away;  
A proof of this most men receive  
On each returning day.  
But though thus gifted, I, alas!  
Man's fatal vices prove.  
Destroy'd, as oft the case, by him  
Who once profess'd to love.

TRANSFIGURED PLAYING CARDS.

FIVE OF SPADES.—"AIRS AND GRACES."

4.

Enigmatisms try their skill,  
How to bring me to their will,  
Likewise farmer, tinkers, tailors,  
Chimney sweeps, and hardy sailors,  
Strive alike with hearty zeal  
My sweet influence to feel.  
If, tired with work, beside you stream  
You chance to rest in airy dream,  
Reliev'd from toil, you hope that I  
Amusement will for you supply.  
Virtue 'tis said I oft destroy,  
But beggars reckon me chief joy,  
Gallant soldiers for me fight,  
Secretaries for me write;  
Kings from me their comfort draw,  
And knaves for me submit to law.  
All-powerful chieftain vice am I,  
Adorn'd by most, tho' all deny  
That they wish me have ought to do;  
But this assertion's seldom true.  
Goodness hates me quite uncivil,  
Because I oft on her bring evil;  
But, ladies, you must all confess,  
I'm all the same your patroness.

5.

When first the world from chaos sprung,  
And man his great Creator sung,  
Though earth's green bosom teem'd with fruit,  
Each native appetite to suit;  
Tho' bow'd beneath its load the vine,  
And flow'd the bowl with gen'rous wine;  
Tho' beauty, harmony, and love  
Declar'd the system from above:—  
The glorious plan was incomplete,  
And mortals wanted something yet.  
I came—that something was supplied:  
I snatch'd the wreath from cloister'd pride;  
Bade knowledge open her ample store,  
And waft her sweets from shore to shore.  
The poet's rudely warbled lay  
I temper'd with my heav'nly ray;  
From monkish cell fair science drew,  
And taught mankind what she knew:  
Religion, too, divinest maid,  
Had now her real charms display'd;  
Not as by superstition drawn,  
With rack and fire, and tear and groan;  
But mildred mercy in her face  
For all the virtuous human race:  
Nor are my precepts singly told,  
But multiplied ten thousand fold;  
To ev'ry party, sect, and age,  
I mark what whilom did engage:  
The fond pursuits of heroes, kings,  
Of cities sack'd, and other things,  
Which ne'er without me would be known,  
But into dear oblivion thrown.

6.

Men to the specious sacrifice,  
The real disregard;  
Each glittering toy attracts their eyes,  
And gains a false reward.  
But is there none whose mental sight  
Can dissipate the shade,  
O'er error's mist induce the light,  
And leave the trifler's trade?  
Yes! some there are, and these will own  
How bright my merit shines;  
In wisdom's eyes I'm purer shown  
Than all Golconda's mines.  
By me extended commerce reigns,  
And rolls from shore to shore,  
My spirit unappall'd remains  
When the loud tempests roar.  
Relying on my friendly aid,  
The sailor feels no pain,  
When clouds the blue expanse o'erspread,  
And suns arise in vain.  
Yet small my form, and low my birth,  
No gaudy tints I show;  
Drawn from my fruitful mother earth,  
Thro' purging fires I go.  
Then subject to another's will,  
Who ties my marriage chain,  
The vows of wedlock I fulfil,  
And ever true remain.

TRANSFORMATIONS.

1.

To the young, or the old,  
It need scarcely be told,  
That the alphabet's very perverse;  
For in verse, or in prose,  
A few letters transposed,  
And the meaning 'twill wholly reverse.  
To make the case plain,  
The last verse will explain,  
And by that you'll find out my intent;  
So we'll see in a trice  
If your guess is so nice,  
To discover soon what I invent.  
If taken aright,  
I'm a scene of delight,  
Where the Graces for pleasure repair;  
But while you there range,  
Should my attitude change,  
Each bramble would echo—beware.

2.

If you a sour thing transpose,  
A very sweet one 'twill disclose.

3.

Part of a foot with judgment transposed,  
And the answer you'll find just under your nose.

## OUR CORNER CUPBOARD!

Nothing begets confidence sooner than punctuality.

Evil men speak as they wish rather than what they know.

Never open the door to a little vice, lest a great one should enter also.

Act uprightly and bravely, as you would defy the devil and all his works.

Be just to others. This is the first step toward becoming better than you are yourself.

Nothing is further than earth from heaven; nothing is nearer than heaven to earth.

Too much is seldom enough. Pumping after your bucket is full prevents its keeping so.

An Irishman, in speaking of a relative who was hung, says he died during a tight rope performance.

Discoveries are mostly recoveries. Tycho Brahe has immortalised himself by saying about comets exactly what Seneca had said rather before him.—*Goethe*.

A young gentleman, who has just married a little undersized beauty, says she would have been taller, but she is made of such precious materials that Nature could not afford it.

The hours of six in the morning, and ten in the evening, are regularly rung from the spire of St. Peter's Church, Dundee, by a chime of bells, produced by the application of water-power to a complicated piece of machinery.

Any one would suppose that the employment of sewing was the most peaceful and quiet occupation in the world, and yet it is absolutely horrifying to hear ladies talking about stiletos, bodkins, gatherings, surginges, h-minings, gorings, cuttings, whippings, lacings, cuffings, and battings! What a list of abominables.

A devotee to Mammon once received a lesson from an humble follower, who did not seem to pay to him, the possession of the purse, sufficient homage, and said, "Do you know, sir, that I am worth a hundred thousand pounds?" "Yes," said the irritated, but not broken-spirited respondent, "I do; and I know that it is all you are worth!"

That the mother supplies the mental faculties, and the father the corporeal, I am quite satisfied. Almost every clever man, living or dead, has had an intellectual female parent. Of great men who had clever mothers, I may name Lord Bacon, Sheridan, Schiller, Sir William Jones, Sir Walter Scott, Napoleon, Marmontel, Curran, and the Kembles.—*Dr. Eys*.

This bore is good for promoting sleep; but though he causeth sleep in others, it is uncertain whether he ever sleeps himself, as few can keep awake in his company long enough to see. It is supposed that when he sleeps, it is with his mouth open. Some aver that he talketh in his sleep, and snail as well as when awake.—*Thoughts on Bore*.

POWERFUL MAGNET.—A lecturer was dilating upon the power of a magnet, defying any one to show anything surpassing its power, when a man mounted the stand, and told him that a woman was the magnet of magnets; "For," said he, "if the loadstone can attract iron a foot or two, there was a young woman who, when I was a young man, used to attract me thirty miles to have a chat with her."

Let us appear not rash nor diffident,  
Immoderate valour swells into a fault,  
And fear admitted into public councils  
Betrays like treason.—Let us shun them both.

LORD ELDON asked a medical gentleman how many tons he had? The reply was, two—one very sharp and quick, the other slow, but sure. "What do you mean to make of them?" "I purpose making a lawyer of the sharp one, and a doctor of the other." "Do no such thing," rejoined his lordship; "make the clever one the doctor, the other the lawyer—I was never anything myself but a plodder."

The other day the teacher of a ladies' school in Wick, while putting a company of juveniles of the gentler sex through their facings in the spelling-book, came to the word "lad," of which, in accordance with the modern method of tuition, she asked the signification. One little puss, on the question having been put, with a sidelong look, blushing answered, "For courtin' wi'!" a reply which we quote for the advantage of future lexicographers.

CONTENT to live, this is my stay,  
I seek no more than may suffice;  
I press to bear no haughty sway—  
Look! what I lack my mind supplies.  
Lo! thus I triumph, like a king,  
Content with what my mind doth bring.

A YANKEE gentleman, escorting a British friend around to view the different objects of attraction in the vicinity of Boston, brought him to Bunker's Hill. They stood looking at the splendid shaft, when the Yankee said, "This is the place where Warren fell." "Ah!" replied the Englishman, evidently not posted up in local historical matters, "did it hurt him much?" The native looked at him, with the expression of fourteen fourths of July in his countenance.—"Hurt him!" said he, "he was killed, sir." "Ah! he was, eh?" said the stranger, still eyeing the monument, and computing its height in his own mind, layer by layer; "well, I should think he would have been, to fall so far."

## OUR MEMORANDUM BOOK!

TRUTH AND FALSEHOOD.—Falsehood is the little girl who, glimmering amid the darkness of the noisome left, leads the unfortunate traveller to destruction. Truth is the radiant sun who, when he rises, dispels the zenith, and pours a flood of light upon the world. Falsehood brings misfortune and misery in her train, like the stormy intelligence of the wind of the desert; but truth, like the odoriferous gale of summer, imparts health and vigour, while she administers pleasure and delight.

RELIGIOUS CHAINS.—When Charles V., after a long and turbulent reign, reigned the crown of Spain and other dominions to his son Philip, reserving to himself merely a small pension, he retired to St. Just, near Piacenza, where he amused himself with mechanics. One day he placed a number of watches before him upon a table, which he had vainly endeavoured to make agree exactly in their time. Having looked at them for some minutes, he said, "How foolish I was to endeavour to make all religious sects agree in one doctrine. I might as well expect this as suppose that these watches would all move with the same regularity."

Some have too much, yet still they crave.

I little have, yet seek no more;

They are but poor, though much they have,

And I am rich with little store.

They poor, I rich; they beg, I give;

They lack, I lend; they pine, I live.

I laugh not at another's loss,

I grudge not at another's gain;

No worldly care my mind can toss,

I brook what is another's bane.

I fear no foe, nor fawn no friend;

I loathe not life, nor dread mine end.

## WHY PEOPLE DRINK.

Mr. A. drinks because his doctor has recommended him to take a little.

Mr. B. because his doctor has ordered him not, and he hates quackery.

Mr. C. takes a drop because he's wet.

Mr. D. because he's dry.

Mr. E. because he feels something rising in his stomach.

Mr. F. because he feels a kind of sinking in his stomach.

Mr. G. because he's going to see a friend off to America.

Mr. H. because he's got a friend come home from Australia.

Mr. I. because he's so hot.

Mr. K. because he's so cold.

Mr. L. because he's got a pain in his head.

Mr. M. because he's got a pain in his side.

Mr. N. because he's got a pain in his back.

Mr. O. because he's got a pain in his chest.

Mr. P. because he's got a pain all over him.

Mr. Q. because he feels light and happy.

Mr. R. because he feels heavy and miserable.

Mr. S. because he's married.

Mr. T. because he isn't.

Mr. V. because he likes to see his friends around him.

Mr. W. because he's got no friends, and enjoys a glass by himself.

Mr. X. because he's made life a bore.

Mr. Y. because he's got a shilling.

Mr. Z.—we should be happy to inform our readers what Mr. Z.'s reasons are for drinking, but on putting the question to him, he was found to be too drunk to answer.

EXPERIENCES OF ANIMALS.—Animals are prompt at using their experience to relieve a to things from which they have suffered pain or annoyance. Grant mentions an orang-outang which, having had, when ill, some medicine administered to it in an egg, could never be induced to touch one afterwards, notwithstanding its previous fondness for them. A tame fox has been cured from stealing eggs and poultry, by giving them to him scalding hot from the saucepan. Le Vaillant's monkey was extremely fond of brandy, but could never be prevailed on to touch it again after a lighted match had been applied to some it was drinking. Two carriage-horses which made a point of stopping at the foot of every hill, and refused to proceed in spite of every punishment, were considered beyond cure, but it was suggested at last that several horses should be attached to the back of the carriage, and, being put into a trot, made to pull the refractory horses backward. The result was perfectly successful, for thenceforth they faced every hill at speed, and were not to be restrained till they reached the summit. A dog which had been beaten while some musk was held to its nose, always fled away whenever it accidentally smelt the drug, and was so susceptible of it that it was used in some psychological experiments to discover whether any portion of musk had been received by the body through the organs of digestion. Another dog which had been accidentally burnt with a lucifer match, became angry at the sight of one, and furious if the act of lighting it was feigned. The well-known story recorded by Plutarch proves the application of accidentally acquired experience; he says, that a mule laden with salt, fell accidentally into a stream, and, having perceived that its load became thereby sensibly lightened, adopted the same contrivance afterwards purposely, and that to cure it of the trick its panniers were filled with sponge, under which when fully saturated it could barely stagger.—*Thompson*.

### Editor's Note-Book.

#### SOUNDNESS OF JUDGMENT.—

Some can decide almost intuitively upon the characters of the persons they last met. So of a book. They can turn it over, read part of a page here, and a sentence or two in another place, and decide, unhesitatingly, upon its merits. When a prejudice has once entered your mind against a man or an author, it is hard to eradicate it. It warps the judgment and makes you partial. If this habit be indulged, the mind soon becomes habituated to act from prejudice rather than judgment. A perfectly just and sound mind is a rare and invaluable gift. A watchmaker once said that a gentleman had put an exquisite watch into his hands that went irregularly. It was as perfect a piece of work as ever was made. He took it to pieces, and put it together again, twenty times. No manner of defect was to be discovered; and yet the watch went intolerably. At last it struck him that probably the balance-wheel might have been near a magnet. On applying a needle to it, he found his suspicion true; here was all the mischief. The steel works in the other parts of the watch had a powerful influence on its motions, and the watch would not be possible with a new wheel. If the soundest mind is warped by any predilection, it must act irregularly.

**CRAMP IN BATHING.**—D. J. For the cure of the cramp when swimming, the bathman recommends a vigorous and violent shock to the part affected, by suddenly and forcibly stretching out the leg, which should be darted out of the water into the air if possible.

**FOOD OF BLACKBIRDS.**—J. Lee.—The natural food of the blackbird is berries, worms, insects, shelled snails, cherries, and other similar fruit; and its artificial food, lean fresh meat, cut very small, and mixed with bread, or German paste.

**TO PRESERVE PICTURES FROM DECAY.**—II.—To strengthen a decayed canvas, and to preserve sound canvas from decaying, let the back of every picture receive two or three good thick coats of white lead, or whatever other cheap pigment is most recommendable for tenacity and strength.

**BARON DE TERNAY.**—Philos.—This dignity, the first order of nobility introduced after the Norman Conquest, is attached to the possession of certain lands, held, according to the custom of past days, directly under the crown, and conditionally to the performance of some honorary services to the monarch.

**FALL-MAIL.**—Juvenis.—Fall-Mail received its name from having been a spot appropriated to the game of Mail, a fashionable amusement in the reign of Charles the Second. In this pastime a round piece of box is struck with a mallet (hence the term "Mail") through a high arch of iron, and he who does so at the fewest blows, or at the number agreed upon, is the winner.

**COSMETICS.**—F. Kelly.—We cannot give our correspondent the information he requires. Cosmetics, in general, are of no real advantage, and some are highly prejudicial to the skin. To set off the complexion, nothing more is requisite than to wash the face with pure water; or, if anything further be occasionally necessary, it is only the addition of a little soap.

**WHALE FISHERY.**—Nautilus.—This is of great antiquity. The Norwegians are supposed to have been the first who attempted the perilous enterprise of killing the whale. The Buccaneers engaged in a regular whale fishery in the twelfth century; but the whales then caught were of a small size, and were employed as food. Whales have appeared to have been then used for the first time. The Polar regions in the southern hemisphere are now resorted to for the whale fishery.

**TRANSPARENT CEMENT.**—E. Masters.—The composition of this cement is as follows:—Take fifteen grains, chloroform two ounces, and alcohol half an ounce. The two first named ingredients may be first mixed; after the gum is dissolved, the alcohol is added, and the whole allowed to macerate for a week. The cement is then ready for use. The advantages of this cement are, that it is transparent, and very strong.

**THE DRAGON'S EYE.**—Gaston M.—What curious the making, giving rise to the old superstition of the "dragon's eye."

watch?—The simple explanation that may be given of this superstitious belief, is, that the popular imagination, which for a long period, attached to a custom that in natural history is an unusual interference. The spider is supplied with a small bladder, somewhat similar to a drum, and the ticking noise termed the "death-watch," is nothing more than the sound he makes upon this little apparatus, in order to serenade and allure his "lady love."

**ECONOMY.**—We are often addressed by persons, who, after stating the difficulties they experience in obtaining a livelihood, request our advice on the subject of emigration. Willing, as we are at all times, to afford any information in our power to correspondents, especially to those who are struggling through poverty and reverses, we still feel a strong disinclination to dispose in a few words of an important matter deeply affecting the future welfare of those concerned. Not knowing the peculiar circumstances of the applicant, it is more than possible the judgment we might form of his case would be erroneous, and we are not disposed to incur such responsibility. We have known instances of individuals who by thoughtless and imprudent conduct have been compelled to expatriate themselves, without afterwards deriving from such misfortune a seasonable lesson for the future. Habits of prodigality and idleness produce the same results all the world over. Perhaps prudent resolutions and timely thrift might render emigration unnecessary to some persons, to whom the "old home" with its tender associations is still endeared. To such, and indeed to all, we would say, *economies*; buy nothing for the mere reason that it is cheap. The question should not be, "Is this article worth, and more than worth, its price?" but, "can I possibly manage without it?" For "he who buys what he does not need, will often need what he cannot buy;" and especially should we remember the wise old maxim that

"WHAT SUFFICES FOR ONE MAY BE MADE TO DO FOR TWO."

**SPONTANEOUS COMBUSTION OF HUMAN BEINGS.**—Certo.—Are there any authentic instances recorded of men being consumed by inward burning, from excessive drinking?—Many true cases of this nature have been positively mentioned, and should serve as a warning to drunkards. In the early part of 1851, it was mentioned in the Paris papers that a house painter, while drinking with some companions at an inn, made a wager that he would eat a lighted candle. Scarcely had he placed it in his mouth when he uttered a slight cry, and a bluish flame was seen upon his lips. In spite of all attempts to aid him, the internal fire continued, and in half an hour the head and upper portion of the chest were entirely carbonized. The fire did not cease until bones, skin, and muscles, were all consumed, and nothing remained but a small heap of ashes to mark the spot where a human being had stood a short time before.

**COMMUNICATIONS RECEIVED.**—J. J. (a warrant of attorney is an authority and power given by any one to an attorney to appear and plead for him, or to suffer judgment to pass against him by confessing the action).—CORROSER (watches are supposed to have been invented by Peter Hele, at Nuremberg, 1490; though Robert, King of Scotland, had one about 1510).—MEXXON (tolls were first instituted in England for mending the highways, in the reign of Edward the Third).—JUNITS (many thanks).—B. (electric light can be procured from brown paper. Rub the paper briskly in a dark room, and flashes of electric light will dart forth to the finger, to a key, or to any other conductor that may be presented to it).—MATROV (to prevent a lamp smoking, soak the wick in strong vinegar, and dry it well before you use it; it will then burn both sweet and pleasant).—ARX (a good perfume for gloves may be obtained by mixing the mixture of extract of ambergris and two ounces of spirit of wine. Rub the gloves inside with a bit of cotton saturated with this perfume).—H. L. G. (hair from the head may be removed by the following means.—The roots of two eggs should be beaten up with the juice of a lemon, and the mixture well rubbed into the hair, using a great deal of friction with the finger upon the skin of the head. The mixture

in the stomach, and a small quantity of warm water, will remove it with ease).—J. (a small quantity of warm water, will remove it with ease).—J. (a small quantity of warm water, will remove it with ease).

**JULIA** (with regard to the breakfast apparel of a bride, we should reply in the affirmative).—MART LARSON (the subject is too ungallant for insertion).—CONSERVAT READER (such pieces are only obtained by interest, and have no salary attached to them).—P. (alcohol is a narcotic poison).—CURIOUS (the name of the term haberdasher, is from *berdash*, a kind of sack given formerly worn in England, and the person who made or sold such articles was called a *berdash*. Hence the present expression, *haberdasher*).—SUKAWA (the bride's cake at a wedding breakfast should occupy the centre of the table).—M. J. (glass should be well rubbed with a wash-leather dipped in a solution of fine whiting and stone blue, and then dried; afterwards it should be polished with an old silk handkerchief).—LAWREN (Indian ink is composed of fine lamp-black and animal glue. It is manufactured in China and other parts of Asia).—L. (marble is polished by rubbing it thoroughly with free-stone or sand, and afterwards with pumice-stone and emery).—BRUNNET (professor is derived from the Latin *profitor*, to profess, or promise openly).—B. J. H. (crouching is superior to crouk in every respect, especially as it possesses greater elasticity. It also keeps better, and is not much more expensive).—DUS S. (the Faculty of Advocates in Edinburgh constitute the bar of Scotland. It consists of about four hundred members).—G. (advowson is the right of presenting a fit person to the bishop, to be by him instituted to a certain benefice within the diocese which has become vacant).—G. KELLY (Many thanks, but the papers mentioned are not cited to our pages).—ILYAN (the paper is too long for insertion).—LXWO (Chas problems, under the careful editorship of Herr Harwitz, will be found in the *Family Friend*, a fortnightly publication. An excellent work on Chas has lately been published by Mr. Bohn).—LAWRIA (etiquette is a comprehensive term, embracing not only all observances connected with social intercourse, but such as belong especially to the domestic circle. *Hints on Etiquette* is the title of a little work that might be consulted by our correspondent).—HARBERT (the subject is political, and we must therefore decline it).—J. (verbena essence may be made by mixing half an ounce of oil of verbenia, four ounces of rectified spirits of wine, and forty drops of essence of vanilla).—R. H. E. (the dukedom, the most elevated dignity in the British peerage, was first introduced by Edward III., who created his eldest son, the Black Prince, Duke of Cornwall).—In writing to the Queen, the form of address should be—"Madam, may it please your Majesty".—JAMES LEX (the number of Heralds in England is fourteen. There are four Kings of Arms—Garter, Clarenceux, Murray, and Bath).—F. M. (the origin of *patenosters* is uncertain: four countries dispute the claim of having first instituted these valuable sources of information, Italy, Germany, Venice, and Nuremberg).—LXARXON (to clean velvet, procure a small square of pipe-clay, and scrape a little oil upon the velvet, then lightly brush it off).—A. B. C. (the rose became the national badge of England in 1486, because the houses of York and Lancaster, then united by the marriage of Henry the Seventh with Elizabeth of York, each bore a rose as its emblem).—GAMBOY (sponge is now allowed to be a living being, but it long remained a question whether it was a vegetable or an animal one).—JOHN M. (rouge is the best substance to clean cutlery).—X. Y. Z. (many thanks, but the contribution is too long for our pages).—ARCHMOLOGOS (Paternoster Row is supposed to derive its name from the people who formerly made *patenosters*, beads, rosaries, &c., and who resided in this neighbourhood).—F. (grease-spots may be removed from linen by employing magnesia in the lump, wetting it, and rubbing the grease-spots well with it).—Y. (apply to a medical practitioner).—HONARTO (many thanks for the kind wishes expressed for the success of our undertaking. The increased favour we receive is a convincing proof that our exertions have been recognised).

Printed by WILLIAM BARNES, at the Crown Office, London; and published for the Proprietors, by J. BARNES, 60, Fleet Street, London.

# THE HOME COMPANION:

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 22.—Vol. I.]

SAURDAY, MAY 29, 1852.

[PRICE ONE PENNY.]

"Another turn of thought and she had decided on the future course and was about to retire, when, gallant as a knight of the olden time, this gentleman leaped upon the shore and looked to her girl fully expecting her not to regard his appearance in that place as contemplated impertinence, nothing being further from his expectations than falling upon such a group of female business!—See Chap. iv.

## THE CALIFORNIANS; OR, BOTH SIDES OF THE PICTURE.

(Continued from page 322.)

### CHAPTER II.

THE following day, at an early hour, Mr Phillips was at this humble lodging, tendering his sympathies to the bereaved, whom he found gathered around the lifeless remains of their parent—the only being in the world whose bosom had ever been the repository of their complaints, whether of griefs or of wrongs; but which was now hushed in death, silent and unresponsive to their moanings.

Mr. Phillips thought proper to endeavour soon to divert them from their tears, and began by caressing his pet—as he was wont to call her—little Susan, the youngest, a fascinating child of seven years of age.

"And you read, write, and cipher, my little one, do you not?"

"I read, sir, and cipher a little, but I do not write yet. I'm going to begin soon; that is, I was going to do so, but now I can't go to school any more, because I shall not have anywhere to live."

"Not have anywhere to live! Why what makes you think that, my child?"

"Why, sir, sister Juliet can't keep a house for us alone."

"Can she say she could not do that?"

"No, sir; but I think she could not."

"Did your sister Juliet write the note that was sent from here yesterday morning to Miss Adams?"

"No, sir; my sister Mary wrote it the evening before, while sister Juliet was gone to carry home the shroud; and ma' told her what to say."

"Then your sister Mary knows how to write very well—if it was she who wrote that note."

"Yes, sir, but she has been learning almost two years! She began before brother Henry went away—when sister Juliet used to teach us."

"Have you ever taught a school?" asked Mr Phillips, seizing the opening for changing the conversation from one to the other, in addressing himself to Miss Adams.

"No, sir, but, until my brother Henry's death, my little sisters were taught by my mother and myself. Since that period they have been to the public school."

"As you appear to have had some experience in teaching, and in many other considerations seem well calculated for a teacher in a select school may I ask, Miss Adams, why you did not, on your brother's decease, turn your attention to that occupation, instead of the one you have been following of late?"

"Indeed, sir, that would have been a much more agreeable one to me; and I felt within myself that I could fill that capacity, consequently my mother and I made great exertions to obtain for me the situation as teacher in a school, or as governess in a private family. But as I had then scarcely entered my sixteenth year, I was for the latter situation considered too young and inexperienced. Besides, music being generally an essential branch required of a private teacher, I was on that account disqualified to fill that station, because of late years, ever since my father's misfortunes, which made it necessary that my mother's pianoforte should be sold, I have had so little opportunity for keeping up the practice of it, that I had nearly lost all the knowledge I once possessed. Then as to the other situation, that of teacher in a school, it was the one which, with my brother's assistance, I was studying for. But in consequence of not having been to a school since my father's decease, which occurred soon after our removal to this city, about five years ago, I was unknown in any of the schools, and therefore could get no certificate of qualifications from those sources; and no one would take me on trial, for any remuneration, other than instruction in some one or two branches that I might require."

"I was unable to accept any offer of this kind; for my mother's health had received such a shock from the afflicting event of my brother's death,

## COUNT KONINGSMARK.

A will, signed at Westminster Abbey, has been found on it a bas-relief representing a coach in the fashion of the day; three horsemen are at its side, and one of them has just discharged a blunderbuss at the person sitting in it, who, from the manner of extending his hands, seems to be wounded; the smoke is rising from the muzzle of the gun, and the horses to the coach are cowering as if alarmed at the report. The design of the bas-relief is to record the death of Thomas Thynne.

Thynne was one of the wealthiest subjects in England. He had been a member of several parliaments; and though much in favour at court, had given offence by carrying up a petition for the speedy call of a parliament. After this he joined the party of the Duke of Monmouth, who had a great friendship for him, and frequently visited him at his magnificent seat, Longleat, in Wiltshire. In Dryden's *Abolam and Alistophel*, Thynne is mentioned under the name of Isaacbar.

He appears to have been popular, much beloved, and not to have excited envy by his riches. He was familiarly called "Tom of ten thousand," which it has been remarked is equal to a hundred thousand pounds at the present day, with the advantage of the alliteration to boot.

At this time, Elizabeth, the daughter of the Earl of Northumberland, was by far the richest heiress in the kingdom. She was born in January, 1687, and her father dying when she was two or three years old, left her the representative of the Percy family and the heir of their immense estates. Her grandmother, who was an intriguing old lady, was much occupied in employing her talents for mischief-making for the benefit of the Lady Elizabeth, and she was married before she was thirteen, to Earl Ogle, the only son of the Duke of Newcastle. With him he never lived as a wife,

and he dying soon after the ceremony, Thynne became her suitor, and by the connivance of the countess and the influence of Monmouth and other nobles, succeeded in obtaining her for his bride. Immediately after the marriage, which appears to have been private, she was, with the consent of her husband sent to the continent for a year to complete her education. Some accounts state that she had to have fled. She was then not more than fifteen, and Thynne was perhaps three times her age.

Early in the year 1681, Count Koningmark visited England, bringing a letter of recommendation from the King of Sweden to Charles II. He was nephew to the Governor of Pomerania, and ally to the royal family, and the proprietor of large landed estates in Germany. He soon became one of the most distinguished nobles at court. His face and person were eminently handsome; his long, light-coloured hair was the admiration of the one sex, and the envy of the other. Gracious and engaging in his converse, conspicuous for his horsemanship and the elegance of his equipping, and cheerful, and a master of all the accomplishments which the age required, it is easily to be conceived what a splendid appearance he made among the courtiers of that dissolute reign. He brought with him, too, the reputation of a gallant soldier, and had already gained renown by several acts of adventurous bravery in a war against the Turk. With the prospect of these exploits, he had visited several countries in Europe, and had been received with distinction by their sovereigns. On his arrival in England he soon ingratiated himself with the monarch, whose favour of him in good stead in the hour of need. Such a civil man, then only twenty-two years of age, was likely to make a great impression on the young heiress of Northumberland, whose susceptibility of flattery and high talents were afterwards fully developed. A matter of no inconsiderable importance, the secret interviews, the agony of separation, and the vows of constancy that passed between lovers so well suited to each other. It is certain that the marriage with Thynne was not agreeable to the lady, and provoked much censure at the time. Lady Monmouth, that the Earl of Essex was suspected of being a promoter of the match, but he denied all participation in it, and accused the Countess of Northumberland of having sold her granddaughter to Thynne for money. The marriage seems not to have extinguished the hopes of the countess, and the preference of the lady for the accomplished young soldier over a husband she had been forced to wed, was apparent. It is easy to believe that while she reluctantly gave her hand to a man who was no longer *dans sa première jeunesse*, her heart of her free will was bestowed on the handsome Swede.

Thynne was with the court in London, his wife in Holland, and Koningmark had returned to the continent. Such was the situation of the parties towards the close of the year 1681. It was on Sunday night, the 12th of February, 1682, that the west end of London was startled by the news, that Mr Thynne had been killed in his coach. It occurred in Pall Mall, one of the most frequented streets, between eight and nine o'clock in the evening. He was shot with four balls, and expired the next morning. His servants saw the three men on horseback but could not identify the murderers. A pistol, however, was dropped on the spot, which was traced to one of them, and led to the detection of the assassins. A Pole named Borosky, and Steyn, a Swede, were apprehended, who immediately confessed their guilt, and were committed to prison. A Captain Vrats, another Swede, on his arrest he did not deny that he was present at the scene, but said his intention was to fight with Thynne for a wrong he had received from him. This, it afterwards appeared, was for speaking ill of his friend the count. Koningmark it was found, on the examination of the prisoners, was then concealed in London, where he had been for some weeks, occasionally changing his lodgings; and that Vrats had used his name, and promised a large reward to his accomplices to induce them to the perpetration of the crime. The police pursued the count, and he was apprehended in the disguise of a sailor, just

as he was proceeding on board a ship at Gravesend. On the 12th of February all four were tried at the Old Bailey—Borosky, Steyn, and Vrats, principals, and Koningmark as accessory before the fact. With the count there was little trouble, as the evidence was sufficient for their conviction. With Koningmark it was otherwise. He was not present at the deed, and the question was, whether the circumstantial evidence was strong enough to convict him with it. There was proof that Vrats, who seems to have been the principal agent in the deed, and Steyn, were in the habit of frequenting his lodgings; that he expressed great anxiety for the arrival of Borosky, who came to London only two days before; that he bought a sword for Borosky; that Vrats and the Swede were at his rooms the day of the crime, and that Vrats returned to him immediately after it was committed. It also appeared that Koningmark had sent to the Duke of the Swedish ambassador, if he should call Thynne to account for certain injurious words he had spoken of him, whether it might not interfere with his put claims to the Lady Ogle. All these circumstances—the concealment of the count, his flying, his disguise, his resentment against Thynne for the affront he had received, and the assassinations being effected by his creatures, who had no motive from any injury to themselves—were urged with great force by the lawyers for the prosecution. The chief justice, Pemberton, leaned very much in favour of the count, and though he attempted to seem impartial, it was apparent his wish was for an acquittal. Accordingly, after being out for half an hour, the jury found a verdict of *Guilty* against the three principals, and of *Not Guilty* as to Koningmark. It was clear beyond the shadow of a doubt, that the assassination had been concerted by him and perpetrated at his instigation, and that he was far more guilty than the three wretches who were most justly hanged. Nothing but the known favour of the king, and the high rank and wealth of the count, could have saved him from the death of a felon, and this trial presents another instance where petty villains are often punished and great ones escape. As the counts were excluded from the evidence, it must be owned, there were not wanting plausible arguments to show the insufficiency of the proof at least as strong as those which are often urged in other cases. But in those days of rigorous execution of the law, such lenity is remarkable, and had he been an obscure culprit, Count Koningmark would have met the reward due to his crime.

Koningmark was glad to hurry from England, as soon as his trial was over. He had remarked that there was a stain on him, but one good action in the year, or some deed of daring would wash it clean. He continued his alienation from court, and lost his place, at the age of twenty-seven, in the year 1686, in a skirmish before Argos. Other accounts say it was some seven taken during the campaign. It was his brother whose remains were found buried near the chamber of Sophia of Zell, the wife of George I., in 1707, where he was supposed to have been put to death by order of the Elector. The two brothers have often been confounded. The beautiful Countess of Koningmark—well known as the favourite of Augustus, King of Poland, of whom the anecdote of the horse-shoe and the cat is told, for her visit to Charles XII, and as the mother of a man who had the most distinguished warrior of the reign of Louis XV—was then sister. Beyond the possession of superficial accomplishments, Thynne appears to have been a selfish, dissolute character, and his name has descended to posterity as an example against the encouragement of intemperance.

The heroine of the tragedy, the Lady Ogle, was now for the second time a widow, and in less than three months after the death of Thynne, being just thirty years of age, she was married to the Duke of Somerset, known as the "Prodigal Duke." She figures in the history of the reign of Queen Anne, over whom she had a great ascendancy, which she used to the detriment of Hailey and the Tories. Swift declares her to be "excellent in every art in every art in every art," and it was against her that the famous black letter, known by the title of the *Madon Prophecy*, was written; but he paid handsomely for this cruel libel, for the Duchess of Somerset, on her death, bequeathed Queen Anne not to bestow on him a mitre, whereby the Dean of St. Patrick's was forever excluded from the great object of his ambition—rest in the bench of bishop. She died in the year 1722, leaving many children, and her posterity are now numerous among the highest nobility of our land.

**DRUNKENNESS.**—When the vice has taken fast hold of a man, farewell industry, farewell emulation, farewell attention to things worthy of attention, farewell love of virtuous society, farewell decency of manners, and farewell, too, even an attention to person. Everything is sunk in this predominant and brutal appetite. In how many instances do we see men who have begun life with the brightest prospects before them, and who have closed it without one ray of comfort and consolation. Young men, with good fortunes, good talents, good tempers, good hearts, and sound constitutions, only by being drawn into the vortex of the drunkard, have become by degrees the most loathsome and despicable of mankind. In the house of the drunkard there is no happiness for any one. All is uncertainty and anxiety. He is not the same man for any one day at a time. No one knows of his outgoings or his incomings. When he will rise, or when he will lie down to rest, is wholly a matter of chance. That which he swallows for what he calls pleasure brings pain, as hourly as the night brings the morning. Poverty and misery are his doom. To avoid these results we are called upon to make an abstinence requires no aid to accomplish it. Our own will is all that is required; and if we have not the will to avoid contempt, disgrace, and misery, we deserve neither relief nor compassion.—*Cobbett's Sermon on Drunkenness.*

THOMAS MOORE

And it is a little later a ke  
New drill d

The grave has just closed upon one of the most gifted of the children of song, and whose honourable career has added upstanding brilliancy to the literary annals of our time. THOMAS MOORE, the poet of the heart whose genius has been well described as 'most mortal and most happy' has passed from amongst us, leaving an impression of regret in the public mind that sufficiently proves his eminent intellectual merit and his amiable qualities in the social intercourse of life.

The "Bard of Erin" was born in Angles Street, Dublin on the 30th of May, 1780 of parents in modest circumstances—his father being a dealer in grocery and spirits which he eventually quitted for the army, and became a quartermaster. At an early age, young Moore evinced a talent for versification, which gave ample promise for the future and at the school of Mr. Thomas Whyte (who was also the teacher of Sheridan) he composed in his fourteenth year, several poems which were published in the *Anthology*, a Dublin magazine. "At the time," writes Moore "when I first began to attend Mr. Whyte's school, he still continued to the no small alarm of many parents, to encourage a taste for acting among his pupils. In this line I was long his favourite show scholar, and among the play bills introduced in his volume, to illustrate the occasion of his own prologues and epilogues there is one of a play got up in the year 1790 at Lady Boroowe's private theatre in Dublin, where, among the items of the evening's entertainment, was "An Epilogue, A Squeeze to St. Paul's" Master Moore.

When the poet was twelve years of age, a circumstance occurred that, probably, materially influenced the patriotic feelings he afterwards immortalised in song. His father was a staunch Roman Catholic, and at this period (1792) took him to a dinner given in honour of the French revolution, then of recent occurrence. The enthusiasm so predominant in the Irish character had allied this event, which ought to have caused sorrow and indignation, with the wrongs and distresses of unhappy Ireland. The expressions of eloquent indignation poured forth at this dinner were not lost upon the young guest, and were afterwards reflected in the *Irish Melodies*. The boy sat on the knee of the chairman, while the toast circulated round the board—"May the breezes from I range fan our Irish oaks into verdure."

Taking advantage of the opening of the university to Roman Catholics by Parliament, in 1798, Moore was entered at Trinity College, Dublin, and pursued his studies with a diligence that secured him the approbation of his teachers. He applied himself more particularly to the classics, and several of his translations from the Greek poets, which were published at this time, excited admiration—especially a faithful and elegant translation of the *Odes of Anacreon*, which was commenced, and afterwards completed and published by subscription, in his twentieth year. At this period he was in London, where he became a member of the Inner Temple. The translation was dedicated to the Prince of Wales, afterwards George the Fourth, to whom he was introduced, and this led to an intimacy which procured him an official appointment at Bermuda, for which place he departed on the 16th of September, 1808. This well-intentioned advancement, however, proved disastrous to the poet, who, previous to his return to England, had employed a deputy to transact the duties of the office and became responsible for the irregularities of his agent. A heavy pecuniary loss was the result to Moore

who was obliged to take a second journey to the West Indies; after which he made an extended tour through the United States, where he composed the air and words of the *Canadian Boat Song*, so familiar to all lovers of sweet and picturesque melody.

In 1806 appeared his *Odes and Epistles*—the fruits of foreign travel during fourteen months—and the passages of peculiar beauty that shine throughout these poems were the vivid impressions conveyed to his mind by the scenes he had beheld. The voluptuous climate of Western India had, however, tinged his verse with a license of imagination which drew upon him the displeasure of the Edinburgh reviewers, who called him "the most licentious of modern versifiers, and the most poetical of the propagators of immorality." His book was denounced as a "public nuisance, deserving to be consigned to universal reprobation." The consequences of this severe and not unmerited censure, was a duel between himself and Mr. Jeffrey, at Chalk Farm which happily terminated without mischief, and even produced some amusement to the public, for it was asserted that the pistols of the antagonists were not loaded. This unfounded railery was not lost upon Lord Byron, who, in his *English Bards and Scotch Reviewers*, alludes sarcastically to "Little a little's pistol." This led to a challenge on the part of Moore, which, instead of taking place, laid the basis of a sincere and unchangeable friendship between the two rivals in genius.

Two years after the publication of the *Odes*, Moore produced the *Form of Homer's Little*, a name assumed as a playful satire on his diminutive stature. This work which displays the same freedom of language that had brought upon him the displeasure of the critics, presents an instance of the perversity of genius expending itself on mischievous trifles, to be expiated afterwards by bitter and unavailing regret. How few writers, unfortunately, can say with the amiable Thomson—"There's not a line which I could wish to blot."

Moore, however, had the good sense to acknowledge his error, and to be ashamed of such puerility. In an exquisite *Ode on his Birthday*, the production of maturer thought he alludes feelingly to this past weakness—

Vain was the man and false as vain,  
Who said— Were he ordained to run  
If a long career of life ago  
He would do all that he had done  
Ah! not thus, it voice that dwells  
In softer birthdays speaks to me  
Far oft' erwise— Of in a wail  
Lavish'd away— (carelessly)  
Of counsel nodd of talents—made  
Haply for high as I pure designs—  
But oft like Israel's incense laid  
Upon unholy earthly shrine.

And could I trace  
All my perfect picture over again,  
If I could add redolent effects  
The lights and shades the joy and gain—  
How little I could do to stay  
How quickly I should melt away!

With that versatile genius so remarkable in Moore, he next changed his line to satire, and published the *Fudge Family in Paris*—written after a visit to Paris in 1817, in company with the poet Rogers—and soon followed by *Fables for the Holy Alliance*, *Tunney Post Rig*, and numerous detached political squibs full of sparkling wit and humour. Such ingenious rail is conveyed in language unsurpassed for its elegant purity, instead of awakening the resentment of the individuals to whom allusion was made, no doubt runs like a smile sometimes at the expense of wounded pride. These satirical poems obtained a wide circulation, and became very popular.

The next work from the same pen that occupied public attention, and the production which of all others will crown the memory of Thomas Moore is his *Irish Melodies*, which have found a home in every heart's nook to tender and patriotic impressions.

The sweetness and beauty of these songs, consecrated to the ancient glories and the sorrows of Ireland, have, perhaps contributed more than any other circumstance to awaken throughout the world a sympathy for the misfortunes of that country. Certainly few poems have been so successful—translation—

\* A pleasant anecdote is related by Mr. Wald of the manner in which Moore was given in after years the original copy of this song. We give it in the narrator's own words— "In 1830 Moore visited Dublin on the occasion of the meeting of the British Association for the Advancement of Science, in that city. At one of the festive soirees which took place during the history of the Association were not rare events a very beautiful girl was introduced to the poet by my brother, but surrounded as the latter was at the time by a host of fair admirers many of whom were most anxious to be presented to him it is doubtful whether he would have vouchsafed more than a slight pressure of his hand to the young lady had not my brother whispered in his ear— 'She possesses the original copy of your *Canadian Boat Song*.' At these words the poet begged to let her show this came to pass. The facts were simple enough. The book, which was a little *Levee*, and on the blank leaf of which the song and the music were pencilled, belonged to Mr. Harcourt with whom Moore was travelling in Canada. On his death the volume came into the possession of Mr. Macaulay, of Edmonstone, near Dublin, who presented the book to his daughter and who very properly regarded the gift as most precious. Moore then expressed the strongest desire to see the book, and it was arranged that I should accompany Miss Macaulay on the following day to a bookseller's shop in Grafton Street, where the poet had a room for writing his letters, and where he engaged to meet us. I shall never forget the pleasure he manifested when his eyes fell on the well remembered lines. He gazed at them long and earnestly—so long and so earnestly that my fair companion at length exclaimed, 'Oh, Mr. Moore I hope you do not want to take the book from me.' No, Miss Macaulay, indeed I do not, he replied 'but if you know what thrilling remembrances of a happy past the contemplation of this page presents you would not wonder at my feelings. Since I wrote these lines, he added, 'I have been going so fast down the rapids of life, that I owe you much for enabling me to live through but for a few minutes, in the past, and I shall long remember this pleasant meeting.' But, as soon as his gallantry played him false for in the same way the new edition of his poetical works, he stated that a 'gentleman' showed him the volume in question and the lovely girl—for such indeed she was—was not mentioned. It would not have been so in his more youthful days. At my request, Moore further detailed the lines, stating the circumstances under which they were written, adding his autograph and, with the book thus made additionally valuable, I escorted Miss Macaulay home."

having appeared in several languages, by foreigners of eminent literary distinction. We are indebted for the great claims that surround these ballads to the love for music which by Moore's own avowal was his earliest childhood, and by which he was animated to write lyrics for popular old Irish airs. He was himself a superior musician, and his voice, though not of large compass, was wonderfully sweet and effective, and to hear him sing one of his own melodies was a rich treat. He was therefore able to appreciate the wild and plaintive melodies of his native land. "It was the effort," he says, "to translate into language the emotions and passions which must have appeared to me to express, that first led to my writing any poetry worthy of the name. Dryden," he adds, "has happily described music as being 'inarticulate poetry,' and I have always felt, in adapting words to an expressive air, that I was bestowing upon the gift of articulation, and thus enabling it to speak to others all that was conveyed in its wordless eloquence to myself."

Regarding the *Irish Melodies*, a writer in the *Times* has observed, that "the love of country that pervades his theme, his simple tenderness of feeling that at once strikes the heart as instantly to melt it, his facility of creation, linked with the glad appreciation of all that is beautiful in nature—the grace, the elegance, the sensibility, the ingenuity that are never absent—the astonishing and thoroughly successful adaptation of sense to sound, of sweetest power to thrilling music—are claims to admiration which the most prosaic of his readers will find it impossible to resist or grudge."

In 1817 appeared *Lalla Rookh*, an oriental poem, written with more than his usual facility of conception, and with great care as regards the manner and peculiarities of the East as many distinguished travellers have attested. The account of the circumstances that induced the publication of *Lalla Rookh* is thus given—"By the suggestions of his friend, the poet resolved to take the field, and attempt a poem of the dimensions which Sir Walter Scott's then recent triumphs had rendered 'the regular poetical standard.' A negotiation was at once opened with the house of Longman but it led to no decisive result and for two years the matter slumbered. In the interview took place between Messrs. Longman and Moore with a view to arrangement and before it closed much to the honour and glory of romance," as Moore with becoming pride testifies, the publisher undertook to pay the poet 3000 guineas for his poem even before a single line of the production. In 1818, some progress having been made in the work Moore wrote to his publishers expressing his wish to assist in his manuscript for their consideration. It was received as an conformity with the magnanimity of the original engagement. We certainly impatient for the pursuit of the poem wrote Messrs. Longman but solely for our gratification. Your comments are all well in the. Another year elapsed, and in 1816 the work being complete was placed in the hands of the publishers. In 1817 *Lalla Rookh* appeared. Messrs. Longman had made no sound or hasty calculation. The poem was hailed with a burst of admiration from sceptics as well as believers.

The poetry has been well described as brilliant and gorgeous—rich to excess with imagery and ornament and overflowing in its very sweetness and splendour. The success of *Lalla Rookh* justified the labours bestowed upon it. The amount of reading and reference to works of oriental literature was such as none but an ardent and industrious genius like Moore could have attempted. The poet himself relates that it was amidst the snail of two or three Derbyshire winters in a lonely cottage amongst the fields, that he found him self enabled by that concentration of mind in which retirement alone gives, to call up round him some of the most striking scenes. As instances of the popularity of the poem, we may state that it has passed through no less than twenty different editions, and it is even been translated into Persian, being thoroughly appreciated on the shores of the Caspian. There are passages of tenderness and beauty in *Lalla Rookh* that have become familiar as household words. Who can forget the song of the Peri?—

How I pity a clown and a child of a  
Aie it is folly to be so wretched  
Mid flowers that never shall fade or fall  
Though mine are the gardens of earth and sea  
And the stars that glaze the firmament  
One blossom of Heaven out-blushes them all  
Though sunny the drake of cool Cishire  
With its plane-tree it reflected the  
And sweetly the founts of life at will  
Though bright are the waters of Singul  
And the golden flood that thickens the strays  
Yet—oh! 'tis only the bloom that is  
How the waters of Heaven outshine them all!

"Go, wing thy flight from star to star  
From world to luminous world as far  
As the universe spreads its flaming veil  
Take all the pleasures of all the spheres—  
And multiply each through endless years,  
One minute of heaven is worth them all!"

In the year 1817 was published *Tom Crib's Memorial to Congress*, one of the happiest of his satirical poems. Two years afterwards, Moore revisited the English capital, in company with Lord John Russell, with whom he proceeded into Italy. Here the illustrious tourists separated—Lord John making George the destination, and his companion proceeding to Venice, on a visit to Lord Byron, whose acquaintance he had made in 1812.

The result of this excursion was the production of a lively volume by Moore, entitled *Rhymes on the Road*. About this period, shades of trouble gathered round the gay-hearted and amiable poet, arising from the unfortunate appointment at Bermuda, and the unprincipled conduct of the substitute he had placed there. The difficulties in which he was involved obliged him to remain on the continent until the close of 1822 when an arrangement was effected which enabled him to return to England. As a proof of the esteem in which he was held by his friends, he received numerous offers of pecuniary

assistance, which, however, he gratefully declined, trusting to his own literary resources to meet the claims advanced against him. The amount required for this purpose was one thousand guineas, towards which the noble of the defunct contributed three hundred pounds. The remainder was furnished by a friend, who would listen to no refusal, and who was soon repaid from the profits Moore derived from his next publication—the *Loves of the Angels*.

This poem, founded on the Eastern story of the angels Harut and Marut, and the rabbinical fable of the *Loves of Uriel and Shamshel*, was written in Paris. It exhibited the fall of the soul from its original purity, the loss of light and happiness in the pursuit of this world's unsubstantial pleasures, and the penitents, both from sensuality and Divine justice, with which unpurity, pride, and presumption, inquiring into the awful secrets of heaven, are sure to be visited. A subject of this nature was, however, scarcely one to which the peculiar genius of Moore, light and fanciful, could render justice. "We do not meet with the grandeur of the angelic character, such as it shines forth in the sublime pages of Milton, whose adoring imagination approaches things sacred to surround them at all times with awe. The seductive fancy of Moore, it must be confessed, ventures to the sanctuary only to profane it. The angels of Milton descend upon the earth to console the family of man, but not to mingle with humanity. The angels of Moore, not only take part in the business of earth, but, like the weakest of mortals, fall over head and ears in love with the fairest of earth's daughters."

In 1825, Moore entered the publishing lists as a distinguished prose-writer, and produced a *Biography of Richard Brinsley Sheridan*. It is a work amidst much fine and powerful writing, are some defects which detract more for the poet than the plain matter of fact reasoner. He had not those habits of close observation so essential in forming a correct judgment of character, and this superficial knowledge of the world he has himself avowed when he wrote—

Fair Science to you,  
I've long bid adieu and a careless adieu.

In 1827 appeared *The Epicurean*, an imaginative prose composition in an Eastern dress and intended originally for a poem. This work, which is more hushed and thoughtful than most of his other productions, was dedicated to Lord John Russell.

Three years afterwards Moore issued his *Notions of the Life of Lord Byron*, the best known and the most deservedly popular of his prose works; and which will descend to posterity as a memorial of friendship to one of England's most gifted bards, who would say without arrogating to himself any assumed powers—

I twine  
My heart's filigree into the melody  
With thy language.

A *Life of Lord Edward Fitzgerald* was next produced, followed by *The Sum of Féile*, a poem with songs dedicated to the Hon. Mrs. Norton. A few occasional squibs were contrived in his later years to the *Times* and the *Morning Chronicle*. The *History of Ireland*, forming a part of *Landed Proprietors* in which bears marks of a diligent research and study, was, with the exception of a revision of his practical works in ten volumes, the last work presented to the public by Moore.

Perhaps few men have received so large a share of private friendship, as the great poet lost. It has been so universally deplored. Beloved and courted in society for his social politeness and charms of conversation, added to a quick and brilliant wit, Moore, in the days of his riper intellect moved in a circle composed of the most distinguished rank and genius of the country. During Lord Melbourne's administration, his political friends obtained for him a pension of £300 a year, which, added to the profits of his literary undertakings enabled him to live free from anxiety in pecuniary matters.

Shelton Cottage—of which he wrote—

Oh! dear house! at evening ark  
Where I can sit and rest at last I've found  
Clearing the when it grows dark  
And comfort in a stormy road,—

situated in Devonshire, and in the immediate vicinity of Bovey, the seat of Moore's constant friend, the Marquis of Lansdowne, was a model of neatness and comfort, and it was there, until within a few years of his decease, he received his numerous and distinguished friends. A residence of thirty-four years had endeared him to the spot, and it was here he breathed his last sigh on the 26th of February, in his seventy-second year. A sad and lingering disease had afflicted Moore during the three years preceding his departure from the world. It had gained upon him without causing him much bodily pain, but resulted in a softening of the brain, which reduced him to a state bordering on childishness.

The poet had married Miss Bessy Dyke, by whom he had four children, who preceded him to the grave. His eldest son died in Algiers, in the French military service, and his second son, John Russell Moore, grandson of Lord John Russell, fell a victim, at an early age, to consumption. Mrs. Moore, to whom a pension of one hundred pounds a year was granted in 1850, in consideration of the literary merits of her husband, and his infirm state of health, still survives, and is said to be the depository of a diary, and other valuable manuscripts relating to the poet's life, besides the materials he had collected for a biography of Sydney Smith, all of which will awaken great public interest.

"Moore," said Byron, "has a happy disposition, his temper is good, and he has a sort of Brerly imagination, always in movement and in each evolution displaying new brilliancy."

The features of Moore have been rendered familiar to the public, by the penicils of some of the greatest painters of the time. The portrait selected to illustrate this biography, is from the likeness drawn by Sir Thomas Lawrence, which is generally esteemed the most striking and effective. The personal appearance of the poet has often been described. The expression of his countenance was the faithful index of the noble heart that animated him, being frank, manly, and benevolent.

The body of the illustrious poet was removed on the third of March, from Sloper's Cottage to a vault in the neighbouring church of Bromham, where two of his children, who died at the respective ages of sixteen and nineteen—Anastasia Mary Moore, and John Russell Moore—had already been interred.

## ARAB SNAKE CHARMERS.

ON May 26th the day on which I first saw the hippopotamus, I witnessed the performance of the Arab snake charmers, at the Zoological Gardens. After their dinner they came from the giraffe-house, proceeding along the road to the reptile-house, on the floor of which about three o'clock in the afternoon, or a little later, the performance took place. The charmers took up a position at the end of the house opposite to the lodging of the pythons, of whose size the old Arab had heard with something like incredulity. The company stood in a semicircle, and at a respectful distance. There was not much difficulty in getting a front place, but those behind pressed the bold spectators rather inconveniently forward. Standing in the open space the old Arab said something to the young one, who stepped down under the reptile cage on the north side of the room and took out a large deal box with a sliding cover which he opened for a few seconds, and pulled out a large, long snake. After a short while, a little while, he set it down on the floor, he squatted down and fixed his eyes on the snake. The serpent instantly raised itself up, and turned slowly on its own axis following the charmer. Arab, turning as he followed him, did not turn as if to bite. He waved the serpent at command with his hand. At this time the old Arab stood still, quietly regarding the creature. He presently he also squatted down, muttering some words, and the snake, he evidently affected the reptile more than in its natural relation, though he remained in its nest doing nothing that he could see but fixing his eyes upon the snake, which he had up and laid the head of the serpent which now turned till his entire column of light to be in a position of. Suddenly it darted open mouth, but it, furiously dashing its head with its eyes, it was a few inches of the charmer, who still impudently kept his position, and was looking bitterly at his excited antagonist. I was very close, and which I was narrowly, but though the snake dived at the old Arab's feet, it was more than twice or three with its mouth open. I could not see the projection of any fang. Then the old Arab, who it was said had the gift of charming serpents in his family for a long series of years, took another box, and took out a five great lizard, and provoked him with them, holding them by the tails in a sort of fork in his hand. When the youth brought out a snake which I observed could be expected as it is the country people say, something like a cobra. He placed it on the floor, but this serpent did not raise itself like the cobra, the charmer stooped to it, moved in a very odd agitated manner, on its belly, regarding him about. I thought the serpent was going to fly at him, but it did not. He took it up, played with it, blew or spit at it, and then set it down, apparently sick, subdued, and limp. He then took it up again, played with it a second time, then set it up in his hand put it in his mouth, went to another box, drew the lid, and brought out more snakes, each of which was another new and the others of a most venomous kind. Now there were two snakes, with heads and bodies erect, obeying, apparently, the volition of the charmers. One of the snakes bit the youth on the naked hand, and brought the blood, but he only spit on the wound and scratched it with his nail, which made the blood flow more freely. Then he brought out more lizards of a most revolting aspect. By this time the floor of the reptile house that formed the stage of the charmers, began to put one in mind of the arena in the *Des Franchises*; only that the principal performers looked more like the Black Huntsman and one of his familiars than Max and Caspar, and the enchanted circle was surrounded with fair ladies and their well-dressed lords, instead of the appalling shapes which thronged round the affrighted huntsman at the casting of the charmed bullets. The Arabs, holding the snakes by the tails, let their bodies touch the floor, when they came twining and wriggling on towards the spectators, who now backed a little upon the toes of the charmers who pressed them from behind. Sometimes the charmers would leave their hold, when the serpents, as if eager to escape from their tormentors, rapidly advanced upon the retreating rings; but they always caught them by the tails in time, and then made them repeat the same adventure. I kept my position in front throughout, and had no fear, feeling certain that Mr. March II, and those under whose superintendence this highly interesting and instructive establishment is so well conducted, would not have permitted the exhibition to take place, if there had been the least danger. Besides this, I observed that the charmers only used their own serpents, which they had, I presume, brought with them. And I confess that the impression upon my mind was, that they had been rendered innocuous by mechanical means. — *Extract from the Note-Book of a Naturalist, by W. J. Brodridge, I R S.*

## THE FIRST BABY.

My old schoolmate, Mary Thurland, had been married nearly two years, when I made my first call on her in her new home.

"Did you ever see such a darling?" she cried, holding the infant up and down in her arms. "There, baby, that's my old friend, Frank. She knows you already, I declare," cried the delighted parent, as it nestled at a bright ring, which I held up to it. "You never saw such a quick child. She follows me with her eyes all about the room. Notice what pretty little feet she has. the darling footy-tooties," and taking both feet in one hand the mother fondly kissed them.

"It certainly is very pretty," said I, trying to be polite, though I could not see that the infant was more beautiful than a dozen others I had seen. "It has your eyes exactly, Mary."

"Yes, and daddy's mouth and chin," said my friend, apertaining to the child, "hasn't it, precious?" And she almost smothered it with kisses.

As I walked slowly homeward, I said to myself, "I wonder if what I marry I shall ever be so foolish. Mary used to be a sensible girl."

In a fortnight I called on my friend again.

How baby grows! she said. "Don't you see it? I never knew a child grow so fast. Grandma says it's the healthiest child she ever knew."

To me it seemed that the babe had not grown an inch, and, to avoid the contradiction I changed the theme. But, in a moment, the willing mother was back to her infant again.

"I do believe its beginning to cut its teeth," she said, putting her finger into the little one's mouth. "Just feel how hard the gum is there. Surely that's a tooth coming through. Grandma will be here to-day, and I'll ask her to see it."

I answered I replied —

"I am entirely ignorant," I said, "of such matters, but your child really seems as if it were one."

"Oh! everybody says that. Pretty, pretty dear!" And she tossed it up and down till I thought the child would have been shaken to pieces. "But little creature seems to like the process immensely. 'Is it growing?' 'Yes, it is.' 'Is it in pain?' 'No, my little dear, what a sweet creature it is.' And she kissed it, and it was still smiling at it with kisses.

When I next called on my friend, she was still full of advances.

"Only look at my little baby, when I had made my way to the nursery, where it was kept herself from morning till night. 'Baby begins to eat. I gave it a piece of meat to-day. a bit of real broiled beefsteak!'"

"What!" said I, in surprise, for the child did look wonderful, "the child ate that beefsteak?"

"Oh! I don't mind saying my mistake. 'What a sad duncie you are, for I But it was a bit of beefsteak of your own. She says you eat beefsteak during a cold the proud mother, addressing the infant, "when you only suck the juice. You don't want to choke yourself do you, baby? Eat a beefsteak! It's funny baby, isn't it?" And as she laughed, laughing all the more because the child smothered it with kisses in return.

It was not in my weeks before the long expected teeth really made their appearance.

For Jane baby had three teeth! triumphantly cried the mother, as I entered the nursery. "The teeth and he's only three months old! did you ever hear of that?"

I confessed that I did not. The whole thing, in fact, was out of my range of knowledge. I knew all about Dante in the original, and a dozen other fine literary accomplishments, but nothing about babies teething.

I took it the little parent exclaimed my friend, as she opened the child's mouth, that they heard me? You never saw anything so pretty — certainly that you didn't. Precious darling, continued the mother, rapturously, holding up the child, "it is worth its weight in gold."

But the crowning miracle of all was when "baby" began to walk. Learning to creep had been daily aided to me. So also had its being able to stand. I, though this meant I found, standing with the support of a chair. But when it really walked alone, the report of fact was announced to me, in note for my friend could not wait till I called. Of course I lost no time in hurrying to Mary.

"Stand there," she said to me in an exulting voice. "No, stoop, I mean. I won't have you be so stupid!" And, as I obeyed, she took her station about a yard off holding the little fellow by either arm. "Now, see him," she cried, as he toddled toward me, and finally succeeded in gaining my arms, though once or twice I fancied he would fall, a contingency from which he was protected, however, by his mother holding her hands on either side of him an inch or two off. "There, did you ever see anything so extraordinary? He's not a year old, either!"

By this time I began to be considerably interested in "baby" myself. He had learned to know me, and would begin to cry whenever I entered the nursery; and I was, therefore, almost as delighted as my friend, when, for the first time, he pronounced my name.

"Djane!" he said, "Djane!"

His mother almost devoured him with kisses in return for this wonderful triumph of the vocal organs; and when she had finished, I, in turn, smothered him with kisses.

I never, after that, smiled, even to myself, at the extravagance of my friend's affection for her baby; the little Jew had kissed himself around my own heart-strings. How wonderful!

And now that I am a mother myself I feel less inclination still to laugh, as others may do, over that mystery of mysteries, a mother's love for her baby.

"Sarah, I must entreat of you to listen to me a moment—I love you most truly, but I do not wish to trouble you in that point. It is not for my own sake I ask you to listen to me, it concerns your own interest, your own well-being. I know well why it is that my presence has become distasteful to you; I will not blame you for not loving me, but I ask you to pause—let me if you will—but pause before you plunge into the gulf before you."—See Chap. xvi

effort; and his funds were reduced to so small an allowance that he had only sufficient to bear his expenses for another week.

Winter was at hand, too, with its frosts to chill the heart, and dry up the streams of trade, already sluggish and shallow.

He was possessed of strong, even violent feelings. Hitherto the effect of them had been to nerve his heart with the most engrossing tenderness to those upon whom his love was placed, and its outpourings had filled those dear ones with the fondest hopes, and the most affecting consolations.

But his very strength of feeling was now turning in upon himself, and working upon his sensitive spirit with a power that would soon unfit him for the severe and manly struggle in which he had engaged. It conjured up before him all the dark visions of the past, only to throw a deeper gloom upon the stern realities of the present. With a sad and desolate heart he mingled with the busy multitude through the day, and retired at night to his sleepless bed, only to awake from troubled dreams to the consciousness of his dependent and unhappy condition.

No wonder if a change was so manifest on his youthful brow. Alas! dear youth, this is but a taste of the bitter cup. What, think you, would it be to wring out the dregs and drink them? There are more evils in this changing scene than your young heart has yet imagined, and yet there are sweet draughts, too, whose potent charms steal over the soul, entrancing it with pleasures beaming from a better world, and giving rich foretastes of what it may yet enjoy. The lights and the shadows, the sweet and bitter, are appointed with a wiser aim, and for a better end than our fancy may imagine.

While Mr. Upjohn was engaged in his homely way, giving true and manly advice, and endeavouring to cheer up the mind of young Edwards, Gitty had been busily employed in arranging things on a little table in the centre of the room.

"Come, Master James, draw up your chair. Gitty, you see, has been getting some nic-nacs for us; that's the way with these girls, always throwing temptations in our way—cheer up, Master James, cheer up!"

Gitty had, indeed, gathered quite a little variety of good things, and they were placed upon a snow-white cloth. There was a plate of large red apples, shining like rubies, and a dish of chestnuts well roasted, and another plate of plump, tempting oranges, and a large pitcher of beer, with the foam rising in a pyramid upon the top. Gitty's eyes, too, were sparkling with delight, and Mrs. Upjohn's needle flew with astonishing rapidity, whilst her husband almost allowed a smile to rear upon his rigid countenance.

Scarcely had they commenced partaking of these simple refreshments, when the little gate was heard to open, which was followed by a rap at the door.

Gitty, as was her custom, immediately caught a light from the table, and attended the summons. As she opened the door a young gentleman, fashionably dressed, was standing on the step. He was evidently confounded for a moment. Gitty began to think he had made some mistake, and was just putting on one of her frosty smiles, such as play around the mouth of these misanthropes when they find one of the sterner sex at fault.

The young man felt the awkwardness of his silence, he saw the smile.

"Pardon me, Miss, I was directed here from Gloucester Street, as the place where I should, probably, learn something of James Edwards."

"He is here, sir, will you please to walk in?"

James had heard his own name mentioned, and immediately stepped to the door. It was Rudolph Hunt.

The young men at once recognised each other.

"I have called on you, Mr. Edwards, to inquire whether you have yet procured a situation."

"I have not sir, will you walk in?"

He accepted the invitation with almost too much readiness quite to satisfy the delicate notions of Edwards, for he at once laid down his hat, and threw off his outer coat. James could do no less than introduce him to the little circle. He blushed deeply as he did so, however, and so did Gitty, who threw her curls back and seemed a little quite restless.

I am glad to see, Mr. Edwards, that you have not yet suited yourself, for my uncle sees now quite anxious to engage you. I say my uncle, for although they are both my uncles, you, no doubt, perceived the last time you called that the difficulty was only with one of them.

I should be very sorry if his objections, whatever they were, have been overruled by any—

Oh! it has been all of his own will, and I think if you call to-morrow, that an arrangement will be made, satisfactory to you."

Reader, have you ever bowed down under the burden of care? Has your spirit ever suffered beneath the load that was pressing upon you? Has the curtain of night—not sweet starlight or moonlight night, sparkling in beauty above, or spreading its mild loveliness in your path, or by your sleeping couch—but night bleak and fathomless, whose deep drapery has wrapped your soul in gloom and filled it with uncertain horrors, ever enveloped you? In such darkness, have streaks of morning suddenly darted through the gloom? and in such a burden, has some kind hand, in an unexpected moment, delivered your sinking frame, and administered a cordial balm to your spirit? Then can you tell what change a few moments, a few short sentences have wrought upon the mind of this lone youth.

There was much lively chatting now, around that humble board. Rudolph Hunt appeared quite at ease, he had much of the polish of the gentleman, but to Edwards, who had a keen sense of propriety, his freedom of manner was not agreeable, and, more than once, James felt the blush warming his cheek, at what he thought not entirely consistent with the conduct of this so lately a stranger. Gitty was, however, highly elated, it was a bright evening to her, but well for her, if it prove not the beginning of sorrow.

## CHAPTER VII.

When Mrs. Edwards bade adieu to James, as he left their new abode to seek his fortune in the great city, she put on a cheerful smile, and gave him such words of encouragement as she felt he needed for the serious undertaking.

upon which his mind was fixed. The poor man was not, as he had hoped much from his strong position in the community, and his virtuous character; but the more he thought of the state of his affairs, the more he knew. Hitherto he had been content to let things go, and he had not come in contact with the difficulties which he now found himself in. But his heart was full of hope, and he could not bear to quench its glow, or to throw a shadow on that quickening beam. Still she had her fears, a mother's fears; they would come unbidden, and disturb her most peaceful moments. She knew that James had noble sentiments, strong filial love, and that hitherto his strong mind seemed to be unassailed by one dark spot; but how would he conduct himself when without a guardian; when the sweet influence of motherly advisers would be wanting; and his ardent temperament should come in contact with the allurement of the city? And what would life be worth to him if he should prove recreant to the high character he had hitherto sustained? The trembling spirit could alone quiet its maternal anxiety, by resting the loved one upon the care of an unseen Protector. Delightful, however, to her mourning heart, was the change from the bustling city, to the quiet and seclusion of the country. In the heyday of life, in youth and prosperity, the city has its fascinations; but when we have tasted of the bitter cup, or have become wearied with chasing the retreating phantasies of life, there is no place like the country. Its noiseless beauties invite the soul towards its great Parent. The freshness of its pure breezes cools the burning brain, and allays the fevered pulse; the bright loveliness of summer, the bursting life of spring, the waning tints of autumn, and even the storms of winter, each has a power of its own that speaks to the heart, that strikes its finest chords, and wakes a melody there, which lulls the sufferer to a sweet repose.

There, too, the child of sorrow meets with that sweet sympathy from his fellow man, which in vain he looks for in the crowded mart. The rich man who affects the pomp and show of city life, and thinks by the glitter of his wealth to claim that homage which obsequious multitudes have paid for the sake of his favour or his gold, may not meet with it. People in our happy land tread freely on their own soil. They meet the city millionaire with an open brow, for they fear him not; and all his wealth could not purchase one single favour that would not be granted willingly to the humblest being that dwells in their neighbourhood. But to the downcast sufferer from whatever cause, there is ever a ready hand and a feeling heart among those who have been reared amid the same miseries and afflictions as he. They have been trained to feel that when trouble was upon a neighbour, it was their business to be doing something. When the swift tempest, or the upspringing flame destroys the humble dwelling and the happy home, soon, like a Phoenix from its ashes arises another and a better in its stead, the gift of many hands, poured forth willingly into the bosom of the unfortunate, and when the dark, walking pestilence is abroad and all is woe and death do his bidding, no hireling watches around the last bed those who have been companions in the work field or together laughed lightly at the festive bowl, are watching with noiseless tread within the sick chamber administering with their own hands to every want and weakness; and when death has done his work, they still are there performing the last sad offices until the departed one is laid to rest in his long home. His and a thousand nameless acts of love beget a fellow feeling, of which those who live where money buys all service that we need from the cradle to the grave, know nothing.

Blest rural life! Thy homely fire, thy simple pleasures, thy manly toil, and thy calm retreats may be despised by the flutterers in the thronged and splendid mart, but keep to thy plain and homeborn virtues, maintain thy jealousy of pomp and state, nor ever covet the glittering tinsel that, at times, flashes across your quiet path; could you see the aching hearts it covers, you would love your inheritance the better.

Mrs. Edwards had been reared among the gay and fashionable but long had she withdrawn from these, and sought her joy alone in the smile of him to whom her heart was given. Her husband's home became her festal hall, and there she reigned sole queen of those she loved. That home has passed away, like all other visions, and now she finds herself the centre of deep responsibilities, and with a frail and uncertain prospect even of a scanty subsistence. But the even tenor of her placid mind is undisturbed with the same dignified and graceful step, she walks within the lowly cottage, as when she trod the stately mansion in former days. The same mild beauty, sheds its loveliness around her, and the same soft tones fall sweetly on the ears of her children, or those new friends and neighbours whose constant kindnesses she experiences and warmly prizes.

The fruition of our hopes is often delayed, so far as we can judge, only to make the blessing more truly realised, and our hearts more happy.

A lonely winter day had just come to a close, and Mrs. Edwards and her daughters were surrounding their little table before the fire, and plying their busy needles.

"Dear mother," said Mary, turning her full lustrous eyes up from her work, "what James will be obliged to yield to stern necessity, and come home to us disappointed and chagrined."

"It may be so, my dear; I have had my fears all along, and yet I cannot but hope he may be spared that trial."

"What would he do, dear mother? His mind has been so fixed, and his confidence so strong. Oh, how I feel for him! It is no trifling thing to be poor."

"It is not, my dear, a state of dependence involves in its contingencies scenes of deep and terrible suffering."

"I shudder, dear mother, to have brother come back disappointed, then if we were all obliged to live on bread and water."

"We all should, Julia; and it is such a trial as that would be, when after to coming poverty its sharpest pain. It is not the fact that we shall not have bread and water, or that the door which we will be shut out of, small; but it is the crushing of those hopes, the loss of noble and free intentions, the disabling of a mind, whose views are more than carrying out its grand plan, and accomplishing its destined end."

"Mother, will you read his letter to me?"

There was no reply to this request, but a sudden knock at the door put the little circle at once in a state of suspense. "Who is it?" said each a peculiar kind that each one fastidiously enquired. "Who can it be?"

It was not the common rap of any of the household. "A Scotchman," it was very unusual, first a loud rap with a little knock, and then a long string of delicate touches, ending with one sharp rap in reserve to the first.

"I will soon see," said Julia laying down her work and taking a jump from the table.

As the room in which they were sitting was somewhat in the nature of a parlour, it was not easy to distinguish voices, but some one was coming in a very pleasant way with Julia, and by laying aside his outer garments was evidently intending to make a stay.

Never did old Sol, when on some fair spring morning his white head dived upon our goodly earth, shine with more complacency than did the full, round face of Mr. Timothy Tightbody, as he stood in the doorway of the little room, and bowed to the two ladies, who were still seated at the table, and indulging a very natural curiosity respecting the coming visitor, looked up to see he was in his best—an entirely new rig. A bottle-green coat of the newest cut, with small brass buttons, a bright buff vest, half-covered by three of the same kind of fastenings, a frill, broad and full, and very small plait, gracefully protruding, adorned the upper man; and green neither garments, and well-polished boots, completed the attire. He wore all these, however, and to which, properly speaking, our friend Mr. Tightbody was intended to apply, shone his full round face. Mr. Timothy Tightbody, to use a homely phrase, "been giving himself a good scrubbing." He had used the soap unsparingly for his well-filled cheeks and ample forehead, glaucous like an alabaster butt, and to crown all, just on the very peak of what would otherwise have been a flat head, there dangled a very graceful curl of rather greyish hair formed by gathering the stray locks from beneath the ears and by some sleight of hand, causing them to combine and twist together, thereby not only making a finish, which some might admire, but also covering up a spot, that, I am sorry to say, had no covering of its own. And never did the aforesaid planct manifest more real goodwill towards our little earth, than was exhibited in the smile accompanying the very polite bow with which Mr. Timothy ushered himself into the room.

Your servant, ladies, Mrs. Edwards, I hope I see you well; Miss Mary, your most obedient, don't rise ladies, don't rise,—"seeing them on their feet and doing their best to return his respectful salutations."

Mr. Tightbody was immediately provided with a seat, but it was some time before he could make up his mind to take possession; he had three extra bows to make, and finally just as he had apparently decided to be stationary all at once he made a rapid movement towards Mrs. Edwards.

—[See Evening page 312.]

Lexus me, dear madam, but I had like to have forgotten my errand! He handed her a letter. The bow, the smile, and the presentation of the letter, together with the rapid retrograde movement to the chair, was a sight not often witnessed.

"A letter from James!" said Mrs. Edwards, holding it up to the view of her daughters, "and there is no post mark upon it, is it possible you have brought it from my son, personally?"

Mr. Tightbody was again on his feet and bending his body forward. "It affords me infinite pleasure, madam, to be able to answer in the affirmative. I saw your son at six o'clock this morning, and he—but I will not anticipate, the letter, probably, madam, will reveal the whole."

You will excuse a mother's anxiety, sir, and pardon me if I leave you a few moments to the care of my daughters."

Mr. Timothy would have been obliged to rise again, but as it happened, he had not yet reached a resting place, the bow was the lowest, the very lowest one he had made. I shall be but too happy, madam, to be in such company. Let me be no hindrance in the least, for although I have no child of my own, I can well realise—

A coal just then fell out of the fire, Mr. Timothy flew towards the range, and Mrs. Edwards left the room.

How long she was absent, Mr. Timothy would not, in all probability, have been able to say, for he had so many anecdotes to tell, he was fond of anecdotes, and it so filled his whole heart with ecstasy to see the bright smile play about the rosy lips of the staid Mary, and to hear the whole-hearted laugh of Julia, that time went with him for nothing.

When Mrs. Edwards returned, she held the letter in her hand; her countenance was lighted with an expression of deep feeling, she had evidently been weeping; but they must have been tears of joy, for her mild eye shone with unusual brightness, and every feature was softened into a look of happiness.

"Joy, girls! our dear James has found a situation."

"Joy, joy, dear mother!" was responded by both the happy sisters at once. "And we are under many obligations to our friend, Mr. Tightbody, for his influence on James's behalf; for he frankly acknowledges that without the aid of some such friend, he should not have succeeded."

The two sisters turned their eyes, glistening with tears of happiness, towards the benefactor of their brother.

the young and spirited, who are the most likely to fall into temptation, by showing them that all the sports and pastimes of youth—the athletic sports in particular—can be best enjoyed by the thoroughly temperate, they denounce all sports and pastimes whatever as the most idle waste of time, and thus excite a prejudice against the truth they seek to establish. In the minds of those who most stand in need of it, and furnish a ready argument, that is certain to be listened to, to those who have an interest in, or a desire of maintaining the old customs. The truth they advocate is universal; is applicable to every state of society, and every peculiar condition of mind. The arguments in its favour should be universal also, applicable to all classes of society—to every peculiar state of mind. There are times when we may be diverted out of error, but could not be persuaded out of them. There are many minds that can be more easily convinced by being amused than by being lectured. If we were to recommend a few good practical lectures by the abstainers, appealing to their excellence in the sports and pastimes of the day, the fact should be denounced in rather unmeasured terms. Suppose, for instance, they established a cricket club, and sent their eleven—the celebrated *I Zingari*—into the different cricket districts in England, and that all who are opposed to them. The cricketers of those districts would begin to imagine that there was some virtue in abstinence, they would see that it did not interfere with their amusements and enjoyments, and the conviction would gradually steal over their minds that they ought to abstain also. Or, suppose some three or four abstinents went in a Cumberland, or into Cornwall, and carried away all the prizes in the wrestling ring. It could produce a greater effect upon a large body of men who are now entirely out of the reach of the arguments than the most eloquent lecture. It would appeal to their senses in the manner most easily appreciated by them. As Luther adapted some of the sweetest secular music to sacred purposes, upon the principle that the devil should not have it all his own, so the abstainers should seize on all the popular amusements which do evil in themselves, but are sometimes made so by long connected bad customs, and turn them to us. But a long way to go about the old world facts, telling people that they ought to abstain because they will be beaten by those who do not. It is a pity that the value of amusements is often misapprehended upon the part of many of us.

Another misapprehension to men for a fact that their abstinence will not be triumphed over with one thing or time. They are continually mixing their great truth with other things, that are not equally true. One of our mistakes, we know, is to have a mixture of wooden shoes. It has seemed to think that a man could be perfectly temperate who is mixed in leather shoes. And as his heart is not so fast as his feet, to vert the drunkard by long arguments in favour of his feet, and not his heart. I think that is a very bad mistake. And their reliance on these crutches is the expression of the arguments in favour of one great truth is weakened the arguments themselves. A lot of often, I only recollection of what they have heard that is carried away with them is the nonsense that has been encouraged to be carried in their wooden shoes, and not the truth. The world cannot comprehend their feet, and so *ought* is not even towards that which all recognise as a great truth. They are backed up in as long time or stupid quacks. Now it is that these are practitioners who cure us of our disorder though in their cases they may be but poor physicians and foolish empirics. There can be no doubt that if the world would adopt the principles of the abstainers, it would cure the world of one great disease. But, unfortunately, they have so many unnecessary drugs into the prescription—make it so nauseous and unpalatable, that the world turns up its nose at it, and refuses it altogether. They prefer the disease to the remedy, and so it is again manifested by nature.

We remember once talking with one of these advocates, who went about the country with all kinds of horrible pictures of diseased organs produced by drinking—noses bigger than all the rest of the face, and of all the organs of the rainbow, angry stomachs with red and brown, and black jaws, charred and dried up, as it were, with the potency of their drink. We asked him if he thought these exhibitions made much impression on the blue-eyed; his answer was one of the most unconscious scenes of satire. A superstitious thinker we ever heard. He replied that he found them make a very great impression on that class of people. So that the very parties who, we might have thought, would have been actuated by the highest moral feelings, by their horror of the moral evils produced by drunkenness, by their strong religious convictions that it ought to be not only discontinued, but vigorously assailed, are merely frightened into an attack on it by their fear of personal pains and penalties in the shape of red noses and charred stomachs. Is it any wonder, when it requires the fear of pain to induce the good, but weak, to do what ought to be done, that the love of pleasure should be all powerful with others, and confirm them in doing wrong in a matter from which they derive a certain amount of sensual pleasure and gratification?

We have used this illustration as applicable to many subjects that we could not deal so freely with, as showing us that in many great questions of morals, even when a clear and demonstrable truth is at the bottom of them, all men are not agreed upon the necessity of acting upon that truth, although they may be, and are agreed that the moral evil, which that positive truth attacks, ought to be put down. We have given the above as a strong case, because the remedy proposed is positive and certain, and no other remedy can by any possibility be so certain. In most other cases of morals and prohibition, there is an admixture of uncertainty connected with them, from the want of a universal standard, which renders it difficult to establish what ought to be done. In matters of physical science, where the search is after positive truth, none of

these difficulties exist, and consequently the world moves on as it ought to do; every new truth, as soon as it is discovered, is acted upon; something is done, and the world is improved by the value of that new truth. But in matters of morals, in questions of relative truth, the world ought to move on, but it is very temperate some which all the world must be induced to submit to, they will not bow down to the imperious dictates of any set of men, and it consequently happens that whenever *ought* is changed in their minds, they are very much inclined to treat it as *ought*. It is very easy for one who can sit down like Sir Walter Scott, and make away his days at the most agreeable, and then set to work and do the thing he ought to do. We copy from his journal—"I am in a wayward humour this morning. I reviewed, yesterday, the last proof sheets of *Woodstock*, and I ought to correct them. Now, this ought sounds as like as possible to *must*, and *must* I cannot abide. I would go to Prester John's country of free good will, sooner than I would amend it to Edinburgh. Yet this is all folly, and silly folly too, and as *must* shall be for once obeyed after I have thus written myself out of my aversion to its peremptory sound—Corrected the said proofs till twelve o'clock, and then I think I will treat resolution, not to a dram, as the fellow told me, who had passed the gin-shop, but to a walk, the rather that my eyelight is somewhat uncertain and wavering." Here Sir Walter Scott knew what *ought* to be done, and did it, in spite of his objection to its imperative tone. And yet also if we all knew with certainty what *ought* to be done, and did it, instead of doing *ought*, might be as well rewarded, although perhaps, in a different manner, as Sir Walter Scott. In the very next entry in his journal, he says that he had done what he ought to do, he says, "I have the extraordinary and gratifying news that *Woodstock* is sold for £8,228—all ready money—a matchless sale for less than three months' work." However often we may suffer *ought* to conquer *ought*, we may be very certain that our wisest and happiest moments would be those spent in learning what *ought* to be done, and then doing it with our whole hearts.

## ADVANCE!

BY D. I. MC CARTHY.

Go, bade the Sun with golden steps sub-	lune	Into the soul of man the sun's rays spoke
Advance!		Advance!
He wailed in the Hatching of time	Advance!	It m out the chaos, thunder-like it broke,
Advance!		Advance!
He took the sun's rays of the tar,	Advance!	Go track the comet in its wheeling race,
With lightning speed in silver shining cars	Advance!	And drag the lightning from its hiding
Along the bright floor of his azure hall,	Advance!	Place.
Advance!		From out the night of ignorance and fear,
Sun, Stars, and time obey, the victor, and	Advance!	For Love and Hope, borne by the coming
all	Advance!	years,
Advance!		Advance!
The River, as its bubbling fountain came	Advance!	All heard and some obey'd the great
Advance!		command,
The Clot of motion like herid the ough	Advance!	It passed along from hatching lamp to lamp,
Advance!		Advance!
Through that it will the night's Master's	Advance!	The strong grew stronger, and the weak
law	Advance!	grew strong,
Alow not a fraction's idle pause	Advance!	As passed the war cry of the World awake—
Flow on his full circle the wheel's wheels	Advance!	Awake, ye nations, know your powers and
Advance!		rights—
And Summer hours like fiery harnesses	Advance!	Through Hope and Woe to Freedom's
steeds	Advance!	new delights
Advance!		Advance!
To Man's in at wondrous hand the same	Advance!	Knowledge came down and waved her
voice in it	Advance!	steady torch,
Advance!		Advance!
Go clear the woods, and cut a bounding	Advance!	Seas proclaimed from many a marble
tyro	Advance!	prize,
Advance!		Advance!
Go as thou art from its secret bed	Advance!	As rapid lightning leaps from peak to peak,
And make the cedar lent its giant cell	Advance!	The Gaul, the Goth, the Roman, and the
Let domes and columns through the won-	Advance!	Greek,
derm at	Advance!	The painted Briton, caught the winged
Advance!		word
The World O Man is thine But wouldst	Advance!	And earth grew young, and cradled as a
thou a slave—	Advance!	bird,
Advance!		Advance!

BEAUTIFUL SCENE.—Night is upon the earth, Darkness is in the valley and upon the hill top. But the moon rising and clearing away the clouds, dispels the gloom. As she rolls upward the stars gather around her. Come with me and look upon a scene of intensely exciting interest. Enter this chamber softly—it is the sanctuary of innocence—the shade of love and peace. Bending beside a table beheld a maiden—a blooming girl of seventeen—on her knees. Her cherry lips move, her graceful form is anxiously swaying to and fro. She is labouring under an excitement. The cool airs rush in upon her through the lattice. She is strengthened. Could we view a more interesting picture?

"Ah!"

Was that a word or long drawn sigh? List again.

"Ah!"

Could she be unconscious of our presence? Her hand gropes upon the floor, then she lost a jewel? Her dark eye in wild frenzy flashes. The sweet smile has vanished from her features. But lo! it returns in triumph. She speaks:

"Mary! Mary!—I've killed that old Jew at last!"

## ONWARD!

**MARCH OF INTELLIGENCE IN THE EAST**—The successors of the Caliph Omar are forgetting that famous aphorism of their race, which described all literature not found in the Koran as superfluous. Of late years the Padiashah of the Moslem world has founded schools, imported types and presses, and set up newspapers in the dominions over which his sway extends.

**ELECTRIC LIGHT AND HEAT**—The French Government has instituted a prize of 50,000 francs, in favour of the discoverer who shall render the voltaic pile applicable with economy to industry as a source of heat, to lighting, chemistry, mechanics, or medical practice. Scientific men of all nations are admitted to compete for the prize, which is to remain open for a period of five years.

**OCEAN PENNY POSTAGE**—Our American correspondence states that the Government of Washington has given notice to our ministers in Downing Street, of its desire to put a speedy end to the present postal arrangements between the two countries. It is understood that this notice has been given with a view to negotiations for the establishment of a cheaper and more extended system of communication.—*Athenæum*.

**IMPROVEMENTS IN PROPPELLING RAILWAY CARRIAGES**—Messrs. Cunningham & Carter, the inventors of a new system of railway propulsion by atmospheric pressure, are making great efforts to obtain the patronage of the various railway companies. The cost of fixing the machinery &c., is estimated at £1,000 per mile, and the daily expense of working a double line of 50 miles long, during a period of 10 hours, with trains (at 3d per train per mile) starting from each terminus every half-hour, and six trains always running, is £25 12s 6d, including £11 per day for depreciation.

**ESTABLISHMENT OF A CHRONOLOGICAL INSTITUTE**—To the humanitary and scientific societies of the metropolis, another has been added—"The Chronological Institute of London." Its object is the promotion of Chronological Science, by literary contribution, by collection and diffusing information, by interchange of correspondence by lectures on Chronology and its various branches and applications, and by the publication or encouragement of Chronological works. On the principle of the division of labour the Society may be useful, and of its utility there is no question.

**NEW MODE OF OPERATING IN SURGERY**—It is known to the professors of natural philosophy that a platinum wire can be heated intensely to a red heat by means of a powerful electric battery—and that it will cut through the skin and flesh of the human body with more ease than the sharpest instruments. The surgeons of the Santa Theresa Hospital, in Vienna, have made the experiment of substituting such a wire for the usual surgical instruments in some of their operations—and it is said, with perfect success. They have had a memoir on the subject before the Imperial Academy of Sciences in that capital.

**SUBMARINE TELEGRAPH BETWEEN OSTEND AND LONDON**—The Belgian minister of public works has decided on the establishment of a submarine telegraph between Ostend and London. Two companies were at first in competition for the contract, but they have since agreed on a coalition, and the work will soon be commenced. Recent political events have given additional importance to this communication. In case of any continental troubles, it is through Belgium that England maintains her footing in Europe. Besides, it is well known that King Leopold is at present the chief adviser of the Queen and Prince Albert, and the telegraph will save the trouble and expense of many despatches and confidential messengers. By a return made by the French Minister of the Interior, it appears that from the opening of the submarine telegraph to the 1st of February 1872 1468 messages have been despatched from London to England and from England to France, and 607 despatches have been transmitted from France to Belgium to England through France, and from England to Belgium.—*Literary Gazette*.

**TELEGRAPH COMMUNICATION AT GEORGE'S HOSPITAL**—In these days when every effort is made to improve social facilities of all kinds, and to complete and perfect every arrangement that can conduce to health or convenience, it may not be inappropriate to call attention to a system of telegraph communication just adopted at St. George's Hospital. Dr. Putnam, the zealous physician attached to the hospital, desirous of getting rid of the annoyances occasioned to the patients by the noisy transmission of orders through the different wards (thus the hall-porter was accustomed to ring a large bell in the hall until it drew all the nurses into the corridors, and then he shouted out the orders he had to give them), requested the assistance of Mr. John Brathwaite, the engineer, who visited the hospital and suggested the manner in which it should be done. In the hall is a column three feet high, having in its top a dial on which are engraved a number of signals, on the walls of the different wards are corresponding circles similarly engraved, but much larger, and when the pointer to the dial in the hall is moved to any signal, all the others move in precisely the same way, and at the same time a little hammer falls on a small bell, and draws attention to the fact that the pointer has moved. In this way about fifty signals are transmitted daily in each ward without the possibility of error or the least noise. The cost of the first instance we are told was very trifling, and that of maintenance is really nothing. The same arrangement might be made useful in dwelling-houses for ordinary domestic use. Messrs. Thompson & Grafton executed the work.

## STATISTICS.

**TAXATION**—Bourgeoismen are taxed at the rate of 10 francs per head per annum; while in France the taxation per head is £1 4s 6d in Prussia, 12s 4d; in Austria, 11s 6d; in Russia, 9s 6d; and in the United States, 9s 7d.

**STATISTICS OF THE GERMAN BOOK TRADE**—There are 2,651 booksellers in Germany, of whom 400 are publishers only; 2,290 are in the retail trade, and 451 are publishers and booksellers. Among the German towns there are 145 establishments in Leipzig, 129 in Berlin, 52 in Vienna, 56 in Stuttgart, and 36 in Frankfurt-on-the-Maine. In the year 1760 there were but 81 booksellers and publishers at Leipzig, and 9 only at Berlin.

**TRADE AND MANUFACTURES OF PARIS**—The manufacture of furniture and cabinet-making is carried on by 1,915 masters, who employ 9,000 workmen. In the manufacture of chairs and furniture (wood only) the number of persons employed is about 3,459. The turners, wood-carvers, and 389 workmen. In carving and ornamenting articles of furniture there is an assemblage of 22 masters and 1125 workmen. The sawing establishments occupy 347 persons, masters and workmen. The upholstery trade occupies about 3,920 persons, many of them women. In the paper-hanging trade there are engaged 141 masters, who employ 329 workmen. The number of persons, masters and workmen, employed in wood-gilding is 1,310. In the manufacture of gas fittings 1 of them employ about 3,000 persons are employed.

**COMMERCIAL STATISTICS**—A recent work by Mr. Brithwaite Poole shows, that—The railways of Britain have cost £240,000,000, the canals £26,000,000, and the docks £30,000,000. Our mercantile marine consists of 36,000 vessels, 1,300,000 tons, with 210,000 men, and the vessel is lost on an average every five days. Our navy consists of 580 vessels, 670,000 tons, and 19,000 men. Vessels of 10 to 23,000 tons. The ancient Britons knew only 6 primitive uses, from which metals were produced; where as the present scientific generation use 50. The aggregate yield of minerals in this country is equivalent in value to about £25,000,000 annually. The agricultural produce of wheat, milk, and butter, and cheese is 3,000,000 tons, and 1,500,000,000. The ale and spirits, consumed annually, exceeded 3,300,000 tons, and £51,000,000. Whilst sugar, tea, and coffee are valued at £1,000,000, and £27,000,000. Our fisheries net 16,000,000 annually. In manufactures, the cotton, woollen, and silk together amount to 120,000 tons, £9,600,000. Whilst hardware exhibits 360,000 tons, and £2,000,000. In addition to which 1,250 tons of pins and needles are made yearly worth £1,100,000. Earthenware, 160,000 tons, £3,000,000. Glass, 55,000 tons, £1,650,000. The *Gazette* shows an average of 11 bankrupts daily throughout England and Wales.

**STATISTICAL COMPARISONS**—China has an area of 60,000 geographical square miles, and about 108,000,000 English acres under rice cultivation, in which, not including the lands for vegetable production, three hundred millions of human beings have to live. The dependent areas are Manchuria, with 13,000 square miles, and, according to the account of government, only 1,300,000 inhabitants—perhaps not one third of the actual number. Mongolia, about 91,000 geographical square miles, numbers perhaps 1,000,000 inhabitants. Tibet 30,200 square miles, with about 6,000,000. Bokhara and Turkistan, 27,300 square miles, with about 6,000,000. The British Empire has 27,160 square miles, with 20,000,000 inhabitants. Russia, including its ice field, 5,872,760 square miles, with 62,000,000 inhabitants. If we compare the resources of the respective empires, the discrepancy is still more glaring. Including all the arms of revenue, provincial and imperial, China does not yield above thirty-three millions per annum in sterling money. Of this, half of your tribute is sent to the general supreme government, and in kind—rice, pulse, and silk—perhaps ten millions more. Yet, in 1846, according to the official statement, only six millions eight hundred and twenty-two thousand pounds reached the court, and only one third of the tribute in kind.

**STATISTICS OF WAR**—The battle of Waterloo lasted for about nine hours, and not more than 20,000 French were killed and wounded. We will suppose that only 5,000 of these were disposed of by the allied cavalry and artillery, and there will remain 15,000 as the results of infantry who were actually engaged on the side of the English, and that they had only expended on an average seventy-five cartridges per man—a most moderate allowance, for it is well known that the British went into action with eighty rounds, and were twice supplied with ammunition during the day. The result will be, that it took the exertions of three English soldiers for nine hours, and the expenditure of two hundred and twenty-five musket shots, to place one Frenchman hors de combat. Slow and tedious work this! And had not the Prussian army, according to promise, arrived in time to surround the French—reduced in numbers and exhausted by their protracted exertions—with an overwhelming force, this would have added one more to the long list of indecisive modern battles. But "the slaughter was tremendous." Well might it have been, when 70,000 French and 70,000 English had been engaged in the exchange of every species of missile for nine hours! But mark a contrast. At the battle of Prestonpans 2,500 undisciplined Highlanders, with broadsword and target, their advance covered by an unskilful fire of musketry, cut to pieces and dispersed in ten minutes a superior number of English infantry, armed and equipped exactly like the men who conquered at Blenheim and Malplaquet. The same result followed at Falkirk, and even at Culloden, with dissatisfaction and disobedience in their ranks, which prevented the first attack being supported and followed up, the Highlanders broke through every part of the English line that they reached in their charge.—*Leader*.

### ENIGMA

I AM the plague of Love  
I make the fond heart bleed,  
I pass my sting through the wedding-  
ring,  
And prompt to a dreadful deed  
Beware of me—in tales of old  
My cruel deeds have oft been told

[ANSWER TO THE PICTORIAL ENIGMA  
PAGE 333—AMBITION]

### MENTAL RECREATION

To find the Difference between any two Numbers the greater of which is a known  
TAKE as many nines as there are figures in the less number, and subtract the one from the other

Let another person add that difference to the larger number, and then, if he take away the first figure of the amount, and add it to the remaining figures, the sum will be the difference of the two numbers, as was required

Suppose, for example, that Matthew, who is twenty two years of age, tells Henry, who is older, that he can discover the difference of their ages

He privately deducts 22, his own age, from 99, and the difference, which is 77, he tells Henry to add to his age and to take away the first figure from the amount

Then if this figure, so taken away, be added to the remaining ones, the sum will be the difference of their ages, as, for instance, —

The difference between Matthew's age and 99 is	77
To which Henry adding his age	35

The sum will be	112
And 1, taken from 112, gives	12
Which being increased by	1

Gives the difference of the two ages	13
And this added to Matthew's age	22

Gives the age of Henry, which is	35
----------------------------------	----

### A PARADOX

One grandfather and two grandsons—one father and his son,  
Another with two other sons (so strange their kindred run);  
Two first cousins and two seconds, uncle and nephew dear,  
But still no more than four men there are included here,  
And their surnames are all the same, 'tis true without a doubt,  
Now all that is desired, is to find this paradox out.

### TRANSFIGURED PLAYING CARDS.

TEN OF CLUBS—"POPULAR CHARACTERS"

### ANAGRAM

AN ancient doctor when transposed, a being great will show,  
Who, when commissioned from above, takes care of men below.

### FLORAL CONUNDRUMS

- 1 WHAT is placed before gentlemen's houses, with what grows in their gardens
- 2 What pleases when in the air, and what a horse cannot abide.
- 3 Half a cabin and a whole country
- 4 The gift of Heaven, and the motion attending it.
- 5 The half of a private entertainment, and a part of a goose.

### CHARADE.

I AM a word of eight letters my first stands for 100, my second is a vowel my third is a consonant My first, second, and third, is an animal of the feline species, my second, third and fourth, means one of the heathen suries My third, fourth, and second, is one of your daily meals, my fourth, fifth, and sixth, is the Latin for I, my fifth and sixth means exit, my first, second fifth, and fourth is a prison for a bird, my fifth, sixth, seventh, and eighth, is another word for sanguinary My seventh, second, and third, is a hateful animal My third, seventh, second, and eighth is as it is used at the tea table; and my whole is an order of ideas

R. S. H.

### AN ARITHMETICAL QUESTION

IN an Aral man manuscript was found this remarkable relation of a dispute.  
Two Arals sat down to dinner, one of them had five loaves, and the other three A stranger passing by, desired to eat with them, which they agreed to. The stranger dined, laid down eight pieces of money, and departed. The proprietor of the five loaves took up five pieces, and left three for the other, who demanded to share the eight pieces The cause came before the magistrate, who said — Let the owner of the five loaves have seven pieces of money, and the owner of the three loaves one Will our readers explain the justice of this sentence?

### A PARADOX FOR 1866

ONE day I saw the sun arise,  
I'm sure I saw him set likewise;  
But, wonderful! that day  
I vouch again he rose, and 'gain  
Beneath th' horizon went; explain  
How this could be, I pray.

### Editor's Note-Book.

**CONTENTMENT**—Be seized dear friend, with a very dreadful idea of your own sufficiency. Distrust your own competency to walk straight, your own ability to detect

power to see even from one moment to another what is best for you. Give not so far the good things of this life, because it happens to be the fashion. Fill not so your mind with golden visions long not so intensely for those on or two little things which you think, after all, fate might really accord you. Above all be more disposed to regard the wheelbarrow than the coach and four, the table spread with bread and cheese, than the banquet-board groaning with its plate. If you sleep well, be happy! Remember, man leads two lives—his days and his dreams, and if you are wise as to the latter, accept the former as the very best which could be allotted you. Depend upon it, my not altogether so hopelessly-wicked reader that the only things which are worth attention in this world are those in which we stand, and that if you have a clear mind, a small opinion of yourself and good resolutions, you are as happy as a prince, as any powerful, too!—*Mary Anne Jennings, in the Literary Magazine*

**SIR JAMES MACINTOSH** A R.—This great writer and statesman died on May, 30 1832 from the effects of a small bone of a fowl, which had unfortunately lodged in his throat.

**TO MAKE RED INK** G W.—Take raspings of Brazil wood one ounce, white lead and alum, of each two drachms, grind and mix them, boil them in a pint of vinegar, with three scruples of gum arabic.

**TO CLEAN GOLD AND SILVER LACE** JCS.—Wash the lace in clean linen cloth, boil it in a pint of soft water and two ounces of soap and then wash it in cold water. If it is tarnished apply a little warm spirits of wine to the tarnished parts.

**CICERONE** M S.—This is an Italian word, applied to guides who point out to travellers interesting objects in different countries. The name is said to be derived from such persons in Italy indiscriminately calling every one a Cicero when they did not know who the statue or picture represented.

**PINS** May.—Pins, such as are now used, seem to have been unknown in England till about the middle of the fifteenth century. Previous to that time pins were made of ivory, bone, boxwood and a few of silver and they were necessarily of large size. Brooches, and brooches and pins were much employed for holding together the parts of dress.

**BARBIFEX** Welby.—The origin of this instrument is unknown. It has been so long a favourite in Scotland and Ireland that it is regarded as the national music of those countries; but it is by no means peculiar to them. It is found represented on Grecian and Roman sculptures, and in several other countries it is a popular instrument at the present time. It is, besides, one of the few things on which time has wrought no improvement.

**TO EXTRACT GREASE FROM CLOTH** A Y Z.—Take off the grease with the nail, or, if that cannot be done, have a hot iron with some thick brown paper; lay the paper on the part where the grease is, then put the iron upon the spot; if the grease comes through the paper put on another piece, till it does not soil the paper. If not all out, wrap a little piece of cloth or flannel round the finger, dip it into spirits of wine, and rub the grease spot.

**ORIGIN OF NEWSPAPERS** Glakoma.—We are indebted to the Italians for the idea of newspapers. The title of their gazettes was most probably derived from a small coin, peculiar to the city of Venice, called *gazetta*, which was the common price of their newspapers. With regard to the first introduction of newspapers in England, we are told by Chalmers that it dates from the epoch of the Spanish Armada. In the British Museum are several newspapers, which had been printed while the Spanish fleet was in the English channel, during the year 1588. For the derivation of the term "news," we must refer our correspondents to an admirable contemporary publication, *Notes and Queries*, which has most ably debated the subject.

**TRAGEDY** J. W.—"I am desirous of writing for the stage, having already commenced a tragedy which several of my friends encourage me to finish. I am, however, in want of a plot, and perhaps you could refer me to some incidents which would furnish me with one."—We are really unable to satisfy our correspondent on this point, having a distaste for horrors of any kind. We remember, however, Oxberry's receipt to make a modern tragedy, which we give in all its culinary precision. "Take a brave hero, and a villain, load one with all the virtues and the other with all the vices that ever were in existence, jumble them well together, so that sometimes one and sometimes the other may be permitted; let the piece be well fermented with battles, and every now and then sprinkle over the whole a few scenes of love. Let it all boil together for five acts, then let it stand three days to cool, and afterwards serve it up for the stage."

**THE PRESS AND THE PEOPLE**—The number of publications that issue weekly from the London press is enormous. The four leading penny serials circulate between them about 500,000 copies weekly. The tone of these papers must necessarily act upon the minds of the community with great effect, and it is therefore important to watch closely the description of mental food of various kinds that is provided. It has been our constant ambition to destroy the pernicious influence exerted by the deluge of mischievous works which are placed within the reach of the industrious classes. Such subjects as *Demerol*, *The Vampire*, or *The Feast of Belshazzar*, *Urania*, *Urania*, *Terrific Regiments*, the achievements of *Diabolus*, *Terrible Jonellian Will*, *Jack Shepherd* and other equally notorious in crime form the characters of the characters who daily figure in the annals of our police courts. We cannot too strongly express our disgust at the means thus employed to demoralise and ruin the young and prevent the seeds of good thought implanted by nature in every mind, from being properly matured. We are sorry to say that such offensive works are too constantly

COMING OUT

**LAMP LIGHTING BY ELECTRICITY** J J.—Mr Editor, in page 220 of your *Alcibiades*, you have quoted an article on this subject, the writer of which seemed to attribute to himself the merit of the idea. In the Paris correspondence of the *Times* however, some time past the following notice appeared:—"A rapid and scientific mode of lighting and extinguishing public gas burners has been invented by a person named Villatte. The opening of the burner of each lamp is covered with a piece of soft iron, mounted upon a hinge. In connection with this is a wire, extending from a galvanic battery the entire length of the surface of the gas lamps, and close to the orifice of each burner is a small slip of platinum. The soft iron becoming a magnet when acted upon by the electric fluid, opens or closes the orifice according to the motion imparted to it, and thus every lamp in a large town may be lighted or extinguished simultaneously, by a different action on the magnetised iron."

**BAD COMPANY** J C.—Our remarks on the early closing movement, page 330, has produced us several communications, in which our advice is requested on the employment of leisure hours in the evening. We have already, on several occasions, adverted to this subject and our space will now only permit us to notice the letter of J. C., who describes himself as a working man of limited means, which prevent him from subscribing to a literary institution, and who is obliged to associate with persons from whose companionship he neither derives amusement nor profit. We can only briefly recommend our correspondents to shun all society tending to degrade and demoralise the mind. We entirely differ from him on the obligation to mix with persons whose standard of intelligence is so low. The story of the shoe and the slipper may drive him in this respect.—A shoe, adorned with a handsome buckle, once found himself next a slipper, whom he thus addressed: "My good friend, why don't you get a buckle like mine?" "Your buckle is an excellent

thing, truly," answered the slipper—"I do not even understand its use." "It is used," replied the shoe, hastily—"to keep your foot warm and dry. Why, but for them we should sink in the mud and be lost." "Yes," my dear friend," retorted the slipper, "but I never go into the mud!"

**CHARLES BANK OF ENGLAND'S NOTES** Dives.—"Mr Editor, I should be glad to be informed how I am to distinguish a good Bank of England note from a counterfeit. Many of my friends pretend to know, but I find that each one differs in his opinion."—The characteristics of a true Bank of England note were explained, some time since, at the Royal Institution. The paper is distinguished—1. By its colour, a peculiar white, such as is neither sold in the shops, nor used for any other purpose. 2. By its thickness and transparency—qualities which prevent any of the printed parts of the notes being washed out by turpentine, or removed by the knife, unless a hole is made in the place thus protected on. 3. By its characteristic feel, a peculiar crispness and toughness by which those accustomed to handle it distinguish the true note instantly. 4. The wire or water-mark, which is produced on the paper when in a state of pulp, and which is easily distinguished from a mark stamped on after the paper is completed. 5. The three decked edges. 11. A mould contains two notes placed lengthways, which are separated by a knife at a future stage of the process. The drizzle or wooden frame of the paper mould produces the peculiar effect seen on the edge of an unprinted paper caused when the paper is in a state of dryness it cannot be successfully imitated after the paper is made. 6. The strength of the paper, which is made, 1. of the worn fibre of old garments, but from new linen and cotton.

**COMMUNICATIONS RECEIVED**—To avoid confusion and delay in our replies we do not request our correspondents to observe the names of those to whom our answers are addressed, before affixing a *nom de plume*, which in several instances belongs to others. For instance, we have at least four different letters with the signature "JUCHA" and about the same number of "Excellence," besides many similar cases, which would be partly avoided by the initials only being sent—A. C. G. W. G. (many thanks for the suggestions)—*DELLA* (Clerkenwell or Clerkenwell is so termed from having been the spot where the clerks of London were accustomed to meet annually for the purpose of enacting sacred dramas selected from the histories of the Bible)—*M* (The invention of bells, such as are hung in the towers or steeples of Christian churches, is by Polydore Virgil and others, ascribed to Paulinus, Bishop of Holo, about the year 400)—*W. SMITH* (alliteration, or playing upon the same letter, is derived from the Latin *littera*, a letter, we may quote as an instance—

"Rough repetition is rare in rudest rhyme,  
As clasp pearls clink in one chiming rhyme.")

**MEMPHIS** (the best season of the year for swimming is during the months of May, June, July, and August. Morning is the best time, before breakfast, from seven to eight o'clock.)—**QUEEN** (heraldry is of very ancient origin. The earliest account we have is in the Scriptures, in the second chapter of Numbers)—**W. Q.** (to give complete instructions for preparing objects of Natural History would far exceed our limits. *Taxidermy*, by Mrs. Lee, published by Longman, contains every necessary information respecting this art.)—**J. E. S.** (apply to M. Claudet, Regent street)—**G.** (many thanks for the papers forwarded)—**X. Y. Z.** (will find at page 80 our reasons for dating the *Home Companion* in advance. The fact in itself creates no difficulty)—**W. B. MOORE** (there are various distinctions of esquires; those of royal creation by the imposition of a collar of S. S.; also Esquires of the Knights of the Bath, Esquires by office as justices of the peace. The term is, however, commonly applied, or rather misapplied, to all persons in the receipt of a certain income, no matter their trade or profession).

**H. SPILLER** (the first public experiments on the atmospheric railway were made in 1840, and were brought into operation in 1841)—**THOMAS** (all papers of a political nature are inadmissible)—**HELEN C.** (there will be no difficulty in forwarding the *Home Companion* to Australia, providing proper instructions are sent).

SATURDAY, JUNE 3, 1852.

[PRICE ONE PENNY.]

"Presently the wheel stopped buzzing, the old man looked very intently at the work he had been performing, and then laying it carefully by itself, threw his spectacles on his forehead, and turned one eye full upon his visitor, while the other seemed to be resting on some object in another part of the room"—See Chap XVIII

## LOVE'S TRIALS; OR, MISTAKEN EVIDENCE.

(Continued from page 346)

"Don't, ladies, don't say one word, I beg of you"—Mr Timothy was standing again—"not one word, my dear madam," turning towards Mrs Edwards; if any poor word of mine has been of any service to him, I mean to your son, madam, and your brother ladies it is a cause of unspeakable satisfaction to me."

It took some little time to get things righted again, or at least to get Mr. Tightbody quietly seated in his chair, he was as restless as possible—the moment he was a little warmed by any exciting remark, up he would go and when up, he seemed not exactly to know how to get back. At the present moment, his feelings were flowing very fast, almost running away with him; in fact, he could hardly be said to have had the reins in his own hands, a combination of exciting circumstances having almost proved too much for his equanimity.

In the first place, he had put on a brand new suit, enough, generally, of itself to affect the mind of a common man, then, this was his first formal call; he had thought a great deal about it beforehand, and not only that, but his head had been full of strange fancies ever since his first interview with the ladies; he was nervous whenever he heard their names mentioned; he had peculiar feelings whenever he passed their cottage, or when he saw the mother and daughters walking, in all their gracefulness, to the church; or along the highway; and even his dreams were more or less affected by visions in which they acted a prominent part. How long Mr. Timothy would have remained in this partially entranced state there is no telling, for in the midst of these enchanting thoughts there was an alarming rap at the street door. All started, even to Mr. Timothy.

Julia immediately seized a light, and, as sprightly as a fawn, was at the door in an instant. She was no coward, but, on turning the latch, such a singular

object presented itself, that she involuntarily stepped back a pace or two, as she did so, the person, or thing, walked within the doorway.

"Is master here missus?"

"What is your master's name?"

Just at that moment a little gust of wind blew out the light, and Julia at once retraced her steps to the sitting-room not very sorry for an excuse to get thence for although she had been accustomed to school her mind to surprise from her infancy, she had never seen anything in the shape of a youth like the one just now before her. No sooner did she turn to go through the passage, than she was conscious that he was shuffling along after her. Beginning to be alarmed, she quickened her speed, immediately her clothes were grasped. In the excitement of the moment, she screamed at the top of her voice, "Mother! mother!"

With a cry of terror, equally loud, the being behind her called out, "Mrs Bet! Mrs Bet! hold the light!"

In an instant the inmates of the room rushed to the spot. Mr. Timothy, as gallantry dictated, was the first to encounter the object of alarm.

"Don't be alarmed, ladies, don't be alarmed. Charles, what is this? how did you dare? Go along this instant!" This was said in a low voice, accompanied by pushes and pinches, which caused the subject, for whose benefit they were intended, to make a few rather rapid movements.

"What is the matter now, Charles? What do you holler for?"

Mr. Timothy lifted up his eyes. "My—?" "What word or words Mr. Timothy substituted for these blanks, it would be hard to say; for nothing escaped his lips but that simple monosyllable. His look, however, betokened strong emotion. Immediately before him, and filling the whole doorway, stood old Bet, his housekeeper, her immense arms, and shoulders, and head, revealed by the light of the lantern, which she held on high, the better to see what was going on in the passage, which was long and narrow.

"Oh! Master Tim, I'm most frightened to death. You almost kill me. She was, indeed, breathing very hard and short.

During a long harangue with which he was favoured by his house-

a kind act on the part of Rudolph had laid James under obligations which he could not easily forget. But, with all his suavity of manners, and the generosity he had manifested, the latter could not be blinded to certain dark traits which would, in the freedom of intercourse, obtrude themselves—marring what he would have wished to love, and shaking his confidence where he would have been glad to feel that there was a sure foundation upon which to rest.

The call which Rudolph had made at the house of Mr. Upjohn, in search of James Edwards, and the introduction he received that evening, were but a prelude to a course of visits and serious intimacy. His manners were pleasing, and the occasional calls he made by no means unacceptable to the little family. Gitty did her best to welcome him, and make the evening pass pleasantly away. These calls had at length become quite frequent, and, on fine summer evenings, when the streets were thronged with the seekers for pleasure, Gitty would be invited abroad to see some fine sight or to enjoy the promenade. Her guardians would much have preferred that she should always be by their side, but how could they think of thus fettering one so young and light-hearted? They had once been young themselves. The young man, too, was of fair standing, and perhaps, in the opinion of many, higher on the scale than she. But of this the old folks thought not. They could imagine no class of society that Gitty was not fully equal to—and yet, when they would sit together, while she was thus away, until the evening had been spent, thoughts would come over them that, for the moment, were like the shadow of a dark cloud. But like it, they would soon fly by, and Gitty would come home and smile sweetly upon them, and Rudolph courteously bid them a good night, and it was all well.

But, alas! all was not well. Gitty might not have been gifted with that strong sense of propriety which many have. She may have been less on her guard against the faithfulness of man than many of her sex and age, but she had a fine and guileless heart; she thought no evil, and she feared none. Very attention on the part of Rudolph she received as an expression of his good-will, of his kind feelings towards her. She received it in all honesty of soul, and, as these tokens of his feelings were neither few nor far between, they won upon her heart. He became more and more associated with the happier spots in her existence, his presence seemed to be got ready to make every occasion of joy just what it should be. In every vision of beauty that flitted through her young mind he was a conspicuous figure. In her dreams by night, and in those livelier and more entrancing dreams by day, in which her spirit loved to lose its present realities and bask in the delights of its own framing, he was one the principal one whose virtues, as her mind painted them, gilded the whole scene with rays of beauty. And thus, around her young and susceptible heart, by degrees a chain has been cast. Its links may have been formed of nothing stronger than the trifles I have named, but they held her ancient feelings in an embrace firmer than the iron clasp that holds the criminal to his cell.

The little family at the White Cottage are no longer mourners. The weeds of sorrow have been laid aside, and time has kindly soothed their agonized feelings. Their humble home has been surrounded with its little embellishments, the work of their own hands. Shrubs and plants are blossoming without and order, neatness, and taste are manifest in every department within. They have known no real wants, although compelled by restricted means to the practice of rigid economy.

Faithful to his trust, James has consorted every farthing of his income, except what was needful for the supply of decent apparel for himself, to their comfort. Occasionally he has been enabled to spend short periods with them, pure seasons of delight they have been—each visit unfolding new charms in each other, and binding in stronger bonds their warm affections.

The fears which a mother's sensitive heart had at times called up, lest this loved one should be led astray, have long since been quieted. His generous spirit sparkles before her in all its purity and brightness, and she feels that her prayers have been answered, and looks forward with perfect confidence to the day when his faithfulness shall reap its reward, and her noble boy stand high among the competitors for distinction, as he now does before her as a true and tried son and brother. Three years, then, have relieved their distresses and confirmed their hopes, and around that little family bright scenes are shining, warming with life and painting with loveliness the scenery that forms the circle of their interests and tugging, even the few scattered clouds that rest upon their horizon with hues of beauty.

**SPLENDOR OF THE AMERICAN HOTELS.**—The glass in the windows of the Metropolitan Hotel, New York, every pane of which is French plate, cost thirty thousand dollars. A large number of men are now employed on the building, and the proprietors are determined, if possible, to have it ready for occupancy by the first of June. We hear glowing accounts of the magnificence and comfort-promoting contrivances of the Metropolitan, of the grand suites of apartments for families, of the suavity and convenience of the rooms in "Bachelor's Row," of the hundred and thirty mirrors ordered from Belgium, two of which, it is reported, will be a considerable fraction of an acre in extent, of the wonderful laundry, and the more wonderful dining-room, and the most wonderful kitchen of the steam-engine which is going to do everything, from the warming of a plate to the hoisting of a ton of coal to the fifth story, of the unspeakable luxuries of the bath rooms; of the glorious promenade on the roof, equal to Brooklyn heights and Weehawken combined. The furniture, it is estimated, will cost something like a hundred and sixty thousand dollars. In short, the new hotel will be as well as be called, **THE METROPOLITAN.**

LINNÆUS.

CHARLES LINNÆUS, the most enthusiastic lover of Nature, and the most indefatigable inquirer into her productions that ever graced the annals of science, was born on the 3rd of May 1707, at Rasmult, a village in the province of Smaland in Sweden. His father was the pastor of the village, and was passionately fond of gardening. The love of plants and flowers in the elder Linnæus was increased by his obtaining about a year after the birth of his son, the living of Stenbroholt, which in addition to a somewhat more lucrative benefice had the advantage of an extensive and good garden annexed to the house. This garden he soon rendered the finest in the whole district, crowding it with upwards of four hundred species of flowers, many of them of foreign growth and great rarity. Thus were the incipient tastes of young Linnæus guided by his father's care. Flowers were his earliest delight, as they were his latest enjoyment. At eight years of age he had a separate plot of ground assigned him by his father, which was dignified by the name of Charles's Garden, and many an excursion did he make to the neighbouring woods and meadows for plants and flowers, wild herbs and weeds, where-with to enrich his store.

It was, however, the farthest from the intention of the elder Linnæus to make his son a naturalist. His business would all have authorized him to encourage a speculation so little likely to afford any advantage beyond the mere pleasure of the pursuit. An ambition equally natural and laudable prompted him to hope that his son might one day succeed him in the pulpit, and to furnish so desirable an object, Charles Linnæus, after receiving the elements of a liberal education at home, was sent in 1717 to continue his studies at the Latin school in the adjacent town of Wexiœ, in the province of Scania.

His love of Nature, however, possessed far greater attractions for Charles Linnæus than all the laboured tomes of the "Illustrations dea." He was examining plants when he should have been consulting his dictionary, and writing descriptions of them when he was required to be composing them. The consequence was, that, although his master, being a botanist himself, viewed his wanderings with a more complacent eye, his school-fellows considered him only as a stupid and truant boy, and at the end of seven years, instead of seeing him ready for admittance into holy orders, his father and mother laid the communication of hearing complaints from the professors of the college, suspecting his apparent indolence and inattention. Linnæus, grieved to the heart at beholding the mortification of his parents, whom he held in equal reverence and love, promised them that he would, for their sakes, apply himself most assiduously for the future to the study of divinity, though he at this early time acknowledged that he had no inclination whatsoever towards the sacred calling. His father too, exasperated to force upon him an office which ought never to be undertaken but from the purest motives, and too proud to encourage him farther in researches which he had not the means of bringing to any beneficial result, determined on a line of life for his son, equally removed from the irksomeness of study and the uncertainties of philosophy, and actually proposed binding him apprentice to a shoemaker and cobbler.

Happily for the delightful predilections of Linnæus, and for the future diffusion of science, this threatened blow, so fraught with ruin to both, was never struck. John Rothman, a benevolent physician at Wexiœ, and Professor of Medicine in the college of that city, had noticed the genius of Linnæus, his penetration and knowledge, so unusual at his age; and hearing

of his father's intention to remove him from college, he urged him so warmly to let him remain in order to study physic and botany, to either of which professions the turn of his mind seemed admirably adapted, that the elder Linnæus gave at length a reluctant consent to a measure which was in process of time to make his own name known throughout the world, as the father of one of the most perceiving and acute geniuses that ever graced the annals of science.

It was not by words alone that Rothmann showed his anxiety to befriend young Linnæus—he benevolently took him into his own family for the remainder of the scholastic term, supplied him with clothes, books, and everything of which he stood in need, and likewise initiated him in the elements of medicine, in order that he might make a more rapid progress in the study of physic.

Until this auspicious period, Linnæus had studied natural history and botany subjects connected with them, but he had not begun to form a small museum of natural curiosities and rare plants at Uppsala, as he had done in his father's house, yet he had not followed any regularity of plan or scientific arrangement in them.

In Rothmann's library, he, for the first time, met with the work entitled *Elements of Botany*, (Institutiones Rei Herbariæ, Paris, 1700) by the celebrated Journefort, the greatest botanist of his time. Little did Linnæus esteem himself, as he eagerly endeavoured to guide his own researches by the light of Journefort's discoveries, that he would one day surpass this great luminary, and shine forth a sun of science in himself, to throw light over all creation.

After remaining three years with his benefactor, Linnæus set off in 1727, in the twentieth year of his age, to the University of Lund, where he hoped to be able to finish his education through the kindness of Professor Hummerus, who was his relation, and had promised to befriend him. On arriving there, however, he had the grief to learn that his kinsman was no more—the last solemn duties having just then been paid to his remains—and he thus found himself friendless and destitute among strangers, and unable to prosecute his studies, except by depriving himself almost of the necessities of life. Happily, his diligent attendance on the lectures of Stobæus, the Professor of Physic and Botany, and afterwards one of the physicians to the royal family of Sweden, and his eager attention to the principles laid down in them, recommended him to the notice of that learned and benevolent man, who perceiving the indigence of his condition, and possessing much generosity, as had actuated the conduct of Rothmann, followed him to Uppsala, and offered Linnæus accommodation in his own family free from all charges.

Under the instructions of his new friend, Linnæus began to arrange the stores of knowledge which he had already obtained. Stobæus had well arranged collection of objects connected with natural history—Linnæus had never before seen one properly classified—it contained likewise several curiosities which he had till then had no opportunity of examining. He pored over them with the most eager delight, and from that time began to keep a regular herbarium himself, making excursions into all the neighbouring districts for the purpose of augmenting it, exploring the mineral as well as the vegetable productions of nature, and enriching his collection every day by his indefatigable industry and rapidly increasing knowledge.

It was with great regret that Stobæus parted with Linnæus in 1728 to go to the university of Uppsala. This place was seventy-five Swedish miles from Lund, and the expense of the journey alone was a serious object to Linnæus, whose father could only afford him two hundred silver ducats, or about eight pounds sterling, toward finishing his education and establishing himself in the world. Nevertheless, it offered so many advantages in the way of study, that his eager desire after knowledge caused him to defy every obstacle, and he arrived at Uppsala, the scene of his future greatness, the richest in information, and the poorest in finances, perhaps, of any student that had ever entered her walls. Thrown entirely upon himself, poverty soon started the hapless student in the face. Bused for hours together in his pursuit, he thought not of his miserable situation till the unavoidable wants of the day impelled upon him his insufficiency to supply them. For a time he found refuge in debt—that ten pence relief and often his only misery, but Linnæus was too honest to avail himself, to any considerable degree, of credit which he might not be able to redeem, and he was so just to ask that instance of his father which he knew could not be supplied by him without injury to the younger branch of his family. He submitted, therefore, to the greatest privations with cheerfulness, and his countrymen and fellow students, admiring his genius and respecting his fortitude, frequently ministered to his wants, which were, indeed, so urgent that he was forced not only often to accept a meal from their kindness, but was likewise glad to recruit his wardrobe with their cast-off clothes. He could not even afford to pay a cobbler for mending the old shoes which he was constrained to accept from his companions, or to go out barefooted on the excursions where, amidst the treasures and delights of nature, all recollections of his own difficulties and anxieties vanished like a painful dream. To have seen him humming his worn-out shoes himself, as he frequently did with strong paper, and stitching the soles afresh with the old tarred of the bark of trees, it would have appeared that he was really intending to take up the humble occupation for which his father had once designed him, but the mind that can bear without complaint the hardships of poverty, almost invariably extricates itself at last from its disadvantages, and Linnæus lived to offer up his solemn thanks to the Deity in the installation speech which he made in 1741, on entering on his office of Professor, not only for the greatness he had then achieved, but also for the sustaining mercy which had enabled him to bear up under the most trying circumstances of want and disappointment.

The difficulties of Linnæus had arrived at a height which scarcely seemed to admit of aggravation, when suddenly the gloom of his situation was

dissipated by the arrival of Olaus-Celsus from Stockholm. This learned man, immediately after his return, hastened to the Botanical Garden—Linnæus was there as usual. The professor and the student entered into conversation respecting the plants. The enthusiasm with which Linnæus expatiated on their beauties, the exactness with which he described their characteristic differences, and the depth of his information on all subjects connected with natural history, equally astonished and delighted Celsus. He made inquiry into the young man's circumstances and conduct, and finding that he was both in need of assistance and every way worthy of it, generously took him into his own house, and ever afterwards treated him with paternal kindness. Among all his patrons, Linnæus cherished most the memory of this venerable man, and never spoke of him but in terms of reverence and gratitude. It was under his roof that Linnæus first conceived the idea of forming the *New System* in Botany, by which he afterwards immortalised his name. He owed the original suggestion of it to a thought to Van Linn, an ingenious Frenchman, who was a constant visitor of the Royal Botanical Garden at Paris, and died in that city in 1722. Linnæus had been accustomed to class vegetable productions according to the form of the flower or blossom, in conformity with the method laid down by Journefort, but accidentally meeting with a small work of Van Linn's on the *Structure of Flowers*, in which the stamens and pistils of plants, and the manner by which they are generated, were more particularly considered than they had been by any preceding writer, he began to divide them himself according to their sexes and the number of stamens and pistils which they contained. The latter he carried his inquiries, the more deficient he found in the present system, and the more advantages and consistencies in his own. The sexes of plants now occupied his thoughts day and night, and the additional knowledge which he obtained by his researches soon paved his way to a better fortune.

In the summer of 1730 a disputation was held before Bishop Wallin, on the generation of trees. Linnæus was present at the discussion; and, delighted to promulgate his opinions on a subject he had studied with so much interest, he put forth a small *Treatise on the Sexes of Plants*, replete with new and curious observations. This treatise recommended him to the especial notice of Olaus Rudbeck, the Professor of Botany, learned himself, and the son of one of the greatest naturalists and profoundest scholars that Sweden had ever produced. The professor was now seventy years of age, and began to find the delivery of his lectures fatiguing to him; he invited Linnæus to reside in his house and become his representative. Linnæus gladly complied with so flattering a request, and lectured with a vivacity that fixed the attention of his audience, and with a variety and novelty of information that amply repaid them for it. He had to lecture upon ornithology, as well as on botany, and he improved himself considerably in this branch of natural history from an accurate examination of a complete collection of Swedish birds, which was in the professor's possession.

In 1731 the Swedish Academy of Sciences came to a resolution to send a traveller into the remote and savage regions of Lapland, to examine into its productions and natural curiosities. Celsus and Rudbeck, the benefactors of Linnæus, were applied to as the fittest persons to nominate one who should unite the greatest number of qualifications requisite for such an undertaking. It is, perhaps, scarcely necessary to say that their immediate and united choice fell upon Linnæus. This expedition would have appalled the mind by the dangers with which it was encompassed, and disgusted the avaricious by the absence of pecuniary recompence—for the travelling expenses which were all that was allowed, were limited to a hundred Swedish pistars, or £7 10, of English money. But to Linnæus, every herb, every tree, every rock and mountain, every curious object in nature, presented treasures, the exploring of which he deemed ample reward for all the labour and hazard of searching them out.

Linnæus endured incredible hardships in traversing the barren provinces of Lapland. The natural darkness of the country was increased by the lingering severities of winter—for his impatience had not suffered him to listen to the strenuous advice of his friends to delay setting off until the summer should be fully advanced. Bogs and forests everywhere intersected his way, he frequently had to cross rivers swelled into torrents, and often found himself on the opposite side, galled at the risk of his life, without any prospect of a roof to shelter him, or food, of even the coarsest kind, to satisfy his hunger.

Linnæus was so far from being overcome by the difficulties and hardships he had to contend with in the interior provinces of Lapland, that he had no sooner explored them, than he directed his course across the Alpine Mountains, which divide Norway from Sweden—a steep and rocky region, the remotest districts of which had seldom been trodden by the foot of man. Before he terminated his journey he visited the shores of the North Sea, and finally returned to Sweden, almost exhausted with fatigue and hunger, but exulting in the increase of his knowledge.

The Royal Academy of Sciences viewed the young tourist very favourably on his return, and showed their sense of his industry and discrimination, by electing him one of their members, and inserting his *Florus Japonica* in their *Transactions*. These distinctions were the sole reward Linnæus received for his labours; but justly viewing them as the stepping-stones of his future advancement, and anxious to secure to himself the means of decent support, he began, the year after he received them, to lecture at Uppsala on botany, chemistry, and mineralogy.

Notwithstanding the serious objection to which Linnæus stood exposed in all his literary pursuits from the informality of his education, his poverty effectually prevented him from remedying it by taking his degree. Another trial awaited him. The office of substitute Professor of the University of Lund became vacant, and destitute as he was of the means of subsistence, and unable to do any thing to benefit himself at Uppsala, it became a great

object with him to obtain it; but he did not succeed, though his old friend Stobæus, and several other professors supported his claim. This disappointment, however, he bore with his constitutional cheerfulness; it touched none of his finer feelings, and his equanimity was rewarded by an introduction shortly afterwards to Baron Reuterholm, Governor of Dalecarlia, with whose sons he travelled through that province and Norway, directing their attention chiefly to mineralogy.

Linnæus proceeded to Holland in April 1735. On his route he rested some time at Hamburg, and afterwards proceeded to Harderwyk, where he took his degree. The year following he took up his abode with Dr. Clifford, a burgomaster of Amsterdam, a man of princely fortune, and a collector of rare plants and natural curiosities there surrounded by treasures from all parts of the globe, a valuable library devoted to his use, all the domestic arrangements replete with elegance and comfort, a patron proud of his genius, and delighting to anticipate his wishes, he passed many of his happiest hours, forming the system and making the arrangements which afterwards linked his name in inseparable association with the departments of nature he so delighted to explore.

The fruits of his leisure now began to show itself in his works. His *Bibliotheca Botanica* contained materials extracted from upwards of one thousand books, and all systematically arranged. In the next year he published six works, any one of which produced in the same time, would have done infinite credit to his diligence. His time now began to be noted abroad, and the Imperial Academy of Naturalists at Vienna admitted him as a fellow, under the honourable title of Dioscorides the Second, after the celebrated Asiatic botanist of that name. His literary labours sent him to England to see the nurseries of London and Oxford and the North American plants which were cultivated in these places. He took with him a letter from Bottrhaive to Sir Hans Sloane, couched in strains of recommendation which the writer, who was a stranger to flattery, had never been known to use before. "The bearer of this letter," said he, "is alone worthy of being you—alone worthy of being seen by you. If who shall see you both together, will see two men whose parallels will scarcely be found in the world." But, notwithstanding this valuable introduction, and notwithstanding Sir Hans Sloane's generous and love of science, Linnæus did not find himself received by the venerable naturalist with the warmth he anticipated. Sir Hans was in fact too old to enter into new theories, and Linnæus still attempted to introduce some of his own ideas, and to imply in his literature, that he can do better, and that he is a more perfect man than you. In him, the admiration of the sciences sent him pervaded the breast of Miller, the keeper of the Botanic Garden at Chelsea, and of DeClemens the Professor of Botany at Oxford. But the genius of Linnæus and his marvellous manner, surpassed all the prejudices which envy and jealousy might create against him, and left him free to deal with the friendship of many of her most eminent naturalists, and enriched with a variety of treasures for the pursuit of his science. His friend Clifford, who had counted every day of his life, and welcomed him back with all the affection of a parent. This was, perhaps, the busiest as well as the happiest period of Linnæus's life. His incessant application, however, was too great a trial for the health of Linnæus; his energy suddenly forsook him, he became a prey to listlessness and gloom, and at length fell into a violent fever, which brought him to the very brink of the grave. As soon as he recovered he left Holland notwithstanding the ardent desire of the principal people of that country to keep him there. Linnæus stayed a month at Paris on his way home, and was admitted a Corresponding Member of the French Academy of Sciences.

Linnæus returned to Sweden with feelings of the warmest affection towards his friends, and of patriotism towards his country for which he had refused the most flattering offers from other nations. But it is mortifying to consider how often it is the fate of genius to find its coldest encouragement among its nearest connections. Linnæus, rebuffed, respected and beloved abroad, found himself treated with neglect and dislike in his native country. His abilities excited envy, rather than inspired confidence. "Everybody," says he in a letter to Haller, speaking of a controversy he had had with a botanist of the name of Signbeck, "laughed at my botany. No one could tell how many restless nights and tedious days I had bestowed upon it."

Linnæus in 1739 had the glory of continually contributing to the founding of the Royal Academy of Sciences at Stockholm of which he was made President on its opening, and when he resumed the office, which was only to be held for three months at a time, he made a most admirable speech on the peculiarities of the insect tribe, and captivated his audience by the depth and beauty of his observations on the excellence of Nature and the wisdom of all her arrangements. As a lecturer and an orator he was, indeed, at all times, remarkably happy. "Science," says Bieck, one of his Swedish biographers, "streamed with peculiar pleasantness from his lips. His deep penetration his clear perception, and his ardent zeal gave a perspicuity to his language which inspired conviction in all who heard him."

In 1741 the Swedish Government resolved on having the islands of Oeland and Gothland explored with a view of increasing the home manufactures, and lessening the importation of foreign works of art. Linnæus was fixed on for this purpose, and was accompanied by six other naturalists to aid him in his labours. He had particular instructions to examine all the plants and woods which might be useful in dyeing and medicine, also the nature of different earths, in order to find whether there might not be some kinds adapted for the making of porcelain-ware. In this latter department he was unsuccessful—the soil of both islands consisting of calcareous earth and crystall rock—but in all the other objects of his inquiry he was eminently successful, discovering many new plants, and collecting a great mass of information relative to the productions and antiquities of the islands, the

manners of the natives, their fisheries, manufactures, and general resources. The States testified their approbation of his researches, and he afterwards made five other tours in his native country, all equally beneficial to the interest and his own reputation.

It is owing to the industry of Linnæus that no country in Europe is so accurately described as Sweden, with respect to its natural productions. In his *Flora Suecica* twelve hundred and ninety-six Swedish plants are described with an index illustrating their medical and economical properties, the place of their growth, and their Swedish and provincial denominations. The *Flora Suecica* was succeeded, in a twelvemonth after, by the *Fauna Suecica* presenting, when completed, in a second edition, the following state and proportion of the animal reign in Sweden: one thousand six hundred and ninety-one species of insects, one hundred and ninety-eight of worms, one hundred and ninety-five of birds, seventy-seven of fishes, fifty-three of sucking animals and twenty-five of amphibious.

Under Linnæus the first royal museums were established in Sweden. Both the king and queen of Sweden were devoted to the sciences, and, above all to natural history. Still Linnæus loved his garden better than any other place, and encouraged and cultivated it, to find a solace against the sufferings which a declining state of health began to occasion upon him whilst he might yet be considered in the prime of life. From the flower of the *Petas Orthopodites* he formed his theory of the sleep of plants, and proved that it took place at regular intervals, like that of animals. This discovery enabled him likewise to form a vegetable time piece, wherein the hours of the day were marked by the different periods at which certain flowers began to close their blossoms, and in the same manner he framed a rural calendar, for the regulation of the labours of husbandry, according to the appearance of the blossom of plants at stated intervals. Such were the ingenious observations with which Linnæus diversified his more assiduous studies.

In 1753 Linnæus received a distinction which had never before been conferred on any Swedish man of letters in the order of the Polar Star, formed by Frederick the First, for men of merit in the civil line, and, in 1757, he received a diploma which raised him to the rank of the hereditary nobility of the kingdom, and he forthwith called himself De Linnæus. Thus did the descendant of peasant—the whom his own father, at one time, intended for a cooper—become, by the force of genius and perseverance, the equal of nobles, the favourite of princes, the glory of a nation, the guiding star of the world in all matters of natural science, associating him imperially with his own name for the admiration and instruction of future ages.

The health of Linnæus early fell into decay from the intensity of his application, and his slight constitution was a true of his pursuits. The two last years of his life were only a long, and a most arduous struggle with pain. Repeated attacks of a palsy deprived him almost of speech and motion. His days thus descended in his station upon entering on his sixty-eighth year, Linnæus himself could hardly speak, or write intelligibly, and he scarcely able to write. Yet, even in this state nature was his consolation and delight. He used to be carried daily into his museum, and turned his dying eye with peculiar delight on the varieties which had been brought him by his pupils from various parts of the globe.

In 1776 he had no other stock of popularity, which deprived him of the use of his right side. He was obliged to be carried, supported, dressed and fed by others. At length, after suffering excruciating agonies for twelve months, his sufferings relaxed, and he expired in a gentle slumber in the afternoon of the 10th of January 1778, thus calmly closing a busy and meritorious life of seventy years seven months, and seven days. The tidings of his death were received throughout Europe with the regret due to a departed genius of the first magnitude. But in Sweden he was mourned as its glory and delight, and the grief of the people was heightened by that of their monarch himself. "I have lost," said he, in his speech on the opening of the Swedish Diet, in the same year, "his a man whose reputation was as great all over the world as the honour was bright which his countrymen derived from him, and on long will Upsal remember the celebrity which it has just lost in the name of LINNÆUS."

Linnæus had been in the study of Natural History, and would recommend a little book entitled *Crafft's Pflanzens Catalogus*, (the 2<sup>d</sup> time published by Holscher & Storchman) containing a clear and correct list of the bunch of study. It is published in a short memoir of Linnæus with a portrait and many other interesting particulars.

EXPERIENCES OF A DEAR PERSON—I found one day from having, in a flash put a musical snuff-box on my head. The delicious precision of the music, and the revival of the old clearness after the muffled piers of confusion that instrumental music had been to me for some years, overcame me a second time. I am sure that I heard that performance quite as well as any one could through the ear, and I have since clipped on my head every musical snuff-box I could lay my hands on. You may like to know the following when I had become just good enough to have difficulty in catching the pitch of a piece of music in the concert room we attended, which had benches with a long wooden rail to lean against, I could always get right by pressing my shoulder-blade against that rail, only the pitch was always a third below. Finding this with music, which I was familiar with, I soon got to allow for it always, and so did very well for the time. As the dulceness increased, I found all base sounds lose their smoothness, and come in pulses, beating upon the ear and vibrating through the pit of the stomach, while, as yet, higher sounds were as formerly—*Albin and Maestran's Letter to Albin*.

## THE CALIFORNIANS; OR, BOTH SIDES OF THE PICTURE.

(Continued from page 354.)

### CHAPTER IV.

Some weeks had passed on at Philipston House unmarked by incident of any kind, even without the reception of letters from the far distant shores of the Pacific which, when they did arrive, never failed to raise up something of a commotion, or emotion as it might be—when, very late one Sunday evening, as Mrs. Phillips sat engaged in devotional reading in the drawing-room, some distance from her sleeping apartment, where Mr. Phillips had been for some time slumbering for it was his custom to retire early—a violent pull at the great bell startled the lady with such apprehensions of danger that she was sinking to the ground when she felt herself folded within the arms of a man, who exclaimed, "Oh, my mother! my mother! it is you! it is really yourself—you are alive!"

Soon every one in the house was upon his feet, for all the domestics save the parlor maid went to it, the dogs set to barking, the cooks to crowing, and the horses to neighing—all were in consternation, as well as the children, and believed not that they saw a relative in the form of Mr. Henry Phillips but that they were beholding his apparition.

"What is the matter?" was the interrogatory with which Miss Adams, throwing open the door, hailed Mrs. Phillips, that lady was returning to bed.

"Mr. Henry has come home from California with the astounding information."

"Mr. Henry come home?" was ejaculated in return. "It was enough for Juliet Adams, whose quick sensibilities threw her instantaneously upon the cause, the corner-stones of her own family—glow in the fires of their Henry, and the joys of the Phillips in the welcoming home of ten. She uttered not a word. Her heart filled with sadness, she tried to bid not, however to sleep, but to weep.

Several days previous to the event above mentioned the completion and packing up of Mr. Henry's wardrobe for his journey had been finished. The domestics had gone home and the Adamses had been again entirely at leisure, and Juliet had been sensibly indulging in useless waste of their time, although the latter means spent it in all cases, for each and all were assiduous in their application to books, Juliet was pursuing knowledge and imparting instruction to a little girl, and the youth spent in receiving it from her.

During their residence at Philipston the three sisters had been much in the habit of strolling hand in hand in the park—so natural had made them enthusiasts in all matters of horticulture and commerce were the objects there met with in the midst of this enthusiasm. Not when the sewing in Mr. Henry's garden was their point d'honneur, Mrs. Phillips sat by the side of the husband from one o'clock to the afternoon, and put up a case was filled by that kind-hearted lady, that the little ones should have no means of any time to teach to work, as a reward which, she did not forget to mention to them, by sending them to come first, to assist her in pulling her bulbs, and then to pluck off the dry leaves from her plants, and sometimes to accompany her to gather some fruit.

All this while Juliet and her sisters had not only spent a part of their afternoons and evenings in the hushed dystem, as it seemed to them, which they had happily discovered in their rambles, but since then had there, with their books, passed most of the mornings also till they had become almost inseparable from the place, as with the feeling of its being their own private little house, for no farther than the door a long time seemed to have intruded in that spot.

Diverging from one of the broad avenues, was a footpath leading for some distance through a thicket of hies and junipers, extending to the verge of the bank where the Hudson threw up a small cove of most picturesque outlines. The aim which extended for some distance, a gentle slope to the water's edge, and almost at the extremity was a natural terrace covered with primroses and woodbine, and also the profusion and variety of the majestic beech, chestnut, and maple with which that point of land was thickly wooded.

Here, in this sweet spot, sheltered from human sight, Juliet loved to shut herself up with her little world, her sister Mary and Susan, and in the afternoon, it was a sad one, to think of her last one, and gaze mentally upon a vacant future.

It was on a lovely evening, a dusky night had yet closed in, as Juliet Adams and her sisters were sitting at their custom in their lower of roses and woodbine, chatting upon their never-ending theme, when suddenly a splashing of water was heard, and the work of years as of a hoar approaching, another instant and it had rounded the point and appeared before them.

A gentleman, apparently not yet thirty, of manly form and elegant height, dark, wavy hair, and profusion of black whiskers, was the intruder into this retreat.

The parties, equally surprised, remained for some moments alike immovable. The gentleman seemed to be hesitating whether to push off shore and row away again, or whether to advance and solicit pardon for the intrusion, which he perceived it evidently was. And Juliet in her pause, was equally at a loss whether to take her sisters by the hand and retire, or to fasten her eyes upon a book which she held half open in her hand, and engage in its perusal. Another turn of thought, and she had decided on the former course, and was about to retire, when, gallant as a knight of the olden

time, this gentleman leaped upon the shore, and bowed to her gracefully, entreating her not to regard his appearance in that place as contemplated unperilous, nothing being further from his expectations than falling upon such a group of female loveliness. [See *Illustration*, p. 387.] "And now, dear lady," he said, "all I ask is to be permitted to return the way whither I came, with the assurance of your gracious forgiveness for this unintentional molestation." Having said this, the gentleman leaped again into his skiff and rowed rapidly away.

### CHAPTER V.

"Where is Mr. Henry Phillips?" asked little Susan of Mrs. Wells, while they were breakfasting on the following morning, then added, with her usual naivete, that she would like very much to see him, for she wished to see if he looked like her brother Henry, and ended by wondering where he had been all the time since his return from California.

Mrs. Wells satisfied her childish curiosity, by informing her that he had been in the city attending to his business, that he was, however, out at Philipston at that time, but he should see him on his return.

The morning was sunny and bright. The flower-beds, which studded here and there the lawns surrounding Philipston House like so many clusters of gems in a garden, were covered with gay. The expansive young mowers, inactively nibbling the masts, breathing forth from everything around and about them were only on tip-toe for their respective alcove on the shore of the Hudson. But only they were, mother, fixed by the same sympathy to sympathize with and drunk in this cautious joy of universal nature, had preceded them, and was already an occupant of the favorite retreat.

Mr. Henry Phillips had now so arranged and disposed of his business in town that he had been able to pass the previous night at Philipston, the first since that of his arrival in the United States, and in the course of the evening, which was spent in home chat with his father and mother, who, while inquiring for his information the many events that had transpired in his absence, that he had passed during his absence—such as the marriage of this friend, the excess of that the broken-down fortunes of the other—related at last the story of the Adams family, to which he seemed to listen with listless interest, his heart, during its relation with such intense enthusiasm that he felt it was ended he had started to his feet with the exclamation—

"I know! I knew something was the matter here! And, dear mother, I thought it was you, and to acknowledge the plain truth—(as you all would say) that my coming home in good health as I was, and the gold in my pocket as it were, could have been in the world but that which brought me"—and, thought he, this accounts for the group that I happened to surprise this evening.

"Nothing, but what?" inquired both his father and mother in one breath. This interrogatory from his parents, and in their undignified earnest manner, brought Mr. Henry to his conscience, upon which he resumed his tale of a long and amusing for a moment. But he had gone too far to retreat, they required his return for coming home so suddenly and in an unannounced manner.

Well, said he, previously, "I must tell, it was a dream, if dream it was, though it did not seem to me like one."

He related to Henry, said his mother, "I must have it."

"Why, mother," said he, still previously, "it was about you—don't tell about you!"

I was at home in New York yet it was not our own house in the—avenue, but at an indescribably miserable place. At the same time it was our house and my home, and in this wretched place was a great commotion—people weeping and mourning. The whole scene was removed to a church—towards the large living ground, and is quickly to Phillips, where everything appeared enveloped in the black of darkness, and when I was going my way around to try to find you—mother, for it came as you were laid—suddenly, a light, brilliant than that of the sun broke forth over my head, and partly behind me. I turned to look at the phenomenon, as it appeared, and it was a star hanging apperly in the heavens, and which emitted a soft, rosy blaze. I turned again to resume my search for you, then, and the midnight darkness was changed to a soft, golden light, and I then saw you, father looking so natural as I now see you, with a group of mourners about you. But my mother I could now find, and in my agony of mind at this, I awoke.

And did you not see a voice of several then and miles, and then, exactly before the steamer had touched her moorings, take horses, like as the hour was and a light like mad upon the faith of a Jewish dream—the work of an excited imagination, probably from thinking before you went to sleep that night, how much you would like to see your mother—the consequence, doubtless, of having eaten a late supper?

"Is not that country, let me inquire, pretty rich in a population of ghosts and goblins, as well as mines of gold?"

"Oh, Mr. Henry, this is too lame an apology to attempt to palm off on to your father and mother, who know you too well to believe that you could ever be scared by a dream. Say at once, that you wanted to come home and see your mother and give her a kiss, or many of them, as you did that night."

"Yes, that is the truth; and I'll give you another, exclaimed Henry, leaping to his feet to suit the action to the words. Then, with a "Good-night, father!" he bounded out of the room, up the stairs, and into his chamber. But he was not that night troubled with nightmare visions, for his slumbers were too gentle to allow of his dreaming of anything but that beautiful star, with the soft, rosy light radiating from her countenance, which

In the midst of all this scene of filth, and dirt, and misery, were seen the beautiful Juliet Adams and her sister Mary, striving at cheerfulness—in

agreed to let M. H. J. n u i am on t an act te l bl w it the

Susan Adams was suddenly seized with convulsions, and was, for a time, in some danger. Her fits, however, passed off, and with them the alarm. But the little girl, in her disappointment of not going to Hillsborough, mourned to such a degree for her sisters, that Mrs. Phillips decided upon sending for Juliet, who was soon with her.

It being Sunday, the whole household, save Juliet, Miss Susan, and two or three of the servants, attended public service, as was their custom, at a small village church about two miles distant. Mr. Phillips the elder, taking an early start, walked, and Mr. Henry drove his mother and Mrs. Wells in the phaeton.

Scarcely had Juliet seen them clear of the porch, when—her sister being asleep—she stepped out for a stroll. It was one of those enchanting, warm, sunny days of the Indian summer, pleasant to Juliet's feelings, that invited her to revisit her favourite retreat—the alcove on the Hudson.

Intently fixed was her eye upon the page, and her mind as much so upon its theme, when she heard a rustle among the sticks and leaves. She raised her eyes and cast a glance round—was it a squirrel? It must have been, for the reading was resumed. Again a sound fell upon her ear—it was a footstep. In another moment, and Mr. Henry Phillips was before her.

She instantly rose exclaiming, "Oh, Mr. Phillips! I thought you were at church." "I saw you driving your mother and Mr. Wells thither," "So you did, Miss Adams. That is, I set out for church, but overtaking my father on the road, I resigned the reins to him for reasons which you are now going to learn. I returned for the express purpose of seeking an interview with you. It may as well take place here as at the house."

"Oh, Mr. Phillips! permit me, if you please, to retire to the house. It is so very embarrassing for me to be found by you in this place."

"You will oblige me, Miss Adams, if you will allow me a few moments' conversation with you in this spot. It is a much loved one of mine, and, apparently, one appreciated by yourself. Am I mistaken in this?"

"No, Mr. Phillips, I loved it much, too, when I did not as I now do feel myself an intruder."

"This is enough, Miss Adams. You begin to make me happy. Let a truce to intrusive questions, I shall soon put you at ease. When I tell you that from the first moment I beheld you I have loved you with all the soul with which God endowed me, I tell you, Miss Adams, you have become the dearest object of my existence. There needs now but a word from you, to make me eternally happy and contentable."

Juliet, with her usual firmness of character, and "I am a free girl," "Mr. Phillips! But not only that I—myself to my little sister—admitted until she had arrived at your womanhood, that I—myself included in my questioning my heart."

"If it were not for my heart, which I have, I feel, replied Henry Phillips, "I should be a cold, unfeeling man. But thanks to Heaven, I have not only sufficient to fill a child's mind, but of her who may be intruded into my heart—but to satisfy the gratification of my own extravagant desire."

"Mr. Phillips, you know that it is not to be so. I do not stand equal ground with you. A claim of independence gives on the freedom of feeling and feeling. I am a creature of dependence calls for a sacrifice of feeling."

"And this creature of independence I offer to have with you, Miss Adams, and not only with you, but with your sisters. Then, if your heart can feel and love—as I know it can—will I ask in return, that you will give me those affections."

Juliet turned her face a little aside to conceal a tear that was gently trickling down her cheek, then—suppressing the emotion which for a moment had prevented utterance—she turned again, and said, "Let me beg of you, Mr. Phillips, to permit me now to retire to the house and also to forget the subject of this morning's interview, at least for the present."

"Your wish, Miss Adams, shall be respected. And I drawing Juliet's arm within his own, in descending the steps to the door."

All began now to be excited at Hillsborough, in preparation for the half-term *soirée*. Invitations were sent out and kind engagements received, and from the latter, when all were gathered in at the parish of the school were pretty generally disposed to be in attendance.

Mr. Sommers was never more gratified at the solicitation of Henry Swift to the Swifts than on the present occasion, for as the whole house was going to be thrown open for dancing, music, and other amusements, it would afford him an opportunity he had never yet enjoyed—that of a *tête-à-tête*, unobtruded, with Juliet Adams.

Light, gay, and mirthful is the *soirée* embleme. The waltzing was graceful, the music charming, and the plays amusing in all which the Adamses, of course, bore no active part. Not so by any means, the Swifts. But either are never more lively and coquettish in a garden of flowers, nor ever flitted in more gorgeous or attractive array. And the only drawback to the mother's excess of enjoyment and gratification on this occasion, was the fact that none of the Phillips's family were present.

Mr. Charles Sommers never danced. It was nothing marvellous, then, in either Mrs. Hill's or Mrs. Swift's mind that he was seen promenading and talking a great deal with Juliet Adams. However, others there were who not only observed it with wonder, but listened. And this was heard—"Mr. Sommers, I do not belong to myself, I am not mistress of my own will, I am not my own to dispose of." And, further, Juliet's face was observed to be frequently alternating between blushes and pallor. All these things were not only observed, but gossiped about in certain groups of the company, till they came to Mr. Henry Phillips's ears, who immediately sought Mr. Sommers, though not on "dearly purpose bent," for he said, "Sommers was a noble-

souled fellow, and that sooner than break his heart, he would break his own head, but know the depth of the matter he must."

However, in the interview between these gentlemen all that Mr. Sommers could say, of course, was, that it was his business at present to find out to whom the Adamses belonged, all right of self-disposal being by themselves utterly disclaimed.

The announcement of this intention caused Mr. Henry Phillips's eyes to open, for he thought that he, likewise, had been a listener to much the same language, and it therefore behoved him to be looking about for the same thing. And so he did. He went to his father, and in a brevity amounting almost to abruptness, asked him—"Who the Adamses belonged to?"

"Why, Mr. Henry, I do not know, as I cannot say, exactly, to whom they do belong, unless it is to myself, they seem to have fallen upon me, or rather I appear to have fallen upon them. For it was I who first sought them, and it is they me."

"Then you, sir, consider that you have the right of the disposal of them?" "I do, my son, with their own consent. Now, Mr. Henry, may your father, in his turn, interrogate his son a little? May he ask, what is his purpose in making these inquiries?"

"Simply this, father, to ask Juliet Adams if she is not already otherwise interested, to become my wife."

"This, Henry, is a very agreeable announcement to your father, for he regards that young lady as a pearl of great price. But you remarked, my son, if not otherwise interested? Explain your meaning, if you please."

An old Californian acquaintance of mine, and a person whom I highly esteem, is soliciting her hand, and, for aught I know, possesses her heart. This, with your permission, sir, I will make it my business to understand immediately."

"You have my permission, my son, as also my best wishes."

## CHAPTER VI.

Just at the dusk of evening Mrs. Charles Sommers was seen descending the stairs from the drawing room at Hillsborough, where by especial favour, as an old family acquaintance, he had been for some time *tête-à-tête* with Juliet Adams. It was remarked that his countenance was stern, and that he passed out of the room with a gloomy word to his own—a very unusual thing with him, who was generally full of smiles and cheer, and so rarely had this gentleman left when Mr. Henry Phillips entered the house, and sent a request to Mrs. Hill, for permission for an interview with Miss Adams, a short time in the evening.

Juliet entered the parlor with a considerable emotion, and found Mr. Henry Phillips standing in the doorway. Since yesterday she taken a step within the door, and he had looked her hand with the exclamation—

"Mr. Adams! you look very pale. Do not be agitated. Breathe as well. I have been thinking of communicating to you, at least, I hope not. Although, Mr. Adams, he has told me, that you have my word for silence on the subject of interest to my heart yet there has recently come to my ear that which I should not as I should mind the promise, and learn from your own lips the truth of what is to make either my happiness or distress. My language will be plain, and I should like your answer to be the same. All I wish is to know whether Mr. Charles Sommers possesses your affections?"

"No, Mr. Phillips, he does not. I, how you esteem Mr. Sommers very highly."

"And now mother proposition, Miss Adams, which I hope will be met with equal frankness. You know that you are already in the possession of my heart, can you in return give me your own?"

"Mr. Phillips, I cannot dispose of that I do not possess. My heart, my only claim, already your own and was so from the first moment that Heaven directed you to my view."

"And I, Mr. Adams, with the whole and true soul of a woman, and a very young one, I feel, Juliet, and your sisters, my sisters, and as I shall live cheerful and protect them."

"Oh, Mr. Phillips, my father! Have I ever met his face?" "Meet him, Juliet, with your usual unthwarting eye and loveliness, for in his father receives you into his family—to his heart."

"Does he know that you love me?" "Yes, Mr. Phillips, he knows all and now in a loved embrace."

Never was lover happier than was now Henry Phillips. And things began to look different to Juliet. When she was being handed into the carriage she was struck with its richness. It appeared to her as if new from the hands of the maker. Neither was the driver Old Simpson. The horses, likewise, were strange—a splendid pair of grey bloods. Not long had Juliet been seated before she learned that the equipage was her own, one of her bridal gifts, and that she was on the road to her own mansion in the city.

Mr. Sommers has returned to California, and the Swifts, who treated with heartlessness and scorn Juliet Adams, the poor seamstress, obsequiously sought her society as the rich Mrs. Henry Phillips, by repeatedly giving their cards at her house, but notice of which was never once returned by her. The family are now, however, gone abroad as contemplated.

No one now, in the great city of New York, is more courted than Juliet Adams, the once poor seamstress, who, and that, too, but a short time since used to be seen trudging in the dusk of the evening taking to her patron the bundles of garments her fingers had formed with such hard toil. Neither at the same time, is there now any one in that city who is more zealous and indefatigable in searching out and solacing the needy and distressed—for none can feel for the woes of others like those who have seen BOTH SIDES OF THE PICTURE.

• **Prevalence** – the proportion of the population with a disease at a particular point in time

## MENTAL RECREATION

AP: on setting a Figure out of the Sum of the other 4 to the last that is 73

Such numbers must be offered as are divisible by 9. For instance, 36 63 81 117, 126 162 207 216 252 261 306 315 360 and 372

Then let a person choose any two of these 10 numbers and add all of them together in his mind strike out 1/10 of the first place from the sum.

After he has done this, desire him to tell you the sum of the remain-  
 figures and that number which you are obliged to add to his amount  
 in order to make it 9 or 18 is the one he struck out.

For example, suppose the rule is  $10 \text{ and } 22 \text{ the } u \text{ of}$   
which is 378

Then if he strike out 7 from the answer, the remainder of res, 3 and 8 will make 11, to which 7 must be added to make 18

If he strike out the 3 the sum of the remaining figures 7 and 8 is 15, to which 3 must be added to make 18 and so in like manner for the 9

## PARADOXES

1

Nothing and six, with five hundred, when framed  
Will give you a poet in ancient times famed

2

I'm neither man, beast, fish nor bird  
Insect or reptile, none  
Yet live and breathe, though, on my word,  
My origin was none  
As soon as you have found my name,  
All doubt will disappear,  
Then fail not to reveal the same,  
Without reserve or fear.

## TRANSFIGURED PLAYING CARDS.
